Appendix

Target for Tomorrow

EXTENSION OF REMARKS
OF
HON. JOHN STENNIS
OF MISSISSIPPI
IN THE SENATE OF THE UNITED STATES
Monday, May 7, 1956

Mr. STENNIS. Mr. President, recently I attended the annual dinner of the United States Chamber of Commerce and was very much impressed with a very thoughtful, informative, and inspiring address delivered by Mr. Philip D. Reed, the chairman of the board of directors of General Electric Co.

The part of his speech looking toward the future, especially the future planning with reference to meeting the demands of our Nation, is impressive and, I think, quite helpful.

Because I think these remarks by Mr. Reed would be of interest to the people of the Nation, I ask unanimous consent that they be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

TARGET FOR TOMORROW

(Address by Philip D. Reed, chairman of the board of directors, General Electric Co., at the annual dinner of the Chamber of Commerce of the United States, Washington, D. C., May 2, 1956)

History has no parallel for America or for the economic status of the American people. I shall attempt no extensive documentation of that statement because the figures are too well known, particularly to this audience. The fact, for example, that with only 6 percent of the land area and 7 percent of the population we produce 40 percent of the world's goods and services. The even more important fact that with this great productivity the economic benefits have been very widely shared here in America. Between 1946 and 1956 the number of families and individuals with disposable incomes of over $4,000 rose from 19 million to 29 million. Our society is characterized by an extremely thin band of very rich, an equally thin band of very poor, and the great mass of our population occupying the middle area.

I could give specific examples. To take just one from my own company, in 1939 the average annual earnings of General Electric employees were $2,028; in 1955 these had risen to $5,627; and, as we further automate to meet customer demand, thus raising productivity and constantly increasing both the number and the ratio of highly skilled to unskilled jobs, it seems entirely possible to us that the average earnings of General Electric employees 10 years from now may be in the range of $8,000 to $9,000 annually.

Addressing itself to the past 50 years, the Twentieth Century Fund's Survey of America's Needs and Resources had this to say:

"No period of comparable length in human history has brought such great changes in the variety, quality, and quantity of goods and services available for consumption. In many ways those of us now passing middle age have within our lifetime experienced a greater advance in our material standard of living and a more pervasive change in our way of life than occurred in all the previous centuries of human history. * * * The mass of the people, it is important to emphasize, have been the chief beneficiaries of this great material progress. Worth mentioning is the fact that this momentous development has been taking place not in Communist Russia but in capitalist America. Of all the great industrial nations, the one that clings most tenaciously to private capitalism has come closest to the Socialist goal of providing abundance for all in a classless society."

That ends the quote, but the question remains: To what can this tremendous progress be attributed? To our natural resources—our land, minerals, harbors, forests—these have frequently been cited as a reason for our favorable position? To the energy and resourcefulness of our people drawn from every quarter of the globe? To the size of our domestic market unhampered by internal trade barriers? To our own particular brand of capitalism, evolved through the years? To our concept of freedom and our form of constitutional government with its system of checks and balances so carefully worked out by our forefathers?

Surely each of these has played its full part in producing the economic and social complex which is today's America. But it is also true that each of these important elements has long been exerting its constructive influence on our country's economic development; some of them from the very beginning. One is inclined, therefore, to search for something added, something new, that may help to account for the accelerated pace of the rise of our national economic indexes in recent times. And it is one of these added starters that I shall examine tonight in the hope that its usefulness, as applied by thousands of business organizations, may have broader application to the objectives of the Nation both in business and in other fields.

As a result of visits to some 30 foreign countries since World War II, it is my observation that every successful economic system must be founded on one indispensable concept—growth. Those countries which have made the greatest strides, and many have made great progress, have also been characterized by the emergence of a new attitude or outlook in the industrial and business community. This growth psychology can best be described as a firm and positive faith in the capacity of the economy to maintain a long-term upward trend through continuous and intelligent expenditures for research, improved production facilities, better marketing techniques, and through the broad distribution of the fruits of the progress thus made. Growth, the idea of constant progress and the creation of incentives for every element of the economy to achieve it, is a definite must in any economic system that is going to prosper in the world's economy.

This may seem so obvious as scarcely to warrant more than passing mention. The fact is, however, that reasonably comfortable human beings—you and I, for example—particularly as we grow older, develop a tendency to resist change and to cling to the status quo. Growth and the status quo are as incompatible as competition and cartels or as benzedrine and barbital. And it is for this very reason that such immense importance must be attached to the growth concepts that provide powerful incentives for research, for expansion and modernization of facilities, for increased productivity, for investment in new businesses and in exciting prospects for old businesses.

The "something added," therefore, to which I referred a moment ago in searching for the fresh factor in the American economic scene, is first, the concept, the state of mind that accepts growth, change, and progress as a way of life; second, the practice of setting long-term business targets or objectives; and third, the creation, step by step, of long-term plans to reach them.

Today more and more business leaders are trying to get ahead of the job and attempting to work out more or less definite plans for the development of their enterprises over a period of 5 or 10 years. To a growing extent today's business decisions are being made on the basis of long-range considerations, instead of day-by-day or year-to-year opportunistic measures, rushing to expand when the business barometers read fair, and cutting back at the first sign of a cloud on the horizon. Let me very briefly review the planning process in broad outlines.

The first task is to examine any and all data that will help to determine the size and character of our economy—national, regional or local, as the case may be—5, 10, or more years hence. What is wanted for this purpose is the most expert forecasts available on such factors as population growth, family formation, gross national product, national income and its distribution, research expenditures both overall and in the field of the particular business, etc. Obviously, many other projections of a more specific nature would be used here depending on the kind and location of the business for which the projection is being made. And let me emphasize in passing that statisticians don't make progress, they record it. There is no substitute, therefore, for hard individual thinking, forward thinking, business-by-business, industry-by-industry, community-by-community, venturer-by-venturer; for it is their results which add up to but do not derive from forward estimates of the national economy.

The purpose, then, of this study is to estimate the approximate level of the economy at specified future dates and, more importantly, the approximate potential market for the then products of the business concerned.

The next step is the preparation of sales forecasts over the 5, 10, or more year period, based on the projected market potential indicated in the initial study. Costs and income before taxes would similarly be estimated for the indicated sales.

Next, based on the sales projections just mentioned, a careful study is made of what would be required, and when, in each of the following categories, among others, to achieve and support sales of the magnitude shown in the long-term forecasts:

Additional capital in the business, and from what source.

Additional plant and equipment.

Additional trained manpower, both technical and managerial.

Additional research and development programs and facilities.

New or revised organization structure.

AUTHENTICATED
U.S. GOVERNMENT
INFORMATION
GPO

From these requirements are finally drafted a program, phased over the period of the plan, which will meet the estimated needs of the business on all fronts and in time.

Now, before I turn to the implementation of these plans, let me acknowledge at once the obvious fact that there is always the possibility of substantial error in these forecasts. They should be reviewed each year, revised if indicated, and pushed out 1 more year ahead. Our experience at General Electric has been that more reliance can be placed on a 5-year forecast than on a single year projection. In any event, the very process of making long-term plans, and reviewing and extending them each year, orients the executives' thinking and judgment to the needs and possibilities of the business down the years. It tends to avoid the experience so many of us have been through in years gone by of being unable to supply the demand for our products in good times and being unwilling to invest in new facilities or other prospective needs of the business in times of recession.

* * * * *

No doubt the millenium has not yet arrived, nor an ever-upward path achieved, but the implementation of long-term planning based on the concept of growth that is now common in American industry has had, and will continue to have, a powerful influence on the accomplishment of its own goals and on the maintenance of a more stable overall economy.

And it may be noted parenthetically here that if this premise is sound, and I believe it is, such industries as steel, construction and heavy equipment, which were once thought of as boom or bust industries, should no longer have to be so categorized, provided always that they plan effectively and do not price themselves out of the market during periods of unusual demand.

* * * * *

Now if the concept of growth, progress, and the making and implementation of long-range plans to reach predetermined targets is a useful and constructive business tool, even at this early stage in its development, should we not explore the applicability of this same technique to other targets? Indeed, why not explore its applicability to other objectives dear to the heart of all Americans, and why not test its usefulness in the achievement of international as well as national objectives?

For example, just as we in business are learning to project our future requirements of capital, facilities, manpower, research, and organization structure, educators should be able to visualize the kind of education that must be provided now for people who are to run that kind of economy in the future. * * * It is already apparent that just as our American brand of capitalism is going to be based on the widest possible distribution of the fruits of progress, so is it going to demand the best energies—in terms of trained minds—of all the people.

I am sure that educators all over the country are conscious of these things, and are trying to find ways and means of expanding the capacity and increasing the instructional efficiency of the institutions with which they are associated. But I suggest that far too few people appreciate the immensity of the task ahead. I am told that the projected growth in the number of boys and girls of college age during the next 10 years will require us to put on top of existing facilities a plant equivalent to all the colleges and universities built in this country since the founding of Harvard over 300 years ago—and perhaps we should not even be thinking in terms of an equivalent plant.

There is the common claim that we cannot afford this. But can we, in fact, afford not to afford it? I cannot escape the feeling that if every institution of higher education—institution by institution—were to formulate and publicize in its own community a 10-year plan and program designed to accommodate its share of the projected increase in college enrollment, nationwide understanding of the problem and its solution would be greatly advanced.

* * * * *

There are, of course, many other areas of great national importance in which more long-term planning and progressive implementation are sorely needed. Highway construction, for example, is today far behind our current needs—not so much for lack of a plan at the national level but for lack of congressional approval and implementation. Much State and local highway construction has been held in abeyance in the meantime with the unhappy and extremely expensive result so familiar to us all.

Community planning for growth and development, including slum clearance, slum prevention, and such indispensable services as hospitals, schools, play and parking areas, local transportation, etc., are natural subjects for more and better long-term planning of the kind we have been discussing. * * *

Turning to the international field. The opportunity for and importance of long-range planning is, if anything, greater than in domestic affairs.

Private business investments abroad require the most careful investigation and long-term planning of the character I discussed earlier. Additional elements of risk being involved—exchange fluctuations and control, devaluation and expropriation, for example—the projected return on the investment over a period of years must be closely scrutinized for adequacy.

But quite apart from American business operations overseas, our Government's foreign policy would, in my judgment, greatly benefit from an opportunity to engage in more long-term planning and programing. Let me give you three very brief illustrations.

If it is the policy of our Government—and I deeply believe it should be—to assist underdeveloped countries in their efforts to strengthen and balance their economies, and thus gradually improve their standard of living, by giving them technical advice and, in proper cases, loans or even grants of moderate amount—if this be our policy, then nothing could be more limiting and frustrating than to implement it on a year-to-year basis. Here, if anywhere, planning over a period of years is an absolute essential, and the inability to commit our Government to a program of assistance extending beyond a year or two is in many instances fatal.

The arguments in favor of keeping a string on our commitments to countries we are befriending in our own long-time interest are familiar, but I submit they are frequently outweighed by the value to us of doing the economic and technical assistance job on a carefully planned and realistic basis. Anything short of that would be self-defeating.

The present controversy in the Congress over the so-called OTC—Organization for Trade Cooperation—is in part the result of inadequate weight being given to the need for orderly and planned administration. The OTC has no power of decision and cannot commit our Government in any way, but it can be invaluable as a continuing administrative body possessed of world trade statistics of immense usefulness and a complete knowledge of the status of trade agreements between all countries of the world.

Last week Secretary Dulles gave official support to the suggestion that NATO be strengthened and invigorated by enlarging its field of action to embrace economic and perhaps other matters in addition to strictly military affairs. In my view, this is a sound suggestion. But in the same breath I urge the need at the outset for the most careful delineation of its extended duties and of the organization that will be required to perform them.

I could go on with other examples, but perhaps I have said enough to make the point that planning—long-term planning—has been so thoroughly demonstrated to be an invaluable instrument for the operation and further development of our own industrial economy that it would be out of character for us not to pursue, perfect, and broaden its use wherever it can serve us.

* * * * *

Ours is quite different from the many economic systems that go by the name of capitalism in other countries. It has been recently, and quite appropriately, described, as "a people's capitalism," in which the masses, not simply the privileged few, enjoy its fruits and benefits. Our brand of capitalism is characterized and distinguished from the others by the following six principal features:

(a) We in America believe in large volume and small profit margins—not small volume and large profit margins.

(b) We in America believe in high wages, high productivity, and high purchasing power. These must occur together. One without the other defeats its own ends, but together they spell dynamic growth.

(c) We in America believe in scrapping the obsolete, regardless of its remaining useful life. A new tool, new technique, or new machine that can do the job better and faster and which, by resulting savings, will pay for itself in a reasonable time, is a good investment even though it replaces equipment in first-class condition.

(d) We in America believe in consumer credit, and have developed and used installment sales techniques to a degree unparalleled elsewhere in the world. Without it our economic indices would be at a fraction of their present level, and new industries like television, for example, would still be in their infancy.

(e) We in America believe in more leisure for our people through a short and highly productive workweek. And the very fact of extensive leisure has produced great new industries that provide means for entertainment, for cultural pursuits, for sports of all kinds, and for the do-it-yourself enthusiasts.

(f) And finally and most importantly, we in America believe deeply in competition versus the cartel. Competition is the sparkplug of our economy. It keeps us endlessly, urgently searching and researching for new and better products, more efficient methods of production, and surer marketing techniques. It is both the carrot and the stick, at once pulling and pushing us forward along the road to better things. Human nature being what it is, I submit there is no substitute for competition.

These, then, are the principal elements of our strictly homegrown brand of capitalism. To them can be added, at least with respect to the practice of many, many companies, the element of long-term planning as a tool which both anticipates and promotes vigorous economic growth. May its effectiveness be sharpened by experience and its use become universal.

* * * * *

In short, it is our job, ladies and gentlemen, to lift our sights, to future-orient our thinking and our corporate planning. Thus, and only thus, can we do our full part in maintaining the now splendidly rising trend of production, investment, and trade—and hence living standards—in America and throughout the free world. In a very real sense, the kind of lives our children and our grandchildren will live is in the making now. And because the pattern is so largely ours to determine, let's make this our target for tomorrow.

Challenge to Khrushchev by Ferenc Nagy, Former Prime Minister of Hungary

EXTENSION OF REMARKS
OF
HON. JAMES T. PATTERSON
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 2, 1956

Mr. PATTERSON. Mr. Speaker, today America is a haven of refuge for many formerly suppressed peoples who suffered from the painful pangs of Soviet tyranny. Many of these peoples were willing to risk their lives in a perilous effort to escape from Communist bondage to western freedom, and certain former leaders of the captive nations were forced into exile by the Kremlin.

In exile in the United States today is one of the most outstanding statesmen of Hungary who was chief executive of that nation before the Communists gained control of the country. He is former Prime Minister Ferenc Nagy whose government was overthrown by the Communist tyrants who now rule his great nation.

Ferenc Nagy, Mr. Speaker, was a peasant by birth and breeding, and from early youth he worked unceasingly to better conditions of the peasantry of Hungary. Born of a Hungarian family whose financial means did not permit him formal education, by the flickering light of tallow candles this great past Prime Minister studied the classics after tilling the soils of his country long hours of the day. When, after reaching manhood and having attained a vast knowledge of the problems of Hungary, acquired through self-education and personal experience, the heavy hand of destiny fell upon his shoulders in the wake of the Nazi scourge.

With a heart filled with ardent love for his people, Ferenc Nagy rose to be leader of the Smallholder Party of Hungary and was elected Prime Minister of his country after Hitler's armies had been smashed. But the dreams of a lifetime were soon to vanish when the dark clouds of world communism suddenly hovered over his land and precipitated a form of cruel bondage upon the good people of Hungary that was even worse than that of Hitler.

Today, Mr. Speaker, Ferenc Nagy is in exile in the United States, but he is far from inactive in the fight against the further spread of world communism. In a ceaseless effort to enlighten potential future victims of Soviet tyranny, he makes frequent trips throughout the remaining areas of the Eastern Hemisphere that are still enjoying freedom; and in those areas he lectures about the evils of communism and the virtues of American democracy. In such a capacity, the former Prime Minister of Hungary is making an important contribution in the free world's struggle against the Soviet goal of world domination. In his heart the glowing vision of his people still remains, and in the hearts of suppressed countrymen of Hungary he still is held dear as a source of hope and confidence; for the good peasantry of Hungary to whose cause he dedicated his life's work know that he is doing all within his power to bring about the birth of a new Hungary—one in which men are free.

On March 27, Mr. Speaker, this distinguished Hungarian statesman outlined a significant challenge to the Kremlin. In a letter to Communist Party boss Khrushchev, Mr. Nagy commended the Soviet boss for exposing the crimes committed by the late dictator, Josef Stalin, against the dead. But the challenge was contained in the suggestion that the Kremlin rectify the crimes committed by Stalin against those who still live. To rectify those crimes would, of course, involve the complete liberation of the satellite and Baltic States.

Mr. Speaker, the former Prime Minister of Hungary has given me a copy of his forthright letter to Khrushchev, and I wish to here insert this letter in the CONGRESSIONAL RECORD:

DEAR MR. KHRUSHCHEV: Your speech delivered at the 20th Party Congress of the Soviet Union, in which you made public the sins of Stalin, the former dictator of your country, created a deep impresison on the entire civilized world. The facts outlined were not what impressed me most—of these I had previous knowledge—I was most impressed by the frankness with which you revealed an epoch in the life of the Soviet Union before the world. Presupposing that this frankness permeates the leaders of the Soviet Union, the Government and party leadership alike, and through this a new era is beginning in the life of the Soviet Union, I have decided to take the extraordinary step of writing a letter to you, calling to your attention the fact that—in my opinion—what could evolve as logical and just consequences as a result of your speech. My firm conviction is that these consequences, which would result from a practical application and realization of new policies, could create not only in the life of the Soviet Union, but in the field of international politics as well, a new era, one of peace, understanding, and of prosperity. On the other hand, if your speech on the Stalin affair is not followed up to gain necessary results, and it disappears without a trace in the wake of other daily events, then, in world opinion, the impression which will remain will be that the Stalin affair is the personal affair of the Soviet leaders, who are happy that they no longer have to fear physical annihilation or humiliation; otherwise the policies of Stalin continue unabated without any change whatsoever under your leadership.

The press, so far, has not published complete reports of your speech. From excerpts published thus far, I see that you spoke only of the sins committed by Stalin against the Soviet leaders and against the Soviet military. Stalin's sins are not limited to those committed against his coworkers, the murders and humiliation suffered by the Soviet people. Stalin was the greatest criminal in all history, even if you consider that the number of mass murders in China may possibly exceed in number the sum total of Stalin's victims. Stalin committed the greatest crime in all history against all mankind. After the Second World War, it was Stalin who prevented honest carrying out of international agreements, the creation of a true peace, and as a result, the calming down of humanity. Stalin was responsible for creating international tension, which even today is the primary problem of the entire world. It is the crime of Stalin, that after the Second World War, after Hitler was conquered and destroyed, hate in the world did not cease, that the technical progress learned in the war was not used for the benefit of mankind; that instead of being put into the service of the people's welfare, there began the greatest rearmament race in history, the labors of mankind were heaped into armament, rather than serving the happiness and contentment of the peoples of the world. Into Hitler's place on the gory stage of history stepped Stalin, with the same personal ambitions and the same murderous terror. Hitler was motivated by a mania for power, when during the war he temporarily subjugated the peaceful nations of Europe, but the same mania for power drove Stalin when he, in turn, subjugated the defenseless, plundered, bleeding nations of Eastern Europe after the war.

I am writing you this letter from exile. But at the beginning of the international terror of Stalin's reign, I was still at home in my country, having lived through imprisonment by Hitler's Gestapo. During the two years following the war, I was a cabinet minister, President of Parliament, the Prime Minister, and the leader of the majority democratic party. These are positions in which I had to make personal contacts with the imperialist terror of Stalin. Based on my personal experiences and my proofs, I state, that after the Second World War, the nations of eastern Europe were subjugated by a terroristic minority under the orders of Stalin, with the aid of the Red army, and the open aid of Soviet diplomats. And I further declare that present world tension is not caused by the various problems now engaging the public opinion of the world, but by the occupation of the area of eastern Europe by force—all other events are but results of this No. 1 international crime.

The nations of eastern Europe, from the Baltics to Albania, will speak for themselves. I will chiefly speak of Hungary, where I was a political and national peoples' leader in a period following the war. There was absolutely no necessity for the subjugation of Hungary. The Soviet Union was not in any danger whatsoever from Hungary. She was weakened by the war, and the unanimous aim and hope of the people, robbed by both the Germans and the Russians, was to create peace, build up a democratic system and economy, aid the standard of living, and attain happiness and contentment. The political group which declared war on the Soviet Union, and which entered into an alliance with Hitler, had lost all its influence by the end of the war. Those social groups, which before the war hindered democratic progress, were no longer factors. The people of Hungary—despite the brutality of the Red army—did not hate the Soviet Union. The Government wanted peace, and a good-neighbor relationship with the Soviet Union. The democratic development and the good intentions of the country were fully recognized by the chief representatives of the Soviet Union. After the elections, held in 1945, in which my party obtained an absolute majority, Marshal Voroshilov, the President of the Allied Control Commission, the present President of the Soviet Union, declared before me that the good relations existing between the Soviet Union and Hungary, must be built up in the victorious Independent Smallholders Party. The democratic way of life extant in Hungary, and its peaceful desires were not questioned even by Stalin himself. When in 1946, in April, I was a guest of the Soviet Union in Moscow, Stalin greeted me as the democratic leader of the Hungarian Government, and he solemnly promised that the Soviet Union would never endanger the independence of Hungary, nor would it ever interfere in the internal affairs of Hungary.

Why, then, was it necessary to remove the democratic Government of Hungary, and replace it by force with the henchmen of Stalin at the helm? Why did the Tuchachevsky conspiracy trials have to be repeated in Hungary with the aid of the NKVD? Why did honest Hungarian leaders have to be dragged away to the Soviet Union? Why was there interference in the internal affairs of my party? To this there is no other answer, but

because of Stalin's terroristic criminal tendencies. In the light of reality no explanation can be found for the eastern European policies of Stalin. If Stalin had not subjugated eastern Europe there would now exist a peaceful and prospering east Europe, which would carry on normal commercial and political relations with the Soviet Union. But Stalin created an uneasy and hostile eastern Europe where more than 100 million people look upon communism and Moscow with deepest hatred.

Without a doubt, the Soviet Union in the past 10 years, has massed a great deal from plundering the economy of eastern Europe. But these amounts in no sense of the word are proportionate to the cost of arming the Soviet Union for the illegal occupation of eastern Europe, and the international tensions resulting therefrom. With the occupation of eastern Europe, Stalin plunged the people of the area, as well as the Russian people, into poverty and backwardness. If, after the Second World War, Stalin had permitted true peace to be established, if the basis of international politics had been mutual trust, and rearmament in the Soviet Union could have been kept at a peacetime level, there would have been no reason for even beginning a similar program in eastern Europe. Thus in the Soviet Union, the major part of the cost of rearmament, and in eastern Europe the total cost of a similar program, could have served the development of the economy of the area, and the raising of the standard of living for the people. The detrimental effect of Stalin-type policies is clearly indicated, when, as examples the Soviet Union and Germany are compared. Germany, conquered, plundered, and saddled with reparations problems, today, after a 10-year period following the end of the war, can offer higher living standards to the workers, than even in the time of Wilhelm II, or even in the time of Hitler. In comparison, the citizens of the rich and victorious Soviet Union, in their standard of living cannot even approach that of Germany, or that of other free countries in Europe. In Hungary, compared with the economic situation in 1947, there exists a serious and irreparable decline.

The selfish and terroristic foreign policies of Stalin brought incalculable harm not only to the Soviet Union and the people of eastern Europe but to the people of all the world as well, primarily to the people of Asia and Africa. The problems of these peoples may be divided into two groups. The first group would be comprised of economic problems. The peoples of Asia and Africa are so underdeveloped in relation to the Western World, that without the aid of the West, and mainly that of America, it cannot hope to overcome this problem. America is ready for all sacrifices to lift the backward nations to a higher level, and to enable them to attain the blessings of civilization. But Stalin has forced the rearmament of America and other Western Powers, and this armament program limits the amount of aid which can be extended to Asia and Africa. It is easy to picture what the policies of Stalin have cost the peoples of Asia and Africa, when we know that the annual cost of arming the West is more than the national budget of India for 25 years. In the other group belongs the question of the sovereignty for Asian and African peoples, and the question of colonialism. After the Second World War, a tremendous program of decolonization was instituted. The Western Powers liberated more than 600 million people from a colonial status. This process gave indication of the final liquidation of all colonialism. When did the decolonization program stop? Exactly at the time when Stalin subjugated the countries of eastern Europe. It would be political shortsightedness not to recognize the connection between the two. The West could not relinquish its colonial outposts at the very time that the Soviet Union was conquering new areas for itself.

Naturally, there are many other aspects of the criminal and reckless policies of Stalin which must all be weighed carefully when someone wants to clarify the sins of Stalin. It is only natural, that one cannot stop with recognizing the sins of Stalin, and publicizing them. From these sins, neither you Mr. Khrushchev, nor Mr. Molotov, or even Marshal Voroshilov can be considered exempt, without taking into consideration the end results. As you have been rid of Stalin, so you must rid yourselves of continuing his sins. The sins of Stalin can be expressed in one word: "terror." The results of terror cannot be eliminated by the substitution of a minor terror. You cannot diminish terror at home, and keep up the terror in the international scene. The opposite of terror is freedom. Terror, in even a diminished quantity, is negative; freedom, on the other hand, is positive. This positive idea is the one which must be employed against Stalinism both on the national and the international scene.

It cannot be doubted, Mr. Khrushchev, that you have done a great service to mankind when you place Stalin in history where he rightfully belongs, beside Hitler and the other bloodthirsty terrorists. You have helped along a new way of thinking in the people living under communism, and in those who, in a free world are studying communism, or sympathize with it. But you will only serve mankind truly, if you do not stop at unmasking Stalin, but without any hesitation will begin the liquidation of Stalin tactics. You must give back the right of self-determination to nations, and to the people, as you have together with your fellow leaders won your rights for self-determination through the death of Stalin, and by the recognition of his crimes.

It is not enough to speak about those sins of Stalin which can no longer be rectified. It is those crimes which must be brought to light which Stalin committed against the living: people and nations as well. The dead cannot be resurrected, but imprisoned people can still be liberated, and unjustly subjugated and terrorized nations can also be set free.

Respectfully,

FERENC NAGY,
Former Prime Minister of Hungary.

WASHINGTON, D. C., *March 27, 1956.*

Edward V. Gronet, Polish-American Leader

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 8, 1956

Mr. ANFUSO. Mr. Speaker, Polish-American professional and businessmen of the metropolitan area—Greenpoint, Brooklyn—honored Edward V. Gronet with a testimonial dinner-banquet, Sunday, April 15, 1956, in Brooklyn, N. Y. The event marked the 10th anniversary of Eddie Gronet as a polka disc jockey of Polish-American radio programs Polka Time from station WWRL, Woodside, N. Y. He was the first to introduce a Polish-American TV program, WATV Polka Party, on channel 13, Newark, N. J., which covers four States: New York, New Jersey, Connecticut, and Pennsylvania.

The entire program for the testimonial dinner-banquet was prepared and arranged by the following Polish-American professional and business men: Chairman, Vincent Brunhard, president of the Ampol Baking Co.; vice chairman, Matthew Widlicki, vice president and treasurer of the D. & Z. Bottling Co.; Martin Weglicki, president of the White Eagle Market; treasurer, John Bucko, of the Bucko Jewelers; secretary, Ted Maksymowicz, of radio station WEVD; journal committee, Paul Pucilowski, of the Powers Furniture Co.; financial secretary, Mrs. Kashimira Garrison, of the Garrison Beauty Salon; ticket committee, Edward Zielenieski, of Martin's Shoe Store; and the reception committee, Al Bartosiewicz, of Newell Fuel Co., Hal Korman, and Dick Martin, WWRL-WATV.

As known to many friends and in the professional field, Eddie Gronet is a man of many accomplishments. In addition to his radio and TV programs, Eddie has one of the outstanding dance and recording orchestras in this area. The voice of Eddie Gronet is known to hundreds of thousands, if not millions, of Americans of Polish and non-Polish descent through his radio, TV programs, orchestra, and records.

Eddie Gronet received his education at the Sts. Cyril and Methodius Roman Catholic Parochial School, Bishop Loughlin Memorial High School, and Manhattan College—majoring in music and accounting.

During World War II he served in the United States Armed Forces with distinction for 4 years. Upon completion of his basic training, he was assigned to a tank destroyer unit and later transferred to the finance department at Camp Hood, Tex., where he was promoted to private first-class. Two months later he was promoted to staff sergeant and headed the enlisted personnel and officers day section. Third promotion in succession within 1 year raised him to the rank of warrant officer, junior grade, in the 8th Army Corps, Dallas, Tex. Later he was assigned to the 66th Infantry Division as an administration officer and was shipped overseas in 1944, where he served in England, Germany, France, and with the occupied forces in Vienna, Austria. While in Vienna, Gornet served in the Four Power Secretariat Office as chief clerk under Gen. Mark Clark. He was honorably discharged in May 1946 as chief warrant officer.

After returning from his tour of duty, Gronet resumed his radio and musical career. For the past 10 years he conducted, produced, and is the director of Polish programs at radio station WWRL, Woodside, Long Island, N. Y., and as such participated in many community drives for American Red Cross, heart fund, TB health fund, March of Dimes, Greenpoint Central Polish National Alliance of Brooklyn camp fund, and numerous Catholic and social charities.

Eddie Gronet has one of the outstanding dance and dance-recording orchestras in the New York-New Jersey metropolitan area, often appearing at Roseland Ballroom on Broadway. He is a re-

cording artist, having performed for Columbia Records and currently under contract with Coral Records. He is also an instructor at the Harmony Music School.

In 1950 he was awarded a plaque for being chosen the favorite polka band in a contest sponsored by Melody Girls, affiliated with the Polish Singers Alliance of America, and in 1953 was awarded a plaque by St. Adalbert Alumni Association, of Bronx, N. Y., as the most popular polka disc jockey. He was also a winner of first prize in a band contest sponsored by Loew's Meserole Theater in 1944. Last September 1955 Eddie Gronet's WATV polka party was awarded the first prize blue ribbon by the New Jersey State County Fair held in Trenton, N. J., for the outstanding TV program of its type.

Besides his music and radio work, Gronet is very active in numerous church, social, fraternal, and community organizations. He served a brief term as president of the Polish-American Democratic Club of the 15th Assembly District in Brooklyn, during which term he was a candidate for the assembly; vice commander of George Washingotn Post, No. 3, Polish Legion of American Veterans—PLAV; secretary of the White Eagle Democratic Club; a director of downstate New York division, Polish American Congress, member of Musicians' Union, Local 802, A. F. of M.; member of the American Radio and Television Artists—AFTRA; Greenpoint Lions Club; Victory Club; Kosciusko Foundation; General Pulaski Memorial committee trustee; Polish National Alliance; Sons of Poland; Holy Name Society; and Knights of Columbus.

Eddie Gronet is a true, a sincere, and a devout Polish and an American patriot, always willing to devote his time, energy, and services toward freedom and democracy. He serves and represents the Polish people of his and other communities well in all reespects, and the Polish people are always very proud of him. Eddie, through his untiring efforts, continues to promote Polish culture in all fields among Americans. Eddie Gronet is considered one of the outstanding Polish-American leaders in the New York metropolitan area.

Ike's Choice of Interior Head Will Be Revealing

EXTENSION OF REMARKS

OF

HON. WAYNE MORSE

OF OREGON

IN THE SENATE OF THE UNITED STATES

Monday, May 14, 1956

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Ike's Choice of Interior Head Will Be Revealing," published in the San Francisco Bee of April 20, 1956.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

IKE'S CHOICE OF INTERIOR HEAD WILL BE REVEALING

President Dwight D. Eisenhower yet has to make his personal position on national resources conservation completely and unequivocally clear.

There have been contradictory and inconclusive actions in the White House, notably the President's advocacy of and then cancellation of the Dixon-Yates contract and his on-and-off position on the natural-gas bill.

While speaking up for conservation, President Eisenhower bestowed high praise upon his retiring Secretary of the Interior, Douglas McKay, whose administration was marked by almost continuous charges of giveaways of the Nation's resources.

The President's laudation of McKay had some political implications, since there is nothing the Republican leaders would like more than to have McKay defeat WAYNE MORSE as United States Senator from Oregon.

But no such personal politics will be involved in the selection of a successor. And in the choice he makes the President will be demonstrating not only his convictions but from whom he takes advice on such matters.

One of those prominently mentioned for the post is Clarence Davis, who is Under Secretary of the Department.

In appraising McKay the Washington Post takes the position he was a genial Secretary who did not always know what was going on in the back room.

No such naivete is attached to Davis.

The Post points out it was Davis who negotiated the questionable Al Sarena mining claims in Oregon and who wrote into a Department directive almost verbatim the recommendation of the Pacific Gas & Electric Co. to relieve private utilities of power wheeling obligation.

Were the President to appoint Davis it would be a clear indication he approves of what has been going on in the Department.

Under McKay the Department slipped far away from the conservation ideals of Theodore Roosevelt and Gifford Pinchot. The President has the opportunity to reverse that trend.

Address by Hon. Edward J. Thye, of Minnesota, Before Reserve Officers Association

EXTENSION OF REMARKS

OF

HON. EDWARD J. THYE

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Monday, May 14, 1956

Mr. THYE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address I delivered before the Reserve Officers Association at St. Paul, Minn., on May 5, 1956.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY SENATOR EDWARD J. THYE TO RESERVE OFFICERS ASSOCIATION, STATE OF MINNESOTA, AT ST. PAUL, MINN., May 5, 1956

Never before in our history has the United States been required to invest so heavily in preparing for conflict at a time when its citizens are receiving and enjoying the dividends of peace. As a world leader, we are in the position of leading the forces for freedom and peace in the tense struggle against Russia and her satellites.

This type of position in world affairs presents many problems which we have not faced before. On the one hand, we must make every effort to establish friendly relations and a desire for peace by all nations and, at the same time, think in terms of a war which promises mass annihilation. We must investigate all possibilities for disarmament, but, at the same time, continue our development of the most destructive weapons man has ever known. Within our own Nation, we must gradually build our Armed Forces into an effective and efficient fighting unit, but, at the same time, we must place a priority upon the factors which make up a peacetime economy and society.

We are, as a nation, in the position of a man working in the sunshine with the clouds of a summer storm in the background, threatening to interrupt his activity.

To maintain a proper balance between our search for peace and our preparation for a possible conflict demands the greatest skills of leadership available. In President Eisenhower, we have such leadership. He is particularly suited for leadership at this time because he, above all others, combines the type of statesmanship and diplomacy needed to build a foundation for peace, with the vast experience which he has in guiding the military destinies of the United States and the free world.

The many difficult problems which we have at the present day, however, demand the maximum efforts of all citizens in positions of responsibility. That is why I am pleased to have the opportunity to meet with the Minnesota State Reserve Officers Association. As a veteran of World War I, when I served as both an enlisted man and as an officer, and as your Senator, I understand your problems and recognize the importance of your program in supplying the type of leadership we need today.

Our main concern right now is to establish a proper balance between our manpower reserve and research into existing and new weapons within the budgets established by the administration and the Congress.

The greatest possible effort must be made in the development and research in the field of guided and interceptor missiles. We have already spent millions of dollars in missile research and development and will continue to make this program a priority in our defense preparation. We also realize that the Russians are concentrating right now on missile development. It is no secret that the intercontinental missile, when fully developed, will have a deep impact on relations between the major world powers. At the same time, an interceptor missile which is capable of destroying a missile already in flight will further change the pattern of any future conflict.

At this point, I would like to make clear that I do not view a conflict of major powers as imminent. I believe that all nations are coming to the point where they realize the futility of war. However, we cannot operate on the assumption that peace is assured. We must protect ourselves against any possible outbreak of war. We learned very costly lessons at Pearl Harbor and in June 1950, when the Korean war started. Never again can we afford to be caught off balance.

I should also like to take issue with those who state that manpower is no longer important to our defense planning because the next war will be a pushbutton war and will be over in a short time. No matter what scientific advances we make in the development of new weapons, we will still need well-trained manpower in all branches of the service.

The Congress had this in mind when it passed the Reserve Forces Act of 1955. The

passage of that act was a major step in the development of a strong and effective Reserve, which can be trained and schooled in methods of modern warfare.

In drafting this legislation, the Congress recognized certain facts which make the task of building a Reserve force difficult. We might as well admit from the outset that we are a peace-loving Nation and that during times of peace it is hard to generate enthusiasm for an active fighting force and for a large Reserve. This is a psychological hurdle which must be met.

The young high-school graduate will always have doubts as to why he should be called into service during times of peace. That is only natural. Once he sees that he has a responsibility to his country to maintain its defenses, he will be willing to cooperate and serve in the active forces. However, he would like to have that new responsibility set forth in the most definite terms. That is what the Reserve Forces Act does. It gives the high-school graduate or the person under 20 a variety of alternatives in serving his country.

You are all aware of the provisions of the law and the choices the men have in fulfilling their military services. The opportunity to serve in Active Reserve units not only stimulated Reserve activity but also made the Reserve a most important element in our defense planning.

The present goal is to establish by 1959 an active Ready Reserve of 2,900,000 men. We also hope to have a Standby Reserve of approximately 2 million men by 1959. Much of the responsibility of reaching that goal rests on you as Reserve officers. If we are to meet the goal, we must carry out a consistently effective education program to inform the prospective reservists of the various opportunities which are available. This program must be carried into every community and high school of the United States. The law is a good one. It seeks to alleviate hardships and inequities. It attempts to show the young men in definite terms what is expected of them and enable them to plan for the future. It allows them to proceed with their education at higher levels with the least amount of dislocation.

These facts must be made known to the parents of these men. It is only natural that a parent should be concerned over the future welfare of his child. Parents who want to send their children on to college and university should know that they can do so with no serious delay because of military service.

Prospective employers of these prospective servicemen should be aware of the provisions of the act. They should be encouraged to hire men of military age. They need not fear that a man will be taken away for a long period of time after he has been trained in a business or vocation. These were all factors which made your work difficult in the past. We have tried to make your task easier through this legislation.

The provision allowing for 6 months' active duty and 7½ years in the Reserve should stimulate greater scholarship achievements in our high schools. This, in itself, will have many favorable ramifications. The high-school graduates should also be told that the Armed Forces today make every attempt to place them in positions for which they have an aptitude or for which they have prior training and experience.

This entire program is designed to allow the graduates to fulfill their military duty when it interferes least with his education and plans for a career. This will remove him from the uncertainties of the draft calls.

Another provision of the law which is of great importance is the screening of ready reservists in peacetime. This is a constant process whereby persons of unusual civilian skills may be transferred to the Standby Reserve. This serves to stabilize our civilian labor force so that we may avoid serious dislocations and inequities if it becomes necessary to carry on an actual war.

This Reserve program should have the solid support of all citizens. This support will develop as the people become aware of the many benefits of this plan. It is too early to evaluate the success of the Reserve program either in terms of enlistments or of public acceptance and support.

Another problem which we face is that of retaining already trained men who are on active duty. This has become an increasingly serious problem, due to our domestic economic and social advances made in the past 10 years.

The high degree of prosperity which we enjoy in our civilian society has made a military career less attractive. Just the other day, I came in contact with a striking example of this. A major in the Air Force who had 13 years of active service found it necessary to take a job in civilian life. He told me that his date for retirement would come up at the same time that his children would be of college age. His desire is like most other parents—to send his children to college. The only way he can plan for that is to accept a position at a higher pay level. Here is one case, and there are thousands of them, where the Armed Forces will lose a trained and qualified man who has spent 13 years of his life in the military service.

As your Senator and as a member of the Appropriations Committee, I can see the same thing happening not only with officers and enlisted men but with highly skilled civilian employees. Private industry today can give to these men a greater amount of economic and financial security.

The last session of Congress took some steps to correct this situation, and the current session will take further action. Such items as reenlistment bonuses, improved medical care for military dependents, and increasing career incentives for doctors and dentists. It is necessary that action be taken to provide service personnel benefits which are more comparable with those enjoyed in civilian life.

There are indications that this inducement program has already eased the manpower situation. The general Department of Defense reenlistment rate for Regulars has increased from 27 percent in fiscal year 1955 to about 43 percent up to March 1 in fiscal 1956. As a result of the increased reenlistment bonuses and career incentive measures, there has been a sharp rise in the proportion of 6-year reenlistments. The total reenlistments in fiscal year 1954 was 47 percent, as compared with 77 percent in the current fiscal year.

There is another facet in this entire manpower situation which does not directly affect the Reserve program, but which is tied in directly with our entire manpower and research and development program.

At the present time, the United States has taken the lead in scientific and technological development, but at the same time we are faced with a shortage of future manpower in these same fields. We must continue our leadership in these areas and make certain that the Russians do not surpass us.

The Soviet Union today is graduating each year over twice as many engineers and scientists as are being graduated in the United States. We are faced with a marked and continuing decrease in the number of qualified teachers at the high-school and college levels in the basic-science fields. As a result, we have fewer and fewer students each year who are pursuing studies in the sciences and in engineering. We are now faced with a situation that at the same time as science and technology are moving to a position of unprecedented importance, the manpower to maintain our progress is declining.

To meet this situation, the President has appointed a nationwide commission to advise the administration as to what can be done to solve this dilemma. Along the same line, I have introduced in the Senate a resolution to establish a Joint House-Senate Committee on Scientific Research. The legislative branch cannot escape the fact that it is going to become more deeply involved in this area of activity. We will be called upon to work with plans and programs established by the executive branch of Government, including the Department of Defense. Such a committee would work in cooperation with the executive agencies, industry, and our institutions of learning. It would, as a result of its work, be in a position to advise and counsel the proper legislative committees which will be called upon to legislate in this area.

We must be ever mindful of our responsibility as a world leader to establish a firm foundation for peace and freedom for all peoples of the world. The Reserve Officers' Association must play a key part in the progress which we make. Without a large and well-trained Reserve, we cannot prevail. No one can predict at this time whether our destiny is to be written in terms of war or peace. We must maintain a steadfast faith and confidence in the hopes for peace, but at the same time, we must be ready to defend the cause of freedom and justice whenever the time should come.

The Significance of OTC

EXTENSION OF REMARKS

OF

HON. PETER FRELINGHUYSEN, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, May 14, 1956

Mr. FRELINGHUYSEN. Mr. Speaker, under leave to extend my remarks, I should like to insert in the RECORD an article from the May 11, 1956, issue of the Washington Post and Times Herald, by Roscoe Drummond, as follows:

(By Roscoe Drummond)

The Eisenhower administration is going to have quite a fight on its hands to win one of its main objectives at this session: Congressional approval for United States membership in OTC—Organization for Trade Cooperation.

This is no big headline-making issue. Win or lose, it won't carry a doubtful State or lose a doubtful district. But OTC is the symbol of everything the United States has been trying to do for years, including the Eisenhower years, to expand the channels of profitable trade throughout the free world.

It is the strong conviction of the President:

That American labor, agriculture and business will be benefited by what OTC can do in expanding world trade.

That OTC cannot function effectively without the United States.

That America would be abdicating its world leadership and would be virtually conceding the field to the Soviets if we decide that OTC isn't worth the effort.

The congressional outlook is not as good as the 18-to-7 vote of approval which the House Ways and Means Committee gave to OTC. While the Democrats voted overwhelming, 14 to 1, for United States membership, the Republicans voted substantially, 6 to 4, against OTC. Obviously the President will have to do a lot better than that with his own party if he is to win.

Secondly, the House Ways and Means Committee voted strongly for OTC because its members have come solidly to grips with the facts and know that most of the arguments used against it are fabricated eyewash.

Things bring us to the oddly revealing circumstance that almost the whole opposition to OTC rests upon charges which have not the slightest relationship to reality.

One can honestly argue—though I happen to think mistakenly—that we ought to dump the Reciprocal Trade Act, turn our back on the effort to build freer multilateral trade and put further subsidies on the American consumer to protect the prices of American industry.

But for particular industries—which don't want the hot breath of world trade to force them to be more efficient and more competitive—to argue that OTC puts the Nation's economy into international bondage, scraps the authority of Congress over tariff policy, sinks American sovereignty and undermines United States industry is adulterated buncombe.

It does none of these things. The bill which would put the United States into OTC guards against all these things. There is no factual basis for such contentions.

The fact that the charges are being made and blandly circulated to Members of Congress suggests that the arguments against OTC are so weak that its opponents dare not use them. They are erecting instead a massive, miasmic wall of fiction which they hope will confuse those who haven't laid hold of the facts.

OTC does not involve any new tariff reduction authority, does not change any United States law, does not affect Congress' authority to legislate, does not give the President any additional powers, does not touch the safeguards of the Reciprocal Trade Act like the peril point, and the United States retains a veto over any action which affects American policy.

You wouldn't get Secretary of Commerce Sinclair Weeks or Cola G. Parker, president of the National Association of Manufacturers, to support OTC as they do, if it did any of these things.

OTC is made up of 35 countries which do 80 percent of the trade of the free world. It would be the administrative instrument to carry out existing trade agreements and iron out trade disputes within the framework of existing policy. It would play a big role in preventing other nations from discriminating against United States exports.

Secretary Weeks is no pie-in-the-sky visionary. His report to the Cabinet on OTC was: "With Soviet economic activities on the increase, the United States must strengthen its cooperation with free nations in the trade field. OTC is essential to this end."

Ike Ranks Only Third in Days Spent Away From the White House

EXTENSION OF REMARKS
OF
HON. LEO E. ALLEN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 14, 1956

Mr. ALLEN of Illinois. Mr. Speaker, Under unanimous consent, I insert in the RECORD an Associated Press dispatch captioned "Ike Ranks Only Third in Days Spent Away From White House:"

WASHINGTON.—The magazine U. S. News & World Report said today President Eisenhower "ranks third among modern Presidents in time spent away from Washington for reasons other than convalescence from illness."

The magazine said it went to official records which gave a log of each Presidential trip, regardless of how short in time and distance, and it continued in a copyrighted article in its current issue:

"Franklin D. Roosevelt was away from his desk at the White House more days each year, on an average, than any other President in this century. William Howard Taft averaged fewer days away from the White House than Mr. Roosevelt, but was away more days than Mr. Eisenhower."

Including both official trips and vacations, U. S. News & World Report said this was the average time spent away from Washington yearly by the last eight Presidents:

Roosevelt, 136 days, not counting 29 days of convalescence from a persistent respiratory infection spent near Georgetown, S. C., in 1944; Taft, 131 days; Eisenhower, 124 days, not counting 81 days of convalescence from a heart attack spent at Denver and Gettysburg, Pa., Calvin Coolidge, 96 days; Harry S. Truman, 86 days: Warren G. Harding, 63 days; Woodrow Wilson, 61 days; Herbert Hoover, 44½ days.

The magazine gave figures on "work-and-play" vacations of the last three Presidents.

It said Roosevelt spent 483 days (not counting 29 days of convalescence) at Warm Springs, Ga., on cruises and at other vacation spots while in office.

Truman spent 309 days at Key West, Fla., on cruises and at other vacation spots, the magazine said.

It said Eisenhower has spent 283 days not counting 81 days of convalescence at Denver, Augusta, Ga., and other vacation spots while in office.

The magazine said Roosevelt averaged 59 days a year while in office at his home in Hyde Park, N. Y.; that Truman averaged 12 days a year at his home in Independence, Mo., and that Eisenhower has averaged 24 days a year at his farm home near Gettysburg, Pa.

U. N. Building Used With Lease Unassigned

EXTENSION OF REMARKS
OF
HON. USHER L. BURDICK
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 14, 1956

Mr. BURDICK. Mr. Speaker, I have here an article by David Sentner, chief, Los Angeles examiner, Washington bureau. Under leave to extend my remarks, I wish to insert this material in the RECORD, so that all who read it may see how we are being hoodwinked by this organization, and how it protects and promotes communism in this country:

WASHINGTON WINDOW

WASHINGTON, May 6.—The United Nations never did ratify the amended headquarters agreement—you might call it the lease and fine print trimmings—through which Uncle Sam, the landlord, is supposed to let the internationalist organization operate in the United States.

Maybe Bridey Murphy's eye specialist can explain why nobody noticed this before, including the State Department, the courts and public vigilante groups.

The inference is that the U. N. has been functioning 10 years against the mandate of Congress—which tacked on a reservation to the agreement when it passed a joint resolution in 1947.

The revised agreement—under the tagline of Public Law 357—was sent along to the State Department which presented it to the U. N.

The U. N. officially ignored it, pretending that the unrevised original document, signed by U. N. Secretary-General Trygve Lie and Secretary of State Marshall in 1946 (on the assumption Congress would okay it) was a sufficient arrangement.

The major reason, apparently for the U. N. not approving the hearquarters agreement with the United States, as revised by Congress, was that it proclaimed the right of this country to keep out Communists.

The reservation in Public Law 357, intended to effect an agreement between the United States and the U. N. for establishing a permanent U. N. headquarters here, declared:

Nothing in the agreement must diminish, abridge, or weaken the right of the United States to safeguard its own security and completely control entrance of aliens into American territory, other than the headquarters district. The boundaries of the latter were to be fixed in a supplemental agreement.

The State Department admits the U. N. has never ratified the document.

Therefore, does it mean even the territorial confines of the U. N. is a shadowy matter?

That the controversies over Communists in the U. N. and whether they should receive back pay, should be thrashed out anew?

That the very legal status of the U. N. is open to question along with many of its decisions?

A State Department official presented the following picture:

Circumstances have never arisen to force the issue with the U. N.

The U. N., in general, has acted as if the reservations had been formally approved.

One reason why the Republican 80th Congress put through the headquarters agreement's protective clause was to slow the funneling of top Communist agents into the United States under the guise of U. N. personnel.

Contributing to the general confusion on the subject was the turnabout last week in granting an American visa to Alain Leleap to attend a U. N. group meeting here.

Leleap recently was released from a Paris jail on the charge of imperiling French security along with other Communists.

The above-face was explained at the State Department as due to the determination it was not a security matter but a political matter.

Employment at New Peak

EXTENSION OF REMARKS
OF
HON. LEO E. ALLEN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 14, 1956

Mr. ALLEN of Illinois. Mr. Speaker, under leave to extend my remarks in the RECORD I include an Associated Press dispatch captioned "Employment at New Peak":

EMPLOYMENT AT NEW PEAK—BUSINESS BOOMS

WASHINGTON.—Government chart-watchers Wednesday came up with a sheaf of favorable business reports, including a 912,000 rise of employment in April.

That brought the number of jobholders to an April record of 63,990,000. Simultaneously unemployment dropped by 270,000

to 2,564,000 despite continuing layoffs in the automobile industry, the Commerce and Labor Departments reported.

Similar economic strength was reflected in new reports on construction last month and on factory sales, corporation earnings, and dividend payments last year. Meantime the United States Chamber of Commerce, which polled its businessmen members at their annual meeting here last week, reported the results; they augured well for business activity in the second half of this year.

Forecasts by 404 employers, the chamber said, showed that a majority expect both sales and employment in second half 1956 to equal or exceed the levels of this half.

The Commerce Department reported that new construction activity totaled $3,300,000,000 last month. This matched the all-time April record set a year ago and was 9 percent above March.

Residential activity ran 8 percent behind last April's unprecedented level, but commercial building and highway construction rose to records for the month—up 18 percent and 4 percent, respectively, from April a year ago.

A joint report of the Securities and Exchange Commission and the Federal Trade Commission showed that manufacturers' earnings in 1955, both before and after taxes, were approximately 35 percent higher than in the previous year.

The higher rate of business activity which prevailed in the first three quarters of 1955 was well maintained to the year end, the report showed. Sales set a record for the fourth quarter at $73,600,000,000 and profits after taxes were $4,200,000,000.

Petition to Congress

EXTENSION OF REMARKS
OF
HON. USHER L. BURDICK
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 9, 1956

Mr. BURDICK. Mr. Speaker, I have here a petition from the National Patrick Henry Organization, of Columbus, Ga., which I have been requested to insert in the RECORD by its national secretary, Mrs. Jessie W. Jenkins:

Whereas during the year 1945, certain forces among us were busily engaged in whipping up a new League of Nations under the label of "United Nations Organization," which was purported to end wars through diplomacy;

Whereas these more or less self-appointed Solomons of the now familiar ideological cult, employed deceit, fraud, and flagrant misrepresentations to sell it to our Senators as a great peace instrument;

Whereas its utter fallacy has been proven in a thousand disastrous ways, including the Korean sellout, wherein we now know Russians also fought, while a Red Russian general directed that war through U. N., contriving the brutal slaughter of thousands of our sons, and our first military defeat;

Whereas the UNO Charter, section 7, article 2, states: "Nothing contained in the present charter shall authorize the U. N. to intervene in matters that are essentially within the jurisdiction of any state," but has proceeded to set up a host of treasonable agencies, such as ILO, Human Rights, Genocide, UNESCO, and so on and on, all of which are designed to destroy our States rights, our established laws and customs, our sovereignty, and with it, our freedom, as in Russia;

Whereas we now know and must recognize these forces as the sponsors of the world Communist conspiracy, whose aim is world conquest as attested by the swallowing up of many other nations and the enslavement of their millions before our eyes, as grim reminders of the feudalism and barbarism of the Dark Ages;

Whereas evidence abounds that top brackets of our armed services are loaded with men willing to collaborate, while the covertly obtained "Status of Forces Treaty" places our fighting men in jeopardly of being framed and wiped out at the command of a Red general whom the U. N. Charter provides shall always head its Military Department, proving U. N. authorship the implacable foes of all Christendom;

Therefore, we of the National Patrick Henry Organization, Inc., solemnly declare that U. N. is a den of spies, an agency of destruction, and our mortal enemy;

That its sponsors and supporters are enemies of America, and that Congress should so declare, on the basis of U. N.'s treasonable record, if not their own;

Further, we implore and petition Congress to rescind and abjure U. N.'s Charter forthwith with all its treasonable agencies; to drive it from our soil and to prosecute all its one world Benedict Arnolds.

Mrs. JESSIE W. JENKINS,
National Secretary-Treasurer.

Bend, Oreg., Sets an Example

EXTENSION OF REMARKS
OF
HON. SAM COON
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, May 14, 1956

Mr. COON. Mr. Speaker, it is certainly a memorable occasion when a city makes a decision not to apply for Federal funds, which would almost certainly be granted to it. Bend, Oreg., is a very progressive and civic-minded city in my district. It is working on a planning survey for a comprehensive city plan. Instead of asking for Federal funds, it decided to pay its own way.

Under permission to extend my remarks in the RECORD, I am including an editorial telling the story of this event, which appeared in the Boise (Idaho) Statesman and which was reprinted in the Bend Bulletin:

BEND SETS AN EXAMPLE

Well deserving of a preferred position in some national hall of fame is Oregon's town of Bend whose city commissioners have lately rejected a proposal that an application be made for Federal funds to finance a planning study.

Some years ago before ever such an enormous proportion of the national income was siphoned into the Federal Treasury, an Idaho town came in for a good deal of favorable comment when it turned down a proffered new Federal building because, the townspeople said, it wasn't needed.

Bend does have a recognized need for its planning survey. Annually the past 2 years it has appropriated $5,000 to complete a comprehensive city plan. When it was suggested this year that this expense be unloaded on the Federal Treasury, Hans Slagsvold, ex-mayor and a member of the city commission, led the opposition. He argued to this effect:

"Getting Federal money to match our funds is only evading responsibility. If we need money to continue our city planning, let's get it into the budget. Any Federal money you get is money you have sent to Washington, minus freight charges both ways."

Slagsvold's argument was nothing more than plain common sense. But in this instance it was effective. The seven-man commission headed by Mayor Hap Taylor unanimously tabled the proposal.

It may be that Bend, in this instance, has provided the exception that proves the rule these days. Even at that, there must still be quarters in which it will be hailed as a wholesome manifestation of fidelity to the essential virtues of self-reliance and local self-government.

Is it too much to hope that Bend's example may be taken up by so many other communities that their action may be reflected sometime in a reduction of demands that may be translated into a measure of Federal tax relief?

Henry Cabot Lodge and the U. N.

EXTENSION OF REMARKS
OF
HON. HAROLD C. OSTERTAG
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, May 14, 1956

Mr. OSTERTAG. Mr. Speaker, we seem to be engaged this year in enshrining a myth, at the expense of history. The myth is achieving heroic proportions by virtue of the celebration of the centennial of Woodrow Wilson's birth. It is to the effect that, except for the benighted and vindictive opposition of a little group of willful men, headed by the late Senator Henry Cabot Lodge, America would have joined Woodrow Wilson's League of Nations and peace everlasting would thereupon have descended on the earth.

There are several things wrong with this myth, but time and space do not permit correction here. Suffice it to say that the United States rejected the League of Nations for good and sufficient constitutional reasons—reasons, I may say, which Europe was willing to accept but which Woodrow Wilson was not; and that the main reason was a refusal by the United States to permit a supranational organization to commit this Nation to war, at any time or place on the globe, in violation of our constitutional processes.

The matter is important because generations of young Americans are reaching maturity, believing, on the basis of what they hear and read in some quarters, that the world's hope of peace and utopia was destroyed by Senator Henry Cabot Lodge and some of his colleagues, including my distinguished predecessor in this body, the late Senator James W. Wadsworth, Jr., out of personal animus toward Woodrow Wilson. Only recently I heard this canard going out on the airwaves from a great New York City radio station. Then the young people turn their eyes to New York, and see that this country is the home of the United Nations, and certainly its most devoted supporter, financially and otherwise; and they see that our two Ambassadors to the United Nations are former Senator Henry Cabot Lodge and Mr. James J. Wadsworth, the grandson and son, respectively, of the men who they are told, "wrecked" the League of Nations. Is it any wonder they are con-

fused? Is it any wonder that our friends from abroad, who are even less familiar with our history and our constitutional processes, are even more confused?

In fairness to ourselves, to our contemporaries here and abroad, and to posterity, and above all, in fairness to our distinguished and devoted United States representatives at the United Nations, we ought to be doubly sure, Mr. Speaker, that we do not falsify history in order to honor Woodrow Wilson. There are honors enough to go around.

The elder Henry Cabot Lodge did not set out to scuttle the League of Nations. He tried to bring it into conformity with our hard-won constitutional processes, and time has amply justified his efforts, for the improvements for which he fought, and which Woodrow Wilson would not accept, were, in fact, incorporated in the Charter of the United Nations. The U. N. today is a tribute to the idealism of Woodrow Wilson, but it is also a tribute to the devotion to constitutional processes of Henry Cabot Lodge.

A book entitled "Through These Men" has recently been written by the distinguished author, John Mason Brown. It deals in part with the Lodges, senior and junior, and sets forth, in brief but accurate perspective, the history of the principles for which they fought—principles which were ignored in the League but recognized in the U. N.

Under leave to etxend my remarks, I include in the RECORD some pertinent excerpts from the chapter on Henry Cabot Lodge:

WILSON AND THE ELDER LODGE

Politics absorbed Lodge as they had never attracted his father, and his politics, while he was in college and for the first years thereafter, were his grandfather's. The old Senator died in 1924, 9 months after Woodrow Wilson. During his last 3 years, when he was reviled or revered for his successful fight against Wilson's League of Nations, the first Henry Cabot Lodge's relations with his namesake became closer and closer. An austere man, small in size but commanding in manner, he thawed completely when with his grandson. His eyes lighted up at the sight of him and his face, so often haughty in expression, creased into a hundred smiling wrinkles above his pointed beard and flowing mustache. His was the final flattery of treating his grandson not as a grandson but as an equal in knowledge and experience, and talking with him man to man about national and international affairs.

The young Lodge had good reasons for being proud of his grandfather, reasons which have been obscured or forgotten by those unable to forgive the Senator for having won his battle against the League. Many disagreed violently with his policies, but none could deny his courage, his skill as a strategist, and the multiplicity of his talents. More than being a practical politician, he was a scholar-author-historian. As such he belonged, even as Wilson and the earlier Roosevelt did, to a race of public servants, now almost extinct in this country, of which Churchill in contemporary England has been the most glittering example.

Considering the crowded life he led, the elder Senator's literary productivity was incredible. His biographies of Hamilton, Webster, and Washington were much admired. He turned out work after work on American history, produced countless monographs, and found time to edit, among other things, the Federalist, Andre's Journal, and a nine-volume collection of the works of Alexander Hamilton. The bitterest of his books, though an able presentation of his own position, was the Senate and the League of Nations, a subject which the old gentleman and his grandson discussed by the hour.

The struggle between the elder Lodge and Wilson left its permanent scars on history. Although it turned everyone into a partisan, few could have followed it with a keener interest than young Lodge. It was a battle royal from which, in a ringside seat, he learned much about the infighting of politics, the sorry fate of the highest of ideals when those who fight for them disregard the political means essential to their realization, and the Senate's adamant determination to preserve its constitutional rights.

In spite of their irreconcilable differences, the elements of greatness in Wilson, and Wilson's far larger role in history, Lodge and Wilson had many things in common. Both were brilliant and both scholars. Both were zealots in the beliefs they held and acted in good faith. They were equals in their arrogance and in their unwillingness to compromise. Lodge fought his case with the technical precision of a prophet. This meant the President enjoyed an advantage in the eyes of his contemporaries no less than of the future. He held the trump card, an appeal to the most radiant of man's hopes—lasting peace.

The Senator paid dearly for his victory. His reputation continues to suffer because he felt obliged to oppose the President's global program by mentioning anything which seemed so mean and petty to the idealists of that moment as our national interest. Wilson was talking in terms of moral grandeur, Lodge in cold hard facts. The Senator was, therefore, cast as a villian in the minds of many who did not care about the details by which peace was achieved so long as it seemed guaranteed. Although Lodge rightly resented having the covenant and the treaty presented as a package deal, he was not against the League, as some were. He was for it, but with reservations. Wilson, however, wanted all or nothing and, rather than accept the treaty with reservations, urged Democratic Senators to vote against it when it came up a second time on March 19, 1920.

Many have pointed out the irony of having the United States represented at the "new League" by the grandson and namesake of the man who in the popular mind is supposed to have done most to keep us out of the old League. The real irony lies elsewhere. It is to be found in the U. N. Charter. It was presented to the Senate unattached to any treaty, and its provisions include equivalents of some of the reservations which created such bitterness when Lodge proposed them. Among these are the U. N. guaranty not to intervene in a domestic question; the denial to small countries of equal voting power with the large countries in the making of action decisions; and—shades of article X—the stipulation that each member nation can ratify its particpation in military actions according to its constitutional processes. In other words, in theory at least, the United States cannot be involved in a war or requested to send men overseas without the consent of our Government.

The Rapid Growth of Tax-Exempts

EXTENSION OF REMARKS
OF
HON. NOAH M. MASON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 14, 1956

Mr. MASON. Mr. Speaker, tax-exempt organizations in the United States are increasing in number and size at a very rapid rate. They are making continued inroads upon taxpaying establishments everywhere. The high corporate rate of taxation, 52 percent, gives the tax-exempt competitors of taxpaying businesses such an advantage that they are growing about as fast as a snowball rolling down a mountain side—growing in momentum with ever-increasing speed. Tax-exempts during the past 15 years have grown from a $5 billion income to a $20 billion income.

Mr. Speaker, with such a tremendously accelerated growth during recent years, it is past time that all tax-exempt business organizations that are in competition with taxpaying business organizations be put upon the same taxpaying basis as their competitors.

The National Association of Refrigerated Warehouses, Inc., at their 65th annual convention in Los Angeles, held recently, adopted the following resolution which I include as a part of my remarks:

Whereas 40 years of cooperative enterprise tax privileges has been abused and perverted from its original meaning; and

Whereas the "patronage dividend" scheme has been used by many business groups competing with taxpaying American enterprise in order to escape their fair share of taxes: Now, therefore, be it

Resolved, That our industry, contributing millions of tax dollars each year to the economy, does favor enactment of H. R. 43 now pending in Congress, which would end this abuse and equalize taxation for all competitive enterprise.

Opposition to Use of H-Bombs in the Pacific

EXTENSION OF REMARKS
OF
HON. WAYNE MORSE
OF OREGON
IN THE SENATE OF THE UNITED STATES
Monday, May 14, 1956

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a recent advertisement headed "We Dissent, Mr. President," published by the Women's International League for Peace and Freedom.

There being no objection, the advertisement was ordered to be printed in the RECORD, as follows:

WE DISSENT, MR. PRESIDENT—WE DO NOT AGREE THAT THE EXPLOSION OF H-BOMBS IN THE PACIFIC IS NECESSARY FOR OUR DEFENSE

We oppose not only these tests, but any future tests, because they imply our continued reliance on weapons of mass destruction for peace and security.

We agree with the renowned nuclear scientists, including seven Nobel Prize winners, who served notice to the world (July 1955) that the hydrogen bomb threatened the continued existence of mankind. They said in part:

"We appeal, as human beings to human beings: Remember your humanity and forget the rest. We have to learn to think in a new way. We have to learn to ask ourselves, not what steps can be taken to give military victory to whatever group we prefer, for there not longer are such steps; the question we have to ask ourselves is: what step can be taken to prevent a military con-

test of which the issue must be disastrous to all."

This is why, Mr. President, we, the undersigned, speaking from our deep concern, have this message for you:

We ask that you now cease these series of hydrogen-bomb tests in the Pacific, and that you seek agreement through negotiations with other nations for cessation of all such tests.

The cessation of thermonuclear weapons tests would be welcomed for the following reasons:

It has been acknowledged by the great powers, both at the summit conference and subsequently during the disarmament debates in the United Nations, that a practical limit to nuclear weapon power has already been reached. To cancel these tests, Mr. President, would be in keeping with this opinion and, moreover, would advance greatly the initiative of the United States at all future sessions of the disarmament commission.

These tests may well be considered an affront by millions of people throughout the world who do not share the confidence of the great powers in the war-deterrent effect of these weapons, and who have not participated in this decision which so vitally affects them.

Cancellation of the tests would have a tremendous moral effect on the people of this country and on the peoples of the world who look to the United States for leadership away from the fear of war and destruction, and toward a fuller life for the present and the future. In particular, we would be showing good faith to the people of our trust Territory, the Marshall Islands, who have again petitioned the United Nations "that all experiments with lethal weapons within that area be immediately ceased."

Finally, since the biological and genetic effects of the explosion of thermonuclear weapons are not fully known, there can be no guaranteed safeguards for food, animals, and human life against the hazards which these experiments might create.

When you launched your atoms-for-peace program, Mr. President, you gave inspiration and hope to the entire world. Today, the reversal of your decision to hold tests would confirm what we truly believe is your dominating desire: this great new power be used for life only, and never for death.

Yours very truly,

Katharine Arnett, Philadelphia, Pa.; Emily Greene Balch, Wellesley, Mass.; Roger Baldwin, New York, N. Y.; Stringfellow Barr, Falls Church, Va.; Helen Marston Beardsley, Los Angeles, Calif.; Helen Boughton, Los Angeles, Calif.; Henry J. Cadbury, Wallingford, Pa.; Dr. Mary Owen Cameron, New York, N. Y.; Lucy P. Carner, Philadelphia, Pa.; Rev. Henry Hitt Crane, Detroit, Mich.; Dorothy Day, New York, N. Y.; Ruth Freeman, Ithaca, N. Y.; Alice Hamilton, M. D., Hadlyme, Conn.; Rev. Donald Harrington, New York, N. Y.; Dr. Michael Heidelberger, New York, N. Y.; Lewis Hoskins, Philadelphia, Pa.; Hannah Clothier Hull, Swarthmore, Pa.; Rev. Allan A. Hunter, Hollywood, Calif.; Dorothy Hutchinson, Jenkintown, Pa.; Samuel Guy Inman, Bronxville, N. Y.; William Kemsley, New York, N. Y.; Freda Kirchwey, New York, N. Y.; Dr. Flemmie Kittrell, Washington, D. C.; Dr. Charles D. Lawrence, New York, N. Y.; Caroline Biddle Malin, New York, N. Y.; Lenore Marshall, New York, N. Y.; Dr. M. F. Ashley Montagu, Princeton, N. J.; Stella W. Moos, Melrose Park, Pa.; Rev. A. J. Muste, New York, N. Y.; Bertha McNeill, Washington, D. C.; Kathleen Norris, Palo Alto, Calif.; Violet Oakley, Philadelphia, Pa.; Mildred Scott Olmstead, Moylan-Rose Valley, Pa.; H. A. Overstreet, New York, N. Y.; Dr. Victor Pashkis, New Jersey; Clarence Pickett, Haverford Pa.; Josephine Pomerance, Cos Cob, Conn.; Meta Riseman, Dryden, Mich.; Dorothy Medders Robinson, Washington, D. C.; Rev. Orris G. Robinson, Washington, D. C.; Rev. John Nevin Sayre, South Nyack, N Y.; Kathleen W. Sayre, South Nyack, N. Y.; May B. Schamberg, New York, N. Y.; Emily Parker Simon, Baltimore, Md.; Annalee Stewart, Washington, D. C.; Norman Thomas, New York, N. Y.; Howard Thurman, Boston, Mass.; Elizabeth Tolles, Swarthmore, Pa.; Gladys D. Walser, New York, N. Y.; E. Raymond Wilson, Washington, D. C.

IF YOU SHARE OUR CONCERN LET THE PRESIDENT KNOW

This advertisement has been initiated by the Women's International League for Peace and Freedom, founded in 1915 by Jane Addams, and has been made possible by the generosity of interested members. We welcome your interest and support in our continuing endeavors for peace and freedom.

Mrs. META RISEMAN,
National President, Women's International League for Peace and Freedom, 2006 Walnut, Street, Philadelphia 3, Pa.

I would like to know more about the program of your organization.

Name ----------

Address ----------

Letter From Harry S. Truman to Annual Convention of Americans for Democratic Action

EXTENSION OF REMARKS
OF
HON. JAMES E. MURRAY
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Monday, May 14, 1956

Mr. MURRAY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter which former President Harry S. Truman sent to the ninth annual convention of Americans for Democratic Action.

In the letter, Mr. Truman expresses concern over the decay of the grand alliance of free nations of the world, over the concentration of economic and political power in the United States, and over the administration's "cruel policy of lower farm prices and fewer farmers."

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

LETTER TO NINTH ANNUAL CONVENTION OF AMERICANS FOR DEMOCRATIC ACTION FROM HARRY S. TRUMAN ADDRESSED TO JOSEPH L. RAUH, JR., NATIONAL CHAIRMAN OF ADA

Mr. JOSEPH L. RAUH, Jr.,
National Chairman, Americans for Democratic Action, Washington, D. C.

DEAR MR. RAUH: Please extend my good wishes to the delegates of the ADA, meeting in their ninth annual convention.

The welfare of the country calls for hard work and courageous action by all ADA members and all independent liberals in this election year. After 3 years of concealment and complacency, the Eisenhower administration is preparing for us another election campaign of high-level Presidential smiles and low-level Vice Presidential smears. The job of the liberals is to bring the real issues out from behind the smoke screen and help all the people to reach an informed opinion.

Liberals today must realize that many of the old battles have been won by the liberal cause. There are new dangers to face and new problems to solve. These new problems demand the same kind of creative thinking that was successful in the past.

The country has unfilled needs for education, health, roads, and expanded community services of all kinds. Civil rights and civil liberties must be high on any liberal agenda. But I would invite your special consideration of three major problems.

First, on foreign policy. We must hold the free world together in the face of a new and more insidious Communist offensive. President Eisenhower has allowed the grand alliance of the free nations to fall into decay. Liberals have a contribution to make in devising new and constructive international measures based on the principle that unilateral action by any of the great free nations will fail to counteract the Soviet threat.

Second, our farmers. An agricultural depression is growing up in the midst of the boom. President Eisenhower persists in the cruel policy of lower farm prices and fewer farmers. Liberals must advance fresh ideas, such as the Brannan plan, to restore to our farmers a fair share of the national income.

Third, the growth of a new feudalism. Centers of private power, beyond democratic control, are exerting greater and greater influence over our national life, driving small business to the wall and strangling individual enterprise. This curse of bigness dominates our press, our air waves, our amusement industries, and is beginning to shape our thoughts and beliefs. We must oppose the socialism of corporate power quite as much as socialism by government. Liberals can serve their country by devising means to reverse this trend.

Let your thoughts be bold, and keep your sights high. For the United States of America, make no little plans.

Sincerely yours,

HARRY S. TRUMAN.

Paul Wooton, "The Man in Charge"

EXTENSION OF REMARKS
OF
HON. JOHN STENNIS
OF MISSISSIPPI
IN THE SENATE OF THE UNITED STATES
Monday, May 14, 1956

Mr. STENNIS. Mr. President, recently there appeared in the Washington Post and Times Herald an editorial entitled "The Man in Charge." The editorial refers to the Washington newsman, Mr. Paul Wooton, who for a long time has represented the New Orleans Times-Picayune and is a leader in the great newspaper profession. I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE MAN IN CHARGE

To Washintgon newsmen, Paul Wooton has been, for more years than seem probable, not merely an indispensable man but an indispensable institution. This friendly, easy-going, ubiquitous dynamo who for years has represented the New Orleans Times-Picayune and the Chilton Publications in Washington has been at one time or another

president of the White House Correspondents Association, president of the National Press Club, president of the Overseas Writers, chairman of the Business Papers Correspondents' Committee, and chairman or president of an appalling list of other groups and organizations. But he has been at all times permanent secretary-treasurer and chief arranger, factotum, and driving power of every one of them. Whenever the press corps has had work to do, Paul Wooton has done it.

So there was warm gratitude as well as deep affection behind the luncheon given yesterday in honor of Paul Wooton's 75th birthday. There is hardly a member of the press corps who has not personally felt his kindliness and generosity; and there is none at all who has not been a beneficiary of his talents as organizer of banquets, receptions, and celebratory events. When visiting kings or queens or prime ministers have come to Washington, it has always been Paul Wooton who presented them to the press—and always with a simplicity and grace that illuminated the occasions. He has made a career out of helping his colleagues. We congratulate him on his birthday; and we congratulate ourselves on having him among us.

Closing of CIA Offices Abroad

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Monday, May 14, 1956

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following column by Peter Edson which appeared in the Washington Daily News on Wednesday, May 9, 1956, in which Mr. Edson calls attention to the fact that nine United States foreign aid economic missions abroad have been closed during the past year:

FOREIGN-AID LIQUIDATIONS

(By Peter Edson)

The United States International Cooperation Administration offices, administering foreign aid in Bonn, Germany, and Vienna, Austria, will be closed July 1. Later in the year, says ICA Administrator John B. Hollister, offices in Rome, Italy, and Paris, France, will be closed.

This will make nine United States foreign economic aid missions liquidated in Europe in this fiscal year. Five were closed last September. They were in the Netherlands, Portugal, Denmark, Norway, and Belgium-Luxembourg.

It will leave only five of the original Marshall plan missions going. The principal one will be in London, for which no closing date has been set. It is still administering a sizable program of United States surplus disposal for British currency counterpart funds to help finance British defense.

The Greek and Turkish missions will be continued. Aid to these two countries and their military defense are now linked more closely with the eastern Mediterranean area.

United States economic aid missions in Spain and Yugoslavia are also being continued, but these two countries are now not in the North Atlantic Treaty Organization. Thus far, Spain has been allocated $232 million in defense support and Yugoslavia $336 million. For next year, $45 million in defense support funds are being requested for Spain and $30 million for Yugoslavia.

Actually, United States aid to Europe has been tapering off gradually for the past 2 years. No new programs have been started since July 1954. The only continuing program is $12 million for next year, requested to aid West Berlin's industries and help care for refugees coming from behind the Iron Curtain through East Berlin.

So by and large, the Marshall plan, which was started with such a great surge of enthusiasm in 1948 and continued in the mutual security program in 1953, will be liquidated by mid 1957. Its main function, which was to aid in the economic recovery of war-torn Europe, has succeeded.

What is proves is that these foreign aid programs do not have to go on forever, but can be terminated in time.

This fact has been generally lost sight of in all the hulabaloo over President Eisenhower's request for $4,900,000,000 to run the mutual assistance programs next year. This year's appropriation was only $2,700,000,000. There are $6,600,000,000 worth of foreign aid supplies on order but not delivered.

These are the figures which make most critics of foreign aid think that it is a constantly expanding and never ending program.

The important point most frequently overlooked in this criticism is that the big item is military aid—which must apparently continue indefinitely for United States' security.

Out of next year's $4,900,000,000 requested for foreign aid, $3 billion will be for military aid. And practically all of the $6,600,000,000 in unspent aid funds will go for military supplies.

Coal Char Industry To Open New Vistas for Red Lodge

EXTENSION OF REMARKS
OF
HON. JAMES E. MURRAY
OF MONTANA
IN THE SENATE OF THE UNITED STATES

Monday, May 14, 1956

Mr. MURRAY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Coal Char Industry To Open New Vistas for Red Lodge," which appeared in the May 4, 1956, issue of the People's Voice, published in Helena, Mont. It is a stirring story of how Mayor D. W. Columbus, of Red Lodge, Mont., and other Montanans are transforming a dream into a reality as they build a new and important industry for Montana.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

COAL CHAR INDUSTRY TO OPEN NEW VISTAS FOR RED LODGE

Behind each dream of a better tomorrow there is usually one person, who, more than all the rest, provides the continuing guiding spirit that eventually leads to that dream becoming a reality.

There was Susan B. Anthony, who spent her lifespan in the fight to secure women's suffrage.

There was Sen. George Norris, of Nebraska, who, for a generation fought for and finally saw his dream of a Tennessee Valley Authority become a reality.

There was, here in Montana, one newspaper editor, Harry (Hungry Horse) Kelley, who for 30 years plugged constantly through his Flathead Monitor at Kalispell for the building of Hungry Horse Dam. Before he died he had the satisfactory of seeing his dream coming true—Hungry Horse was under construction.

Right now, at Red Lodge, there's another Montanan who appears on the verge of seeing a dream become reality. Several years ago when it became apparent the coal industry was definitely on the decline as a source of fuel in the long-accepted sense a group of Red Lodge people, sparkplugged by their mayor, D. W. Columbus, decided to see if there wasn't something that could be done about the economic problem brought on by the decline in use of coal. They had no desire to see their city become like so many coal towns in the east—perpetually depressed areas, nor did they want to see their town die. There must be another way. Columbus took the lead in seeking out that "other way."

Increasing use of coal derivatives for plastics, tars, creosote, char, throughout the Nation as America began entering the Chemical Age in earnest looked like a lead that had possibilities.

Then followed numerous meetings of the Red Lodge Chamber of Commerce industries committee, the arousing of widespread public interest, numerous contacts with political figures in Montana and Washington, D. C., continuing efforts to interest various petroleum and chemical firms in the possibilities of Red Lodge coal.

Columbus made voyages to Helena, to Washington, D. C., to numerous other places. Senator Murray became interested, so did then Gov. John Bonner, another Helenean and longtime champion of greater resource development; Lester Loble, and Willard Fraser, Billings, also a longtime advocate in eastern Montana and Rex B. Zachery who recently joined the Meyer & Chapman State Bank—to name only a few.

Mr. Columbus would be the last person to take full credit for the realization of his dream, and hastens to mention many people who have contributed in an united community effort to open industrial vistas in the picturesque valley in the Bear Tooth Mountains.

A COMMUNITY-WIDE EFFORT

There were the contributions from Red Lodge citizens, large and small, in true spirit of community development, people too numerous to list.

Still the road toward obtaining industry proved discouragingly slow. But then, in the that Montana's abundant coal resources, 1955 legislature, a realization began to dawn that Montana's abundant coal resources, although outmoded as a source of fuel, held real potentialities as the raw material which might well become an important industrial base in the Treasure State. Development-minded Representative Earl Clark, who represented another county hard hit by reduced coal usage—Musselshell—headed up introduction of H. B. 294 to provide Montana State College with a $30,000 appropriation for extensive chemical experimentation with Montana coals.

MSC chemists, with the facilities at hand, have done yeoman-like service. They've found Montana coal contains in good quantity much of the basic ingredients so necessary to the manufacture of plastics, phenol oils, in addition to being rich in tar and creosote. And of course, the residue—char—is of such a quality as to be eminently satisfactory for heavy industrial use, such as the sponge-iron process employed by the Anaconda Co. in smelting operations at Anaconda.

James R. Brophy, owner of the Brophy Coal Co., worked with Dr. Berg, of the Montana State College to perfect the new method of obtaining char and other products from Red Lodge coal.

NEW INDUSTRY SOON

Things are now beginning to pop around Red Lodge. Koal-Krudes, a Spokane corporation, and subsidiary of P. D. & P. Processing Corp., is planning construction of a

char plant in Red Lodge in the very near future. The city of Red Lodge has donated a tract of land adjacent to the railroad for a site.

Initial size of the Koal-Krudes char plant envisages the processing of 200 tons of coal per day. To man a unit of such a plant would require about 20 men in addition to the employment of miners. But 200 tons per day would be only a beginning. The proposed plant is to be constructed in such a way that it can be added onto as markets increase. They hope to add 3 or 4 units as soon as possible. Says Mayor Columbus, "As it looks now from the inquiries Dr. Lloyd Berg, of the Bozeman College, is receiving for char samples, this plant will grow very fast."

As of now, the future begins to take on a more rosy tinge for the Carbon County seat nestled in the mountains just to the north of Yellowstone Park. The coal miner as a producer of fuel is no more, but, soon that coal miner will again be busily plying his craft mining the high-grade coal which has made the Red Lodge-Bearcreek region famous. But this time he'll be mining it with the full realization that the end product may be nylon stockings on milady's shapely gam, and not a clinker in the furnace to cause many a poor husband anguish.

And, when that day arrives, the people of Red Lodge can chalk up their recovered prosperity in large degree to one of their fellow citizens who had a dream and the tenacity to fight on until that dream came true.

Hon. James P. Richards

EXTENSION OF REMARKS
OF
HON. ELIZABETH KEE
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 14, 1956

Mrs. KEE. Mr. Speaker, one of the most distinguished Members of the House of Representatives, the Honorable JAMES P. RICHARDS, chairman of the Foreign Affairs Committee, has announced his intention to retire from Congress at the end of the present term. "DICK" RICHARDS and his charming wife, Katharine, are long-term friends of mine, as they were of my late husand, the Honorable John Kee, who preceded Mr. RICHARDS as chairman of the Foreign Affairs Committee. It will be a great personal loss to me when they leave Washington, and I am sure that it will be the same to a host of their other friends. But it will be a loss to the entire Nation not to have the wise and sane leadership of "DICK" RICHARDS in one of the most important posts in Congress during these troubled times in international relations.

It is too late to persuade "DICK" RICHARDS to change his mind about leaving Congress, if that would ever have been possible; and so all that we can do now is to wish him well in his future life with Katharine on their beautiful plantation in South Carolina, where I am sure he will take an active interest in many things besides looking after his cows.

Mr. Speaker, under leave to extend my remarks in the RECORD, I should like to include the following article about Mr. RICHARDS from the Georgetowner for May 10, 1956:

REPRESENTATIVE JAMES P. RICHARDS PLANS RETIREMENT IN 1957

(By Elizabeth Maguire)

One of the most important men on Capitol Hill is the Honorable JAMES P. RICHARDS, the chairman of the powerful Foreign Affairs Committee of the House, and a Democrat. Several months ago, Mr. RICHARDS announced he would retire next January. "And I'm going to be long gone," he says. After 24 years in the House—4 of the last years as chairman of the Foreign Affairs Committee—he is looking forward to retirement, so called.

The life which the Congressman and his wife, Katharine Wylie Richards, plan on a beautiful 500-acre farm in their native South Carolina promises to be active and pleasant; and while raising cattle and farming, Mr. RICHARDS will doubtless take a lively interest in foreign affairs. He loves fox hunting and bird dogs, and says that he also has a very fine coon dog with tan tail and tan feet.

On foreign aid, the Congressman has a good deal to say. In an aside, he confessed that his real problem is how his cows are getting along. But in the committee room, the chairman of the Foreign Affairs Committee of the House is faced with these two problems: (1) whether or not all the mechanics of our foreign aid program are outmoded; and (2) whether or not we are laying too much emphasis on military aid instead of economic and scientific aid.

"Our military aid to other countries had the Russians just about stopped in their tracks," said Mr. Richards "and they answered with technical assistance and loans to a number of countries. The Russians are saying 'We just want to help,' but at the same time they are increasing their military strength."

"But if our military aid had the Russians stopped, why switch to another form of assistance," we asked.

The Congressman explained, "They have answered us, and now we must answer them. You see, the game of foreign affairs is like a duel between two swordsmen—you thrust here and lunge there."

Mr. RICHARDS said further that the United States formerly had led the world in turning out scientists and technicians, and now the Russians are ahead of us in this respect. He pointed out that the Russians win friends by giving technical assistance to other countries, and this enables them to form a 5th column within those countries.

"And we have got to meet the Russian approach in this field," he continued. "We must not get hysterical about it and we should not out-bid Russia, but we should evaluate what they are doing and meet it when we determine the best method of doing so."

Congressman RICHARDS believes strongly in the necessity of a foreign aid program, and he affirms that if it were not for our foreign aid, the whole continent of Europe would now be dominated by communism, and our backs would be to the wall.

"When people object to foreign aid, they should stop to consider this," he said. The Congressman added, "However, I do think that the executive branch is asking for too much money for the program—we can't afford it—and I was hoping we could taper it off a little more; $4,900,000,000 is too much."

Asked if he thought Monaco would ever be a trouble spot, the chairman of the Foreign Affairs Committee replied, "There's enough trouble in Monaco now, but I don't know whether it's the Prince who is in a hell of a fix or Grace."

On the political scene in the United States, the Congressman sees a new battle shaping up out of which he predicts there will come a realinement of political parties.

"Some of these days," he said, "the fight between constitutional government and left-wing philosophies will force a realinement of parties, and the old terms Democrats and Republicans will give way to something else. I believe in two parties—you have to have criticism in one way or another. The real issue will be between the people in this country who want to save its basic institutions—constitutional government, free enterprise, freedom of speech and other solid principles upon which this Republic has been founded—and those who would regard the Constitution as an obstruction to their purposes and who would whittle away the powcomes, we will have to forget the so-called ers of the Constitution. When that day comes, we will have to forget the so-called Democrats and Republicans, and we will have to get away from prejudices associated with the two parties. The realinement will come about in the face of the bigger issue—sooner or later."

Be all that as it may, Representative RICHARDS will observe future developments in the battle from a vantage point on his lovely estate in Heath Springs, S. C., just outside Lancaster.

Asked if he had lived in or around Lancaster all his life, he proudly stated, "I was born in Liberty Hill. * * * Liberty Hill has a population of 250 people. * * * I've forgotten whether I walked or rode the 20 miles to Lancaster * * * but I went there to practice law after graduating from the University of South Carolina.

In Lancaster JAMES RICHARDS met Katharine Wylie, a southern belle, very small and very charming. "I figured it would be a good idea to do some fast talking," recalls the Congressman, "and I think she has been regretting it ever since."

Mrs. Richards looks forward to having more time to indulge a favorite hobby—collecting antiques. And she'll put to good use her flair for cooking. "She's the best cook I ever saw," brags her husband, "in fact, she's the best cook." In further praise he comments, "She saves many a dollar," but he reflects with a chuckle, "and spends it on something else the next day."

We asked Mrs. Richards for her husband's favorite recipe, and she drew back in silence. Then, after considerable hesitation, she said, "I hate to tell you, but it's 'fatback' and grits."

"Fatback is the kind of salt pork bacon that nobody will buy and grocers don't like to sell," she explained. "And every morning I have to have fatback and grits on the table—with coffee and eggs or something."

The Richards have two sons and a daughter. The eldest son, Richard Richards, is married, has two little girls, and he practices law in Lancaster. The other son, Norman Richards, is just out of paratrooper training and has gone back to Davidson College in North Carolina. The daughter, Jane, attends Salem Academy in Winston-Salem, N. C.

At present the Congressman and his wife live at 3016 O Street. "I kind of like Georgetown," says Mr. RICHARDS, "and when I come back to visit here, I'm going to head for Georgetown first thing. We take the Georgetowner and we read it all the time."

"But I want to get out of Washington before I get pickled," says the Congressman, "What do I mean? Well, being pickled means you can't adapt yourself to anything else; and I want to get out before that happens. There are people in public service who have been here so long that they would not be happy anywhere else, nor would they be happy working at anything else. And they think their services are indispensable * * * yes, they always think that * * * I think the first requirement for anyone with a job is that he not take himself too seriously because nobody else is going to take him seriously."

And so, with new horizons well in view, a leading legislator is bringing a successful career to a close. His friends and colleagues in Washington will miss the tall Congressman with his easy-going manner and keen alert eyes. And the United States will miss his wise guidance in foreign affairs.

Mary Gardiner Knowles

EXTENSION OF REMARKS
OF
HON. B. CARROLL REECE
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, May 14, 1956

Mr. REECE of Tennessee. Mr. Speaker, the Harvard University Young Republican Club publishes a weekly newspaper, the Harvard Times-Republican, which has attracted much favorable comment in college circles. It expresses views of the membership of the club without fear or favor. Under date of May 3, 1956, it had an editorial with reference to the grant of $5,000 by the Fund for the Republic to the Plymouth Meeting Library in recognition of the board retaining as librarian Mary Gardiner Knowles, who had been identified as a Communist. It is an excellent editorial which I feel should go into the RECORD. The young men who comprise the membership of the Harvard Young Republican Club deserve much credit for the patriotic and effective work they are doing in rendering intellectual leadership and integrity in the cause of good government.

The editorial follows:

THIS LAST MONDAY

This last Monday, the United States Senate voted to cite Mrs. Mary Knowles for contempt of Congress. The vote was unanimous. Last year the Senate Internal Security Subcommittee of the Senate Judiciary Committee had subpenaed her, because it believed that she possessed information which would be vital in combating the Communist menace. Mrs. Knowles refused to answer any and all questions put to her.

Mary Gardiner Knowles has long had a record of intimate association with those groups which would destroy our Government. For example, she was the secretary of the Samuel Adams School in Boston. This outfit has been cited by the Attorney General of the United States as an organization which was a front for those who would overthrow our Constitution by force and violence—the Communists.

Two years ago, Herbert Philbrick, a former undercover agent for the FBI, identified Mrs. Knowles, under oath, as having been a cell members with him in Maiden, Mass.

With this background, one can see why Mrs. Knowles was called before the committee. She could have rendered valuable service to the Nation, but she chose not to do so.

After her refusal to testify, Mary Knowles was released from her position as a member of the staff of a library in Norwood, Mass. She was quickly employed, however, by the William Jeans Memorial Library, which was owned and operated by the Quaker Monthly Meeting, of Plymouth Meeting, Pa. To date, the library committee has refused to dismiss Mrs. Knowles.

The action of the Plymouth Meeting Library caused a violent uproar. Protests were made by the Plymouth Township School Board and local units of the American Legion. Three members of the library committee, the group which did the actual hiring, resigned, and the financial support of the township was canceled.

Into this sorry mess, though, stepped the Fund for the Republic, under the leadership of the free-wheeling nonconformist, Dr. Robert Maynard Hutchins. This group is the child of the Ford Foundation, which gave the fund the sum of $15 million.

The fact that the fund's moneys are tax-exempt means that the American taxpayer—you and we are included—must pay for those Government projects which would have been covered by the annual taxes that normally would have been paid on the $15 million fund treasury. Hence, the fund is engaging in projects which are actually being financed by all of us. It is because the fund's activities are actually being financed by the public, that political projects are forbidden by the law.

Speaking of the fund, the Special House Committee which investigated tax-exempt foundations said in its report: "An example of the danger that a great foundation may use its public trust funds for political purposes or with political effect is to be found in the creation of the Fund for the Republic * * *."

The Fund for the Republic granted a $5,000 award to the Plymouth Meeting group (not the library) for "courageous and effective defense of democratic principles in refusing to fire Mrs. Knowles." So far, the group has refused to accept the money.

This will give you an idea of the various projects into which the fund enters. In this case, it sought to reward an organization which hired a person who has done a distinct disservice to her country. By unanimous vote, the Senate has judged her to be in contempt of our Representatives, and for this she will stand trial. But, all this makes no difference to the fund. It merrily goes on its way, dispensing tax-free funds to the benefactors of those who would defy our Congress.

Such action as this is merely another example of why the Fund for the Republic should lose its tax exemption. There is no reason why your money, which normally would be used to defray the expenses of the Government, should be used to promote ideologies which run contrary to the basic sense of the Nation.

Devoted Public Servant

EXTENSION OF REMARKS
OF
HON. HAROLD C. OSTERTAG
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, May 14, 1956

Mr. OSTERTAG. Mr. Speaker, by any yardstick, the city of Rochester, N. Y., is one of the outstanding cities of the United States, and one reason for it is its municipal research bureau, which, everlastingly, through the years, has supplied public officials with the facts they needed, in order to make wise and intelligent decisions.

Next week, a testimonial dinner will be given to Earl Weller, the director of the municipal research bureau, in recognition of the debt which the citizens of Rochester owe him, and the esteem in which he is held. Mr. Weller will retire next month. His influence on good government will not retire with him, however. He has seen many of the things he worked for become realities. Other projects which he launched and assisted are moving to fruition. But far beyond these concrete symbols of his wise guidance and vision is the influence of the example he set for every city in the State, and indeed, in the country. Good government, as the Rochester Times-Union pointed out editorially in its issue of May 8, was Earl Weller's life. Our country can never have too many Earl Wellers.

Under leave to extend my remarks, Mr. Speaker, I include in the RECORD the editorial from the Times-Union of Rochester, N. Y.:

GOOD GOVERNMENT IS WELLER'S LIFE

It's too bad that Rochester and Monroe County can't give W. Earl Weller a completed civic center and an integrated county-city government as a going-away present when he retires as director of the bureau of municipal research on June 30.

There are two projects that took much of his time and energy and held his enthusiasm for at least his last 10 years with the bureau.

But before deciding upon the date of retirement, he had won firm commitments for the civic center. The integration of the two levels of local government had made progress, but not nearly the progress he had hoped for.

There is still time to unify the health services in one countywide health department before June 30. Weller's bureau originated the master plan for that project, as it has the other unifications in force or proposed.

Weller has been a long-time student of means of eliminating overlaps and duplications in local government. He was the originator of the approach being used here—unification by function rather than by annexation.

The bureau is a privately supported watchdog of local government. It has wanted to know not only what local government is doing but also how it might do it better.

It has kept an unofficial eye on the city's physical plant—its sewers, firehouses, water-supply system, and all the technical services required where large numbers of people live in a small area.

Hence, under Weller's direction, it has made itself extremely useful not only to Rochester and Monroe County but to other local governments in New York as well. Good local government owes much to the bureau.

Address by Hon. Estes Kefauver, of Tennessee, at Convention of Young Democratic Clubs of Oregon

EXTENSION OF REMARKS
OF
HON. WAYNE MORSE
OF OREGON
IN THE SENATE OF THE UNITED STATES
Monday, May 14, 1956

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by the Senator from Tennessee [Mr. KEFAUVER] at the 25th annual convention of the Young Democratic Clubs of Oregon, in Portland, Oreg., on April 21, 1956.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Chairman and fellow Democrats, I am always grateful for a chance to come to Oregon. I have been doing it for a long time

now. I am grateful for the warmth and the loyalty of thousands of friends here. As a Democrat I have been gratified by the great growth of the Democratic Party in this State.

As both a Democrat and a Members of the United States Senate—and above all as an American—I am grateful that the people of Oregon are represented in the Senate by as fine a pair of Senators as represent any State of the Union.

WAYNE MORSE and DICK NEUBERGER are great Americans. They work assiduously for the welfare of this State and its people. But beyond that they work unceasingly for the welfare of all our people. Their voices are heard whenever the forces of progress and growth are under attack. They fight for a decent, liberal, prosperous America, and a peaceful world.

WAYNE MORSE and DICK NEUBERGER do not content themselves with just voting in the Senate and letting others carry the brunt of the battle. Wherever the fighting has been hardest, they have been in the thick of it. No one will ever call them lily livered.

The fact that WAYNE MORSE has been so effective in behalf of the people of Oregon and the Nation is the reason why this year he will be the No. 1 target of the Republican Party.

The other day, Douglas McKay told a reported in Washington that WAYNE MORSE "has put more roadblocks in the path of the Eisenhower administration than any other single politician I can think of."

The Democrats of Oregon ought to glory in that statement.

WAYNE MORSE has often stood like the boy with his finger in the hole in the dike, keeping the land from being inundated by the galloping giveaways.

No wonder the Republicans hate him. No wonder the fat cats and big mules of the predatory interests will be pouring money into this State this fall in an unending stream. No wonder the Republican Party's propaganda experts will be as numerous in Oregon this fall as fleas on a lazy dog.

Mr. McKay calls WAYNE MORSE a "turn coat" for leaving the Republican Party. I doubt that WAYNE MORSE could be said to have left the Republican Party. I think it left him.

WAYNE MORSE represented the final beachhead of the liberal tradition in the Republican Party. From Abraham Lincoln, through Theodore Roosevelt, Gifford Pinchot, George Norris, Charles McNary—and perhaps even Wendell Willkie—it had been a long line. But as big business and selfish interests have gained more and more control of the Republican Party, there has been less and less room for liberalism.

I know how hard WAYNE MORSE worked to keep that faint flame alive in the Republican Party. The remarkable thing to me is that he strove so hard and so long when all the odds were against him.

I am glad that WAYNE MORSE made his great decision. I am glad for the Democratic Party—which he has strengthened not only here in Oregon, but nationally. I am glad for the liberal position in the Democratic Party which his presence and his counsel strengthen and encourage. I am glad for WAYNE MORSE, who has found a party in which, when he puts his shoulder to the wheel, the wheel turns.

Possibly there remains some doubt as to who will be chosen by the Republicans to oppose Senator MORSE. I understand that Douglas McKay is the candidate of President Eisenhower and the Republican national committee. Perhaps he won't make the grade with the Republicans of Oregon, but whether he does or not, Mr. McKay is going to be the campaign issue.

He personifies the Eisenhower approach to the development of natural resources. The Eisenhower approach is "don't do it."

In the whole of McKay's tenure as Secretary of the Interior, he managed to hold just one press conference. I assume that there was too much he didn't want to explain.

At that one press conference, he announced the administration's partnership policy for power development. When he gets out here to campaign I hope you people of Oregon will ask him how it is that his partnership policy has failed to develop a single kilowatt of electric power.

I hope that the people of Oregon will find out from McKay how and why he sought to avoid the preference clause put in the law by Congress to see to it that the public got the first crack at power produced at Federal installations. I hope he will be asked about the abandonment of so-called wheeling arrangements for the transmission of power, which was one way of getting around the preference clause.

While he is out here and within easy reach, I hope you will find out something that Congress has never been able to find out—nor has the press been able to find out: That is why on earth he ever let that Al Serena deal go through.

The conservationists in this State—and there are a lot of them—also ought to find out on what basis Secretary McKay justifies opening up nearly every wildlife refuge to the oil companies.

I am told that Mr. McKay's chief asset is his amiability. In general this is a nice quality and one which we all admire. But when the country has an amiable Secretary of the Interior there always arises the question as to who he is amiable with. Is it the people who would like to destroy public power in America? Is it the people who want to do a little timber mining? Is it the people who tell the ducks and geese to move on somewhere else so that they can look for oil?

The simple truth is that the Eisenhower administration, by its failures in the field of resource development, has put a ceiling on the progress of the West and of this great State of Oregon. And Douglas McKay has been the instrument of that failure.

Oregon and the Northwest have been pushing forward on the impetus they got in the years of Presidents Roosevelt and Truman. The business and industry that won't get started, the jobs that won't be there when the need comes, the acres which will remain without water and life—the failures due to the inaction of President Eisenhower and Douglas McKay, lie in the future. But that future is too near at hand for comfort.

It took only a few moments and a scratch of the pen for Douglas McKay to write off the great dam at Hells Canyon. But the people of the Northwest may take generations to pay for one of the most callous acts in the history of western development.

I have nothing against the development and sale of power by private means and private capital. I have never been persuaded that power ought to be a governmental monopoly.

What I know the growth of the United States requires, however, is plenty of electric power at the lowest possible cost. And when the most power at the lowest cost can be produced only by public means, then we must adopt methods which will produce the most for the least. When Douglas McKay signed away Hells Canyon he was performing the act of a man who does not believe much in the future of America.

If America is going to grow—and if Oregon and the Northwest are going to grow—we must have tremendous new supplies of energy to make that growth possible.

The growth of industry in this area has in large part been due to prior development of power resources by the Federal Government. One of the greatest factors in this growth has been the increasing development of the electro-processing industries. In 1950 these industries were consuming 17 percent of all power used by industry. By 1975 these industries will be using an estimated 30 percent of all our industrial power. This means that power consumption by these industries alone will increase 425 percent in a quarter of a century.

The growth of these industries can continue only if power costs are kept low—and a difference of 1 mill a kilowatt may make an enormous economic difference—and the future supply growing to meet the demands to be made upon it.

There is no native source of great energy in this region except hydroelectric power. The only hope for the region lies in the development of the full potential of the Columbia, the Snake, and other rivers of the area. It is to this development that Douglas McKay has said "No."

As it is, it is going to take a long time to make up for the mistakes and the failures of President Eisenhower and Douglas McKay in the field of resource development. I hope and expect that next January a Democratic President and a Democratic Secretary of the Interior will be able to reverse this sorry trend. And I hope that WAYNE MORSE and DICK NEUBERGER will both be there in the Senate of the United States to help them.

The Democrats and Independents of Oregon started the tide turning in 1954, when DICK NEUBERGER was sent to the Senate. This year let's go all the way. Unite and organize and fight—and put Oregon in the Democratic presidential column, elect Democrats up and down the line, and, most of all, reelect WAYNE MORSE.

Operation Bootstrap in Puerto Rico

EXTENSION OF REMARKS
OF
HON. A. FERNÓS-ISERN
RESIDENT COMMISSIONER FROM PUERTO RICO
IN THE HOUSE OF REPRESENTATIVES
Monday, May 14, 1956

Mr. FERNÓS-ISERN. Mr. Speaker, perhaps you have heard it said that they are moving mountains in Puerto Rico. Indeed, this is true. They have been moving mountains there since Operation Bootstrap got under way in 1948.

The Puerto Rican people last week enthusiastically celebrated the establishment of the 400th new industry in the island in that brief span of years. This Operation Bootstrap program has been the accomplishment of an inspired people, responding to an inspiring leadership. It is the work of a free people, working happily in the framework of sovereign self-government and within their association to the Federal political system of the United States, made possible by the Congress of the United States and by the voluntary decision of the people of Puerto Rico.

The Thursday, May 10, 1956, issue of the Washington Post and Times Herald carries an editorial commenting on the gains which have been made in Puerto Rico. I am sure, since this body in large measure has shared the responsibility which resulted in the political evolvement of Puerto Rico, and the accompanying industrial revolution there, each Member will be interested in reading this editorial. The editorial follows:

PUERTO RICO'S EXAMPLE

At a time when free men everywhere are concerned with the plight of underdeveloped countries, America can rightly point with pride to a quiet revolution which has

changed the face of Puerto Rico. For the first time this week, the Commonwealth estimates that manufacturing has displaced agriculture as the chief source of the island's income. This milestone in Puerto Rico's Operation Bootstrap deserves the week-long celebration it is receiving. It has demonstrated in our own backyard what cynics have argued is improbable elsewhere: That an economically disadvantaged people can industrialize swiftly without resort to iron-fisted 5-year plans or police state goads.

The statistics tell an impressive story. In less than a decade, the life expectancy of Puerto Ricans has increased from 46 to 61 years—and literacy has risen to nearly 80 percent. The annual net income of the Commonwealth has climbed from $230 million in 1940 to almost $1 billion today. According to government estimates, productivity per worker has doubled in this same period—and the average family income has risen from $600 in 1940 to $2,360 in 1955. Much of this rapid progress can be ascribed to the Puerto Rican government's energetic and effective campaign to attract new industries, to diversify the island's agriculture and to lure tourists.

Most important, these changes have taken place in the framework of a free society. Intelligent planning, self-help and free criticism have been the tools of change. It has been a wise policy for the State Department to send thousands of point 4 trainees and foreign visitors to study the island's achievement. As Puerto Rico's brilliant Governor, Luis Munoz Marin, pointed out recently:

"The answer to the Communist challenge lies in the ability of the Western powers to show the less fortunate countries of the world that a greater transformation can be achieved, at an even faster rate and on sounder economic foundations, without shattering or ignoring the fabric of political and individual liberties."

It would be a mistake, however, to interpret Puerto Rico's example only in the narrow gage of cold war strategy. Equally significant, the Commonwealth's advance is a turning point in the far older cold war against poverty and ignorance. While much still remains to be done to bring the island up to continental American standards of prosperity, Puerto Rico's present progress will mean a better life for more people soon. That is an enduring victory which surely transcends swiftly changing cold war strategies. It is worth cheering about.

Altoona (Pa.) Mirror Editorial "Above the Atom" Cited as One of Three Outstanding Editorials in Pennsylvania Newspapers in Behalf of the Handicapped

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 14, 1956

Mr. VAN ZANDT. Mr. Speaker, the following editorial which appeared in the September 24, 1955, issue of the Altoona (Pa.) Mirror was written by J. E. Holtzinger, president of the Mirror Printing Co., Altoona, Pa.

The editorial titled "Above the Atom" was selected by the governor's committee on employment of the handicapped as one of the three outstanding editorials in Pennsylvania newspapers on the advantages of hiring disabled persons. The editorial follows:

ABOVE THE ATOM

The might of the mind is greater than the power of the atom and the minds of men also conceived the way to use the atom and the minds of men also have conceived ways to use the power of the atom for peace as well as for destruction.

In this swiftly moving world of today scientists already are looking beyond the atom to new sources of energy and along the frontiers of today's knowledge men already are predicting that within the time limits of men now living the world will see vast new sources of energy put to use for the benefit of mankind.

In a world where mere physical strength is being replaced with energy directed by the minds of men and by the skillful use of machines and power tools of all descriptions, it may seem a little foolish to have a special week devoted to the appeal for employment of the physically handicapped. But such an appeal is necessary and October 2 through October 8 has been set aside as a week to draw national attention to the employment of the physically handicapped.

Observant people long have noted nature's gift of compensation to those who suffer an affliction or an impairment of a part of the body. Dim eyesight is often compensated for by acute hearing, a weakness in the lower limbs is quite often compensated for by extra strength in the arms and torso and in numerous other ways old Mother Nature seems intent on giving to each of her children some special gift to make up for a lack in some other department of physical fitness.

Added to these gifts of nature in the past few decades have been the facilities of man-made institutions which have sought to rehabilitate those among us who suffer from some impairment or other. In this modern world of ours all people are needed and all who are of sound mind can contribute their share to the world's progress.

Employment of the physically handicapped is not a one-way street, by any means. Quite often these especially trained people are just the asset business and industry have been looking for to balance out a work force that is now out-producing any other body of workers in the world.

As Henry J. Riter, III, of the National Association of Manufacturers puts it: "Disabled employees in industry throughout the land have written a record of accomplishment which more than justifies the confidence management has placed in them. The social myth that the physically handicapped cannot fit effectively into modern industry has been thoroughly exploded. The fact is that today and every day, the physically impaired compete with the able-bodied and ask no special favors."

Our Nation has now had 9 full years of experience with the National Employ the Physical Handicapped week and as we enter into the 10th anniversary of the special week there are thousands of examples of people who have been employed through this special effort and who have given their employers and their fellow employees many occasions to rejoice over their selection as part of the working force.

Altoona and Blair County long have enjoyed a fine record in their very human approach to this very human problem. Hundreds of handicapped workers have been employed in this area, many of them for several decades before the national effort in their behalf was made.

Perhaps this is only a natural development in a part of the country where railroads and railroad workers have been so predominant, where accidents in the field of transportation and in the adjacent coal fields brought the problems of the handicapped to the fore years ahead of the present national maker of handicaps—the automobile accidents.

America has led the world in so many fields because we have, from the very beginning, refused to acknowledge handicaps. Very early in our history we learned to overcome the handicaps of strange languages, differences of religious opinion, conflicting national origins and of a strange new world where distances were great and travel extremely difficult because the wilderness was unexplored and there were few roadways.

This year do yourselves and your industry or business a real favor. Employ at least one physically handicapped person and discover anew the thrill of helping oneself through helping another. The Pennsylvania State employment service will give you skillful aid in selecting just the right people for the job you have in mind.

Address on Brotherhood Delivered by Governor McKeldin, of Maryland

EXTENSION OF REMARKS
OF
HON. J. GLENN BEALL
OF MARYLAND
IN THE SENATE OF THE UNITED STATES
Monday, May 14, 1956

Mr. BEALL. Mr. President, there has been much discussion in recent months concerning the so-called problems of brotherhood. Actually, as many of us have tried to show, the difficulties are not an intrinsic part of brotherhood itself, but rather they have evolved from a refusal by some men to recognize an already existing situation.

Gov. Theodore R. McKeldin, of Maryland, recently gave an exceptionally fine analysis of that point in an address built around the fact that brotherhood is a condition and not a theory. His remarks were presented at the Central Pennsylvania Conference of the Evangelical United Brethren Church, at the Albright Memorial Evangelical United Brethren Church, Fourth and Rittenhouse Streets NW., Washington, D. C., and I ask unanimous consent to have them printed in the Appendix of today's RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY THEODORE R. MCKELDIN, GOVERNOR OF MARYLAND, CENTRAL PENNSYLVANIA CONFERENCE OF THE EVANGELICAL UNITED BRETHREN CHURCH, ALBRIGHT MEMORIAL EVANGELICAL UNITED BRETHREN CHURCH, FOURTH AND RITTENHOUSE STREETS NW., WASHINGTON, D. C., MAY 4, 1956

Brotherhood is a theme on which men can write and have written variations in endless numbers, ranging from the highest realms of thought to the lowest levels of expediency. Consider them in descending order: brotherhood is part of the law of God; brotherhood is the highest of human ideals; brotherhood is the mortar with which we build civilization; brotherhood is the best security of man in a hostile world; brotherhood is a paying proposition.

I propose today to offer you still another variation, without saying whether it is high in the scale of values, or the lowest of all. That depends upon the point of view. But, high or low, it is as profoundly true as any; and I put it in a phrase borrowed from a former President of the United States. It is this: brotherhood is a condition and not a theory.

To illustrate my point I do not need to quote the Bible, nor any other ancient book that men have regarded as Holy Writ. I

call your attention instead to the newspaper accounts of what follows the detonation of such a hydrogen bomb as we set off on a remote Pacific Island. It was, the scientists tell us, by no means the most powerful bomb that can be made; we know the formulas for the construction of others much more destructive than this one, and there is no apparent reason why we cannot produce them whenever we choose to do so.

Yet after this bomb of relatively moderate size exploded for 10 miles up the wind and for 190 miles down the wind, that is, for a total distance of 200 miles, invisible death rained from the skies for the next 2 days. It was a visitation more merciless than the fire and brimstone that the Lord rained upon Sodom and Gomorrah, for that at least was swift; the cities of the plain were wiped out almost instantaneously. But this man-created horror does not strike like a thunderbolt; it sets up within the victim's body an invisible and unquenchable fire that consumes him by slow degrees through weeks and months of increasing agony.

Under that soft and gentle sifting down of pain and death, do you think it matters in the least what is the color of a man's skin, or how blue is his blood or which of our countless creeds he holds to be true religion? Whether they cry to Jehovah or to Allah, or to Christ the King, it is all one. Whatever they may have been before, they are brothers in their agony, brothers when merciful death has brought their only possible release.

This, I repeat for emphasis, is a condition and not a theory. We cannot alter it in any way. We can deny it, but our denial will be "a tale told by an idiot, full of sound and fury, signifying nothing." We all stand in the same peril, all under the same condemnation, and the way of escape is escape for all or for none. War is the last, most insolent denial of human brotherhood; and continued war plainly threatens the existence of the race.

If then, we are brothers in the last extremity, who will have the hardihood to assert that the relation begins only in the shadow of death? And if the relations exist from the beginning, how can we escape the conclusion that the organized slaughter of human beings, whatever name we give it, is in the final analysis fratricide?

It is our custom to brush this somber fact aside with the argument that war has existed since before the dawn of history, that war is a condition of human life in this world, and that it is a distortion of logic to equate it with the individual crime of murder.

It is true that war has always existed, has always been a condition of human life. But war guilt is entirely different. Even the stumbling approach to perfect justice that is manmade law recognizes that the degree of guilt increases with the mental and moral responsibility of the guilty. An imbecile is not held legally responsible for any of his acts, and even the crime of murder cannot send a man to the gallows unless the jury is convinced that he knew the difference between right and wrong.

Only in the higher civilizations have the masses of men begun to suspect the essential criminality of war, and only in the highest have they realized that aggressive war is not distinguishable from mass murder. We have yet to develop a civilization high enough for men to realize that truth, emotionally as well as intellectually, which is to say that we have not yet developed any civilization high enough to abolish war. Not until we feel, as well as think, that war is a crime will we be capable of getting rid of it.

Development of that kind of civilization is the world's one hope, and the chief responsibility for it rests upon the nations that are the leaders of our present civilization. Americans cannot evade that responsibility unless we are willing to concede that ours is a backward nation morally, however far in advance it may be in technology. It is a concession that I, for one, am unwilling to make; I prefer to accept the heavy responsibility for leading the world in the ways of peace.

But in accepting the responsibility we must face the fact that the hour is late, I fear much later than we think. It is an ironical fact that the time left us has been shortened by our own act. Like the fisherman in the Arabian tale who removed the seal of ignorance that barred release of the infernal powers that now loom over us as the monster towered over the fisherman, we excuse ourselves by saying that if our hands had not done it, another's would have within a short time.

It may be true; but that does not alter the fact that we did it, and by doing it incurred chief responsibility for seeing to it that the unleashed evil does not overwhelm our brother men.

How may we hope to discharge that responsibility? Only by facing the facts, all the facts. One that must be faced is the somber fact that the nations are not yet morally developed to the point at which they will all voluntarily renounce war as an instrument of national policy. Some must be restrained by knowledge that aggression cannot bring profit but only ruin to the aggressor; and it is our business so to organize the world that the knowledge will be too plain for any man to escape it; this involves labor, expense, and eternal vigilance. We must be strong ourselves and we must be surrounded by strong friends, a condition that will last probably for many years.

But we must face all the facts, and there is another that is equally grim, equally distressing. It is the fact that our own moral level is far too low to justify us in assuming a holier-than-thou attitude toward any other country. The fact of human brotherhood is frantically denied every day and every hour in the streets of our own city and in every other city across the continent. It is not done in words as often as in deeds more eloquent than words. If we are honest with ourselves we will admit that it is denied in our own hearts. "Am I my brother's keeper?" snarled Cain, and the mark of the murderer was laid upon him; but where is the man who can stand before the bar of judgment and swear that never has that scream of the beast been echoed, even in his inmost thought?

None of us is guiltless, none of us has never yielded to the impulse to reject the condition of brotherhood; and it is that guilt that blinds our eyes so effectively that we cannot see our way through the labyrinth of the modern world. I believe that with the growth of a realization of our brotherhood, not with Chinese and Hindus, but with the man next door and the man down the street, with the man who worships with a rite different from our own, the man whose skin is of a color different from our own, there will come a sharpening of the vision of statesmanship, a lifting of the mists that obscure our way. With the growth of brotherhood here at home, problems abroad that now seem beyond solution will become increasingly simple and plain.

Cynics sneer at this as impractical idealism, but it is the cynics themselves who are superstitious fools, still believing in witchcraft, still proposing to cast out devils in the name of Beelzebub, Prince of Devils. The realist knows that human brotherhood is not a pious aspiration, but a biological fact, and that fratricidal strife among brothers is a defiance of the laws of nature as disastrous as swallowing poison or deliberately walking off the edge of a precipice.

I think it is realism, too, to acknowledge the fact that all existing programs for the abolition of war are probably inadequate. Pacificism will not do it, although loyalty to the ideal of peace is certainly an essential. I am skeptical of world government as a solution because it seems to me that world government should follow as a result rather than come first as the cause of the abolition of war. Most emphatically reliance on military power can produce nothing but the opposite result, as all history proves.

The fact is that the blind alley in which the modern world finds itself has no way out through any sort of formulas and systems. Formulas and systems may have their uses after the way out has been discovered, but the first necessity is a change in the human heart.

If you feel inclined to throw up your hands at that and cry that human nature never changes, my answer is to ask you: In that case, what has civilization accomplished? Is the human nature of an American of the 20th century exactly the same as the human nature of a caveman of prehistoric times? Basically it may be unchanged, but you know very well that it manifests itself in ways so different that the two creatures seem hardly to belong to the same species. Of course human nature changes; if it were not so, education would be a waste of time and religion nothing more than an empty dream.

The attainment of a sense of human brotherhood is not an impossible ideal, but I sometimes think that we may have laid too much stress on it as an ethical duty. It is a duty, certainly, but it is also a rational process, very much like attaining a realization that the world is round. For many ages that idea, too, was rejected by the mass of mankind as a denial of commonsense. Any man, merely by looking around him, could see that the world is flat.

For an even longer time men have been taught by that same commonsense that they are not brothers, but mortal enemies. Any man can see it, merely by looking around him. Nevertheless, as evidence kept piling up that the world is round until the fact had to be accepted, so the evidence that men are and must remain brothers keeps piling up. Th evidence of the hydrogen bomb is merely the latest item. The lives of countless millions of human beings are in our hands, and our lives are in their hands. We are our brothers' keepers, and we can no more alter the fact than we can alter the course of the planet around the sun.

Our choice is limited to accepting or rejecting the duty that the fact implies. It is within our power to be murderous brothers of the breed of Cain, but brothers we shall remain, and if the voice of blood cries out from the ground, it will be our brothers' blood—which is my reason for saying that brotherhood is a condition and not a theory and its acceptance is only secondarily a moral triumph. It is first of all a triumph of reason over ignorance and superstition; and as every triumph of reason results in intellectual enlightenment, so I have faith to believe that the progressive acceptance of the fact of human brotherhood will be a lamp unto our feet and a light unto our path that will guide us through the darkness that threatens to overwhelm us, and lead us into the perfect day.

The Political Scene

EXTENSION OF REMARKS
OF
HON. WAYNE MORSE
OF OREGON
IN THE SENATE OF THE UNITED STATES

Monday, May 14, 1956

Mr. MORSE. Mr. President, one of the most able journalists in the State of Oregon is Mr. Dewey Rand, publisher and editor of the great weekly newspaper in our State, the Capital Press. I have before me three editorials, written by Mr. Dewey Rand, dealing with the political scene, both State and National. The editorials are so excellent, Mr. President, that I believe an historical record should be made of them. Therefore, I ask unanimous consent that they be printed in the Appendix of the RECORD.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Salem (Oreg.) Capital Press of April 6, 1956]

PASSING IN REVIEW

(By Dewey Rand)

Like many other out-of-State newspapers the Los Angeles Times has entered the Oregon United States senatorial contest. It does not approve of Oregonians electing Senator WAYNE MORSE for another term. If it has its way, and one can be sure it feels it should, Oregon will send Douglas McKay to Washington instead of the man who has had the effrontery to criticize President Eisenhower and—worse still—change his registration from Republican to Democrat.

Oregon editors who do not read the Times are indebted to the Oregon Voter for this news. In the March 24 issue, this courageous defender of Republican monopoly and private power interests in Oregon, published an editorial from the Los Angeles Times of March 13. It is too bad both the Voter and the Times do not have a larger circulation in the State so that Oregon voters could be better informed on the baseness of MORSE and the nobility of McKay. For the Times editorial points out that Oregon voters will have a clear choice between these two extremes if MORSE and McKay are nominated in May, and oppose each other in November.

There could hardly be a more extravagant use of adjectives than the Times editorial writer displayed. Most of the space is devoted to MORSE and running through it are these descriptive words applied to the character or conduct of the Oregon Senator: Obstructionist, deluded, petty, windy, bitter, verbose, self-righteous, unctious, demagog, and, quoting McKay, "slippery." The Times did not need as much space to give its evaluation of McKay. In one paragraph it packed these words, descriptive of the recent Secretary of Interior: Courage, integrity, ability, competent, useful, enterprising, successful, and popular.

Many may wonder why the Times goes to all the trouble of telling Oregonians how to vote, and why. The answer to that is as flattering to MORSE as the Times piece was derogatory. There is a national campaign underway, supported by the big-business interests, including oil, gas, and private power, the Republican National Committee, and the President of the United States, to end MORSE'S political career. Add to this most of the newspapers, not only of Oregon but of the Nation, and the national magazines and you have a rather high recommendation for MORSE in the eyes of the less privileged people.

Although most publications make no pretense of covering their hatred for MORSE, few are as vicious as was the Times in its editorial. The usual anti-MORSE method is more devious and, therefore, more effective. An example of this is the March 19 issue of Time weekly, wherein it reports the coming McKay-MORSE race. Time conceals its prejudice quite well, but it shows in the pictures it uses with the story. Under the one of McKay, the caption reads "Ripened Practically." Under the MORSE picture Time says "Unripened Brilliance." The point in this is, we suspect, brilliance has no place in Government. To keep the country safe, only the successful in business or the military should be recruited or elected to guide the destiny of the Nation.

When MORSE was a Republican Senator his conduct was either applauded by these same editors, who now are united against him, or his actions, when disapproved, were never mentioned. When have the Republican editors of the State, or the Nation, criticized a member of the party? On the other hand, when have they missed an opportunity to vilify a Democrat? This is to be expected, but it should also be remembered when reading partisan editorial comment on Senator MORSE. The Times is entitled to its opinion or its propaganda, but its readers are also entitled to regard what it says with suspicion.

The venom many of the Nation's and Oregon's editors spew on MORSE is little short of amazing. They make no specific charges against him, they do not cite his record, for to do so would assure his reelection. Instead, they search the dictionary for belittling adjectives and manufacture phrases of innuendo. The Los Angeles Times with its complete lack of fairness and restraint, is an example of the extremes to which the press will go to defend those of special interests and privileges who control the Republican Party.

Senator MORSE, independent, brilliant, and capable, is a constant threat to the profitable privileges for the few the Times is defending. In the minds of the majority, the less privileged Oregonians, there should be no better reason for the reelection of MORSE than the opposition of the Times and others of its kind.

[For the Salem (Oreg.) Capital Press of April 20, 1956]

PASSING IN REVIEW

(By Dewey Rand)

President Eisenhower's appearance on television this week in defense of his veto of the farm bill was a credit to his stage manager, Robert Montgomery. But the script did not quite match the performance. Perhaps the President should get himself some new writers. And then again, perhaps they did as well as anyone could do with that very tough theme, the farm problem, and the President's attitude toward it.

Of course, for those who "like Ike," there sat a man with courage and integrity who faced the issue fearlessly and nopolitically, letting the chips fall where they would. Didn't he, himself, say: "I have one yardstick by which I test every major problem—and that yardstick is: Is it good for America?" You had his own word he had done the wise and fair thing.

But to those who regard the President of the United States only as a man who has great power and whose decisions have profound effect on the lives of those he governs, it was neither that simple nor conclusive. Nor were his words entirely nonpolitical, or the rightness of his veto so conclusively proven as was intended.

Whether or not the bill he killed was good or bad has been debated long enough and there is nothing to do about it now. No one now has hope there will be any substantial remedial farm legislation this year. Surely the President knew his veto would mean just that—everyone else did. On Monday the President once again expressed great concern for the farmer's plight. These were only words. Once again his action belied these words of sympathy.

This difference between words and deeds, which has been the farm policy of the administration for more than 3 years, should leave practically no one with any illusions. If farmers, or those who believe their economic welfare is important, support the President for reelection, it will have to be for other reasons than expectations he will propose or support a plan that will raise the many small farm families to a position of prosperity comparable to those in the Nation's booming industry. Either he does not regard the plight of the farmer with the concern he expresses or, for some reason, he fears a helpful program. The result is the same in either circumstance.

All this is difficult to understand. It may be, as some experts argue, that the small farmer is an outdated economic unit and should be liquidated. Surely this administration has allowed enough progress in this direction to warrant the suspicion, at least, that this is the plan. Secretary of Agriculture Ezra Benson, with his cold banking and business regard of the problem, has done his best to further the liquidation with stubbornness, if nothing else. Surely, Benson's actions, attitude, and inactions are approved by the President.

Who can rightly claim to have the answers to this problem? We do not pretend to be the one. But we do believe the President should have signed the bill, and we do not believe it was proven a bad bill simply by the President saying so. We believe the estimated $3 billion it would have provided for the farmers this year would have been good for America—not bad. We do not believe that a country supporting a $38 billion defense load would collapse under this additional strain.

Benson and the President have decried surpluses for 3 years in an effort, it seems to us, to draw attention to their own failures by blaming the Democrats for all the troubles. Admitting the Democrats were to blame for the surplus, too much food is not the greatest evil that can befall a nation. A greater one, we believe, is the impoverishment of millions of American farm families.

President Eisenhower has become a capable and convincing television performer. He gave every appearance, in his talk on the farm bill, of sincerity and deep conviction. But while he was deploring this work of Congress and saying it "would hurt the farmers," and intimating it would be bad for the country, the viewer could not help remembering the alacrity with which he signed away the tidelands oil. What yardstick did he use to measure that problem? Does he have one for American businessmen, and another for American farmers?

[From the Salem (Oreg.) Capital Press of April 27, 1956]

PASSING IN REVIEW

(By Dewey Rand)

It has been a long time since an Oregon newspaper has produced a sensation equal to the one the Portland Oregonian made last week. All newspapers report news. Last week when the State's leading daily published its first story by two of its top reporters who had spent months investigating political and vice connections in Portland, it had made the news.

In their investigation the reporters could hardly have snared bigger game. That is not saying anyone should be considered guilty of anything at this point. What the stories do show is that Portland officials, Multnomah County officials, labor officials, and underworld characters have been carelessly, to say

the least, associating. Included in the cast are the mayor of Portland, his chief of police, a city commissioner, the Multnomah district attorney and sheriff, a Portland underworld figure, a Seattle bookmaker, and two kingpins of the teamsters union.

The story thus far centers primarily on two men. These two are Clyde Crosby, Portland boss of the teamsters, and Jim Elkins, reputed boss and banker of Portland's underworld. It is intimated Elkins has influence with Portland's police chief, James Purcell. It is charged that Crosby, who was an intimate of District Attorney William Langley, conspired with Elkins, the Seattle bookie, J. P. McLaughlin, and coast teamster boss Tom Maloney, to pool and control all the rackets and fringe business in the county. The break for the Oregonian seems to have occurred when Elkins and the others could not agree, and he started talking to the two reporters.

The Multnomah County grand jury will now take up where the Oregonian has left off. On May 7, Attorney General Robert Thornton will begin an investigation at the direction of Gov. Elmo Smith that will dig to the bottom of the charges and countercharges and will prosecute, if evidence warrants. In the meantime, it would be unfair to those featured in the Oregonian stories to jump to any conclusions of guilt.

Meanwhile, it is more practical to speculate on the political motivation and consequences of the Oregonian's exposé. So far, there has been more political heat generated than crime uncovered in this journalistic enterprise. It is interesting to note that the Teamsters are a power in Multnomah politics, as they are, to a lesser degree, in the State. It is also of interest that the Teamsters support Democratic candidates with few exceptions, and the power of this union swings others in the same direction. Finally, the Oregonian broke the story just 4 weeks before the primary election.

This newspaper itself, has raised the question of politics. In an editorial this week, it protests its innocence. "Neither the investigation nor subsequent news has been motivated or influenced by political considerations," it says. "This newspaper has printed what substantiated information it could obtain, without regard to candidates, officials or political parties." There you have the editor's word that the paper's motives are pure.

But circumstances cause a raised eyebrow, at least, if not actual suspicion. The district attorney, who has appeared in the poorest light in the stories, is a Democrat. So is Sheriff Schrunk, who was, and maybe still is, a strong contender for Mayor Peterson's job. The city election is nonpartisan, but Peterson is a Republican and so is Commissioner Stanley Earl, whom the Teamsters are attempting to defeat. The Teamsters have also endorsed these Democrats: Wayne Morse for Senator; Edith Green for Congress; Robert Holmes for Governor, and Monroe Sweetland for secretary of state. If the Teamsters' leaders are made to look disreputable, or worse still, convicted of criminal conspiracy, some of the scandal will rub off on these candidates.

The Oregonian editors are no political amateurs, and are steadfast propagandists for the GOP and its candidates. They know as well as anyone the political consequences of what they have published. They may not be "motivated or influenced by political considerations," but why such fortunate timing? Portland is a big city, and crime and vice are no new importations. Political and underworld connivance has been going on for many years and the Oregonian has never shown such crusading fervor when the city hall and court house were safely in Republican hands.

The Oregonian has performed a public service by calling attention to the suspicious conduct of public officials, labor czars and racketeers. But in this commendable program, its statement of political purity is out of place and hardly believable when all the circumstances are reviewed. Crusading is one thing, hypocrisy is another.

The Grain Terminal Association Daily Radio Roundup

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Monday, May 14, 1956

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the daily radio roundup of the Farmers Union Grain Terminal Association, of St. Paul, Minn.

There being no objection, the release was ordered to be printed in the RECORD, as follows:

TUESDAY, MAY 8, 1956.

Sagging farm income ought to be a flashing red danger signal to the rest of the country. It's a warning that means a lot of people besides farmers are going to get hurt. The story of how sick agriculture take-home pay is infecting other parts of the economy is told in a couple of newspaper articles. One comes from the St. Paul Pioneer Press. It carries a report under the headline saying, "Ag Troubles Spread to Business," and tells the findings of a checkup by that newspaper. In short, it says "Farm prices and weather trouble are spreading seriously to business in the agricultural implement, auto, and fertilizer industries."

The farm price troubles, said the St. Paul newspaper, are represented by a new sag of 3 percent in the past year in the purchasing power of Minnesota farm products. This finding was from a study made by farm economists at the University of Minnesota. They further report that the purchasing power of Minnesota farmers was the lowest for the month of March in 21 years. That low level of purchasing power reflects low prices of farm products and high prices of things farmers have to buy, says the newspaper.

In fertilizer sales it's a case of sales running better than last year, but the rate of expansion in sales is less than it has been the last few years. Farmers are reluctant to cut down on this way to higher yields—that's being efficient. Farm-machinery dealers are finding the cuts in sales, however, to be sharp. And the same goes for auto sales in farm country here in the upper Midwest.

Another newspaper, the New York Times, also published a survey devoted to the farm machinery and auto sales for the whole country. The newspaper commented that farm income has dropped by 26 percent in the last 5 years, and nobody knows it better than the farm-equipment makers and dealers. Here's what it says about the business: "Even though spring planting is well underway, sales are skidding. The retail dip is as great as 80 percent in some cases, though the average is probably closer to 20 percent. There are variations in the pattern. Farm equipment volume has slumped most in the Midwest farm States." The Midwest Farm Equipment Association, composed of about 750 members in western Iowa and Nebraska, reported to the New York newspaper that their business was running 38 to 40 percent behind the 1955 pace.

And a correspondent from Des Moines, Iowa, told the Times that "the picture for implement dealers here does not look happy. There has been an increase in the number selling out recently." Farmers are poor customers for farm implements and for automobiles, when their income takes the sharp cut that it's been handed for the last few years. And the findings of these surveys show that when agriculture gets under the weather economically it is going to spread to other industries. And one as dependent on farm customers as the farm-implement industry is headed right for the economic sick list. It means workers will be laid off in the cities, as they are these days, and profits of farm machinery manufacturers go down, and some dealers go out of business as they are.

So, it ought to be clear that helping get agriculture back on its feet is a matter that concerns many people besides farmers. GTA, the co-op way, is dedicated to helping farm people win a fair return for their contribution of food abundance to the Nation.

SUNFED Should Not Be a Part of the United States Foreign-Aid Program

EXTENSION OF REMARKS
OF
HON. THOMAS E. MARTIN
OF IOWA
IN THE SENATE OF THE UNITED STATES
Monday, May 14, 1956

Mr. MARTIN of Iowa. Mr. President, on May 7, 1956, I reviewed the question of United States participation in the Special United Nations Fund for Economic Development, popularly known as SUNFED.

I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Knight newspapers which supports my position.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Detroit Free Press of May 8, 1956]

NO HELP TO UNCLE SAM—FOREIGN AID VIA THE U. N.

With power diplomacy currently taking on a cash-and-carry aspect as the United States and Russia compete in the open market for allies, it is natural that someone would propose a supermarket system for handing out foreign aid.

That is what the suggestion amounts to that United States aid funds for underdeveloped countries be disbursed by the United Nations.

The plan has strong backing. Our U. N. Ambassador Henry Cabot Lodge supports it as does Adlai Stevenson, candidate for the Democratic presidential nomination.

President Eisenhower, on the other hand, is dubious about it, as the majority of Americans are likely to be.

The best case for turning over to the U. N. a large part of the $4.9 billion which Congress is being asked to appropriate for foreign aid is advanced by Ambassador Lodge.

It would, he says, be a big step over an aid program sponsored by the United States alone.

It is his hope that Russia would follow our example. In fact, he thinks the Soviet would be forced to do so. The result would be an end to the spending competition between the two nations in their efforts to win the alliance of underdeveloped countries, and a spreading out the available funds so that more poor nations would benefit.

Other people have offered the argument that aid through the U. N. would be more acceptable to the beneficiaries because it would not put them on one side or the other.

That prompts the question of what the real purpose of handing out billions of dollars for dams and other enterprises really is. As a matter of cold reality, why are we spending billions of dollars unless it is to win the alliance of other peoples to our side in the cold-war struggle with the Communists?

There are several other things that come to mind in a discussion of this plan.

First, we wonder just how fierce is the competition between this country and Russia to aid other nations. There has been a good deal of talk about what the Reds are offering in this or that quarter of the globe. But there isn't much evidence that they make good on their offers. They make promises which they may or may not intend to keep; we match those promises with hard cash.

The results, so far, have been precious little in the way of value received.

If the money was paid by the U. N.—our money—it would have a U. N. label on it. That would mean to the beneficiary that Russia was as much a donor as the United States.

How would that give us the slightest advantage in winning good will?

The U. N., as we understand it, was created to serve as a common meeting ground in which points of tension between two nations could be argued out and eased.

We can't recall that it was intended to buy peace with American dollars.

To make the U. N. a disbursing agent for the money of American taxpayers smacks of the one-world concept. We can almost foresee the time when, under such an arrangement, the U. N. will tell us how much we are to appropriate. Our only job then will be to raise the money.

Finally, we doubt if any such arrangement will ease the tension between the United States and the Communist world. The latter is dedicated to the destruction of freedom as we conceive it.

If a U. N. fund to which we contribute heavily will stop the bidding for friendship that goes on now between this country and the Reds, we can be almost certain that the latter will shift their line and find some other method of undermining our prestige and strength abroad.

North Dakota Clean Grain Week

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Monday, May 14, 1956

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter I have received from Mr. Wayne J. Colberg, secretary of the North Dakota Clean Grain Committee.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

STATE COLLEGE STATION,
Fargo, N. Dak., May 8, 1956.

Senator WILLIAM LANGER,
United States Senate,
Washington, D. C.

DEAR SENATOR LANGER: We plan to hold a Clean Grain Banquet in Bismarck, N. Dak., on June 21, 6:30 p. m., in the American Legion Hall. This banquet will be the official "kickoff" of our "North Dakota Clean Grain Week" July 9 through 13, to be proclaimed by Governor Brunsdale.

Our menu will feature only North Dakota grown products and we sincerely hope that we can create a little more interest not only in clean grain but also all of our good North Dakota agricultural products.

On behalf of the North Dakota Clean Grain Committee, I wish to extend an invitation for you to be our guest at this banquet.

Very truly yours,

WAYNE J. COLBERG,
Extension Entomologist and Secretary to North Dakota Clean Grain Committee.

The Late Honorable Alben W. Barkley

SPEECH
OF
HON. NOBLE J. GREGORY
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 1, 1956

Mr. GREGORY. Mr. Speaker, you know that the hearts of all Kentuckians are heavy and our heads are bowed in grief over the passing of our most illustrious native son. I particularly am grieved over the loss of this great and good friend. He was a resident of the great First District of Kentucky, which I have the honor to represent and which he made a great district as an illustrious Member of the House, as a distinguished Senator from Kentucky, and later as the Vice President. His last words were typical of him and typified his life both as a citizen, as a neighbor, and as a public official. I am sure that I have known him longer than any Member of either body as I knew him when I was a small boy and witnessed his climb in public affairs from county office to the pinnacle in national affairs in his party and in his Nation.

ALBEN BARKLEY was born in the small community of Lowes, in Graves County, Ky. He never forgot his beginning in humble surroundings and his loyalty to that community and his devotion never wavered.

I felt that it would be appropriate that the high school at Lowes, Ky., should have the flag which was flown at half mast over the House from which he started his rise to fame. I have sent this flag to the Lowes, Ky., High School with the accompanying letter:

To the Students of Lowes High School, Lowes, Ky.:

The hearts of all of us in Kentucky and, in fact, throughout the Nation are heavy and our heads are bowed in sorrow over the sudden passing of the late Senator ALBEN W. BARKLEY whose life has for so many years been dedicated to unselfish public service to his fellowman.

I know that in his birthplace of Lowes his loss is probably felt more keenly, if possible, than elsewhere. His loyalty and devotion to the Lowes community never wavered. Your forebears knew him as a schoolboy and knew of his ambition, character, and determination to be of service to his fellowman. He realize this ambition and achieved the second highest honor in the world in becoming the most popular Vice President in the history of the United States.

Coming from a modest beginning and having achieved these many great honors by the application of industry and honesty—fortified by character and unselfishness, his life was and will always be a beacon light of inspiration to young men and women possessing these traits.

The Congress of the United States paid just tribute to him. All flags were flown at half mast when his passing was announced. Since he started his rise to fame as a Member of the House of Representatives, I feel that the flag flown over the House of Representatives at half mast should be presented to you to hang in your school as a constant reminder to you and the students of the generations yet to come that great good can be achieved by you if you emulate his great life. I am sure that this will be an inspiration to you.

I have secured this flag and am sending it to you today together with a certificate of the Clerk of the House that this is the authentic flag flown over the House at half mast as a token of grief and deep respect which not only the Congress felt but which was shared by peoples of the entire world.

So long, Mr. Speaker, as character and devotion are honored among men, so long as courage of conviction may be cherished among men, so long as unselfish service to humanity is appreciated—just so long will the memory of ALBEN W. BARKLEY occupy a hallowed place in the minds and hearts of all Americans.

United States Says "No" to Coffee Agreement

EXTENSION OF REMARKS
OF
HON. THOMAS E. MARTIN
OF IOWA
IN THE SENATE OF THE UNITED STATES
Monday, May 14, 1956

Mr. MARTIN of Iowa. Mr. President, on many occasions I have discussed on the floor of the Senate the difficulties interent in attempting to stabilize the prices of commodities through intergovernmental commodity agreements.

For sometime, many Latin American governments have been urging this Government to participate in an international commodity agreement for coffee. The New York Herald Tribune on May 5 reported that the United States Government has decided not to participate in the plan for an international coffee agreement. I commend the State Department for their position in rejecting this scheme.

The difficulties in administering commodity controls are well illustrated in a report by Laurance F. Stuntz, of Rio de Janeiro, which appeared in the Washington Post May 4, 1956. Mr. President, I ask unanimous consent that Mr. Stuntz' article may be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Post and Times Herald of May 4, 1956]

AUTO AND COFFEE RACKETS IMPERIL BRAZIL'S STABILITY

(By Laurance F. Stuntz)

RIO DE JANEIRO, BRAZIL.—A little racket in automobile imports has tipped off Brazilian authorities to a big racket in coffee exports. The two together pose a new threat for the country's precarious money stability.

The illegal import of automobiles apparently is partially financed by the coffee racket. The latter appears to be costing the government somewhere between $25 million and $250 million a year.

The coffee racket, born of Brazil's elaborate control of foreign exchange, works this way:

An exporter ships out, say 1,000 bags of Santos coffee grade 2, but he issues the invoice for the lower grade 4. The difference is usually around 1¼ U. M. cents per pound—$1.50 difference per bag or $1,500 on the shipment.

The United States importer pays the exporter for the higher grade. But the exporter sells the Banco Do Brazil, as the law requires, only the dollars based on the lower grade. Since he receives more dollars this way he can use them to buy cars in the United States or he can sell them on the free market.

DIFFERENCE IS CONSIDERABLE

The difference is considerable. The government pays 37 cruzeiros for every dollar received from the sale of coffee. The free market rate is twice this—around 74 cruzeiros for the dollar. Thus the crooked minority of exporters get twice as many cruzeiros as they would if they sold the dollars to the government.

These dollars feed the free market and the racket probably accounts for the fact the rate is around 74 cruzeiros. One foreign firm has figured the true value of the cruzeiro is now about 90 cents to the dollar. But the heavy sale of dollars from the coffee racket has kept the price lower.

Free market dollars can also be used to buy automobiles to be brought in through loopholes in the customs laws. The going price of $10,000 for a new Chevrolet makes this a profitable business.

It is because of the shortage of dollars that Brazil forbids the import of cars. Anybody who can get a car into the country can make a 400-percent profit. With this much at stake, smart operators looked for a loophole. They found it in the legal provision that lets a returning Brazilian bring in his car from abroad. Dealers could give a housewife a free trip to the United States, arranging for her to bring back a car. The housewife got the trip and the dealer got the car. He could pay the $700 airplane passage and still make plenty.

ONE THOUSAND CARS THIS YEAR

With cars flooding in—more than 1,000 already this year—Brazilian consuls asked United States shipping lines not to carry any more. But other lines were less cooperative and dealers took to chartering ships.

The Government cracked down by increasing port charges in order to dry up the profits. Unloading a Chevrolet, the most popular here, now costs $4,280 even if you can get it out of customs in less than a month. Most cars take around 3 months. Storage is $1,510 the first month and twice that the second month. Port use is $920 and stevedoring bossing $1,850. On top of that, freight and duty are about $750.

Legislation Accomplished in This Session of Congress

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 14, 1956

Mr. McCORMACK. Mr. Speaker, in my extension of remarks, I include a memorandum prepared for me by the Legislative Reference Service of the Library of Congress comparing the legislation accomplished in this session of Congress with that accomplished in about the same period in the 2d session of the 83d Congress:

COMPARISON OF LEGISLATION ACCOMPLISHED IN THIS SESSION OF CONGRESS WITH THAT ACCOMPLISHED IN ABOUT THE SAME PERIOD IN THE 2D SESSION OF THE 83D CONGRESS

As of May 1, 1954, there were 60 public bills enacted into law.

As of May 1, 1956, there were 112 public bills enacted into law.

As of May 1, 1954, there were eight bills in conference.

As of May 1, 1956, there were 10 bills in conference.

As of May 1, 1954, there were 11 bills through conference.

As of May 1, 1956, there were nine bills through conference.

As of May 1, 1954, the Senate had passed 397 measures.

As of May 1, 1956, the Senate had passed 575 measures.

As of May 1, 1954, the House had passed 442 measures.

As of May 1, 1956, the House had passed 404 measures.

As of May 1, 1954, the Senate committees had reported 426 bills.

As of May 1, 1956, the Senate committees had reported 674 bills.

As of May 1, 1954, the House committees had reported 418 bills.

As of May 1, 1956, the House committees had reported 404 bills.

Yea-and-nay votes:

As of May 1, 1954, there were 48 in the Senate and 19 in the House.

As of May 1, 1956, there were 57 in the Senate and 19 in the House.

Executive nominations:

As of May 1, 1954, the Senate had received and considered 11,680 nominations requiring senatorial confirmation.

As of May 1, 1956, the Senate had received and considered 33,777 nominations requiring senatorial confirmation.

Some of the major proposals which have received action during the 2d session of the 84th Congress are:

Natural gas bill (H. R. 6645) vetoed February 17, 1956.

Disaster loans (H. R. 7871) approved February 2, 1956, Public Law 402.

Home disaster relief (H. J. Res. 471) approved February 10, 1956, Public Law 405.

Farm-gas tax exemption (H. R. 8780) approved April 2, 1956, Public Law 466.

Tax Rate Extension Act (H. R. 9166) approved March 29, 1956, Public Law 458.

Federal Highway Act of 1956 (H. R. 10660) passed House April 27, 1956.

Navy shipbuilding and conversion (H. R. 7993) passed Senate April 26, 1956.

Farm bill (H. R. 12) vetoed April 16, 1956; veto sustained April 18, 1956.

School-milk program (H. R. 8320) approved April 2, 1956, Public Law 465.

Merchant Marine Academy (H. R. 6043) approved February 20, 1956, Public Law 415.

Willful aircraft destruction, penalty (S. 2972) reported in House March 29, 1956.

Aeronautical research (H. R. 8675) passed House February 27, 1956.

Colorado River project (S. 500) approved April 11, 1956, Public Law 485.

Taxation of insurance companies (H. R. 7201) approved March 13, 1956, Public Law 429.

Medical-dental officers, incentives (H. R. 9428) passed Senate April 18, 1956.

Military dependents' medical care (H. R. 9429) passed House March 2, 1956.

Military-procurement contracts, advertising (H. R. 8710) passed House February 20, 1956.

Poliomyelitis Vaccination Assistance Act, extension (S. 2990) approved February 15, 1956, Public Law 411.

Military construction (H. R. 9893) passed House April 12, 1956.

Foreign Service pay increase (S. 3481) passed Senate April 12, 1956.

Food and Agricultural Organizations and International Labor Organization (S. J. Res. 97) passed Senate April 19, 1956.

Atomic Energy acquisitions (H. R. 10387) passed Senate April 19, 1956.

National bank examinations (S. 1188) approved April 30, 1956, Public Law 502.

Red Willow and Wilson Dams (S. 1194) approved May 2, 1956, Public Law 505.

Federal Reserve bank authority to purchase obligations (H. R. 9285) passed House April 19, 1956.

War orphans' education (H. R. 9824) passed House April 23, 1956.

Veterans' housing loans (H. R. 9260) passed House April 23, 1956.

Bank holding companies (H. R. 6227) passed Senate April 25, 1956.

Disarmament as a Part of a Just and Durable World Peace

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Monday, May 14, 1956

Mr. WILEY. Mr. President, last Saturday it was my privilege to address a civic conference in Chicago on the theme of disarmament as a part of a just and durable world peace.

I ask unanimous consent that my address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

SENATOR WILEY URGES INTENSIFIED EFFORT TO EXPLORE DISARMAMENT PLANS; QUESTIONS REAL SOVIET ATTITUDE

It is, indeed, a special honor for me to be with you today. It is more than gratifying to see an assembly of local civic groups bound together by a mutual concern for meeting the greatest international challenge of our times—maintenance of world peace through the achievement of workable, safeguarded disarmament.

Secretary Dulles' remarks before the General Assembly in September of 1953, ring truer today than ever before. He said at that time:

"Destructive power inherent in matter * * * must be controlled by the idealism of man's spirit and the wisdom of his mind. They alone stand between us and a lifeless planet. There are plenty of problems in this world, many of them interconnected. But there is no problem which compares with this central universal problem of saving the human race from extinction."

Such is the measure of the problem of regulation and control of armaments in the grim atomic-hydrogen age.

THE SENATE IS FULFILLING ITS RESPONSIBILITY

It is fitting and proper that the Senate of the United States, acting on behalf of the people of our country, has wisely established our 12-man subcommittee, for the exclusive purpose of exploring this central problem.

It is my view, as I know it is yours, that the Congress has an inescapable obligation continually to review this problem with the

highest officials of the Government of the United States, with leading citizens' organizations, and with individual spokesmen for the American public.

It is our task to help spotlight this challenge in all its implications and then, to leave no stone unturned, no channel unexplored, no constructive suggestion unconsidered in trying to help meet this immense and complex problem.

We are all aware that disarmanent plans could not possibly be worked out by the executive branch in a vacuum, or all by itself. Plans must and will be worked out in full accordance with the constitutional prerogatives of the Senate in its advice and consent function and in full accordance with the clear interests and responsibilities of the House of Representatives as well, speaking for our people.

WORLD OPINION'S CRUCIAL ROLE

In turn, disarmament discussions can only advance within the framework of what world public opinion wants and understands and is ready for; and that is where you in particular come in, with your constructive thinking and suggestions.

To better equip yourselves, you are, during this all-day session, getting the benefit of the judgment of a great many experts who have devoted a very considerable amount of time and energy to exploring all phases of this problem. I will not duplicate what they will say or have already said in their respective fields, but I may briefly touch upon some of their areas.

My own principal theme is, that you may feel confident that your Congress and, in particular, your Senate, is moving ahead, seeking earnestly to fulfill its responsibility in this awesome field.

We are not of course, seeking to arrogate unto ourselves any of the powers and rights of the executive branch in spearheading United States diplomacy, nor are we, however, idly sitting back and abandong our own clear obligation to work as a member of the executive-legislative team, on behalf of world peace.

WE WATCH ENTIRE WORLD STAGE

We are keeping our eye on the main ball, and we are not losing sight of the other East-West balls either.

The talks in London were of course, but one part of the fast-changing world stage.

Inevitably, all that transpires in the dynamic field of foreign policy may affect the climate and, indeed, the fate of disarmament negotiations.

The latest Bulganin and Khruschev statements from the Kremlin; the latest signs of dissension over the downgrading of Stalin; new developments in the explosive Middle East; new Soviet trade and technical assistance offers to underdeveloped lands; new Soviet cultural exchanges; the exploration by the three wise men of NATO of greater economic and political cooperation within that vital organization; new nuclear discoveries from laboratory and testing ground— these are but a few of the factors on the world scene which interrelate, if only indirectly, with the problem before us.

They give us clues, signs and omens of the state of Soviet thinking.

THE MOST BASIC OF ALL PROBLEMS: SOVIET INTENTIONS

And always, we get back to the most basic problem of all: Is there, in the heart of the Soviet leaders (as we know there is in our heart) a genuine desire to do everything humanly possible to have all of us succeed in the disarmament talks. Is there a real desire for—just and durable peace, because after all disarmament is not a goal in and of itself but rather is a vital part of a just and durable peace.

Or, are the Soviet leaders simply sparring for time? Are they simply maneuvering for propaganda value—for example, with phony offers on meaningless reduction of their huge ground forces?

Only the future will really tell. But the past does tell us something. And it is this: we have good reason to be on our guard, to be vigilant. We have good reason to be hopeful, and yet, not to be naive.

We have welcomed ford from Harold Stassen, of progress made during the 5 Nation Conference of 6 weeks in London. Indeed, we have welcomed every sign at any time, that, despite the enormous gap which still separates East and West, we have moved toward a closing of at least part of the gap between the United States and her allies on the one hand, and the Soviet position, on the other hand.

There is no reason for discouragement or despair.

But we still don't know the real answer to the real question: What is actually in the mind of the Kremlin?

Does it actually desire to do everything possible to avert an H-bomb holocaust in the world, to avert it by genuinely constructive deeds—irrevocable, ironclad deeds?

Do the "powers" in Moscow truly realize the ominous implications of the ever-mounting East-West stockpiles of nuclear weapons and the ever-increasing destructiveness of these weapons?

Do the "powers" in Moscow actually seek some constructive way out of the arms race, the nuclear deadlock? Or are they only paying lip service to the problem, while actually repeating their "Nyet," "Nyet," "Nyet"?

In his recent visit to Great Britain, Mr. Khruschev said to a group of his hosts: "It would not be of much use to our peoples if we were to stand facing each other like fighting cocks. * * * Such an attitude would lead to an arms race involving tremendous costs; an arms race that can lead only to war; and with modern weapons, war can lead only to disaster for all."

As for ourselves, we clearly perceive the nature of such a possible disaster. So, we will work patiently and persistently, and we will seek "to move mountains" to see that disaster does not befall the human race.

SOVIETS CAN BE MOVED

For the present, we can only say that the Soviets are not immovable. They have moved. They are definitely subject to the pressure and of world opinion. Russian opinion itself.

When we look back at the Soviet position in 1946, we very definitely see modifications. Russia has come a long way from her old arbitrary insistence that prohibition of nuclear weapons should precede an "effective system" of international control.

She now acknowledges the indispensable concept of stages in the process of bringing a disarmament program into being.

Yet, it is true that the Soviets have continued their pattern of "running from specifics." And the areas of disagreement still overweigh those of any agreement. Any optimism in London got a particular setback by statements of Messrs. Khruschev and Bulganin in outright criticisms of the Disarmament Subcommittee's efforts.,

Russia is still unwilling to agree to an adequate inspection system, including combined air-ground inspection and controls.

For the present, she accepts only ground installation inspection. She unsoundly maintains that aerial survey has nothing to do with real disarmament control—that it has "other aims." What these aims are were not specified.

It would seem that Russia suffers "conveniently" from "loss of memory," forgetting that in 1945 she herself introduced a proposal, providing an international air force under the United Nations, to help maintain peace.

Also, the Soviet Union still does not want to comprehend that a settlement of world political problems is part and parcel of general disarmament. How can we possibly agree to her disarmament plans which insist on the neutralization of Germany and Korea, which would mean the complete withdrawal of Western defense forces from world tension centers?

Nor has Russia met the West on definite proposals for even partial—first phase—nuclear disarmament.

She has failed too, to respond to our suggestions for certain confidence-binding gestures such as: Test control areas, exchange of technical missions, and exchange of information on troop movements.

Moreover, we must remember that President Eisenhower is still awaiting a belated reply from Marshal Bulganin in answer to our historic proposal in his letter of March 5. As you well recall, the President had suggested for the first time an East-West freeze on stockpiles of nuclear weapons (with appropriate inspection safeguards of course).

IRON CURTAIN HAS ONLY A FEW PEEPHOLES

Basically, the Iron Curtain remains exactly that. There are a few peepholes for looking through it, but there is no sign of anything like the comprehensive inspection system which must be at the very core of disarmament plans.

Meanwhile, Harold Stassen informs us that in another year, scientific know-how on the hydrogen bomb will have spread around the world. If this information becomes common stuff to other countries before an international disarmament treaty is drawn up, tensions and dangers will be seriously increased.

PROMISING NEWS ON U. N. ATOMIC AGENCY

While we are waiting for some disarmament blueprint, we must and will continue to take the lead in seeing that our "Atoms for Peace" program is carried out. We have already made great strides in seeing a United Nations Atoms-for-Peace Agency drafted and approved. But, the specifics have yet to be put down in print. As set up, this new atomic code would at least help assure to all peaceful nations throughout the world a share in the marvelous benefits of nuclear energy—benefits which will lift mankind to higher levels of well-being.

Most significant for our discussion here today, is that this proposed agency would bar the warlike use of any atomic materials pooled with it, and would set up an inspection system to see that this was carried out. Is it possible that this could be a first step in limiting atom bomb production? The prospects are promising, and the United States should drive for approval of this agency, when it comes up for authorization in September.

OPPORTUNITY IN JUNE AND SEPTEMBER

On an overall basis, our Government is wisely determined to continue its dedicated effort to try to come to sound terms with the Russians. The U. N. Disarmament Subcommittee will meet again in about 6 months—time enough for reappraisal of proposals and positions by both sides. It is obvious that Russia wants some thinking time on United States proposals. Perhaps we will get an inkling of something new when delegates of the five nations report to the full U. N. Disarmament Commission in mid-June, for a review of their latest effort.

As Mr. Stassen remarked, "It is America's policy to turn the armaments spiral downward." In carrying this policy out, we will never slacken our drive to reach a workable accommodation with the Soviets, if it is humanly possible.

We know that our own national interest—our very lives—are directly involved. Life on this planet is directly involved. We cannot afford to be lax. Nor can we afford to make mistakes. We cannot afford to be impractical. We cannot afford to allow scien-

tific and military developments to render our proposals obsolete.

We are fortunate that the President of the United States and the Secretary of State clearly recognize all of the facts which I have mentioned, and that we have the services of so competent a leader as former Governor Stassen.

AVOID BOTH FALSE IDEALISM AND CYNICISM

We must constantly move ahead with judgment and discretion. We, as a people, must and will avoid the bluster of threatening statements, or the impatience of immaturity.

We must avoid any fuzzy-eyed idealism, which would cause us to take ill-conceived, unilateral disarmament steps, without the tightest and most effective safeguards.

But, at the same time, we must avoid the so-called realism which may only be a blind cynicism, which refuses to admit of the possibility of progress in this field.

Instead, the world needs hope; it needs faith. The world hungers for constructive efforts. We will not allow this hunger to go unmet.

Meanwhile, one-third of the Members of the Senate face reelection this year, and all of the House of Representatives. This issue, however, like other key foreign policy issues, must and will be kept out of partisan politics. It is too big, too important. And I am satisfied that this fact is clearly understood.

As we move ahead, it is up to us in the Congress to continue to furnish light for the American people, and for the peoples of the world, in cooperation with our associates of the executive branch.

It is up to us to warn America, however, that we may expect more and more Soviet propaganda tricks between now and the time the disarmament talks resume. We may expect that the Reds will make more showy efforts, for example, to reduce their swollen, conventional land forces. But we will not be deceived.

STAFF STUDIES BY SUBCOMMITTEE

Our subcommittee will help keep the spotlight on this problem. Our competent staff has, as you know, already completed several important studies which are being widely distributed throughout the country to interested citizens and civic organizations such as yours.

For example, our study of the Executive Branch and Disarmament Policy outlines all machinery within the executive branch responsible for carrying out a sound plan for control and reduction of araments. After all, final policy can only be as effective as the agencies involved in formulating it. Are they as efficient and clear-cut as they could be? Is there possibly any duplication or overlapping of efforts? Are lines of coordination, for instance, between Mr. Stassen's office, and Departments of State and Defense clear in analyzing arms control proposals? These are some of the questions we hope to answer.

Another study, A Selected Chronology on Disarmament, has afforded us one of the first really concise outlines of disarmament developments over the decades. These past experiences are highly significant today, and should serve as vital lessons for present and future courses of action over the conference table.

These and other subcommittee publications are gladly available to the public, and should prove of further educational benefit.

Our group will not only keep itself informed of all current developments in disarmament policy; in cooperation with the President, we will continue actively to seek new approaches in controlling the destructive forces unleashed by nuclear energy. Probably the most important phase of our work is collecting the viewpoints of the experts and public. This has alread proved a three-way learning process; enlightening to us; to those in attendance; and, I would venture to say, informative to the experts themselves.

Thus far, we have heard from such officials as Secretary Dulles, Mr. Stassen, Admiral Strauss, and Secretary Wilson. In our hearings with these and other representatives of the executive branch, I think we can stimulate fresh thinking on disarmament. In fact, it is not too presumptuous to believe that our conferences with them may have been helpful in presenting the recent arms control plan.

PAST MEETING IN BOSTON; COMING SESSION IN MINNEAPOLIS

But we have wisely gone to the people, as well, at the grassroots.

Our first out-of-town meeting in Boston was highly successful and informative. We heard from distinguished educators, scientists, clergymen, and private individuals. Their testimony not only took in specific parts of a total disarmament program, but they integrated disarmament with other foreign policy problems.

Needless to say, Boston certainly lived up to its reputation as a center of learning and pursuit of knowledge. Such opportunities to get an exchange of ideas, to talk out the problems at hand, and to receive original disarmament proposals, can but lead to new techniques.

We now look forward to our second "grassroots" meeting in Minneapolis on June 16. Again, printed copies of these hearings will be made available for public distribution.

Earlier, on June 8, we will have held another major hearing in Washington.

We are hoping for the broadest possible press coverage of it, for it is hard to conceive of hearings more genuinely meaningful to our own and all other peoples.

YOUR OWN ROLE

By our mutual efforts, we will help overcome any apathy which exists among our own people.

We know that time is running out and passive indifference must give way to an active searching for peace. Thus, it is up to responsible community organizations such as that of the groups represented here, to continue leadership in this job of public education. We need your continued cooperation in stimulating broader interest.

Through your local discussions and studies, you are arousing expert opinions and working toward an ever-better informed citizenry. At the same time, you are enabling people to help shape and share in policymaking on this crucial subject. The American people must have a still wider chance to participate in constructive discussions on disarmament; for how else are they to understand it and finally accept the policies pursued?

Our universities and colleges should be moving more rapidly into basic research on this problem—in particular, tying in disarmament with their studies in foreign affairs and international relations. Our Boston meeting underlined the important role of our higher educational institutions, in concentrating more specifically on the problem.

CONCLUSION

In summing up, may I congratulate all those who have contributed to the conception and the holding of this conference.

I hope that the work carried on today will move ahead in the days and weeks and months up ahead.

The road to a practical blueprint for weapon control remains a long and hard one. But setbacks and disappointments should only serve to speed constructive efforts on all our parts.

As our President has said, "There is no alternative to peace."

To win this most prized of all goals, we must and will do our part—each and every one of us.

Keynote Speech by Congressman John M. Vorys, Republican Mock Convention, Ohio State University, May 12, 1956

EXTENSION OF REMARKS

OF

HON. JOHN M. VORYS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, May 14, 1956

Mr. VORYS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following:

KEYNOTE SPEECH BY CONGRESSMAN JOHN M. VORYS, REPUBLICAN MOCK CONVENTION, OHIO STATE UNIVERSITY, MAY 12, 1956

I am honored to be asked to address this convention. You have met to frame a platform to support a successful campaign, and 4 years of wise and good administration after victory in November.

The Democrat convention will be engrossed and involved in the ambitions and intrigues of half a dozen presidential candidates, all of whom I have met personally, none of whom is big enough to be President; but they want to run for it, anyway!

Our convention is different. We are concerned with principles. We are inspired and influenced by the radiating personality, the moving spirit of our humble, friendly, beloved, great President, Dwight D. Eisenhower.

Here is a curious thing. We have a President who does not believe in one-man government, indispensable men, a rubber stamp Congress. Last September 10, before his illness, he said, "We don't believe for a minute that the Republican Party is so lacking in inspiration, high quality, personnel and leadership, that we are dependent on one man. We don't believe it for a minute." • • • He said, "Never pin your flag so tightly to one mast that if a ship sinks you cannot rip it off and nail it to another."

Yet this humble man has shown such a genius for team work, such a lifting spiritual quality, such ability in action, such a hold on the hearts of the people, that his already deathless spirit will permeate the conventions of both parties and will influence their decisions. We have had many would-be dictators in the world; some in this country. Our President, who would not be a dictator, has a voluntary following, based on affection and respect, here and over the world without parallel in history. Others would rule by fear; he leads by friendship.

You are young people. Others may feel that what you do or say is unimportant. President Eisenhower does not. He believes in youth. He is an old soldier. He learned in war that winning battles depends upon—not just generals, but youth. He has said: "The old tactical textbooks say that the commander always visits his troops to inspire them to fight. I for one soon discovered that one of the reasons for my visiting the front lines was to get inspiration from the young American soldier. I went back to my job ashamed of my own occasional resentments or discouragements. • • • The young American in action is something to inspire anybody." On the political front, he has said, "Each lower eschelon of leadership should in its composition, respond to the need for youth, for the idealism, the enthusiasm of youth."

So as you meet here, inspired by our President, remember that he is inspired by what you are doing.

II

I have been asked to make a keynote speech. I warn you, I am no orator. In fact, I am dubious about the value of campaign oratory, a phrase that has become synonymous in the public mind with hokum and buncombe. Campaign oratory makes everything black and white; what the opposition does is black, what we do is white. Our country is not that way; our parties are not that way; our government is not that way. I believe in 2-party government as the bulwark of our liberties; one-party government is despotism, as in Russia. Many parties means paralysis of government, as in France. Therefore, I believe in two good parties; I just want ours to be the best. As the President has said, "No party has a monopoly on brains or idealism or statesmanship." You have heard about a bipartisan foreign policy. Many people do not know that in the committees in Congress, and on the floor, most of the work is bipartisan. We have many bipartisan policies, and bipartisan opposition to them: For instance, in agriculture, civil service, roads, veterans. I would estimate that easily 95 percent of the text of bills and reports and debates in Congress is bipartisan or nonpartisan. It is that critical 5 percent that counts, and makes the difference between the parties.

Many people wish there were greater differences between our two great parties. They wish the other party would accommodate by being against everything good, and for everything that is bad. It would make campaigning easier. But neither party will accommodate the other inthis respect. This is hard on compaign oratory. It reveals, however, the essential unity of the vast majority of our people.

We have a big country, with a complex economy, many divergent regions and interests. Communism despises majority rule, so the Communist Party, the only party permitted, can be small and exclusive. In a free country a national party seeking a voluntary majority following must be large and inclusive. Measures that are vital necessities in one section may seem unimportant extravagances to those absorbed in the interests of another section.

An Italian statesman once said, "We have 14 parties, but only 2 factions; you have 2 parties and 14 factions." This was a witty remark, but it did not reveal the great weakness of government by coalitions of parties. We have many factions in this country who want their party to represent only their ideas. Their trouble is that the cannot get all the others to agree, or to drop out. So usually they exercise their right to stay in, and complain.

There is diversity within our parties. There is unity in many things among our people, but there are fundamental differences between our great parties in principle, in practice, in promises, in people.

III

There are cleavages between the northern and southern Democrats that may tear their party apart this year.

What is the Republican Party like in 1956? Some of our right-wingers say it has become Socialistic and is trying to out-deal the New Deal. On the other hand, the Democrat hopefuls in their their campaign oratory are saying the Republicans are the party of big business. Both of these statements cannot be true. As a matter of fact, neither of them is.

We are the middle-of-the-road party, conservative in economics, progressive in meeting human needs. Three words sound the keynote of our country's great desires, our party's principles, practices, and promises. The Republican Party stands for peace, prosperity, and progress. For the first time in a quarter century we have both peace and prosperity. Everything but the guns are booming, and we are marching right up the middle of the road to progress in a Republican administration. We stand, as the President has said, for "a Nation whose every citizen has reason for bold hopes, where effort is rewarded and prosperity shared, where freedom expands and peace is secure."

IV

Let us look first to our record of performance. On the Archives building in Washington are inscribed these words, "The past is prologue." When it comes to campaign promises, the Democrats always outdo us. They are the most "promising" party in America; but we older people remember that Franklin Roosevelt won in 1932 on a platform to balance the budget and reduce spending 25 percent. People this year, hearing the Democrats, will remember Emerson's words, "What you do speaks so loudly I cannot hear what you say." What have we Republians done?

Peace

The President promised to end the fighting in Korea. It ended July 27, 1953.

War for Formosa has been prevented.

We went to the brink of war in our offers to help stop Chinese Communist aggression in Indochina, but our allies aifeld us, and we refused to join in the abject cease-fire in Vietnam.

Nevertheless, we have furnished arms and defense support to keep South Korea, Formosa, and South Vietnam free in the face of constant danger of Red aggression.

We led in forming and implementing SEATO for mutual defense in Southeast Asia.

To the south of Russia, Secretary Dulles led in the northern tier concept, which resulted in the Baghdad Pact, binding together Pakistan, Iran, Iraq, and Turkey.

In Europe, Western Germany, with her sovoreignty restored, has joined the Western powers in NATO.

Little Austria has at last secured a peace treaty.

The problem of Trieste has been settled.

Bases for our bombers are being built in Spain.

In Latin America the Communist regime in Guatemala was overthrown. Peron is gone from Argentina, and the 21 American Republics have joined unanimously in agreement to resist Communist aggression, subversion, or infiltration in any Latin American country.

The Soviets find themselves now completely hemmed in by a system of regional defenses, with weapons and defense support we furnish, backed by our mobile airpower and military might. And this complex, potent, deterrent to Communist aggression is maintained at less cost to us than the spotty forces supplied under the Truman administration.

So the Soviets have changed their strategy. They know that aggression will not pay right now, and so we have a strategic new look of sweetness and light in their unswerving campaign for world domination. As Secretary Dulles says, the fact that they changed, shows that they think they are unsuccessful.

We have helped the 18 underdeveloped countries that have emerged from colonial status to independence since World War II. We have furnished moral support, economic aid, and technical assistance. Now the Soviets are launching a program of economic aid and technical assistance. As Secretary Dulles says, if imitation is the sincerest flattery, perhaps we should be flattered that they are imitating our programs. He warns, however, that this flattering imitation increases, rather than decreases, the challenge of the Soviet new look.

The dramatic proposal of our President for the use of atoms for peace has captured the imagination of the world. The Soviet charges of American warmongering have been quietly dropped, because nobody believes them any more.

I was opposed to the President's going to the summit meeting at Geneva. I was thinking about Yalta. I should have known better. He made no promises or commitments, but his open-sky inspection proposals electrified the world in the cause of peace and effective safe disarmament.

We have certainly not yet achieved perfect peace.

We must not be lulled into a false sense of security by any means. The Soviet "new look" creates new problems and dangers. But we are not fighting and, with wars under Democrat administrations in recent memory, those who love peace would do well to go forward with Republican President Eisenhower, the master of war, now dedicated to peace, and a Republican team in Washington, down the middle of the road to more just and lasting peace.

Prosperity

Prosperity is like health and fresh air—hard to appreciate while you have it. We are the most prosperous nation in the world in all human history. We have had the highest wages, the highest national income, the highest employment, the higest standard of living, in our own history, in the last 3 years under this Republican administration dedicated to sound government fiscal policies, giving the American free-enterprise system a chance. This record of prosperity is not an accident, or a coincidence. It is the direct result of Republican policies.

Under the Republicans, controls were eliminated on wages, prices, rents.

A Republican Congress in 1954 made the biggest tax cut in all history—$7.4 billion, with 62 percent going to individuals and 38 percent to corporations.

Inflation is stopped and the cost of living has been stabilized. In 3 years the Republicans held the dollar to within 1 cent of its 1953 value, compared with a 12-cent loss in the last 3 Democrat years.

The budget submitted this year is in balance.

The Government got itself out of over 100 business activities and turned them back to private enterprise; everything from synthetic rubber plants and barge lines down to dry cleaning and coffee roasting.

Under a great Ohioan, Secretary of the Treasury George M. Humphrey, the fiscal affairs of the country have been managed with imagination, caution, and skill, to encourage private enterprise, to avoid an inflationary boom.

The pattern of prosperity is not perfect. Our farmers are not getting a sufficient share. Many factors account for this, especially the continuance of rigid price supports, initiated to produce wartime needs, into a period of peace by the Truman administration, resulting in ruinous surpluses. The Republican administration proposed the soil-bank plan, boldly designed to strike at the root of the problem, to compensate the farmer, save the land, and reduce our agricultural surpluses. A Democrat Congress loaded down this proposal with a pork barrel of panaceas to buy votes. Our President courageously vetoed it and went to the people. As a result, Congress sustained his veto, a soil-bank bill has passed the House, and I believe will pass the Senate.

The farmers have this choice: either to go back to the party which had depression or war for 20 years and pull everybody down to the farmer's present level, or to stay with the party that brought peace, and prosperity enough for all, including the farmers, if we are given enough time to adjust for past Democrat mistakes.

Progress

Sometimes fiction is stranger than truth. For years, the Democrats, their columnists and commentators, have pictured the Republican Party as mossback, reactionary, old fogies. This strange fiction is belied by the facts.

In their first period in power in 20 years, the Republican Party has proven progressive. In the last 3 years, forward steps have been taken in government, in human welfare:

1. The Department of Health, Education, and Welfare was established under a Cabinet officer. It was appropriate that this new Department, needed for 20 years, should have as its first head a woman, Mrs. Hobby.

2. An Air Force Academy has been established. As an old World War I flier, I can testify to the longtime need for this institution.

3. After three decades of talk, this Republican administration, with a Republican Congress, launched the St. Lawrence seaway, which, among other things, puts Ohio on the seaway map of the world.

4. The Eisenhower administration launched the plan for the interstate highway bill which has now passed the House. This pay-as-you-go measure to create a 40,000-mile defense highway system has been needed for many years.

The Republicans have been progressive in meeting the basic human needs of people; for instance:

1. Social security has been expanded to include 10 million more people.

2. Unemployment insurance has been extended to 4 million more people, in government and small business.

3. Vocational rehabilitation used to help 60,000 annually; now it helps 200,000 each year.

4. Civil rights have been made a reality in the District of Columbia. Integration has been completed in the Armed Forces. Following the Supreme Court decision handed down by Chief Justice Warren on school disintegration, a proposal for Civil Rights Enforcement Division in the Department of Justice has been submitted to Congress.

This is a partial record of progress under Republicans in the last 3 years. After long experience in Congress, I want to remind you that all of our problems have not yet been solved; many that look solved will need additional action later. But on meeting human needs, government needs, which party will be most progressive? The party that promises, or the party that performs, the Republican Party? Charting the future by the past, the Republican Party is going forward, up the middle of the road in peaceful, prosperous progress.

V

You will be drafting a platform for the future. It must contain principles, a program, for the campaign and for the 4 years of responsibility to follow. Our President has said, "Fellow Republicans, the campaign before us is concerned with those things that count most—people and principles."

We are interested in people as individual citizens with God-given rights and duties, their needs, and hopes, and ambitions, not as statistics, or blocs, or classes.

We must make solemn pleges we intend to use in the campaign and carry out afterward. These pledges must be based on principles, not on expediency.

We must avoid the Democrat tactic of setting class against class, selfish appeals to pressure groups, resulting in a meaningless mosaic of conflicting, insincere promises of everything to anybody.

On the other hand, our principles, our program, our pledges, our platform must be broad enough to include the legitimate needs and aspirations of many kinds of good people living all over a vast Republic, in a complex economy, so as to draw them together in a united citizenry.

It is not my function to name a ticket or outline a platform for you. I think it would be helpful, however, to remind you of some fundamental principles of our party, as expressed by our first Republican President and by our latest Republican President.

Abraham Lincoln, who stood for union and freedom, said: "The legitimate object of government is to do for a community of people whatever they need to have done, but cannot do at all, or cannot so well do, for themselves, in their separate and individual capacities. In all that the people can individually do as well for themselves, Government ought not to interfere."

President Eisenhower said, on April 17:

"I am a Republican, because I share our party's deep-lying trust in what freemen can do—a fundamental trust in the nature and capability of individual human beings.

"I believe the Republican Party, in its methods and traditions and broad philosophy:

"Offers the best hope of preserving the self-reliance and vigorous independence of individual Americans;

"Best serves the Nation in the search for peace with justice and freedom;

"Best fosters a competitive enterprise economy whose purpose is a wider prosperity fairly shared;

"Best answers the concerns of people for the meeting of their human needs;

"Best assures our children, and their children's children, the heritage of an America rich in all the resources of nature, dynamic in great traditions and ideals and purposes.

"I so believe because the Republican Party remains true to its heritage.

"Our party was born to vindicate the equal dignity of all men, their equal right to life, liberty, and the pursuit of happiness. The dedication of its earliest days still animates our party, in this age when worldwide corrosion eats away at freedom, and justice and opportunity for men."

VI

Our campaign, as the President said, is concerned with people and principles. After we have the principles for people incorporated into our platform, what about the people?

In our campaign we must remember that people do not vote in blocs or classes or groups. People vote one at a time, in secret.

We must get the Republicans to vote Republican. We must get many Democrats to vote with us. But the election for President and Vice President, for the House and Senate, will turn on the vote of the independents.

We have independent Republicans and Democrats, but how about the unattached, who say, "I belong to no party. I vote for the man."

There are three things we must do.

1. We must have a ticket and a platform that should appeal to any and every right-thinking citizens.

2. We must tactfully remind our independent friends that hardly anyone has the time, or the intelligence, to investigate every candidate thoroughly. I hear people say, "I'm going to vote against so-and-so" because of "this, or that." Then I find that they know nothing about the so-and-so they are going to vote for. People who do not claim omniscience, and do not want to be guilty of negligence, should associate themselves with the party that generally suits them, and then rely upon the collective choice of like-minded people on candidates, unless they know personally about each candidate and his opponent. Independents do not realize that they are political hitchhikers. They expect someone else to pick candidates, to write a platform—and then they may go along for the ride. Let's try, tactfully, to get them to understand the importance of the two-party system and then to join our party, and help it to get along.

3. When it comes to choosing a party, many of us were born into the Republican Party. We cannot say much, from personal experience, when an independent says, "why should I join the Republican Party?" We might call their attention to three very intelligent, very high minded, very experienced, very independent, very different men who asked themselves such a question: Abraham Lincoln, in 1856, had served in Congress as a Whig; the Whigs were dying out; there were a number of new parties around; he searched for principles and like-minded people, and became a Republican. There was Herbert Hoover, in 1920; he was a successful man; both parties courted him; he became a Republican. There was General Eisenhower, a successful general, a successful college president; both parties wanted him; he became a Republican. Henry Clay said, "I would rather be right than President." We cannot guarantee that every good man who joins us will become President. We can prove that wise, successful independents of presidential caliber became Republicans. An independent who joins us may not become President, but he will be right.

Finally, let us remember our keynote is peace, prosperity and progress, as proven by our pledges and our practice, based on our principles, promised in our platform. Politics is an exciting game, but it is more than that. It is more than a deal—new, fair, or otherwise. It is one of the noblest activities of a citizen in a country that would be free. Representative government is on trial all over the world, challenged by Communists seeking a popular front with Socialists. Our Constitution does not mention Democracy, but it guarantees to every State a republican form of government. Our party can guarantee to the Nation a republican form of government, with peace, prosperity and progress, after victory in November.

Fluoridation of Water

EXTENSION OF REMARKS

OF

HON. ARTHUR V. WATKINS

OF UTAH

IN THE SENATE OF THE UNITED STATES

Monday, May 14, 1956

Mr. WATKINS. Mr. President, I recently received a letter from Mr. Ted J. Parkinson, of 435 Fourth Avenue, Salt Lake City, regarding the controversial question of fluoridation, and he requested that the contents of his letter be made available to Congress.

Therefore, I ask unanimous consent that these excerpted remarks from his letter be printed in the Appendix of the RECORD.

There being no objection, the excerpts from the letter were ordered to be printed in the RECORD, as follows:

Congress has been asked to appropriate $2,971,000 to the United States Public Health Service to combat "dental disorders." Most of this money would be used for the "engineering of consent" to persuade city governments to add fluorine to their municipal water supplies. Now, whether an inorganic fluorine compound taken in drinking water would be beneficial, or would have undesirable cumulative effects, is a highly controversial issue with eminent authorities on both sides. To use public funds to promote one side of a highly controversial issue is not good, or in the public interest.

Government in the ideal state is supposed to gradually wither away but our Government is not withering; it is getting bigger and more expensive every year. It is whittling away our free agency a freedom at a time. To use the police power to force fluoridation of municipal water supplies, over the strenuous protests of those who feel it is harmful, is a violation of our fundamental freedom which is totally unjustified. Tooth decay is not an emergency, or a disease which can only be cured by fluoridation.

The problem arises partly because food processing and handling methods remove vitamins and minerals, including fluorine, from various foods so they will keep better. If fluorine is necessary for healthy teeth, then so are the other vitamins and minerals. A better use of that money would be to help educate people to choose better quality, natural, unprocessed foods which are rich in vitamins and minerals, including fluorine.

There are several methods of obtaining the benefits of fluorine about which there is no controversy. There is the topical application of fluorine by the dentists; there are fluorine toothpastes such as Crest; drugstores can provide fluorine tablets which are very cheap; certain foods are rich in natural fluorine. There are many choices, you see, and many people are exercising their rights to choose the best way. To deprive these people of their right to choose, to force them to take fluorine in their drinking water against their expressed will, is an unjustifiable invasion of our fundamental rights as guaranteed by the Constitution.

Gordon Keith Chalmers

EXTENSION OF REMARKS
OF
HON. JACKSON E. BETTS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, May 14, 1956

Mr. BETTS. Mr. Speaker, last week Dr. Gordon Keith Chalmers died at the age of 52. Dr. Chalmers was president of Kenyon College at Gambier, Ohio, a small private church school of higher learning.

In Congress Kenyon has many friends. Kenyon Bolton, son of Congresswoman FRANCES BOLTON, is a trustee. Congressman PAT HILLINGS studied there while in the armed service. Former Congressman Robert Crosser and myself are graduates. Congressman WIDNALL, of New Jersey, and Dr. Chalmers were schoolmates at Brown University.

As head of Kenyon, Dr. Chalmers gained a wide reputation, both as an educator and administrator. But more than that, he appreciated the need of small private colleges in our system of education and understood their difficulties in a day when much attention is focused on large State universities operating at public expense. He realized the need of both private and public-supported colleges and universities to advance the educational and cultural life of America. To that end he served both as a member and head of organizations endeavoring to keep the small school a going concern on the American educational scene. His death is a loss not only to Kenyon, but to the intellectual progress of the country.

The Dilemma of the Youth of Poland

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 14, 1956

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article which appeared in the New York Times on Friday, May 11, 1956, written by Sydney Gruson, in which Mr. Gruson calls attention to the dilemma now facing the young people of Red Poland:

YOUTH'S DILEMMA IN POLAND IS TOLD—18-YEAR-OLD DESCRIBES HOW POLICY SHIFTS SHATTERED HIS FAITH IN PARTY

(By Sydney Gruson)

WARSAW, May 10.—The people of Poland are talking again and none with more effectiveness than the nation's youth.

They have had silence or conformity imposed on them for nearly 8 years. A steam valve has been opened recently.

What has come out from the youth is eloquent, touching and accusing, a measure of bitterness and cynicism of a new generation in Poland that considers itself lost.

The Government and the United Workers (Communist) Party have recognized this. Officially sponsored meetings are being held to seek ways of reorganizing the Polish youth organization and to try to regain for communism such young men as Michael Bruck.

SPEAKS FOR GENERATION

Michael Bruck is an 18-year-old student at Warsaw Polytechnic. He undertook to speak for his generation in a letter that has been published in the current issue of Nowa Kultura, a weekly magazine. These are excerpts from the letter:

"When I was 10 I was told that my beloved brother Lech was killed in the Warsaw uprising for falsehood. In my childish imagination he was always the embodiment of heroism, courage, and uprightness. When I was 10 they told me in a history lesson that he was killed fighting for the vile cause of the London (Polish) Emigree Government and not for the real Poland. I have thought there was only one Poland and now it appeared that there were many.

"When I was 10 I ceased to believe in the hitherto sacred word 'Fatherland' because I did not know which of these many Polands was my Fatherland. I no longer had a Fatherland.

"I had God. When I was 15 I ceased to believe in God. God had proved to be an ally of the murderers of Lech. For long hours I knelt in a dark empty church. My soul cried, threatened, implored. I hated Him and at the same time I loved Him so much. My poor betrayed Lech also loved him.

"You must know how terrible it is to feel one's faith slip away, vanish, and yet crave for it to remain. You must know those sleepless nights, that desperate struggling in the soul of a child. The day finally came when the cross became to me only a piece of wood.

"A friend 5 years older than I gave me help. He was a Communist. It was he who then brought me closer to the ideology [that] restored my faith in the world, in the goal of life, in mankind. These were my happiest years. I rushed from one meeting to another. I believed in the idea and its executors.

"Three years have passed. Now I am 18. It has turned out that what my family said was true—about the cruelty of secret police investigations and about the dictatorship of Stalin. It has turned out that history was really forged. Those who looked at my personal questionnaire with suspicion when I begged them for an explanation now speak of the Stalin era and the time of Beria [Lavrenti P. Beria, Soviet secret police chief executed in 1953].

They are recommending jazz, which they opposed 2 years ago as a symptom of the decayed culture of the West. They are discussing youth oragnizations in Yugoslavia, about which they sang satirical songs a few years ago.

"And I? I do not know how to change my soul for the fourth time without fear that it will become a rag. Now I cannot stand in the ranks with my face up high although I would like to. I am ashamed of my older colleagues, ashamed for the whole party, for all those who waited, sniffed, and looked around and for those who deceived and let themselves be deceived for my stupidity and credulity.

"I no longer know how to raise my head. If I ever raise it again—but this is impossible for I have no basis for believing anything.

"Our era was not easy and although we had no rifles in our hands we did not have a rosy path. It is not through effeminacy and prosperity that our cynicism was born and it is not egoism and desire for comfort that have ordered us to reject the political leaders. We, 18-year-olds and 20-year-olds, although growing up in new conditions, are not happy because we have perceived that this newness is very old and it deceived our dreams. It is distressing to lose everything in which one believed."

Creeping Killers

EXTENSION OF REMARKS
OF
HON. WILLIAM E. JENNER
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Monday, May 14, 1956

Mr. JENNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Creeping Killers," written by Robert Paine, which appears in the May 1956 issue of the magazine American Motorist, official publication of the American Automobile Association Motor Club.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CREEPING KILLERS

(By Robert Paine)

One of the greatest menaces on the highway today is the obstinate, self-centered slowpoke. Most of the emphasis placed on accident prevention and highway safety these days is on curbing the fast driver—the irresponsible psychopath who exceeds the speed limit. The public is beginning to believe that if everybody stayed below the posted speed limit, there would be no more fatal accidents. Nothing could be further from the truth.

Accidents are caused by lots of different things—and high speed is only one of them. Unreasonably low speed is another, but the average driver hears little about it.

The Sunday snail—one of the printable names the slowpoke is contemptuously called by other drivers—thinks of himself as a safe driver. He seldom has an accident himself and if he does it usually isn't too serious.

But how many does he cause other people to have?

There are no statistics to show that Mr. Slowpoke is the direct or indirect cause of X accidents each year, but the way in which he is responsible is painfully apparent.

A traffic engineer would explain it something like this: traffic flow is smoothest and safest when all vehicles move at approximately the same speed. It is great divergencies in speed that cause trouble. Coming up fast behind a slow-moving vehicle, passing at intersections, on hills or on curves are all far more dangerous than speed alone. When a few vehicles travel at speeds well below the general pace of traffic they actually force more of these trouble situations on other drivers than a fast car would create.

Any driver knows from his own experience that this is true. Everyone who has spent much time on the highway knows that when a "snail" picks up a long "tail" of following cars, no matter how bad the highway is or how short the sight distance is ahead, sooner or later somebody is going to lose patience and pass. If the tail is very long and the impatient driver is at the rear, a very dangerous situation will develop. Who's to blame if a crash occurs?

In all probability, the motorist who tried to pass will bear the legal blame—if he lives through the wreck. The "creeper" will merely roll along and remark to the next person he talks to about the "madman" he saw on the highway come to a bloody end. But, human nature being what it is, the legal blame and the moral blame do not necessarily fall on the same person. After following an abnormally slow driver for miles, it is sometimes hard to really hold a man responsible for losing his patience and taking a chance that he would not normally take.

Traffic engineers, safety specialists and accident investigators have known and expounded these facts for many years. The American Automobile Association has actively urged that laws be enacted and strictly enforced to control slowpokes in the same way that speeders are controlled. The type of law which the AAA favors is the one contained in the Uniform Vehicle Code—a model motor vehicle code prepared by a national committee for the guidance of State legislators—which states: "No person shall drive * * * at such a slow speed as to impede the normal and reasonable flow of traffic except when the reduced speed is necessary for safe operation." The model law also gives State and local authorities the right to determine on the basis of "engineering and traffic investigation" whether fixed minimum speeds are needed on certain highways. If they are, the authorities may declare that it is illegal to drive below them.

Few people know it, but more than half the States have such legislation on their books now. The reason that it's not widely known is that the law is seldom, if ever, enforced. Occasionally, a policeman will "speed up" a car loafing along traffic-clogged city streets, but on the open highway it is practically unheard of, and certainly not publicized. The situation as it stands now is likely to go on just as it is until actual minimum speed limits are established.

Many police officers say that it is almost impossible to make arrests and get convictions so long as the law is so broad. Often, motorists just don't know what "such a slow speed as to impede the normal and reasonable flow of traffic" is. Neither do a lot of policemen.

Posted minimum speed limits have been used very successfully in a few places. On long bridges and tunnels where there is no room for passing of any sort, they have been found to be the only way of keeping traffic moving and getting maximum use from the facility. In these places it is fairly obvious to the motoring public as to why minimum speed limits are established, and enforcement officers report that there is comparatively little difficulty in maintaining good traffic flow.

On highways, however, many people do not take kindly to being told how slowly they can drive. The old chant "speed kills" is getting so firmly fixed in the minds of many motorists that any suggestion that they must not drive below a certain speed sounds like a violation of the safety rules. Public education on the theory that uniform traffic flow is usually safe traffic flow is badly needed. The legislators of the various States are tackling the problem.

It is reasonably certain that minimum speed signs will soon be dotting the sides of many roads and major highways. But without public understanding and acceptance—accompanied by sound enforcement—the old slowpoke is, unfortunately, going to remain the number one highway nuisance who often leaves death in his meandering wake.

Plea for a New Kind of Point 4

EXTENSION OF REMARKS
OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Monday, May 14, 1956

Mr. HUMPHREY. Mr. President, I wish to call to the attention of the Senate an article in the New York Times magazine section of April 22, 1956, entitled "Plea for a New Kind of Point 4," by Mr. Willard R. Espy.

Mr. Espy is an eminent writer and publicist, who has long been interested in programs of technical and scientific assistance, coupled with economic aid, as an integral part of our foreign policy. His article is especially timely in light of the new Soviet economic and technical assistance offensive on the international scene. Mr. Espy urges greater use of the United Nations agencies and facilities. In this I strongly concur. It is regrettable that the present foreign-aid program and the one designed for fiscal year 1957 places so little emphasis upon the use of the U. N. technical-assistance project.

I ask unanimous consent that this article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PLEA FOR A NEW KIND OF POINT 4

(By Willard R. Espy)

Americans, from the President down, are looking anxiously for some means of revitalizing our faltering program of aid to underdeveloped areas. Suggested here is one way, and I think it is perhaps the only practical way at this moment in history to increase the effectiveness of the point 4 program while reassertaing our moral leadership of free men.

There is reason for concern when India, which for years to come will have urgent need of outside help, proposes to reject further American aid; or when Burma refuses $35 million of our money; or when tiny Lebanon considers it politic to turn down a $5 million road-construction loan from the International Cooperation Administration. And the concern becomes acute when Russia unveils an exportable surplus of capital goods which she is happy to send to underdeveloped areas in return for the food she has not yet been able to raise on her Siberian steppes.

Undoubtedly, America has the capacity to deliver to Asia, the Middle East, Africa, or Latin America, on a cash basis, goods and services dwarfing anything in Russia's present power. But that is not the problem. If the aid of either side is simply a way of buying allies, there is no reason to believe they will stay bought if the other side makes a higher bid. The uncommitted nations thus find themselves in a position to play off one side against the other; and this some of them are already doing with a will.

If it could be demonstrated that the recipient nations would benefit from this pulling and hauling of the two great blocs, a detached observer might find a wry gratification in the situation. Unfortunately, however, even this cold comfort is usually denied us. The problem of the underdeveloped areas of the world are deep-rooted. New, inexperienced, and sometimes shaky governments are not always the best judges of their own requirements. Too much of anything—money, dams, fertilizers, or tractors—may be as damaging as too little; and too fast may be as dangerous as too slow.

As the clamor rises to reframe our programs on technical and economic aid, suggestions like these are widely reported:

Gather under one responsible authority the aid functions that have been scattered wildly among a score of Washington agencies; obtain longer-term commitments from Congress so that the recipients will know that they can count on a continuing program; make private investment more attractive by a United States guarantee against risks due to unsettled political conditions; join in aid programs with other like-minded powers, thus eliminating any anti-American suspicion or hostility; emulate the Russian strategy of stressing trade rather than aid and asking not fealty but simply neutrality as the price of help; multiply our assistance, and give it full rank as a perhaps decisive weapon in the cold war; strengthen the economic staffs of our legations abroad.

It is difficult to quarrel with the premise that there should be more unity of direction, more flexibility and continuity in existing aid operations. But can anyone still be so naive as to think that private investment can be aimed and fired like a cannon in the cold war? Money goes where it can bring the highest and surest return. Nor is private investment in any general sense a cause of stability. It is a result. The core of the error in these proposals is the assumption that we can win the cold war in uncommitted, underdeveloped areas simply by outbidding Russia.

It is important to remember that the original theory of the economic and technical aid program was not to outbid Russia. Russia was not even present as an economic factor in most of the areas involved. Rather, the theory was that by establishing the preconditions for orderly progress we would both reduce the likelihood of successful Communist infiltration and eliminate the power vacuums which in the past have proven so irresistible a temptation to stronger nations.

The amount of money and goods that these areas can absorb quickly and profitably is limited. In many cases that amount is well within the apparent economic capacity of the Soviet Union to provide. Once our side and theirs have bid up to that absorption limit, there is bound to be stalemate, or worse—chaos.

The first step toward restoring the good sense and good name of point 4 is to cut down to size its value as a weapon in the cold war, and to build up to size its value in building a durable peace. There will always be aid projects that we will undertake primarily for military reasons. But

there are also projects that are imperative purely and simply because they help to create more viable societies, and so reduce the instabilities which light the fuse for military explosions.

Yet, even if we do set sound economies in Asia, Africa, and Latin America as goals in themselves, we shall find it extremely difficult to convince some countries of our sincerity. Quite apart from suspicions that we abet colonialism and imperialism, we are handicapped by the very fact of our technical advancement. It is difficult for an American to understand the needs of a people who are technically 200 years behind him, and because of this gap we are frequently charged with standing apart from the people we are helping.

The form of government on which underdeveloped nations settle will stem from their traditions, not from ours. They will not turn overnight, by magic, into democracies of the United States type. But we do not need, and should not wish, to force an American pattern on their internal politics any more than on their foreign policies. If we truly believe in freedom, we want them to be free from any outside stamp, including our own.

This much we know: Social and economic soundness, which is meat for democracy, is poison for tyranny. Intelligent help will add ultimately not to some Western equivalent of the Russian satellite system, but to the area of a truly free world.

The policies we have been following are sick and no simple remedy will cure them. Regardless of the fact that we face the partisan distortions of an election year, it is imperative to deal with the Communist economic and political offensive on the basis of a major foreign policy decision.

In my opinion, the indispensable decision is to channel a major portion of the world's technical and economic assistance through the appropriate agencies of the United Nations.

First, to be sure, we must once and for all make up our minds as to whether we really want the United Nations to work. For here, at last, is an opportunity to make plain our faith, without in any way changing the U. N. Charter or the nature of our adherence to it. There is no need to risk votes in the General Assembly, or votes in the Security Council, or abrasive delegations of national sovereignty. Many of the appropriate agencies exist; they are doing now—and doing well, to the extent that their means and facilities permit—the kind of job that this proposal would assign them in greater measure.

It would be only necessary for us to increase our annual appropriation to these agencies and to ask other nations within the limits of their economies, to raise their own contributions proportionately. Last year, for instance, we gave $15 million to the U. N. technical assistance program. Ten times $15 million would not buy a single good-sized battle cruiser—but it might well point the road to a durable and dynamic peace. Our overall expenditure for technical aid through the United Nations might well be actually less than our present point 4 budget, at least until results justified raising the amount.

Men of good will have insisted from the inception of point 4 that it should have its major expression through the United Nations. Many observers (including myself) have felt in the past that such a step was politically impractical. Today I believe it is the natural way to sublimate an economic conflict which neither side can possibly win.

The technical assistance program of the U. N. has already produced notable results. In 1955, U. N. agencies gave aid to 92 countries and territories ranging from the plateaus of the Andes to the tropical farms of Africa.

They helped the Middle East battle the desert locust; fought rinderpest in Ethiopia, and foot-and-mouth disease in Syria; trained the fishermen of India in the use of mechanized boats; taught logging techniques in the Amazon Basin; arranged for simplified rules on international air flights. The International Bank lent underdeveloped areas more than $400 million, and the World Health Organization raised to 400 million the number of persons it has helped protect from such diseases as malaria, tuberculosis, and yaws.

What would be the results of channeling economic aid through the United Nations? Here are a few probabilities:

First, the United Nations would be strengthened—not in any area of supranational sovereignty or political conflict, but in the technical, nonpolitical arm that for 10 years has worked quietly and effectively for the good of humankind while oratorical battles rolled and roared around it.

Second, business could anticipate at last conditions sufficiently stable to justify a growing capital investment in many newly independent nations. Such investment has been held back heretofore by the investors' distaste for excessive restrictions and risks. It has been held back also by the host countries' fear of outside economic domination. On both counts the prospects should be more pleasing if the United Nations were in charge of the program.

Conditions applying to investments could then be standardized; nor would changes of national regime lessen obligations assumed under the U. N. It is not difficult for a nation still in swaddling clothes to justify failure to pay what it owes to allegedly imperialist powers or their entrepreneurs. It would be far more difficult to justify reneging on an agreement entered into under U. N. auspices.

Ample U. N. machinery for capital investments and loans is either in operation or in readiness. The World Bank has already helped finance self-liquidating projects totaling $2.5 billion. In the past few months alone it has helped complete a major highway in Guatemala, modernize a rolling mill in Japan, rebuild a port in Pakistan, bring more electric power to Algeria. The International Finance Corporation with $75 million capital, stands ready to put up marginal funds for both private and government investors.

The widest gap in the U. N. credit structure occurs in the financing of multipurpose developments (such as dams) which are not self-liquidating. A Special U. N. Fund for Economic Development, with starting assets of $250 million, has been proposed repeatedly, and repeatedly has been turned down by the United States. Early approval of SUNFED should be a priority item in increased support of the autonomous U. N. agencies.

Third: The Soviet Union and her satellites would meet the Western world on the basis that both sides profess to desire—as peaceful competitors. If Soviet engineers were more fitted to build a dam in Iraq than our engineers were, they would get the job—as members of the U. N. team. And if any American becomes panicky about the spying that would doubtless go along with the dam building, let him ask himself whether he would prefer to have the Soviet Union carry out the whole Iraqui operation on its own responsibility, without outside control or even outside observation.

Any project that can draw the Communists into the constructive work of the United Nations is desirable. The principle, indeed, has long been put into nominal practice; for years we have been giving financial support both to the United Nations itself and to autonomous U. N. agencies in which Communist nationals are represented. Only last February, at the Bangalore conference of the Economic Commission for Asia and the Far East, the American representative went out of his way to urge greater Soviet participation in the U. N. technical-assistance program.

After years of "cold war" many of us have forgotten that the U. S. S. R. and her satellites were originally urged to take part in the Marshall Plan. Had Stalin agreed, we might be living in a happier and more secure world today. It may be doubted whether Russia's new leaders would be stupid enough to reject an offer to cooperate with us in an enlarged U. N. aid program.

Russia, like ourselves, would continue to handle alone those projects which she felt directly involved her own national security. But in the vast uncommitted areas of the world unilateral aid would be automatically self-defeating.

The same considerations which nullify for us the cold war value of economic aid nullify it also for Russia. The fear of Western emperialism in Africa and Asia may be great, but the fear of Communist imperialism is no smaller. Aid without cold-war overtones, based on needs rather than blackmail, would certainly be more welcome to the recipient than aid accompanied by Kremlin directives. Russia will cooperate eventually with U. N. aid projects because she will have to.

Fourth. Aid under U. N. auspices would end recipients suspicions that they were being bought for purposes either of economic imperialism or of advantage in the cold war. U. N. aid would be scheduled on its merits, where it was needed and could be put to effective use.

And finally, a move to route economic and technical aid through the United Nations would revive the hopes and faith of a worried, cynical world. It would restore to full luster the moral leadership that this country has sometimes seemed willing to tarnish under the compulsions of the cold war.

Would Congress agree to increase its contribution to the autonomous agencies of the United Nations? I do not know the answer; but I do know that for many weeks it was considered impossible that Congress would agree to vastly more revolutionary Marshall Plan, while the idea that it would make aid available to underdeveloped areas was considered so farfetched as to be laughable.

Yet when policy in Europe became bankrupt, Congress acted decisively; when the need for point 4 was obvious, the legislators acted decisively again. Today, there is overwhelming evidence that we must reassert our moral and economic leadership or lose it forever to the enemies of everything we believe in.

Defense Is More Than Guns

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 14, 1956

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Times of Friday, May 11, 1956, in which this newspaper discusses military appropriations for the coming fiscal year:

DEFENSE IS MORE THAN GUNS

After only 2 days of comparatively listless debate the House of Representatives has approved unanimously and without major changes the Eisenhower Administration's de-

fense appropriation bill, calling for military expenditures of more than $33 billion during the coming fiscal year. This bill, by far the biggest money measure of the year, must still pass the Senate. But the attitude of the House clearly guarantees similar action in the upper Chamber.

Though by no means a record appropriation, the total is still so large as to give new emphasis to the cost of freedom in the face of the challenge by totalitarian communism. It is indeed significant that despite a perfunctory minor cut by a committee there was no real opposition to the measure, and that the principal objections raised were not that it was too much but that it might be too little. This in itself is reassuring evidence of a bipartisan realization—in contrast to some wishful thinking in Europe and elsewhere—that despite the Soviet "new look" tactics international communism continues to pose a deadly threat to the existence of the free world.

At the same time the debates on our defense structure, in and out of Congress, have revealed some misgivings and confusion as to what defense consists of, and how it should be organized. Some of these misgivings are due to rivalries between the services, in which each service naturally emphasizes its own needs. As a result the technical issues of, say, ground forces versus the air arm, and the long-range bomber versus the aircraft carrier and foreign bases, all become subjects of public debate, in which even experts disagree.

In these circumstances both Congress and the public appear to be guided by two basic considerations. One is that a large American military establishment is here to stay, and that we must therefore plan for the long pull on the basis of defense expenditures which we can sustain for years without wrecking our economy. The other is that, by and large, and despite their natural desire to have more, all our defense chiefs accept the present appropriation as adequate to meet the initial stages of any war. The authority of President Eisenhower as a military expert paves the way for congressional and public acceptance of this judgment.

But in the modern world, in which power rests on, and wars are fought by, not merely the armed forces but nations as whole, our defense cannot be based on our own guns alone, or even on our own atom bombs. And it is here that confusion shows itself. It is now accepted as an axiom that no free nation, not even the United States, can adequately defend itself standing alone, that it needs allies to supplement its own defense efforts and friends to keep the free world as large as possible in order to provide economic breathing space for all free nations.

Yet some of the same people who tend to press for a larger defense effort on our own part also demand drastic cuts in our mutual security program, providing military and economic aid to our allies and friends. This program constitutes only 10 percent of our own defense expenditures, but it helps to produce nearly 10 times as much in mutual defense as would be produced by a like expenditure at home—not to speak of the fact that it is essential to safeguard our bases abroad.

It is to be hoped, therefore, that a Congress which approves our own defense appropriations will also approve the $4.9 billion mutual security program that is as much part of our own defenses as any gun, tank or bomber we may build. This program helps to build up among our allies and friends what are in the end the final criteria of their capacity for defense—namely, good national morale and hope for progress based on a healthy economy and the moral cause of freedom.

Warning Signals

EXTENSION OF REMARKS
OF
HON. HAROLD C. OSTERTAG
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, May 14, 1956

Mr. OSTERTAG. Mr. Speaker, whether we know it or not, this country is on the threshold of a new era. From here on out, we are going to be required to do more and more with less and less. As a wise and thoughtful columnist has pointed out, in the Rochester Times-Union of May 5, our country is filling up with people, and our supply of timber, coal, oil, metals, and even water, is shrinking a little every year. He does not press the point, but he might have added that our supply of real estate is also shrinking. The demands of the future for rights of way for highways and airports is going to cause as much or more disruption than an atomic attack.

I hope it will be planned and controlled disruption, so that the development of our great country can go forward in an orderly manner, with the conservation of what is good, and the improvement of what is mediocre or poor. And I hope that, as our country fills up with people, they will grow in understanding and wisdom both in their personal relationships and in their relation to their Government. Freedom is always on trial, but in the years ahead, it will be put to unusually severe tests.

Under leave to extend my remarks, I include in the RECORD a column by A. B. Genung, who writes from the village with the historical and, I hope, prophetic name, Freeville, N. Y.:

HOW IT LOOKS IN FREEVILLE: UNITED STATES AND SQUEEZE THAT'S AHEAD

(By A. B. Genung)

I attended a conference the other day and heard a lot of economists say that this country has passed the peak of its natural resources in relation to population.

What they meant is that the country is filling up with people and our supply of timber, coal, oil, metals, and even water, is shrinking a little every year.

The economists tell all this in a kind of stuffy way—but what they are saying is correct. I could get a good squint at it all just by driving home over the old Bridle Road. That was the original ox track cut through the woods into this part of the country from the Hudson Valley.

Up to about 30 years ago it was just a country road with its sprinkling of farmhouses. Today it is built up for miles just as a suburban street.

By 1975—only 19 years hence—the United States population will be about 225 million. What will the country roads look like then?

Take a look at the size of the homes being built by our present generation. Compare them with the old country houses built a generation or two ago. You could put 3 of these little new houses into 1 of the old ones.

The point is that we don't have the wealth of cheap lumber now that they did when they built the big houses.

Take a look around our community cemetery. There is an old part filled with large stone monuments. Then there's another, newer part, over the whole of which the monuments average about a quarter the size of the old ones. Same principle as with the houses. Our grandfathers had a lot more and cheaper marble and granite than we do.

All this trend hangs up some problems ahead of us.

Take the highways, for instance. Here we've got 58 million cars barging around on roads built for 30 million. By 1975 the figure will be 85 million. We've really got some roads to build.

Take housing. The cities are spilling over into the suburbs. Within 20 years the suburbs, at present rate, will almost double. Just ponder the new houses, stores, sewers, hospitals, schools, and other construction that will be needed to service these vast new areas.

Take the case of water. Whoever expected the water supply to get short in this country? But it already is an acute problem in many places. Within a very few years billions will have to be spent if our growing industries are to get water enough to keep them going.

Not only is our population growing by the minute, but we are bulging in the older and younger categories. Our working force will gain only 20 million in the next 20 years, whereas the less productive groups (over 65 and under 15) will increase by around 30 million. More consumers ahead, in proportion to producers.

The point of all this, it seems to me, is that this country is slowly heading into a kind of squeeze play, where we'll have little room for waste and extravagance. It ought to make us think about work and thrift—more output per man—and especially about turning off the spigot on a lot of foreign handouts.

Give Congress Power To Overrule Court

EXTENSION OF REMARKS
OF
HON. GEORGE HUDDLESTON, JR.
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 14, 1956

Mr. HUDDLESTON. Mr. Speaker, several days ago one of my constituents, Mr. Charles Denegre, attorney at law, Watts Building, Birmingham, addressed a letter to the editor of the Birmingham News presenting a very novel proposal. Mr. Denegre's letter was published in the Voice of the People column of the newspaper.

The proposition merits the careful consideration of every Member of Congress and so I am happy to include same in the RECORD under leave to extend my remarks:

The time has arrived in our country for an important amendment to be made to the Constitution of the United States.

As a result of the decision of the Supreme Court in the integration matter, the general welfare of our people is being very much disturbed and will continue to become worse. It is my opinion that the great majority of colored people are satisfied with equal but not identical privileges with reference to tax-supported public institutions.

The preamble of our Constitution provides, among other things to "promote the general welfare." This provision supersedes all other rights set out in the Constitution when the general welfare of our country is

in danger. This doctrine of law was relied upon when natural-born Japanese-American citizens were brought inland from the west coast in World War II because the general welfare of our country was in danger.

Lincoln in his Gettysburg address said "and that the government of the people, by the people, for the people, shall not perish from the earth." Therefore, to maintain and continue the right of general welfare, our Constitution should be amended to provide that if and when the Supreme Court renders a decision that interferes with the general welfare of the people, then in such event the Congress by a three-fourths majority vote of the House of Representatives and a three-fourths majority vote of the Senate, would have the right to declare such a decision null and void, with the amendment further providing that the President could not veto such a law. This would place the final authority in three-fourths of representatives of the people rather than in 9 men on the Supreme Court bench. Such a conclusion by a three-fourths majority of intelligent representatives of the people would be more satisfactory for the general welfare of the people than a legal decision of the Supreme Court as now provided in the Constitution.

CHARLES DENEGRE.

WATTS BUILDING.

Red Boss of Poland Resigns

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Monday, May 14, 1956

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following column by Dorothy Thompson, which appeared in the Washington Star on Wednesday, May 9, 1956, in which the writer analyzes the internal political situation in Poland now that the Kremlin boss, Jakub Berman, has resigned:

KREMLIN BOSS OF POLAND RESIGNS—SHIFTING OF AXMAN RAISES QUESTION OF POSSIBLE CRACKDOWN IN WARSAW

(By Dorothy Thompson)

"The Poles," Winston Churchill exclaimed in one of his famous aphorisms. "There is no virtue they do not possess and no folly they will not commit."

Are they committing new follies that will lead to a new crackdown?

In the previous column I enumerated four acts recently taken by the Polish Government that put Poland in the forefront of the satellite States in striving for greater internal independence and freedom.

Since then, the resignation of Jakub Berman has been announced from Warsaw.

Berman, Deputy Prime Minister and a member of the Politburo, was a great deal more than that. In the original Communist government he was merely minister without portfolio. Actually he was the key personality, his power resting on his intimate relations with the Kremlin. He was the man who laid down the law as it emanated from Moscow. Although he operated in the background, behind the facade of ministers with more obviously important posts, the Polish people called him the gray eminence and recognized him as the Kremlin's man. He was, therefore, the very symbol of Poland's subservience to Russia.

Berman chiefly engineered the 1947 free elections (required by the Yalta agreement) that resulted in crushing the only anti-Communist opposition party in Poland, the Peasant Party led by Stanislas Mikolyczk.

Mikolyczk was the only member of the London government in exile acceptable to the Soviets, as a token of fulfilling Yalta's promise to widen the base of the government they themselves had set up in Lublin.

Following the strange death, in an airplane accident, of General Sikorski—"strange" because he had barely escaped a similar fate on too many previous occasions to make it seem merely accidental—Mikolyczk became the last Premier of Poland before the Lublin government entered with the Russian troops. He was received, as such, by President Roosevelt, in June 1944.

With the war's end, he returned to Poland and set about reorganizing his party, not without conspicuous success. It was the only formidable contender against the Communists and their leftwing Socialist allies in the 1947 elections.

The maneuvering of these elections to assure the overwhelming defeat of the Peasant Party was fully reported by the columnist, who went to Poland to cover them, as did many international journalists.

During the preelection campaign, Berman's role was obvious. He received the Western press, the object of the conference being to present President Roosevelt as, in fact, hostile to Mikolyczk.

This—and the conduct of the elections—resulted in a run-in between himself and me. My husband and I had been, by mere chance, guests in the White House when President Roosevelt received Mikolyczk at the dinner in his honor attended by the full cabinet, at which we were the only outsiders. It is seldom that a journalist has an opportunity flatly to contradict statements made by a man who is spokesman of a foreign state, but in this case I was able to do so. Berman's discomfiture was veiled by heavy irony. (Subsequently the Warsaw press attacked me bitterly.)

Berman, arrogant but suave and even affable, was not unpopular with naive Westerners. He is a good linguist, cultivated, likes to discuss art and Western literature, and was adept at giving the appearance of reasonableness. But though he never bloodied his own hands, he was the Kremlin's axman, and Poland's ideological mentor, recognized as such by quite ordinary Polish people, who thoroughly detested him.

Certainly he was Stalin's man; I expect he would gladly have been Khrushchev's man. But he was the symbol of Poland's utter subservience to Russia, in a country which, though perennially suppressed, has no subservience in its soul, and throughout history has seized every opportunity to strike for whatever independence is possible— too often by its "folly," for what has subsequently proved impossible.

Feather River Facts

EXTENSION OF REMARKS
OF
HON. JAMES B. UTT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Monday, May 14, 1956

Mr. UTT. Mr. Speaker, under leave to extend my remarks, I wish to include the following editorial which appeared January 7 in the Oroville Mercury Register in California.

FEATHER RIVER FACTS

Drew Pearson trifled with the truth again, if he took the trouble to ascertain the truth, when he discussed the causes of the flood situation along the Feather in his release for last Saturday.

Wrote Pearson: "The Feather River—this is one of the major tributaries to the Sacramento River, and disastrously spilled over its banks just before Christmas. To harness the Feather River, Oscar Chapman, Secretary of the Interior under Truman, proposed the Oroville Dam. Pacific Gas & Electric, however, objected. And after much maneuvering and prodding, the State of California took over the building of the dam.

"That was in 1950. Five years have now passed and the Oroville Dam is not yet built. It isn't even started. California appropriated $10 million to get started, part of which was spent, but ground wasn't even broken."

Let us tell the story of the Oroville Dam and the Government the way it really occurred.

Some 8 or more years ago the Oroville Chamber of Commerce was approached by Bureau of Reclamation men (Federal) with the suggestion that a dam might be built on the South Fork, with Federal money. The Oroville men, of course, fell in with the idea. They wanted that dam. Under Bureau plans the dam was to be built above Bidwell Bar on the South Fork, and would not have controlled the heavy floodwater of the main Feather River. This was not the Oroville Dam.

The State of California had a different site (the one now decided upon) and objected. There was long discussion, and finally the Bureau, the State, and the Army engineers all got together and decided on the State's site (5 miles above Oroville, on the main river, below its confluence with the South Fork) as the proper one.

Thus the situation remained until suddenly the Federal bureau, having in the meantime become interested in the power posisbilities of the Trinity project, let it be known that the Trinity project would have priority with it over the Feather River Project.

So it was seen that it was the Federal bureau, not the P. G. & E. or any local or State influence, that caused delay in construction of Oroville Dam and that the bureau plan would not have controlled the main cause of the Feather River floods.

When the bureau shifted its emphasis to the Trinity project, there was a terrific letdown here in C. of C. circles. They felt they had been led up to green pastures by the bureau and then literally sold down the river.

Grasping at straws, there came along something very substantial in the form of the State project to develop the Feather River water for the benefit of the entire State. The chamber group shifted to this project. If Pearson wants a story on the Feather and a dam to prevent floods, he can develop the fact that the dam is now being delayed by public power advocates who don't want it built on any but a public power basis.

During all the time here outlined there never was any suggestion that the P. G. & E. had opposed construction of the Oroville Dam and power house by the Federal Government Government. Such a thing never was mentioned or hinted. It is inconceivable that had the P. G. & E. objected, the proponents of public (socialized) power would not have taken it up and made a lot out of it.

California did not appropriate $10 million to get the project started, as Pearson states. In 1952, 1953, and 1954, the legislature appropriated a total of $2,227,056 to carry on necessary investigations. The 90-page report issued some months ago by State En-

gineer Edmonston represented the expenditure of that money. It also represented the work of 90 engineers, geologists, attorneys and technicians. Twelve eminent engineers, geologists, and investment specialists served on boards of consultants. Contractual assistance was provided by 15 private agencies, 3 Federal agencies and 5 State agencies.

Pearson's assumption that the money thus far spent should have resulted in groundbreaking shows his inexperience with great projects destined to run over a billion dollars in total cost. The ground for the reservoir site has not even been purchased by the State.

In the same article Pearson misrepresents entirely the present situation on the Trinity. The flood on the Klamath, according to the impression given by Pearson, is due to the negligence of Secretary McKay who, after Congress sent the project to him, took no action during 7 months in which not 1 shovel has been lifted.

No human power could have built a dam and a tunnel through the Siskiyous in time to prevent the recent flood. After having left the impression that McKay was to blame for the flood, Pearson himself sees how silly that is and as an afterthought admits that McKay could not, of course, have prevented the flood.

So it is that we can nail down Pearson's misstatements when they concern events that happen right under our noses. But it is different when they deal with matters far afield. Who can follow Pearson around and correct all his stuff for all the papers he serves? Manifestly, it is impossible. So he gets away with it in the public mind.

The time was when a much-quoted adage read, "Let the buyer beware." Change "buyer" to "reader" and you have something that fits the modern situation.

Gen. John Salling: Symbol of America

EXTENSION OF REMARKS
OF
HON. W. PAT JENNINGS
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 14, 1956

Mr. JENNINGS. Mr. Speaker, I wish today to bring to the attention of the Members of the House an observance that will take place tomorrow, May 15, in Scott County of the Virginia Ninth Congressional District.

Tomorrow is the 110th birthday of Gen. John Salling, Virginia's only surviving veteran of the Confederate States Army and one of the last three surviving Confederate veterans. It is appropriate that we pause here today to take note of General Salling's birthday, and I know that every Member of Congress joins me in sending best wishes for many more years of health and happiness.

Last year, when General Salling celebrated his 109th birthday, the Bristol Herald-Courier published the following editorial, which I feel will be of interest to the Members. The press, of course, is again taking considerable interest in the general's birthday, and I am sure other editorials will be written in his honor tomorrow.

The editorial follows:

GEN. JOHN SALLING: SYMBOL OF AMERICA

The Nation was young when John Salling was born in 1846.

There were only 27 States in the Union and the population of the United States was somewhere in the neighborhood of 23 million.

We were at war with Mexico. "Californy" was just "out there," waiting for the great Gold Rush of 1849 and admission to the Union in 1950.

Just 14 years ahead lay another war, pitting South against North, States against States, Americans against Americans, the energies of men like John Salling against the stamina of men like "that Yankee" from Minnesota.

Ahead, too, lay the Spanish-American War, World War I, World War II, the Korean war. John Salling has seen them all.

Today, at 109 General Salling is a symbol of the Old South, the Confederacy, Robert E. Lee, Stonewall Jackson, Jefferson Davis. But today, General Salling also is a symbol of all America. He is a cherished link with the past, a man who has bridged the gap between "then" and "now," a man who has come to like "that Yankee," a man who has weathered the stress of time and the strains of physical labor.

He has seen 21 States swell the ranks of the Union. He has seen the population of the United States rise to more than 160 million. He has seen the advent of the automobile, the airplane, the military tank, electric lights, radio, television, atomic energy, movies, ironclad ships, submarines, mechanized farming, telephones.

He has been privileged to watch this Nation rise from the despair and destruction of internal conflict to a position as the greatest power on earth.

And, today, we are privileged to have him with us as a reminder of all the things which have come to pass in his lifetime. We hope this day will be a happy one for him and that we can repeat that hope again in the future.

General Salling, who is still quite active despite his 110 years, mined saltpeter for gunpowder during the Civil War. He has lived most of his life on his farm in Scott County, about 2 miles from his birthplace.

Many distinguished visitors are expected to call on the general during tomorrow's birthday celebration. Among them will be a delegation from the Governor of Virginia to present the general with a 10-gallon Texas-style hat and a Confederate shirt to complete his uniform. Also an area bakery will deliver a huge cake to the general's farm home.

Mr. Speaker, in observing the birthday of one of my most distinguished constituents, I would like to call the attention of the House to a bill, H. R. 6392, which I introduced last year for the relief of the last three surviving Confederate veterans. This bill is pending before the House Committee on the Judiciary.

This bill provides that the Administrator of Veterans' Affairs be "authorized and directed to pay to the proper person or persons an amount equal to the expenses incurred for medical treatment and care furnished on and after the date of the enactment of this act, and during the 1-year period immediately prior thereto."

In the natural course of events, these last representatives of the gallant gray host will not be with us much longer. Can anyone of us find it in his heart to deny these three Confederate veterans the comforts due to their venerable years with tender respect for the honored uniforms they once wore?

Last year, the Congress approved a bill for the relief of the last surviving Union veteran. I urge you to suppport this proposed bill to aid our last three Confederate veterans.

And so, Mr. Speaker, I wish to conclude by saying that General Salling, who at 110 maintains an active life, is interested in his farm and his Government, deserves our respect and our best wishes. He is, indeed, a symbol of America. I hope that his 110th birthday will be a happy occasion and that we will be privileged to observe many others with him in the future.

We Are Paying for Flood Prevention

EXTENSION OF REMARKS
OF
HON. JOHN E. HENDERSON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, May 14, 1956

Mr. HENDERSON. Mr. Speaker, I wish to commend to the Members of the House a thoughtful article on the subject of flood control and water conservation which appeared in the spring issue of Land and Water, a quarterly magazine published by Friends of the Land, a nonprofit, nonpartisan society for conservation of soil, rain, and man. It has been written by Mr. Ollie E. Fink, a resident of Muskingum County in the 15th District of Ohio. Mr. Fink has been prominent in conservation circles for many years. He serves as editor of Land and Water. His article is as follows:

WE ARE PAYING FOR FLOOD PREVENTION
(By Ollie E. Fink)

Why must we continue to have the flood disasters? This is the question which our citizens in all parts of the Nation are asking. This question has been asked for a short time after each major flood during the past 30 years or more. Congress has been struggling with the flood-prevention and flood-control problems for many years, but there has been little progress. Less than 8 percent of our watersheds are now managed to afford protection against waste of soil and water and flood disasters.

Damage estimated at $700 million was caused by the two floods in the New England area in 1955. Floods in northern California and southern Oregon caused a damage of $100 million. The damage was held to this figure but would have been double these estimates had there been no flood-control program in operation.

These floods received the newspaper headlines. Each year there are floods on the small watersheds which seldom attract national attention, and yet the damage to property is greater than that of these floods on the main stems of our larger rivers. Some estimate that the annual flood damage on the smaller watersheds will often be as great as 75 percent of the national total.

Floods can be controlled and often prevented. To do so requires engineering structures and scientific knowledge applied to the land use proctices to best conserve our water and soil resources. Every drop of water which can be retained in the area where it falls, either in the earth or by small retarding structures, is 1 drop subtracted from the potential flood and 1 drop added to the potential useful water supply.

The construction of the various structures to prevent and control floodwaters requires an investment of funds. These structures on the main rivers are levees, dikes, floodwalls, storage dams, retardation dams, the latter to delay the runoff just long enough to permit the channel to clear without overflowing the banks below the dam. These devices are all used to control the water after it has collected in the larger channels. An equally important flood-control program should first be applied on the smaller upstream watersheds. These flood-control methods include all of the recognized soil and water conservation practices. It should be kept in mind that mother earth is our greatest reservoir for storing water. Recent research shows methods whereby we can increase the water holding capacity of our soils, increase the infiltration rate of water into the soil, and thus reduce the flood hazard. For example, it is presumed that a terraced field will always reduce the flood crest downstream. Terraces can be constructed to solve the farmers' problems of largely preventing soil and water losses, and yet these terraces will have little effect upon the downstream floods. We are now entering a period of landscape management in which terraces and other upstream techniques will be utilized on the landscape to reduce flood crests. Mulching and plowing with chisel tooth devices to break up subsoil compaction increases the rate and amount of water storage in the earth.

UPSTREAM ENGINEERING

We need the upstream flood-prevention and water-conservation practices installed first, followed by the various control methods in and along the main stem; storage dams, retarding dams, floodwalls, levees, and dikes. Practically all of the funds for flood control appropriated by Congress to this date have been spent for downstream measures, which is much like trying to put out the fire after it has reached its peak. The downstream measures should be designed to take care of emergencies which cannot be held upstream. When the downstream devices are constructed without first having the upstream management program in operation, we pay for the downstream twice. First we pay in loss of life and property, including the flooded acres of land taken out of production for water-storage reservoirs, economic development, and human welfare.

Secondly, we pay in that we have wasted our most vital resource, the water which is our most basic wealth. It is the great giver of life to plants and animals and the index to agriculture and industry. The city depends upon the flow of the river for its power and industrial economy. To have a stabilized flow of water in our rivers we need a land use program upstream engineered to release the water in a stabilized flow. The gashed and eroded landscape will result in frequent floods and ultimately will cause "factory closed" signs in our cities. The resources of power, stream flow, grass, forests, soil and terraces and other upstream land use practices are all tied together in our modern industrial culture. The chain of events in our society is trapped raindrops, crop money, business, happiness and optimum progress. Thus, the utilization of water by modern man is not primarily a thing apart, but interwoven into his social and economic web of living. The abundance and degree of development of the water resources determines the permanent prosperity and use of land and gadgets as our living standards rise higher and higher and each of the things we demand to meet our wants, represents the utilization of water at practically every phase of its creation and production. Therefore the higher the standard of living the more water we use. This leads to a better understanding of the fact that those things we want we regard as wealth, so water is wealth.

MUST KEEP THE WATER

If water is so valuable why do we let it run to waste into the sea? Why not build the dams to keep it from escaping to the sea? Did you ever hear of the Edfina barrage? It is a type of a dam in the Nile River, the Rosetta branch near the delta. The purpose of this Edfina barrage is to prevent the sea from invading and spoiling the fresh water of the river. It testifies as to the completeness of the utilization of the waters of the Nile, during much of the year, not a drop of water is permitted to escape to the sea. These people of Egypt know that water is wealth and in a very true sense it is the only wealth they have, without it they would perish.

The water supply in Egypt determines the number of people and their living standard. The population graph shows less than 5 million people in Egypt less than a century ago, but with the addition of more and more dams and barrages, storing more and more water, the population increased. The large dams were built to increase the national income. The taxable value of the land is an assessment based upon the available irrigation facilities. With this keen understanding of their dependence upon the waters of the Nile, its influence upon the people is majestic; they treat it with respect and understanding. To the Egyptian water is wealth and life.

HOLLAND

Another positive approach to an understanding of water is the history of Holland. An immense dyke has been built which walls off the Zuyder Zee from the North Sea. Dykes are now being constructed inside the Zee and the sea water will be pumped out section by section. The land will be washed with fresh water until the salt deposits are leached out so that the land becomes available for agricultural and industrial use. This reclamation plan will add 10 percent to the arable area of Holland. Someone has said that, "God made the world, but the Dutch made Holland." The cost per acre to the Government for the 50,000 acres claimed from the sea before World War II was approximately $800 per acre, and the present cost of the 240,000 acres being reclaimed is much greater.

We in this country are awakening to the fact that water is wealth. Bankers in some of the far western States now send snow surveyors into the high mountain areas to measure the winter snow fall. When the snow melts, it provides the water for irrigating the crops in the valleys. If the snow fall is light then there will not be much water available for irrigation. Farmers will have smaller acreages and less income and a reduced ability to pay off loans. The banker, knowing the amount of water potentially available, makes his loans accordingly. Here is another direct example of how we turn water to wealth.

CAN WE GET ENOUGH WATER?

It is very probable that within another 20 years we shall be providing 1 million gallons of water annually for each citizen—if we can get it. Whether we can get it or not will to a considerable degree be influenced by our flood-control practices. If our rivers are to carry raging torrents to sea instead of conserving this water for beneficial uses of man we shall not have enough to meet our increasing demands. A few buckets of water from the spring or well no longer meets the need of our homes.

This morning Mrs. Smith switched on the dishwasher, and in a few minutes had sprayed 7 gallons of water in cleaning the dishes. Across the street Mrs. Brown was doing the family wash, using 30 gallons of water in the laundromat. Next door, Mr. Green was using 25 gallons of water in his shower. Mrs. Black was using 2 gallons to operate the garbage disposal. Today the average urban dweller uses nearly 150 gallons of water per day, while only 20 years ago the average use was only 20 gallons per day. Laundromats, dishwashers, hot-water systems, air conditioners, two or more bathrooms, are to a large degree responsible for the increased demands of the modern home for more and more water.

In addition to the water used in the home, there is another demand upon water to operate these conveniences and appliances. Water is used in producing electricity whether it is from a hydro plant or steam generators. When Mrs. Jones turns the switch on the Laundromat or any electrical device, she is obligating herself to pay for the electricity, or actually pay for the benefits of water converted to another convenience at the powerplant. A modern home today is likely to have from 10 to 20 electric motors, or even more. The housewife finds new appliances and electrically operated products on the market each year and she looks forward to adding these as she can to her home.

MILLION GALLONS PER PERSON

The water that goes into growing the food we eat and in manufacturing the things we use raises the per capita requirements to nearly 1,500 gallons per day. The water used in supplying these increasing needs continues to climb to an astronomical figure. It is predicted that by 1975 the demand for water will be double what it is today. Today we are using half a million gallons per year, by 1975 one million gallons per year. Keep in mind that not only is the use per person increasing, but the number of people will reach about 220 million by 1975.

More people, each demanding more water, each producing waste, adding more waste and pollution with thousands of tons of contaminants creates a vicious cycle requiring more water which must come from the watersheds. There are many technical hydrologic and engineering problems which must be solved as well as adjustments in the land use pattern to provide for more water. For example, when water is pumped from a stream above a city to irrigate farm crops, it does not return to the stream to supply the domestic needs and industrial uses in our cities. We are in the beginning stages of an explosive expansion of irrigation in our humid areas. It is probable that the legal, political, and economic solutions, to meeting our increasing water needs, will be even greater than the hydrologic and engineering program to be applied to the watershed. Each watershed is different from another. The perspective of the citizens will be determined by geographical background and even our form of government may be altered to meet the increasing demands of our people for more water. An example of this trend may be seen in the acceptance by many of our citizens of the TVA program, the most socialistic of our Federal programs.

WHERE WATER COMES FROM

Where do we get the water we are presently using? In 1950 the United States Geological Survey estimated that about 180 billion gallons of water were withdrawn from the ground, lakes, and streams each day for use on farms and factories, municipalities, and other business establishments of the Nation. Of these withdrawals 17 billion were used in cities and rural communities, some 83 billions were used in industry, and 80 billions of gallons were used irrigation. Between 30 billion and 40 billion gallons were pumped from ground water sources. Community systems provided water for about 105 million people and 250,000 industrial plants. In the larger cities this water is being provided at an average of about 5 cents a ton. Many communities have already reached the maximum demand and are hard pressed to fill the present demands for the municipal, industrial, recreational, irrigation, power and other uses. In some

parts of the Nation the struggle has already developed between watersheds as for example the question of the water rights to the Colorado River as noted in the Arizona-California litigation. We can expect this type of competition between watersheds to increase in the years ahead.

The rights of individuals in regard to water control and ownership is a hodgepodge of laws, practices, court decisions, and rules of governmental agencies operating in the various geographical regions of the Nation. The Federal policies governing navigation, irrigation, flood control and, to a degree, our power policies have been separately conceived and separately administered. There are 25 separate agencies scattered among the 6 departments in the Federal Government and 5 independent organizations charged with the various Federal water purposes. Federal participation has been on a "hit and miss" basis of independent policies. Frequently, one Federal agency has been effectively able to block and retard the progress of the program of another agency through competitive influence with Congress.

CONGRESS AND HISTORY

At this point it would be well to review briefly the efforts of Congress to secure flood control for the people. While there was some discussion regarding upstream flood control measures the first legislation was the Weeks Forest Purchase Act of 1911. The Clark-McNary Act of 1924 provided for the acquisition of forest lands in headwaters of streams with a view of controlling runoff. The McSweeney-McNary Act of 1928 authorized investigations to find ways to prevent erosion and control water runoff. In 1929 field stations were authorized. In 1933 legislation was passed for relief unemployment authorizing work to prevent forest fires and soil erosion. In 1935 Congress authorized the Soil Conservation Service. The Soil Conservation and Domestic Allotment Act became law in 1936 and included flood control in its major objectives.

1936

Upstream flood control was first recognized by Congress in significant legislation by the 1936 Flood Control Act. This act designated a list of watersheds that would be surveyed. The Secretary of War was to make the flood control surveys and the Secretary of Agriculture the surveys for the runoff and water retardation. In 1937, the Water Facilities Act authorized the Department of Agriculture to assist individual farmers and groups of farmers to make better use of the water. In 1938 the Secretary of Agriculture was authorized and directed to make surveys and preliminary examinations for flood control on designated watersheds. Under these congressional acts the Soil Conservation Service and the Corps of Engineers were to cooperate in developing Federal programs for watersheds for the purpose of flood control.

1944

During the years from 1937 until 1944 the Department of Agriculture completed preliminary plans for 154 watersheds; more detailed plans for 18 watersheds and appraisals of flood damage on 40 areas, all in cooperation with the Corps of Engineers. In 1944 the Congress authorized the Department of Agriculture to install flood control works on 11 watersheds. The intent of Congress was not clear, at least there was difference in viewpoint within the Department of Agriculture, the Corps of Engineers, the Bureau of the Budget and the Congress. Since policies were uncertain little progress was made from 1945 to 1954. While more than 1,000 surveys had been authorized; only 58 had been completed, and Congress had authorized only 11 flood-control projects by the Soil Conservation Service, but not one project had been completed.

1953

Public support for upstream watershed flood-control project was apparent from the hearings of the House Agriculture Committee held in 1951. Bills were introduced in Congress in 1951 and 1952, and the pilot project program was initiated by Congress in 1953 and amendment to the appropriations bill. These 62 pilot watersheds were designated to demonstrate the upstream watershed program and provision was made to evaluate the results.

1954

In 1954 Congress passed the Watershed Protection and Flood Prevention Act. The main difference between this and former legislation was the greater emphasis on State and local responsibility. The 1936 act placed the Federal responsibility for selection, planning, and constructing projects, the 1954 act placed the major responsibility locally.

The 1954 act provides that the application must be made by some local organization before the State can study and evaluate the worthiness of the project. The State selects projects from applications and assigns a priority as well as an evaluation of the study of the costs and benefits of the several projects. If forwarded to the Department of Agriculture by the State official where an evaluation is made as to the advisability of spending planning money on the project, consideration is given to the probability of the local group in meeting their responsibilities. The decisions of the Department of Agriculture are largely based upon the economic justification of the project. If the project meets the economic requirements, then the Secretary must decide whether to participate, and the degree of cost sharing. It was the intent of Congress that the local or non-Federal interests would be responsible for an estimated 50 percent of the cost of the program. If the project is approved and a proposal is returned to the local group the contracts are to be accepted or refused. The final step when both the Secretary of Agriculture and the local group have reached agreement, is the decision of Congress. Congress may veto the program, especially if the Bureau of the Budget does not approve the appropriations.

The hopes of Congress and of the leaders in watershed flood control efforts are not being realized. The program is not moved ahead. Some of the stumbling blocks are as follows:

1. Local groups are not prepared by experience and the enabling legislation to accept the financial responsibilities of construction cost and other features as well as administration and continued operation.

2. The Federal Government accepted practically all of the financial obligations of the pilot projects.

3. The Federal Government is accepting about 94 percent of the costs of the projects of the Corps of Engineers. (There is considerable logic to the argument that both programs should operate under the same cost ratio.)

THE DIFFICULTIES

Congress and the executive department have accepted the policy of local interests sharing the costs with the Federal Government. The small watershed program will move slowly, due to many difficulties.

I. Local organizations lack responsibilities. Only a few States have legislation which will permit local groups to organize with the power to tax and make contracts which will be required in cooperating with the Federal Government. Soil Conservation Districts are not adequate to meet the needs. They are normally organized on county lines rather than watersheds. They are managed by farm interests. Flood control programs must be financed by all of the watershed people. City people and many of the rural people will look with suspicion on any proposed additional governmental unit with the power to tax. A conservancy district is an example. Soil Conservation Districts normally have not been granted the right of eminent domain.

II. Federal Government cannot finance the total national program without cost sharing from local people. Local interests should help to pay for their protection. Thousands of watershed groups would place requests before Congress and the "pork barrel" legislative pressures would be terrific if no local financing was required.

RECOMMENDATIONS

What should Congress do?

1. Congress should begin an educational program designed to give insight and understanding to our citizens that water is wealth. Once they have this concept the flood control problem will be greatly reduced or eliminated by the people managing local watersheds to conserve the wealth.

2. Congress should help local watershed groups to secure adequate responsibilities and make financing easier. In many instances the improved beneficial uses of the water which would have been wasted in floods, will be an investment more than paying the cost of the flood prevention program. The irrigation program in this country is an example in which the projects are designed to repay the Government for the funds appropriated by the Federal Government.

3. Congress should establish additional research projects to provide facts for better appraisal of proposed projects from the financial and economic basis as well as the best hydrologic and land use information. Incidentally, the focus of emphasis has been on the Federal benefits and before the program will succeed greater understanding of local benefits must be developed.

4. Congress should set up more pilot watersheds with special emphasis on the basic improved water supply and educational demonstrations of all the water conservation techniques in operation. For example terraces designed to reduce flood flow peaks, rather than just terraces to protect the soil on the farm were installed.

Reprehensible Post Office Gag Rule

EXTENSION OF REMARKS

OF

HON. JAMES T. PATTERSON

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 2, 1956

Mr. PATTERSON. Mr. Speaker, permit me to direct the attention of our distinguished colleagues to the following letter that I received today from Mr. Wallace J. Legge, Jr., president, first division National Postal Transport Association, concerning certain new sections of the Postal Manual that will serve as a gag on the postal unions and all postal employees, if not immediately eliminated by the Post Office Department.

I am certainly in accord with the views expressed by Mr. Legge and his association. The language in the new sections of the Postal Manual is so ambiguous that a misinterpretation could deny the postal employees the right to petition Congress for improvements in their working conditions and prohibit constructive criticism of the postal service.

However, I am confident that Postmaster General Summerfield has no intention of denying any American citizen the constitutional right to petition Congress. Therefore, I concur with the postal employees that the aforementioned new section of the Postal Manual is detrimental to the best interests of both the public and the postal employees, and should be immediately eliminated.

Mr. Speaker, the letter follows:

NATIONAL POSTAL TRANSPORT ASSOCIATION,
Washington, D. C., May 14, 1956.

The Honorable JAMES PATTERSON,
House Office Building,
Washington, D. C.

MY DEAR MR. PATTERSON: For years postal transportation clerks have been subjected to a postal gag rule. Now the Post Office Department intends to apply the gag throughout the postal establishment.

On March 28, 1956 the following addition was made to the postal manual:

"744.442. Engaging in campaigns for chances in the service.

"(a) Information relating to the policies and decisions of the Post Office Department will be released only through official channels. Employees shall not actively engage in campaigns for or against changes in the service, or furnish information to be used in such campaigns unless prior approval has been obtained from higher authority.

"(b) If an employee has justifiable reasons for favoring or opposing changes in the postal service, he shall contact the proper officials and await specific instructions before engaging in local hearings or activities."

The Lloyd-La Follette Act of 1912 grants to postal workers the right to petition Congress for improvements in their working conditions, grievances, etc. The National Postal Transport Association contends that the gag rule acts to prevent employees from giving detailed information to their national officers on which to base appeals to the department or to the Congress for improvements in service, working conditions, or adjusting grievances.

The association contends that this rule is detrimental to the best interests of the public because it prevent criticism of management's errors and inefficiencies. Its practical operation tends to intimidate employees and curb the activities of the National Postal Transport Association.

The National Postal Transport Association contends that this rule is a violation of the intent of the Lloyd-LaFolette Act. The association points out that one of the reasons they are seeking enactment of S. 3593 (labor-management relations bill) is the gag rule, which prevents the union from fulfilling its function.

With many thanks for past assistance, I am,

Sincerely yours,

W. J. LEGGE,

Louisiana Tidelands

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES

Monday, May 7, 1956

Mr. BROOKS of Louisiana. Mr. Speaker, in extending my remarks, I wish to say I have just received a letter of May 11, 1956, from Mr. C. J. Bonnecarrere, secretary, State mineral board, State of Louisiana, together with a resolution from this board protesting the action of the Federal Government in lease sales covering tracts of acres in the offshore area of the State of Louisiana on May 15. So that this Congress may be familiar with this protest and the action of the Louisiana State Mineral Board, I set forth the letter from the Secretary of the State Mineral Board together with the resolution of protest:

STATE OF LOUISIANA,
Baton Rouge, May 11, 1956.

Hon. OVERTON BROOKS,
Member of Congress, Congress of the United States, House of Representatives, Washington, D. C.

DEAR CONGRESSMAN BROOKS: We are in receipt of your letter of date May 7, 1956, relative to the resolution by the State mineral board protesting the Federal Government's lease sale in the offshore area of the State of Louisiana on May 15, 1956.

We enclose herewith certified copies of this resolution in order that you might put it in the CONGRESSIONAL RECORD.

With kindest regards and best wishes we remain

Very truly yours,
STATE MINERAL BOARD,
By C. J. BONNECARRERE,
Secretary.

The following resolution, introduced by Mr. Clanton and seconded by Mr. Bryant, when put to a vote, was unanimously adopted:

"Whereas the Department of the Interior of the United States, Bureau of Land Management, acting for and on behalf of the United States and pursuant to section 8 of the Outer Continental Shelf Act (67 Stat. 462) and the regulations issued thereunder (43 CFR, pt. 201) has published notice that sealed bids are to be received by the Manager, Outer Continental Shelf Office, Bureau of Land Management, 608 Masonic Temple Building, New Orleans, La., on or before May 15, 1956, for the lease of oil and gas in certain areas of what is termed the outer Continental Shelf, off Louisiana and Texas, including the following specially designated tracts, descriptions, blocks, and acreage, as follows:

and:

"Whereas the submerged lands, under the tract numbers, descriptions, blocks, and acreage particularly referred to and enumerated in the last and foregoing paragraph, are located in whole or in part within the gulfward or seaward boundary of the State of Louisiana, as set forth and redefined in Act No. 33 of the Louisiana Legislature for the year 1954, and which tracts in whole or in part are owned by the State of Louisiana in its sovereign capacity and within the historic gulfward boundary of said State; and

"Whereas the call for sealed bids for oil and gas leases by the United States, through the Department of the Interior, Bureau of Land Management, is a slander of the title of the State of Louisiana and injures its people and their property and property rights and to a substantial extent deprives the full and free use of said property and property rights in violation of the fifth amendment to the Constitution of the United States; and

"Whereas the State mineral board, authorized by law to act as the agency for the State of Louisiana in leasing State-owned lands and water bottoms for oil, gas, and minerals and in supervising such leases, when granted, is the appropriate body corporate to represent and act for said State in the premises: Now, therefore, be it

"Resolved by the State mineral board, acting for the State of Louisiana and on its behalf, in regular session convened at Baton Rouge, La., on April 18, 1956, That it does hereby protest the action taken by the United States, through the Department of the Interior, Bureau of Land Management, in calling for sealed bids for oil and gas leases covering the specific tracts of land hereinabove specifically designated and enumerated, which are located within the gulfward boundaries of the State of Louisiana and belonging to said State in full ownership and that the United States, represented as aforesaid, be called upon to rescind and abandon such call for bids, so far as the tracts which are specifically enumerated, listed, and numbered in this resolution are concerned; be it further

"Resolved, That this resolution be published and circulated fully to warn any and all prospective bidders of this protest and to notify them, if leases be awarded covering the tracts herein specifically referred to and above numbered that the State of Louisiana shall take all appropirate and available legal action to maintain and protect the property and property rights of the State and its people in the areas of submerged lands involved in this protest; be it further

"Resolved, That a copy of this resolution be served upon the United States Department of the Interior, Bureau of Land Management."

I hereby certify that the above is a true and correct copy of a resolution adopted at a meeting of the State Mineral Board, held at State Capitol in the city of Baton Rouge, La., on the 18th day of April 1956, pursuant to due notice, at which meeting a quorum was present, and that said resolution is duly entered in the minute book of said board and is now in full force and effect.

C. J. BONNECARRERE,
Secretary, State Mineral Board.

Puerto Rico: Island Workshop

EXTENSION OF REMARKS
OF

HON. A. FERNÓS-ISERN

RESIDENT COMMISSIONER FROM PUERTO RICO

IN THE HOUSE OF REPRESENTATIVES

Monday, May 14, 1956

Mr. FERNÓS-ISERN. Mr. Speaker, I know that many members here present today have had the pleasure of visiting my district, which is the island of Puerto Rico. While some of them have so honored us recently, with others, some years have elapsed since their last visit. I invite all of the Members who have never been to Puerto Rico to come at the first opportunity. We would like to show you what we are doing to industrialize, to remove slums, to better our methods of doing things, to build roads and airports, to start new industries, to create employment, and to raise living standards.

To those who have been to Puerto Rico, I should like to say, "Come again now," for you will see that miracles have happened while you were away. You will see whole new communities suddenly come to life. You will see busy factories where there were no factories before. You will see modern roads, superhighways, to take you to the interior of the island, and everywhere you go, you will find people working harder and harder, creating, building, and improving.

The May 14 issue of the Time magazine tells something of the story of Puerto Rico's Operation Bootstrap. It refers to Puerto Rico, quite properly, I think, as the Island Workshop. I believe that every Member will be interested in this article, which under unanimous consent, I include herewith:

PUERTO RICO: ISLAND WORKSHOP

Two lines will meet and cross on a graph in Puerto Rico this week, and thereby touch off a gerat celebration. The crossed lines mean that, for the first time in history, manufacturing has edged ahead of farming as Puerto Rico's major source of income.

To hammer home the point, no fewer than 20 new factories are to be officially opened. Heading the list is a $2 million General Electric plant to make circuit breakers; other factories will produce such goods as coils, rubber buckets, screen wire, photolithography, saber saws, frozen foods, billfolds, brassieres. The openings will bring to 400 the total of plants drawn to Puerto Rico by its famed Operation Bootstrap.

Puerto Rico's self-help plan is a smashing success, there for any eye to see. San Juan's big, handsome new airport at Isla Verde, built for $15 million, makes most mainland terminals look shabby. An impressive low-cost housing program in San Juan has built 20,000 units. Private building has kept pace. Television antennas forest the roofs of the dwindling slums, and Gov-Luis Muñoz-Marín this week inaugurates an islandwide TV hookup. Wide boulevards and superhighways stretch out from the capital.

Two 300-room hotels are going up near San Juan to help the 300-room, 99 percent occupied Caribe Hilton handle the expected $75-million-a-year tourist traffic. Laurance Rockefeller is putting $1 million into a 72-room luxury hotel with an 18-hole golf course designed by famed Golf Architect Robert Trent Jones. And all over the island are the new factories. They are well lighted, pastel tinted, and smog free (there is no heavy industry), and their signs cry out familiar brand names: Remington Rand, Sylvania, Paper-Mate, U. S. Rubber, Textron, Maidenform, A. S. Beck, Carborundum, Van Raalte, Bostitch, Sunbeam.

UP FROM DESPERATION

But not just any eye can measure the whole force of Puerto Rico's tug at its bootstrap. The full change dates from the thirties, when the economy revolved around the apathetic peasant sugarcane cutter, and when industry—even rum making—hardly existed. In 1940, Puerto Rico resolved that it was going to transform itself. Industrialization became a major goal. As a starter, the government bought out mossback electric companies, built dams, strung transmission lines, and thus provided the electricity that powers today's boom. But the most astute stroke was the 1942 creation of a government corporation, now called the Economic Development Authority, with a charter to industrialize the island.

At first the corporation built and ran plants, for example, a wartime rum-bottle factory, a cement plant. But some strikes that followed showed the vulnerability of government in the double role of industrial labor's friend and employer. The lesson grew clear that the way to industrialize was to attract United States capital. In 1948 Operation Bootstrap, based on that principle, got underway.

DOUBLE PROFITS

Any serious United States businessman who wants to start a factory or a branch plant in Puerto Rico gets kingly treatment from Bootstrap. Under Administrator Teodoro ("Ted") Moscoso, a brief-case-toting man in horn-rimmed spectacles who flouts Latin tradition by working 70 hours a week, EDA can offer mouth-watering inducements. It will provide the businessman with labor from its big files of workers, trained in everything from pastry baking to power sewing by one of the world's largest vocational schools. It will build a plant and rent it to him. Moving to Puerto Rico will free him from United States income taxes. And, as the biggest come-on of all, Puerto Rico will exempt him from all corporate taxes for 10 years if the industry he starts is a new one for the island and not a runaway from the mainland. His personal income from dividends, moreover, can be exempt from taxes for 7 years in the first 15.

Failure is not impossible; 107 firms established under Bootstrap have gone broke for assorted reasons. But the successes are notable. A plastics manufacturer who started in 1953 with a $15,000 investment cleared $200,000 last year alone; a 1952 investment of $675,000 netted $2,800,000 in 1955. The average return on capital before taxes is double that of United States companies.

FREE STATE

Under Governor Muñoz-Marín, Puerto Rico's political innovations have kept pace with the economy. Muñoz is uniquely fitted for island leadership. The son of a famed Puerto Rican statesman, he grew up in Washington, lived for a while as a Greenwich Village poet and intellectual, then returned to Puerto Rico. By hinterlands cam-

paigning for "bread, land, and liberty," he developed a powerful backing among the peasant farmhands, and in 1940 became a senator and an influential leader. In 1948 he became Puerto Rico's first elected Governor (and was reelected in 1952 for a term that expires in 1956).

When in 1950 Congress offered to let Puerto Rico write its own constitution, Muñoz helped draft it and happily saw it approved, 375,000 to 83,000. The constitution makes Puerto Rico self-governing in local affairs, gives it a relationship to the United States defined in the official Spanish term as Estado Libre Asociado (Free Associated State); the official translation is Commonwealth. Congress' laws, notably the draft, apply to Puerto Rico, but, because the island has no vote in Congress, it is spared the income tax.

OVERPOPULATION

Puerto Rico's industrial revolution has wrought the expectable statistical wonders. Per capita national income went from $122 in 1940 to $434 in 1954, against 1954's $201 in the neighboring Dominican Republic, $538 in West Germany, $1,845 on the United States mainland. As a market for the continental United States, the island, buying $584 million worth of goods last year, outranks all foreign countries except Canada, Mexico, the United Kingdom, and Japan.

In thus making more goods available, Bootstrap has tackled one approach to Puerto Rico's basic problem: overpopulation. More than 2,300,000 cram the island, 670 to the square mile. From the approach of providing work, Bootstrap has been barely a holding operation. It has created 33,000 industrial jobs, and perhaps even more resulting service jobs. But a runaway birthrate combined with a death rate lower than the mainland's—plus a parade of labor from the increasingly efficient farms—pours 20,000 workers a year into the market. In the short run, only by heavy emigration to the mainland and the Army's draft has Puerto Rico been able to keep unemployment from rising despite Bootstrap. In the long run, Bootstrap's higher living standards may help importantly; statistics show that the birthrate drops with every increase in family income and education.

TRANSFORMATION

The pull of Bootstrap has transformed Puerto Rican life; the dejection of the past is lost in new pride. A case in point is Salinas, on the south coast, once a drowsy and impoverished sugar town. In 1952 Paper-Mate opened a ballpoint-pen plant there, hired 400 workers, three-fourths of them women who had never worked before, and began to sprinkle a payroll of $1,250,000 a year over the town. As almost the first result, a jewelry store opened to sell the gold watches Puerto Ricans admire. A market soon developed for used cars, furniture, refrigerators.

Now in Salinas, to work for Paper-Mate is to be somebody. After work, in a tableau like a scene from Carmen, the girl penmakers, dressed in factory-provided blue smocks, parade their status through the streets. Drawing a sharp contrast with the old way, sheepish cane cutters often perform the unmanly chore of bringing lunchboxes to their working wives at the plant.

A transformation as speedy and effective as Puerto Rico's has worthwhile lessons for all Latin America, and for all underdeveloped countries with industrial ambitions. The lesson is not being lost; the story of Puerto Rico is better known among development-minded people abroad than it is among Americans. For this week's festivities, 323 foreign students and technicians are on hand, the latest of more than 3,000 who have come in the last 5 years from such distant places as the Fiji Islands, Pakistan, Iceland, Israel, Ethiopia, and Nepal.

They come specifically to learn Puerto Rico's pragmatic techniques of letting private enterprise develop an area while a democratically elected government supplies aid and incentives. Luis Muñoz-Marín thinks that they also see "the United States at its undogmatic best: the helping hand guided by the undoctrinaire spirit, so forgetful of its bigness that it fully reveals its greatness."

Auto Is Greatest Killer

EXTENSION OF REMARKS
OF

HON. KENNETH A. ROBERTS

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 14, 1956

Mr. ROBERTS. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I include three news articles dealing with the number of lives America wastes in automobile accidents. When you realize that one American is injured every 24 seconds and 1 is killed every 14 minutes in a traffic accident, and that the automobile is a greater killer than war, it is time action was taken to stop such human slaughter. I am pleased that the House of Representatives has recognized this tremendous waste of human lives and has voted to have the House Interstate and Foreign Commerce Committee study the causes of these accidents with the hope that we may be able to lessen such destruction and waste. The magnitude of this continual disaster is indeed worth our serious study and I hope the committee will be able to begin its investigation in the very near future.

The above-mentioned articles follow:

[From the Washington Evening Star of April 30, 1956]

HOW TO STOP KILLING YOURSELF

(By Dr. Peter J. Steincrohn)

AUTO IS GREATEST KILLER

"During the Korean war only half of the hospitalized casualties were the result of enemy action. During this same conflict, more Americans were killed in the United States in automobile accidents than were killed in the war."

The foregoing was written by Col. Don. S. Wenger, USAF, in the Journal of the American Medical Association.

Colonel Wenger continues: "The automobile is the military establishment's and the Nation's greatest killer. An American is injured every 24 seconds and 1 is killed every 14 minutes in a traffic accident."

As I see it, and the subject is too important to be facetious about, we did our sons a disservice by getting them out of the trenches and into automobiles. We took them from the relative safety of bombs and bayonets and set them down in the front-line danger of tires and brakes and accelerators.

WAYS TO CURB INJURIES

The car is a killer; long statistical columns of the dead verify that. Knowing that you are as anxious to stay alive as I am, I am sure that you, too, will be interested in this excellent summary by Colonel Wenger:

"Injuries usually result from specific causes. Remedies may be just as specific and simple. Reduce the high peaks of decelerative forces, enlarge the area that absorbs these forces, and restrain the occupants of automobiles so that they do not fly around within or outside the car and a majority of the fatalities and injuries would never occur.

"Possible mechanisms to obtain these results are safety belts, a progressively disintegrating frame, and energy-absorbing construction of various lethal parts of the vehicle such as steering wheels, instrument panels, windshields, and set backs.

"A shock-absorbing bumper, either hydraulic or collapsible, padded panels, and pop-out windshields are possible examples of such construction. A high-backed seat would reduce materially the whiplash neck injuries. If properly packaged for survival you can crash your car and live."

But what do you and your neighbors do about it except think: "When will these silly, crusading bores stop throwing 'scare statistics' at the American people. All they do is keep harping on auto accidents. You'd think the streets are littered with smashed cars and the dead."

THIRTY-EIGHT THOUSAND KILLED IN YEAR

As a doctor I cannot help calling this senseless slaughter to your attention. A matter of 38,000 automobile deaths a year isn't 38,000 peanuts littering our streets and highways. Each "cold statistic" in the long column represents a man, woman, or child.

It represents bashed heads and mashed brains; twisted necks and amputated arms and legs; your blood spilled on flowers at the roadside; and curious bystanders shaking their heads in disbelief and amazement that human beings could do such things to themselves.

But they do: not forgetting the 1.5 million injured yearly; and the 100,000 totally disabled. Do you know what it means to be totally disabled for 24 hours a day for your entire life? Do you realize the implications of caring for such a member in your family?

If you are hurt in an auto accident you have 1 chance in 15 of having such an injury. Furthermore, you run 1 chance in 37 of being killed. Once I asked a pilot of a plane what was the most dangerous part of flying. Without hesitation—and with a knowing grin—he said: "There are two dangers, equally great. And don't jump to the conclusion that they are landing and taking off. The two greatest dangers of flying are taking a cab or your car to and from the airport."

POLIO DEATHS FAR FEWER

That sounded like a joke until I saw these statistics by Dr. C. Hunter Shelden, of Pasadena, Calif.: "Last year the United States Air Force lost 700 men killed in aircraft accidents and during the same period lost 678 killed in automobile crashes."

And I suppose you have already heard that auto accidents have caused more deaths during the past 50 years than all the fatalities of all the wars this Nation has ever fought.

Poliomyelitis? Horrible. Almost 2,000 innocent youngsters lost their lives due to it in 1953. Automobile deaths were almost 20 times as numerous. Is there a fitting adjective to describe it? I think we talk too much about it. If there's any more talking to do let's talk to our Senators and Representatives. Let's tell them we won't reelect them unless they offer a national program of auto safety. Let's tell them we want to be able to walk out of our cars, not be picked up on a stretcher. The final answer lies with you, the car manufacturer, and Washington.

[From the Washington Evening Star of May 3, 1956]

PSYCHIATRIC TEST REVEALS WHO'S SAFEST DRIVER

CHICAGO, May 3.—A dream of highway safety experts—a test to determine in advance whether a person is mentally accident-prone or accident-proof—appeared a step nearer realization today.

Details of tests which proved about 80 percent accurate in 3 separate trials were prepared for the annual convention of the American Psychiatric Association.

Preliminary findings from the 3-year-old accident research project at the University of Colorado School of Medicine, conducted in conjunction with Fitzsimmons Army Hospital, indicated:

1. Religiously inclined persons make the safest drivers.

2. Motorists with a predominant interest in aesthetic or theoretical values have the worst safety records.

TWO HUNDRED AND SIXTY-FOUR AIRMEN TESTED

The project leaders—psychologists and psychiatrists—tested and interviewed 264 airmen from Lowry Air Force Base, Denver, on their psychological, psycho-physical and psychopohysiological characteristics.

The airmen had high, moderate or accident-free driving records.

"The stable results achieved with this test suggests that different sorts of individuals are represented in the accident and nonaccident groups," they said.

Stressing that this is a preliminary report, applied to a relatively small group and limited exclusively to airmen living at a base, they added:

"Frankly, the authors are puzzled by the relatively higher theoretical and aesthetic interests and the relatively lower religious interests in the accident individuals.

"It appears that the accident subjects may well be psychologically more complex than their nonaccident counterparts, less in harmony with their environment and less conventional * * *.

"There is some sign that they (the nonaccident group) tend to accept conventional values to a greter extent; have simpler and on the whole less demanding needs; have less conflict, both internal and external; possess less elaborate physiological defense systems and show less tendency, both as children and adults, to engage in contentious or acting-out behavior.

"The non-accident group had fewer conflicts with authority in the forms of truancy, delinquency and minor offenses, and they more regularly go to church, engage in prayer and in general behave in rather socially conforming ways."

The report was by Dr. John J. Conger, Dr. Herbert S. Gaskill, and Dr. Donald D. Glad, all of the University of Colorado.

[From the Washington Evening Star of April 28, 1956]

SCIENCE VERSUS SPEEDERS

Virginia's use of radar as a weapon in the war on highway speeders is apt to be more effective than ever, now that the State Supreme Court of Appeals has upheld the constitutionality of the State's radar law. That is good news to drivers who are content to abide by Virginia's safe-driving speed limits. For radar is helping to make the roads safer for all drivers by catching or slowing down the reckless motorists who are to blame for most fatal accidents.

The Virginia law had been challenged by a man convicted, on radar evidence, of driving 62 miles an hour in a 55-mile-an-hour zone. He contended that his rights under the "due process" provision of the Constitution had been violated, since he had no way of proving that the radar evidence was wrong. He also argued that radar signs should be posted on every road in the State. The court ruled unanimously, however, that no rights were infringed by the use of a scientific speed-measuring device such as radar, the "general accuracy and effectiveness" of which "are not seriously questioned." And, the judges said, it was sufficient that radar notices were posted on the particular road on which the speeder was arrested.

The court's opinion will contribute to the safety of those who use the public highways in Virginia. The widespread employment of radar in eliminating potential killers from the roads is thoroughly justified—as experience in many jurisdictions already has shown.

Rumanian Independence Day

EXTENSION OF REMARKS

OF

HON. KATHARINE ST. GEORGE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, May 14, 1956

Mrs. ST. GEORGE. Mr. Speaker, the 10th of May has passed by silently in Rumania. But when that country was free, May 10 was the day on which they celebrated their independence and that freedom they have now lost.

We are partly to blame for the plight of Rumania, and of many other nations behind the Iron Curtain, and I want at this time to review some of the events that have led up to the present situation, specifically, in Rumania.

Once the Austrian peace treaty had been concluded and the Russian troops withdrawn from Austria, the Soviet Union had the obligation as provided in the peace treaties with Rumania and Hungary of withdrawing her armed forces from these two countries. It should be stressed that the formal motive, as mentioned in the peace treaties, of the presence of the Soviet armies in Rumania and Hungary was the insuring of the Russian lines of communication with the Soviet zone of occupation in Austria. The peace treaties with Rumania and Hungary provide that the Russian troops should withdraw from Rumania and Hungary within 90 days from the conclusion of the Austrian peace treaty. It should also be pointed out that these provisions are guaranteed by the three great powers, United States, United Kingdom, and the Soviet Union, the peace treaties being a contract between the three of them and the above countries. Therefore, the implementation of these treaties' provisions is the equal responsibility of all three.

It was, of course, an error to conclude peace treaties with nonrepresentative, tyrannical governments, forcibly installed by Moscow, but once that incredible concession was made to the Soviets and signed, we should at the very least have seen to it that these treaties were respected.

The peace treaty with Austria has been concluded, the 90 days from its conclusion have elapsed and then another 90 days have elapsed, and there is no sign of the Russian troops withdrawing from Rumania and Hungary. The Soviet Union is thus violating its obligations under these treaties. Until now the United States and the United Kingdom have not raised the issue of the withdrawal of the Red troops, although it is their obligation to do so. A profound silence reigns over this whole question. Moreover, the Communist Governments of Rumania and Hungary which have been permanently infringing on the treaties and are subservient accomplices to this last Soviet violation, have been rewarded for their crimes by being accepted as respectable members of the United Nations.

Why does not our country take the necessary steps, asking for the fulfillment of these treaty provisions as it is our obligation to do? Articles 38 and 40 of the Rumanian and Hungarian peace treaties provide for the procedure to be followed in this case. We in the Congress could raise this vital question and ask for action on this matter.

The independence of the Rumanian people was fully reestablished by the Congress of Berlin, 1878, after almost three centuries of being under the suzerainty of the Ottoman Empire. Up to the moment of the Turkish advance into the Danube area the Rumanian lands had been ruled by national Domni—independent princes—who took an active part in the defense of Europe and of Christian civilization, through an unceasing fight against the invasions from the east.

The victories you have gained with equal wisdom and bravery over the unbelievers, our common foe, have raised your fame to the point that your name is on everyone's lips, and all agree in exalting you—

Wrote Pope Sixtus IV to Stephen the Great, one of these Rumanian Domni ruling in the second half of the 15th century.

The Rumanian people, descendents of the Roman colonists of Dacia—the ancient name of the land inhabited by the Rumanians—form a strong Latin and Christian outpost at the eastern confines of Europe. The country, numbering now twenty-odd millions, has preserved its national integrity throughout centuries of vicissitudes. A deeply rooted nationalism and Christian faith are once more today the inspiration which wealds the Rumanian people together in an unyielding resistance to communism.

The circumstances under which the independence of Rumania was recognized in 1878 are worth remembering.

On the eve of the war between Russia and Turkey on April 16, 1877, Mihail Kogalniceanu, Rumanian Minister for Foreign Affairs, signed a convention with Russia. The convention assured to the Russian armies free passage across Rumania, provisioning and the use of roads and railways, and pledged her to respect Rumanian laws and institutions. Article II of this convention had the following text:

In order that no inconvenience should result for Rumania from the fact of the passage of the Russian troops through her territory, the Government of His Majesty the Emperor of all the Russias pledges himself to maintain and to make respected the political rights of the Rumanian State, such as derive from its internal laws and the existing treaties, as well as to maintain and defend the present integrity of Rumania.

What happened immediately after this Convention was signed is typical.

Meanwhile the Russian attitude was disquieting—

Writes the English historian Seton Watson.

There was a tendency to override or ignore Rumanian susceptibilities and treat the country as a mere Russian dependency. Rumania's cooperation on equal terms was airily rejected by the vain and pompous Gorchakov (the Russian Chancellor), the most that he would concede was that she might join the war uninvited, but in that event there must be complete fusion and unity of command. "Russia," it was stated quite explicitly, "does not need the assistance of the Rumanian Army." (A History of the Rumanians, Cambridge 1934, p. 336.)

But—

In the second half of July the Russians suffered more than one reverse, and finding themselves in urgent need of reinforcements pressed the Rumanians to come to their aid * * * Prince Charles, with a fresh army of 50,000 men and 180 guns at his disposal, was this time able to lay down specific conditions for cooperation, and the Russians dismounting from their high horse, gracefully offered him the command of the united armies before Plevna. * * * On September 8, the Rumanian Army had its real baptism of fire in the redoubts of Grivita, before Plevna; and the foreign attachés and correspondents were unanimous in their praise of its extreme gallantry and steadiness, which contributed very materially to the final victory.

The reward for this cooperation came very soon. On January 29, 1878, Gen. Ion Ghica, the Rumanian representative in Moscow, was officially informed that Russia demanded the districts of Southern Bessarabia, which had been returned to Rumania by the Treaty of Paris.

The plea that the territory in question had been for centuries an integral part of Moldavia and had fallen to Russia the first time only 44 years before the Treaty of Paris seems to have made not the slightest impression upon either the Tsar or Chancellor.

The possession of Bessarabia with control of the Mouths of the Danube, was cynically made by the great powers an object for bargaining, and the Berlin Congress sanctioned this amputation of Rumanian territory to Russia.

In politics—

Remarked Lord Beaconsfield to the Rumanian Prime Minister Bratianu—ingratitude is oftentimes the reward for the most distinguished services.

It was in vain that Gladstone accused the British Government of "selling Bessarabian liberty to Russia."

A similar incident happened, when, in the autumn of 1944, Sir Winston Churchill sold Rumanian liberty to Communist Russia. But this time there was no Gladstone to protest against this political felony. Thus was the great American principle of self-determination which President Woodrow Wilson upheld and made a reality in Eastern Europe, sacrified to placate a Communist tyrant. The fact that from September 1944 until the end of the war, the Rumanian army substantially contributed to the Allied offensive and considerably shortened the war—being considered at that time, as the London Times put it, "the fourth combative force"—has not affected the cinical bargain between the Great Powers in 1944. The situation is remarkably similar to that of 1878; when Russia raped a province from Rumania, her ally, who had saved her from defeat.

Rumania has been blatantly subjugated by Soviet Russia on March 6, 1945; through the politically and militarily enforced ultimatum, delivered to King Michael, by Andrei Vishinsky 2 weeks after the Yalta Declaration. The United States and the United Kingdom officially recognized this enslavement by signing a so-called Peace Treaty with the nonrepresentative Moscow installed puppet-government in Paris 1947.

Thus does history repeat itself, but this time with infinitely more tragic consequences both for Rumania and for the world.

Remarks of Alvin M. Weinberg Before the Atomic Industrial Forum, Oak Terrace, April 19, 1956

EXTENSION OF REMARKS

OF

HON. ROSS BASS

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Monday, May 14, 1956

Mr. BASS of Tennessee. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following:

REMARKS BY ALVIN M. WEINBERG BEFORE THE ATOMIC INDUSTRIAL FORUM ON APRIL 19, 1956

Dr. Grigorieff, Mr. Goodwin, and guests of the Atomic Industrial Forum, it is a pleasure to welcome you to Oak Ridge and to the Oak Ridge National Laboratory. This afternoon I would like to talk about a nontechnical subject—a subject on which most of you are, in a sense, better qualified to speak than I. It is the question of the challenge which nuclear energy development in this country presents to our whole American industrial system. It will be my purpose to describe the nature of this challenge and to explain why I believe we have a good chance of successfully meeting it.

Our Government and our President have decided to make of the peaceful development of nuclear energy an instrument of national policy. They consider this instrument to be as important as, and in some respects more important than, the development of nuclear weapons. This means simply that we in this country have elected to use the development of nuclear energy as a means of furthering the aims of the United States throughout the world; in particular, we have decided to use this development as a means of maintaining our influence in the uncommitted countries—as a means of "gaining friends and influencing people." All of us involved in the effort are enormously inspired by the fact that not only our military efforts, but also our peaceful efforts, are potentially directed toward such lofty ends. But it is clear that we face certain difficulties in achieving this end because of the way we do business. It is a discussion of these difficulties that will be my concern this afternoon.

Make no mistake about it, the United States Government and our President are in complete earnestness in their plan to use nuclear energy as an instrument of national policy to further the American cause throughout the world. But also make no mistake, gentlemen, about the fact that both the British and the Russians are using the same approach to the same end. The British have in the last year or so announced that they are proceeding with a full-scale program of nuclear energy development and that they will build during the next 8 years 8 full-scale gas-cooled power producing reactors. This program is actually in progress; it is not a plan for the future. We can well live with what our good British friends propose to do; if by such a program the British succeed in cornering a piece of the foreign market this is not of too much concern to us. But at the recent Communist Party Conference in Moscow it was announced that the Russians propose to build during the next 5 years 10 full-scale nuclear power reactors with a total capacity of 2,000,000–2,500,000 kilowatts, each of a different type, each to be built before small-scale development has been completed, the total enterprise to cost approximately $1 billion. Following this distressing announcement in Moscow, some of our American representatives had occasion to speak with Professor Emeleanov, one of the most highly placed scientists in the Russian atomic energy effort, who gave considerable detail on the building of these 10 full-scale nuclear power producers. And what shall we do if the Soviet Union, not the United Kingdom or the United States, corners the foreign reactor market?

It is inevitable that we compare the American effort in this field of full-scale power producing reactors with the efforts proposed by the British and by the Russians. Here we see the profound dilemma which we face and the challenge we must meet. In the United States our Government has elected, for the first time perhaps, to leave primarily to private industry the forging of an important instrument of national policy. There are now proposals for 4 or 5 full-scale power reactors sponsored and financed largely by private industry. Yet our full-scale reactor program falls short of the challenge that is thrown to us by our foreign competitors—both friendly and not so friendly—the British with the billion dollar program and the Russians with their billion dollar program.

Why is it that in this country our large-scale power demonstration program cannot be launched on the same scale as the demonstration program of our competitors? The reasons are really not hard to find: they center primarily around the fact that at the moment the economic incentives to go into large-scale power reactor development are not sufficiently apparent to make such development a really good short-term bet. And the bald fact of the matter is that in countries such as Britain which require nuclear energy at any price for survival, there is no choice but to go ahead with full-scale nuclear power development; and in the case of Russia the question of whether or not full-scale power development has any economic incentive is irrelevant. If the Russians can by such development gain more friends than we, they will ignore cost and go ahead as they are now doing.

It does no good for us to ignore this challenge by saying that in some mysterious way we shall beat the other fellow; we must face the hard fact that unless we recognize the challenge we shall fail to win the race. The problem then is how can we, even though short-term nuclear energy is not an attractive economic proposition, nevertheless attract sufficient private capital to make of nuclear energy development an adequate instrument of national policy? I wish I had a simple and clear-cut answer to this all-important question; I do not have a complete answer but I have a few suggestions.

In the first place, while nuclear energy at the moment is not a clear-cut economic proposition, there is little doubt in the minds of any of us who have devoted large shares of our lives to this development that in no more than a couple of decades nuclear energy will certainly be competitive in large

areas of the United States. And there is little doubt that the returns—when they start coming in rather than going out—will accrue in large measure to those who see this possibility and are willing to do some gambling on the basis of it. The second point is that in spite of the fact that this country has not embarked on as large a program of full-scale power reactor development as either the British or the Russians, the United States has nevertheless pioneered, and continues to lead the world in the development of types of nuclear power reactors which are so highly improved and advanced that when they are successful they will make nuclear energy a bona fide economical, technology—a technology which makes economic sense even in the low-fuel cost United States.

For example, at the Oak Ridge National Laboratory we are now making a concerted effort to reduce to practice certain reactor types which have this real possibility of making nuclear energy a cheap and convenient way, rather than an expensive and difficult way, of producing electricity. I refer in particular to the development of the so-called homogeneous reactors, in which the nuclear fuel is in the liquid state. One of the major difficulties in making nuclear energy economical in this country stems from the fact that coal is cheap and the price of nuclear energy must therefore be low to be economically competitive. In most of the reactor concepts worked out to date the fuel is in the form of precision-machined fuel elements which, after a few percent of the fuel is burned, must be dissolved, the uranium recovered from the dissolution operation, and then refabricated. This is an expensive procedure. The homogeneous method we are developing at ORNL is one way of circumventing this expensive refabrication step, although it would be an exaggeration to say that we have reduced this method to a completely reliable process. Yet, short of having such advanced methods available, it will be very difficult to promote the large-scale building of nuclear power plants in this country if the immediate incentive is to be strictly economic.

There are however other possibilities that have not been sufficiently explored by the private industrial segment of the nuclear energy business. Our difficulty as I say, is that we are overly concerned with the economic return. Of course the United States is almost unique in this respect; almost every other country in the world pays much more for energy than we, and so it is relatively easy to make nuclear energy economical almost anywhere except in the United States. For example, I had a visit recently by Prof. J. Costa Ribeiro, scientific head of the Brazilian atomic-energy project, who pointed out that around Sao Paulo there is a large demand for power in 100 mw blocks; it is economical there to pay as much as 15 mils per kilowatt hour. Brazil is only one example. We have had numerous visitors from Japan who stated that at many places in their country power in 100 mw blocks is needed at a cost of 15 to 20 mils per kilowatt hours. It seems to me that our American groups are missing a good bet in not playing the foreign possibilities more heavily than at present.

As I said, we have in this country 4 or 5 firm proposals for large-scale power demonstration reactors. In order really to meet the foreign competition—and I refer to foreign competition with respect to using nuclear energy as an instrument of national policy—I believe that a country as large and strong and vigorous as ours should have several more large-scale propositions actually underway. It is unlikely that we shall find in this country economic incentive to justify, say 10 more full-scale power reactors until the more advanced technologies like the homogeneous or fast breeder are developed. Yet I believe that we can find foreign markets for perhaps 10 full-scale power reactors where we cannot find domestic markets for them. Such foreign ventures might be supported by American capital in much the same way as American capital has been used in exploiting the oilfields in the Middle East. Such a pattern could certainly be worked out if there is a sufficient desire to do so and if we pursue the job in a sufficiently vigorous manner.

There is one other problem which strikes me as being important—namely, that in this country where we necessarily have pursued nuclear power development largely on a private basis, we often find that groups spring up which are not quite large enough, or which lack adequate financial backing, to pursue the larger scale development at the level which is necessary to insure success in such an expensive undertaking as reactor development. The power demonstration program, of course, has at least two large-scale coalitions—the NPG, which consists of Middle West and Eastern utilities, and the Atomic Power Development Associates, headed by Walker L. Cisler, AIF president, which consists of some 20 utilities and equipment manufacturers. However, one also sees in the industrial atomic scene a large number of other groups that have sprung up, many of which are below the critical size required to pursue nuclear energy development successfully. I would therefore suggest to you that the pattern of establishing coalitions to pursue nuclear energy development is one that ought to expand, and that might prove to be the most practical device whereby American industry can push the development.

I believe the challenge which is presented to us by foreign competitors is one which we shall in the end succeed in meeting. I should stress that the only two places where electricity has been produced from nuclear energy are the United States and Russia, and there is a strong indication that the United States is far in the lead in the actual production of nuclear energy. It is no longer a military secret that the nuclear submarine, *Nautilus*, is a successful device. Yet because it is a military powerplant, we tend to overlook the fact that it represents a great technical achievement on the road toward civilian nuclear power.

It is tremendously important for us to maintain our lead, and it is up to us to examine the problems which might stand in our way in continuing to maintain the lead. In final analysis I am extremely optimistic about our being able to do this—optimistic not only because we have gained the lead, despite what some impatient editorials have occasionally stated, but optimistic because it has always been characteristic of our American system—unburdened by doctrinaire habits—to regroup when we see problems which must be solved. In this matter of pursuing nuclear energy as an instrument of national policy—if in spite of everything we do not get enough reactors built—we might revert, for example, to the contractor system which was developed during the war for an essentially similar purpose—to forge instruments of national policy (in that case military weapons) taking full advantage of our American industrial potential. This is only one possibility—others I know will arise and, given the advantage of the inherent elasticity in the American way of doing things; we will work out the means for maintaining our lead in the civilian nuclear energy venture.

The Rule of H. R. 4090 Should Be Defeated

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 2, 1956

Mr. PELLY. Mr. Speaker, I use this means of calling Members' attention to the impending consideration by the House of H. R. 4090, to require an automatic radio alarm device on United States cargo vessels of 1,600 gross tons or more carrying less than 2 radio operators.

I opposed granting a rule to H. R. 4090 in the Rules Committee, and hope the rule will be defeated when it comes up for consideration in the House. I am informed this will be early next week.

In summary, the objections of the shipping industry are as follows:

First. As stated by the Coast Guard, Federal Communications Commission Department of Commerce and Defense Department in testimony on a similar bill (H. R. 6004) in the 83d Congress in 1954, the present mandatory internationally accepted auto-alarm device is more than adequate from the safety standpoint to receive distress calls and cyclone warnings on off-watch hours.

Second. The expense of hiring two more radio operators on cargo vessels, which as a practical matter is what would result if this bill is enacted into law, on the average per ship will amount to $12,000 per year straight-time pay and $2,500 for welfare per year, plus $3,500 overtime pay. A radio room on a ship now costs about $8,500 per year. By the terms of this bill, the cost will be $26,500 approximately. It is this sort of featherbedding that drives operators to transfer their cargo ships to foreign registry, where they employ low-wage foreign crews. My interest in this subject is in preserving an American merchant marine.

Third. This automatic radio call selector device duplicates existing equipment; it bypasses international safety and communications conventions; it bypasses section 602 (e) of the Communications Act of 1934 which specifically provides a method of approval of equipment in the field of marine radio.

In the presentation to the Rules Committee last week the impression was gained that these devices had come into use since hearings on the bill in March, May, and June 1955. This misapprehension was due to two apparently conflicting statements: the statement that only 1 prototype device had been built, and the statement to the effect that 8 units were in use by the Moore-McCormack Steamship Co. The explanation is that a similar two-signal model was installed by Moore-McCormack in 1947 for convenience and commercial functions, not safety, but was found mechanically defective and the report of the hearings

shows this company's unfavorable testimony.

A more complicated five-signal device is called for by this legislation. But the prototype model of it has never been tried out under operational conditions—as far as I know.

The argument in the Rules Committee by the sponsor of this bill in support of a rule was that the shipping industry has always opposed safety measures and means of increasing safety at sea.

On the other hand in testifying before the Commerce Committee on H. R. 4090 the industry stated without challenge that the shipping industry is safety conscious. It pointed out with pride that it incorporates millions of dollars in safety features into American vessels. It stated with pride that is spends millions of dollars in operational measures and devices to increase safety of life at sea. As a matter of fact, as the hearings state, new technical specifications for the auto-alarm presently used internationally were supported by the shipping industry at the Safety of Life at Sea Conference in London in 1948.

Improved auto-alarm devices to overcome atmospheric and interfering signals are now undergoing tests by the Federal Communications Commission as the hearings show. But such features are not incorporated in the proposed call selector device which would become mandatory under H. R. 4090.

As to the criticism that the industry has always opposed safety I think the voluntary installations of direction-finding equipment 20 to 25 years in advance of compulsion contradict such a statement. Radar, depth sounders, loran, gyrocompasses and gyropilots and similar devices installed but not required by law, indicate the irresponsible nature of such undocumented arguments. Steamship interests supported a program for merchant ships today to have internationally improved lifeboat radio equipment. And besides, if there were a basis of truth for the charge, the argument is hardly germane to the merits or lack of them with respect to H. R. 4090.

A Commerce Committee member before the Rules Committee referred as a similar case to airline opposition to imposition of a new air safety system. I submit that testimony regarding safety devices in the field of aeronautical control is completely irrelevant. The charge is often made that scientific testing such as is conducted by the Federal Communications Commission is slow. If I had patents and was hopefully awaiting approval I would feel that way. But if the safety of my family and friends, and myself, was at stake I would want thorough testing under all conditions. The patented device under H. R. 4090 has never had such a test. What is the hurry? This is being a bit overanxious to hand a signed order in blank to the patent owner, saying if you can make this device work here is an order forcing more than 1,000 American ships to install a $2,500 or $3,000 piece of equipment, and this without finding out if the present internationally accepted system can be adapted to the same purpose.

This measure has the voice of Jacob, but the hands are the hands of Esau; and the House may be misled into giving its blessing to the wrong object. This is special legislation. It is dangerous to allow the high and highly emotional motive of safety-at-sea to be considered hastily with only one hour of debate.

I urge when the rule on H. R. 4090 is debated on the floor of the House that it be defeated so the great Committee on Interstate and Foreign Commerce can restudy the measure in the light of the evidence.

No Right To Criticize

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, May 14, 1956

Mr. CURTIS of Missouri. Mr. Speaker, under leave to extend my remarks, I want to insert in the CONGRESSIONAL RECORD the attached editorial from the St. Louis Labor Tribune entitled "No Right to Criticize" which I thought was excellent and a matter for all citizens to ponder:

NO RIGHT TO CRITICIZE

The St. Louis Globe-Democrat runs a daily column captioned "The Inquiring Photographer." The reporter accosts a number of people, usually six, in some specific area and quizzes them on a current topic.

Recently, the question asked was: "Would you want your child to enter politics?" Not 1 of the 6 men and women queried said they would want their youngsters to enter politics. The concensus of their opinions was that politics is degrading and that its remunerations are not worth the efforts and sacrifices.

We sincerely hope that this unanimity does not reflect a truly majority opinion and that people generally do not have so deprecating and unjustified opinion of politics and politicians as they function in this country.

If politics is supposed to be a dirty business and if only those seeking personal gain have the kidney to make it a career, then the so-called nice, respectable, morally prophilactic people who are completely immersed in getting ahead, the people who pay the bills and take the consequence of bad, incompetent government, have no justification whatever to complain about the way the Government is run, simply because they have defaulted their moral right to a voice in that determination.

In the early days of our Republic, outstanding men in the community and State eagerly sought public offices and considered it an honor and a privilege to be a servant of the people. And in many cases they performed their public duties at a great personal sacrifice.

Politics is and should be an honorable profession—with proper compensation paid to those who enter it. The cream of our young people should be encouraged to enter politics, and should be paid wages comparable to that paid in private industry for similar responsibilities. There never was a time in the annals of our country when there was a greater need of men and women of courage, ability and honor to serve in public office.

Bad government is a sound indictment of the so-called good people of the community who lack the guts, intelligence, discernment and self-respect to get out and fight for the kind of government they are entitled to and pay for.

Cinco de Mayo

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, May 14, 1956

Mr. DINGELL. Mr. Speaker, on May 5 the Mexican people celebrate a day memorable in the annals of Mexican history. That day is the anniversary of the Battle of Puebla, in which the heroic defenders of Mexican freedom repulsed the proud, battle-hardened troops of Napoleon III who had invaded their soil. I think it is fitting that we in the United States also pay homage to the defenders of Puebla, for in a very real sense those brave Mexican troops struck a blow for freedom for the entire Western Hemisphere.

Mexico, after independence from Spain had been achieved, suffered a long period of intermittent warfare in the struggle to create a government. In 1857 the liberal forces at last established a democratic constitution. Benito Juarez, an Indian of humble origin but of great intelligence and honor, was elected president of the Mexican people in 1861. The aristocratic and conservative elements, however, fearing for the loss of their privileges, continued to give battle. They even intrigued with Europeans to put an end to the democratic, republican government of the young nation.

England, Spain, and France, vexed by the unpaid claims upon Mexico of their citizens, agreed to send a joint squadron to Mexico to force payment. The allied nations landed troops in the coastal cities. President Juarez promised to meet Mexico's obligations as soon as the weakened country was on the road to recovery. The President's promise satisfied Spain and England, who promptly withdrew their troops. But the French remained, and the ambitions of Napoleon III to set up a French colony in the Americas soon became apparent. Napoleon had visions of a vast French Empire, stretching from the border of the United States, down through the Isthmus of Panama, where the French had plans to build a canal, and even to the southernmost tip of Tierra del Fuego. The moment was opportune to get a foothold. Mexico was weak and tired; French troops were already on Mexican soil; some powerful members of Mexican society supported the French designs; and the United States was too occupied with its own bloody civil war to keep check on French maneuvers. Napoleon ordered his troops to seize Mexico City, the capital.

On May 4, 1862, the French division of some 6,000 encamped on the out-

skirts of Puebla. The following day, an inferior force of raw recruits, badly equipped except for their grim determination and patriotism, clashed with the well-organized, well-disciplined troops of the French emperor. The Mexican victory in Puebla on that memorable May 5 was the event that gave the nation courage to continue resisting the invaders.

Napoleon sent reinforcements from France and finally forced Emperor Maximillian of Austria upon the Mexican people. But the battle of Puebla had given the Mexicans courage and confidence in themselves. The victory at Puebla had taught them that the mighty French were not invincible.

It was not until 1867 that Juarez returned to his rightful position of leadership in the Mexican capital. Many battles were fought before the French troops and puppet emperor were routed. But none holds the place in Mexican hearts of the first encounter, when Mexican men stood up to the might of Europe and in doing so served notice that the young American republics were no longer prey for the imperialist nations of the Old World.

Credit Unions

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Monday, May 14, 1956

Mr. PATMAN. Mr. Speaker, I am inserting herewith a statement of the Credit Union National Association prepared by H. B. Yates, managing director of the association, which gives an interesting and helpful review of credit union purposes and philosophy, and the reasons the credit union movement opposes a type of share-deposit insurance for credit unions:

CREDIT UNION
NATIONAL ASSOCIATION, INC.,
Madison, Wis., May 2, 1956.

Hon. WRIGHT PATMAN,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN PATMAN: The President, in his economic report to Congress, dated January 24, 1956, suggested that Congress should consider the desirability of establishing a self-supporting Federal program of share-account insurance for credit unions. A copy of the paragraph relating to this subject, which appears on page 95 of the printed copy of the President's economic report, is enclosed.

We believe a Federal program of share-account insurance for credit unions would be most undesirable. We believe it would be most undesirable not only from the point of view of the credit union movement, but from the point of view of other business enterprises and the American people as a whole. We believe such a program is contrary to the basic concept of good government because by such an act the Government would be insuring shareholdings in a private corporation. Credit unions are membership organizations. The members use their own funds and do not do business with the public. There is no more reason why the Federal Government should insure the shareholdings of a credit union than they should insure the shareholdings of a bank or any other stock corporation.

Since banks enjoy the privilege of creating money it is essential that the Federal Government have supervisory control over the banking business. The United States is the only country in the world that has insured bank deposits. The reason for this being that after failing to gain control of the banking business by passing the National Banking Act in 1863 and the Federal Reserve Act in 1913, it was only when the people refused to use the banks in the spring of 1933 that the Federal Government was able to gain supervisory control over the State banks by passing the Federal Deposit Insurance Law.

The Bureau of Federal Credit Unions made a study of the losses of Federal credit unions from June 1933 to December 31, 1952. This study proved that 81.4 percent of all losses were due to embezzlement and 18.6 percent was due to poor operations. To take care of embezzlements, the Credit Union National Association introduced a special type of surety bond for credit unions which provides for 100-percent coverage against losses up to a million dollars. More than half of the credit unions have already accepted this bond program and the remainder are accepting it at the rate of more than 200 a month. This bond is available to all credit unions and we believe that within 2 years more than 95 percent of all credit unions will be using this program. Credit unions are already closely supervised by Government, are examined regularly and by law are required to set aside adequate reserves to insure against losses.

The credit unions of the United States do not desire or need insurance for credit union share accounts as we have the following safeguards:

1. A credit union is organized among a group that has a common bond; they are sometimes all acquainted with each other. It is a membership organization dealing with people that the credit union manager is acquainted with and not with the general public.

2. Many credit union loans are character loans that a bank or other organizations dealing with the general public could not make.

3. The board of directors, elected by the members, meets monthly for reports on business.

4. The credit committee passes on the loans.

5. The supervisory committee audits the treasurer's books quarterly, many large credit unions have CPA examinations annually.

6. The annual membership meeting gives the members reports on the year's business and also gives the members opportunity to replace members on the board of directors and committees.

7. The reserve or guaranty fund sets aside one-fifth or 20 percent of the net earnings to take care of losses—surely this is enough to spend for poor management.

8. Under the new 100-percent bond program, all losses from embezzlement should be covered.

9. Additional protection for loans is provided by loan insurance, which 80 percent of the credit unions carry as protection against death and total disability.

10. Credit unions under law are limited in their investments.

11. An annual supervisory examination once a year is a further safeguard against losses.

An insurance fund administered by the Federal Government would necessarily require concern for the safety of the fund and rigid rules and regulations, which would automatically stymie the operations of the credit union. Credit unions are organized to serve the people not to amass such great sums of money that it becomes necessary for the Federal Government to watch it. We believe this share insurance program would actually deprive credit unions of the incentive for responsible and resourceful action to solve their own problems. Credit unions are doing too much good and have too clean a record to be saddled with any guaranteed insurance program.

We do hope, therefore, that you will strongly oppose any effort to enact in the United States Congress any legislation setting up share insurance for credit unions. We shall be glad to discuss this with you at any time and to give you any additional information you may require.

Very truly yours,

H. B. YATES,
Managing Director.

EXCERPT FROM PRESIDENT EISENHOWER'S ECONOMIC REPORT TO CONGRESS, JANUARY 1956

The introduction in 1934 of insurance for bank deposits and for share accounts in savings and loan associations has greatly strengthened the capacity of our economy to resist possible cumulative effects of any recessionary development. The extension of insurance to the share accounts of credit unions would be a useful step in the same direction. These cooperative institutions have been growing rapidly. By mid-1955 over 7.5 million people had about 2.5 billion dollars invested in credit union shares. The loss of any appreciable part of these savings would work severe hardships on individuals of limited means. As suggested in last year's Economic Report, the Congress should consider the desirability of establishing a self-supporting Federal program of share-account insurance for credit unions. If such a system were established, it would be essential to maintain the proper safeguards, limitations, and supervision that go with an insurance system.

Dynamic Incentive Competition Is Responsible for Our High Standard of Living

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 2, 1956

Mr. SMITH of Wisconsin. Mr. Speaker, there can be little doubt about the fact that the living standards of the people in the United States are the result of a dynamic free economy sparked by the incentive of competition. The Congress of the United States must make sure that incentive competition is not throttled by big business cartels or, as we know them, monopolies.

Mr. Graham Patterson, publisher of the Town Journal, has an interesting editorial on the incentive of competition which I am inserting as part of my remarks. The editorial appeared in the May 1956 issue of Town Journal:

THE INCENTIVE OF COMPETITION

Among the reasons for America's growth and prosperity and its high standard of living is the freedom of our business organizations to compete for the favor of the public. This competition is the lifeblood of our economic strength, for it serves as a constant spur to better products, better service and

lower prices, with resulting benefits to the people.

There are certain fields of industry, however, where competition is controlled by legal restrictions. One of these is the shipment of goods by various means of transport. Many years ago, when competition in this field was largely limited to that among railroads, it became so intense that Government regulation was necessary to prevent unfair competitive practices, and the act to regulate commerce was passed in 1887.

Since then, however, conditions have changed radically. Billions of dollars have been spent on building and improving waterways, and more billions have been spent on improved highways. Today the shipper of goods can choose between railroads, motortrucks, and waterways. Each has natural capabilities and advantages in service, or cost, or both, but Government regulation often prevents the public from gaining the benefit of these advantages. If the railroads, for instance, propose to reduce freight rates on certain products in regions where their natural advantages permit them to operate at lower costs than other modes of transport, permission to do so has often been refused because the reduced rates would be lower than other modes of transport offered. Such action has more of the aspects of allocation of business than regulation.

It is not the prerogative of any Government agency to decide how much or how little business any industry or firm may do. That is something that should be decided by the public, whose decision would be based, of course, upon the quality and price of the product or service offered.

The function of Government is to see that there is a competition, full and free, not to see that there isn't. The Government's responsibility is to prevent unfair practices and keep services vital to the public interest in existence, but its responsibility should end there. If fair competition for the public's favor is permitted to work, prices invariably take care of themselves. And the quality of services and products does likewise.

Unfortunately for the public as well as for business, Government with its regulations—too often unrealistic—seems to be usurping power it does not and should not have, to the point where it can control prices, instead of permitting normal and natural competition to exert its beneficial force.

The horse and buggy and the horse-drawn wagon gave way inevitably to the automobile and motortruck, because they provided the people something better. All through the history of our Nation are countless examples of products and services being supplanted by others that offered better service or lower price. Our country was built on competition, not on Government regulation. With greater freedom in competition among the different types of transportation, the same as in any other field of business, with each user free to choose that which best meets his needs, the real gainer in the end would be the consuming public.

A Letter From the President to Hon. Frederic R. Coudert, Jr.

EXTENSION OF REMARKS
OF
HON. KATHARINE ST. GEORGE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, May 14, 1956

Mrs. ST. GEORGE. Mr. Speaker, we Congressmen are apt to be the recipients of a good deal of criticism, slings and arrows of outrageous fortune, some of it unjust. So it is pleasant for us all, regardless of party, when one of our number receives an approving word from his or her leader.

Our friend and colleague, FREDERIC R. COUDERT, JR., has received the following letter from the President, which we all know is well merited, but nonetheless welcome. The letter follows:

THE WHITE HOUSE,
Washington, April 28, 1956.

The Hon. FREDERIC R. COUDERT, Jr.
House of Representatives,
Washington, D. C.

DEAR FRITZ: I should feel remiss if I failed to express to you my appreciation of your cooperation in the Congress in connection with a number of matters of vital importance to our country which have come before the Committee on Appropriations. I am aware that on several occasions your efforts have contributed a great deal to the success of key programs, and for this I am personally grateful. I look forward to the continuance of your effective public service in the years to come.

With kind regard,
Sincerely,

DWIGHT D. EISENHOWER.

Value Your Skin

EXTENSION OF REMARKS
OF
HON. CHARLES A. VANIK
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, May 14, 1956

Mr. VANIK. Mr. Speaker, I want to take this opportunity to call the attention of the Members of Congress to an editorial in the Cleveland Plain Dealer of Friday, May 11, 1956, entitled "Value Your Skin." The editorial writers of the Cleveland Plain Dealer express their concern over the status of America's airpower as follows:

VALUE YOUR SKIN

Defense Secretary Charles E. Wilson lumps those who express concern over the status of America's airpower as fear mongers.

Include us in, then, and gladly so.

We see nothing whatsoever wrong with expressing honest doubt over our aerial readiness.

It is a known and admitted fact, and this Wilson has not denied, that, Russia not only has more intercontinental bombers like our B–52 than we but also in turning them out faster.

Now Wilson tells the public B–52 production will go up to 20 per month. Present output is six. He does not say when that rate will be obtained. Next month? Next year? No. There's very little chance it can be accomplished before early 1958 at best.

At that point, says Gen. Curtis E. LeMay, Strategic Air Command's chief, the Soviets could have far outstripped us. There's no reason to think they won't try it, either, based on the consistent way they have surmounted the problem of aircraft production lead time.

Wilson's rosy reassurances do not bear total disparagment. He properly calls attention to our very large fleet of B–17 medium jets, a force ranging between 1,500 and 1,800 planes. Bolstered by aerial refueling, the 47s could conceivably retaliate against Russia without need for landing at bases overseas. This, though, is as speculative as the status of Red missiles calculated to knock out airfields abroad. The tankers have to operate from those strips.

All Americans, if they value their skins, must continue to insist that we have an air force second to none. It's not enough to be content with one that's merely the equal of a potential enemy. We are grateful to Senator STUART SYMINGTON for forcing this issue, for it goes beyond the trappings of an election-year debate.

Genius at Work in White House

EXTENSION OF REMARKS
OF
HON. WILLIAM L. SPRINGER
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 14, 1956

Mr. SPRINGER. Mr. Speaker, there is an old saying that "no politics at all is the best politics." There is another one that says "There is no recommendation like a job well done." Wrap these two up together and the result would probably hit the occupant of the White House square on the nose. Stewart Alsop has developed this theme in the attached article, Genius at Work in White House. Due to the fact that Mr. Alsop is usually on the side opposite the present administration, this is indeed a compliment to the President.

This article is from the Washington Post and Times Herald of May 13, 1956:

MATTER OF FACT
(By Stewart Alsop)

GENIUS AT WORK IN WHITE HOUSE

"Who's the new genius in the White House?"

The question was asked rather sourly by a leading Democrat when he heard of the President's appointment of Senator WALTER GEORGE, of Georgia, as his personal ambassador to NATO. The question was a tribute to the move as a political masterstroke.

The appointment will be popular everywhere, but especially in the South, as a generous gesture to an admired elder statesman.

But that is not the only plus for the administration. The GEORGE appointment blunts Democratic charges that the administration has abandoned bipartisanship. As the President's personal envoy, the revered GEORGE will also serve as a lightning rod to divert Democratic criticism of the administration foreign policy.

Moreover, as the question quoted above suggests, the GEORGE appointment is only the latest in a series of surefooted and brilliantly timed White House moves which have kept the Democrats off balance and at a loss for winning issues. Leaving the merits of the issues to one side, consider the political aspects of the President's two major vetoes in this session of Congress.

It is no secret that a Presidential veto of the farm bill was precisely what very large numbers of Democrats thirsted for, to provide them with a winning issue. Indeed, some provisions of the farm bill were carefully framed to force a veto. But, especially since the President scored so high in the Indiana primaries, the Democrats are beginning to wonder whether the veto will prove quite the bonanza they had counted on.

The President's fireside chat on the veto was effective. Much of the political curse was removed from the veto, moreover, when the Administration, quietly abandoning the

policy of flexible supports, raised the supports on the most politically sensitive crops to within a few points of 90 percent. Then the administration proposed prepayments to farmers under the soil-bank plan (which would have been denounced as fiscal madness if the Democrats had proposed it).

This was the unkindest cut of all—it put the Democrats in the horrid position of refusing money to the beleaguered farmers in an election year.

From a straight political viewpoint, the gas-bill veto was unquestionably a brilliant move. It put the administration morally on the side of the angels and blunted the "give-away" issue. At the same time, the powerful gas and oil interests were put on notice that they would get what they wanted eventually—but only if the Republicans remained in control of the White House.

Or take the administration's fiscal policy. The budget submitted to Congress by the President early this year forecast a very close balance based on exceedingly conservative estimates of revenue. A fat little surplus now appears in prospect.

Budget experts have reported to the Democratic leadership that the administrative surplus should be around $2 billion, the cash surplus around $4 billion. The more the Democratic leaders debate what to do about the surplus, the more aware they become that they are in a box.

If they propose a tax cut, they will split their own party on the issue, and be accused of fiscal irresponsibility and trying to buy the election. If they do nothing, they will permit the administration to take credit for a tax cut, or for reducing taxes, or a little of both. The Democrats darkly suspect that their box was carefully prepared in advance by administration strategists.

Whether or not this suspicion is justified, there is no doubt that the White House has shown a real genius during this session in keeping the Democrats on the defensive and aborting Democratic issues. The achievement is all the more impressive, moreover, if one recalls the stumbling amateurishness which so often showed itself in the first Eisenhower years. Who, then, is the new genius in the White House?

Some identify the genius as White House Chief of Staff Sherman Adams, or Press Secretary James Hagerty, or Attorney General Herbert Brownell, or somebody else. Others espouse the theory that Thomas E. Dewey is the real mastermind of the administration. But another theory is rapidly gaining ground among both Democrats and Republicans on Capitol Hill. This is that the new political genius in the White House is none other than Dwight D. Eisenhower.

Two or three years ago, the President was obviously unsure of himself in the unfamiliar field of politics. But as the years have passed, his sureness of touch has visibly grown. And perhaps his greatest achievement as a politician has been to continue to seem wholly above politics, which remains his greatest political asset.

Location of Credit Unions in the Governmental Organization

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Monday, May 14, 1956

Mr. PATMAN. Mr. Speaker, I am inserting herewith a statement prepared by Mr. H. B. Yates, managing director of the Credit Union National Association, Inc., which gives some interesting information about this fine association.

STATEMENT OF THE CREDIT UNION NATIONAL ASSOCIATION CONCERNING THE LOCATION OF THE BUREAU OF FEDERAL CREDIT UNIONS IN THE GOVERNMENTAL ORGANIZATION

It is our understanding that some thought is being given to the transfer of the Bureau of Federal Credit Unions from the Department of Health, Education, and Welfare to an agency more directly concerned with fiscal administration and supervision.

We are sorry to hear this because we have felt that the present location of the Bureau was a specially happy arrangement and because any suggestion that the Bureau might be more appropriately placed in a more fiscally oriented agency indicates a disturbing lack of realization of the basic nature and purpose of credit unions.

When the Bureau was established in the Social Security Administration in 1948 the late Thomas W. Doig, who was then our managing director, said, "This act places supervision of Federal credit unions in the Federal Security Agency, which deals with the humanities. This we believe to be entirely fitting." We still so believe.

Throughout our credit union history and increasingly as the movement grows in size we have been and are faced with the danger that credit unions will be supervised and regulated as fiscal businesses doing business with the public. If they are to perform their unique and urgently needed social function, credit unions must rather be recognized and supervised as special cooperative agencies through which people may pool their own small resources. They do this to help each other obtain a source of low-cost credit and provide each other in good times and bad a greater measure of financial strength and a sure and understanding source of financial assistance.

People must have this dependable assistance and this increased strength if they are to meet self-reliantly their financial emergencies and if they are to get from their incomes the full benefits offered them by the industrial wealth they help create and which depends upon their buying power.

This need was clearly seen in 1934 by the makers of the Federal Credit Union Act which provided for the federally chartered credit unions "to promote thrift among their members and create (for their members) a source of credit for provident and productive purposes."

If anything the need is greater now, for with the expanding economy it becomes increasingly difficult for people generally to enlist and engage their resources, which includes their credit, to take full and wise advantage of and give full support to the productivity of our economy. On the one hand they are pressed with a wealth of goods and the encouragement to buy them on time with regular payments and carrying charges which are often but not always excessive but which always should be but often are not related to their whole financial circumstances. On the other hand the cost of professional services and of other emergency needs increases with the modern development of professional and physical resources.

The fact is that normal commercial financial agencies and installment dealers do not serve to provide the great mass of people consumer credit designed to be as it should be a part of a thrift program; that is designed to help people spend their financial resources, which includes their credit, in a manner that is truly wise and economical. Certainly the installment dealers do not. Personal loan departments of banks and loan companies do so only to a degree and only for a select part of those who come to them.

Probably no commercial agency could serve such a broad cross section of people credit unions can. Such agencies are understandably directed so as to obtain the maximum amount of loan business from relatively select risks. They naturally therefore tend to unbalance the economy by helping many people to overspend their credit while they fail to help many more use the credit that is innately theirs to spend and which our economy cannot afford to disregard.

On the other hand credit unions through a cooperative approach and using cooperative techniques do make it possible for almost all people no matter how small their incomes or their training to increase their buying power—often by a sort of Operation Bootstraps. Credit union history is full of dramatic examples involving settlement people in New York; factory workers over the continent; fishermen in Nova Scotia, Jamaica, the Fiji Islands; share croppers; residents of an all-Negro community; people everywhere of all sorts and of all abilities.

Under the present economic system, the principle sources of credit for people of small means are credit unions, sales finance companies, and loan companies. In the regulated States loan companies are usually allowed to charge 36 percent interest. In the unregulated States, mostly in the South and West, the unregulated loan companies charge interest rates sometimes running more than 100 percent. People of small means who are suddenly plunged into debt by misfortune, who do not have credit at reasonable rates of interest, sometimes remain in debt for the rest of their lives.

Most everyone in the middle and low-income groups are forced to borrow money at some time in their lives. A bank simply will not make a loan to a person in the low-income group without security but such a loan will be made by a credit union and a loan company. The difference in the credit union and loan company loan is that the credit union is interested in getting the member out of debt, while the loan company, being interested in profit primarily wants to keep him in debt. This is easily accomplished as the loan company will find out how much the person earns, how much it takes to live and then set the payments up to take up the balance of the earnings. One of the causes of poverty today is the loan shark evil that is allowed to exist in so many of our States. "Help people to help themselves," is a slogan used by credit unions. The credit union helps to permanently solve the problem of the unequal distribution of wealth by enabling man to help himself and permanently improve his condition. When man is able to help himself, character is strengthened and improvement is permanent. When man is aided by gifts and subsidies, character is weakened, self-respect is lost and no problem is solved, since relief is only temporary and aid must be continued.

The fact that some credit unions have thousands of members and $1 million and more in assets testifies to the great potential need for credit unions. But it is more notable that the median credit union has around 500 members with less than $100,000 in assets, which means that half of all credit unions are smaller than that.

The point here is that credit unions render a service urgently needed and that they can do so because their orientation is toward people and their problems, not toward the business of making money from money. Their history has been an increasing demonstration that the people can manage their own financial affairs and provide themselves low-cost credit they cannot otherwise get, which is helpful not only to the individual but to the community.

Credit unions have been able to do this, because they have challenged many of the normal business concepts of consumer credit and consumer-credit management. It is notable, too, that they have done this without creating any inflationary new credit money. While some credit unions do borrow money

from banks to meet the loan needs of their members, the movement as a whole has accumulated more funds than its members have outstanding in loans. This, of course, provides a great potential of credit available for time of special need or special opportunity. Actually credit unions provide their members the service of a great revolving fund. On the average credit-union loans are repaid or refinanced about every 260 days.

To be also stressed is the fact that this liberal, across-the-board service has been given with the best of records for safety of funds and returns to the members on their savings (share deposits). We can explain this by the observation that the typical person is honest, is responsible for his obligations to his fellow beings, has good sense, and appreciates and profits by the mutual concern for common problems credit unions provide their members.

An official recognition of these qualities is found in the series of amendments Congress has made in the Federal Credit Union Act which raised the permitted limit on unsecured loans granted members from $50 to $400. The continuing good record of Federal credit unions has confirmed the wisdom of Congress in these actions.

The real problems we credit union people face have much more to do with the human factors with which the Department of Health, Education, and Welfare deal than they have to do with tangible assets and the business of finance. Actually, our movement's big concern within itself is to inspire the directors and credit committees of its member credit unions to be as liberal as they should be.

As we grow in united and collective experience we more and more make our individual credit unions agencies of maximum service. We develop the facilities and the ability to help our members face up to their whole financial picture realistically, constructively, and at a minimum cost. We develop understanding of human strengths and weaknesses. By very personal concern and friendly consideration of personal problems, we develop the human resources which are the basis of all credit.

We find it relatively easy to train people to operate a credit union from a strictly operational point of view. Our real concern is to inspire those to assume leadership in credit unions who want to serve people and who inspire people to bring them their problems and talk them over frankly and constructively.

Just so are we most concerned that the supervision of credit unions be from the human being point of view than from the fiscal management point of view. It's the human resoruces that we really have to do with and quite frankly these resources tend to be placed in jeopardy by the restrictions that are apparently innate in normal financial management and financial supervision.

That is why the Credit Union National Association has been happy to have the Bureau of Federal Credit Unions in the Department of Health, Education, and Welfare, and why we would be most unhappy to have the Bureau transferred to an agency primarily concerned with money business. Such a transfer would without question serve to restrict and limit the provision of credit union service in any true sense of the term. For credit unions are not primarily designed to make money from money. They are designed to help people help themselves.

Since the Social Security Administration has to do with the general economic security it seems that the Bureau of Federal Credit Unions should logically be under the Social Security Administration, as Federal credit unions serve as an agency to prevent individuals from becoming dependents. As you know, the Bureau of Federal Credit Unions is self-supporting and requires no congressional appropriation.

The "Disunification" Administration

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, May 14, 1956

Mr. MULTER. Mr. Speaker, I am pleased to direct to the attention of our colleagues the following address by the Honorable Carmine G. DeSapio, New York's secretary of state, which was delivered at the annual dinner of the Kings County Democratic Committee, held at the St. George Hotel in Brooklyn, N. Y., on May 10, 1956:

Mr. Chairman, reverend clergy, Governor Harriman, Mrs. Shackey, Joe Shackey, Democratic leaders, ladies and gentlemen, it is always a very great pleasure for me to make the brief trip across the East River to visit with my friends and fellow Democrats here in Brooklyn and to reaffirm my personal faith in the strength and vitality of the largest Democratic county organization in America.

The bond of friendship and common purpose which exists today between the Democrats of Kings County, and the Democrats of New York County, reflects not only our traditional relationship as good neighbors but, in a much larger sense, it is typical of the spirit of unity which has developed over the years as one of the strongest and most unique features of our national Democratic organization.

In recent months, the Republican Party leaders have sought to convince themselves and their adherents that all is not well among Democrats in various parts of our country, that so-called regional factions within our party operate at cross-purposes and quarrel with each other to the advantage of Republicanism.

In short, the Republican spokesmen, for once, have remained true to their own tradition, to the historical and hysterical creed which requires all loyal members of the GOP to base their political conclusions upon fancy rather than facts, upon conjecture rather than upon coherent analysis, upon temper rather than upon truth, upon wishful thinking rather than upon well-founded thought.

Earlier this week, our fellow Democrats in the State of Texas—those maliciously slandered Americans whom the Republican dream-merchants envisioned clambering aboard a great GOP Trojan elephant—proved once again that our party's supporters cannot—and will not—be hoodwinked by the desperate devices which the Republicans fondly and foolishly hope may promote Democratic disunity.

And in piling up an unprecedented landslide victory for Senator LYNDON JOHNSON and indirectly for Speaker SAM RAYBURN, the people of Texas conclusively demonstrated the inherent loyalty and political awareness which is characteristic of Democrats everywhere. In so doing, they have won the applause and admiration of their fellow democrats throughout the country.

For the American people understand with perfect clarity that ours is a two-party country * * * that our national greatness, in large measure, has been founded upon the development of a political system broad enough and flexible enough to accommodate both Democrats and Republicans alike.

We know, too, that the organization of our political parties, at the grassroots level, is—and always will remain—the bedrock foundation of American politics, impervious to the trickery of the occasional mugwump.

Mugwump—the very sound of that derisive word provides the key to the attitude of all Americans—whether they happen to reside in Brooklyn, Texas or in any other part of out Nation—toward the kind of political disloyalty which it describes.

Yet, today, the President of the United States flouts the traditional American concept of the two-party system in a reckless attempt to bolster the sagging prestige of his party, pretending that Republicans, too, believe in a sound liberal political philosophy, and hoping thereby to attract the support of loyal Democrats.

It seems perfectly clear that the Republican strategy for fomenting Democratic disunity is under the direction of the same incredible bunglers who, systematically, have made a shambles of our national economy and who seek to conceal their wretched inability to think clearly or to act decisively in the interest of the American people, under cover of a monotonus, droning chant of national prosperity.

Here in New York, we have recently witnessed another—and even more callous—brand of mugwumpery, as a self-styled liberal Republican abandoned his own alleged political philosophy and publicly declared his support for RICHARD MILHAUS NIXON, a man whose possible accession to the presidency of the United States shocks and frightens the entire free world.

Unquestionably, my friends, the members of the ragged regency which rules America today possess a remarkable talent for promoting certain types of disunity. We have only to examine their record in international affairs to discover the awesome variety and extent of their skill.

Here, as always, their tactics have been designed to dazzle the people with words rather than with deeds. In this case, however, the magic word is not prosperity, but peace.

As President Eisenhower sat wreathed in smiles for the world's foremost photographers at Geneva, as he happily told the world's reporters that the Soviet leaders shared his desire for amicable international relations, his press agents chanted that he was delivering peace at the world's doorstep.

Since Geneva, this Republican gift of peace has flowered throughout the world—in the fighting in Israel, in the heightened tension in North Africa, in the unrest on Cyprus, in the gradual return of Yugoslavia to the unholy Soviet orbit, in the Khrushchev-Bulganin courtship of India.

It is a small world, indeed, when you exclude Europe, Africa and Asia, to which the Eisenhower administration has brought peace.

Peace indeed, peace and prosperity. But fortunately for the state of our national well-being, the American people do not share the President's daydream.

Today, the American farmer is not echoing the administration's chant of prosperity. The bankrupt small-business men throughout our Nation do not raise their voices in praise of Republican prosperity.

And millions of American parents need only to search their own hearts to realize—tragically—that their children are not growing up in an era of peace.

Who today is the great Republican architect of peace? I wish I knew. I wish the American people knew. My friends, I wish the administration in Washington knew.

Once we were a nation of people. Today, we seem to have become a nation of presidents. We have a president for foreign affairs, a president for national defense, a president for agriculture, a president for slogan making, a president for publicity, indeed, we have a president for everything except the Presidency.

Fortunately, the era of multiple chief executives is drawing to a close. Next November the American people will elect one man

to the highest public office in our land, one Democrat who will bring sense and form to our National Government.

And, as the John Foster Dulleses, the Charles Wilsons, the Ezra Bensons, the Richard Nixons, and the Sherman Adamses lead the great Republican exodus from Washington * * * we will become not a nation of ex-presidents but a nation of people united under the strong leadership of one president pledged to secure true national prosperity and genuine international peace.

During the coming months we Democrats—in New York, in Texas, in California, and throughout the country—will disprove the false and cynical Republican doctrine that national power depends upon the ability to promote discord among the American people.

We will prove, beyond all question of doubt, that the American people are inherently united in their desire for peace and prosperity in fact as well as in theory * * * and that the American people are determined to implement the achievement of these goals through sound and unified government.

Here in Brooklyn, under the forceful and progressive leadership of Joe Sharkey, I know, you will again demonstrate that the size of your Democratic county organization is matched by the vigor and dedication of its entire membership.

And I can tell you, in all sincerity, that across the river in Manhattan—and throughout our sister boroughs—we look forward to the inspiring task of bringing the message of our party philosophy to our neighbors and fellow citizens * * * and to placing our city in the forefront of the great national Democratic victory for which America has longed since 1952.

Thank you very much.

The Essentials of Good Citizenship

EXTENSION OF REMARKS
OF
HON. FRANK IKARD
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Monday, May 14, 1956

Mr. IKARD. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include an essay that won first prize in the Gainesville, Tex., Kiwanis Club's citizenship essay contest. The prize-winning essay was written by Miss Beatrice Zimmerer, of the Sacred Heart School in Muenster, Tex., entitled "The Essentials of Good Citizenship," and I feel that it is a privilege to have this excellent essay included in the RECORD:

THE ESSENTIALS OF GOOD CITIZENSHIP

"Breathes there the man with soul so dead,
Who never to himself has said:
'This is my own, my native land.' "

Probably you cheer loudly when the Stars and Stripes are raised and if called upon you would give your life for your country. But are you living your life as a good citizen?

Citizenship is not an underling's job, but a challenge to the best that is in every man. A good citizen votes, attends meetings, and serves on committees. He makes speeches and writes letters to the newspapers if he wishes. If he is qualified, he should serve in public office. In short, a citizen is public spirited and active, whereas the "parasite" is interested and active only for his own welfare.

To be responsible, a man must have knowledge. He must understand how democracy works and how it can be improved. Democracy needs every bit of his knowledge. He can prepare for citizenship by securing an education. He must keep up with current events through reading and listening all his life. A good citizen pays his share of taxes, whether on property, on income, or on goods he buys. He realizes that taxes are low costs, indeed, for the services democracy furnishes him.

Finally, a good citizen must respect the rights of other citizens. We can have freedom of action only so long as our actions do not endanger the life and property of other people. Reckless driving and reckless talking are both undemocratic, for both may be harmful to other people.

The good citizen is interested in life about him. He knows something about the political, social, economic, and religious life of the Nation of which he is a part. He participates in worthy activities and becomes identified with those forces which make the Nation. Thus, he becomes a worthy part of it.

But there is another great qualification which he should possess if he is to be a citizen of the finest type; that is, a good character which is the very foundation of good citizenship. A good character must grow from within one's self. The home, the school, and the church must all help to start its growth in the young citizen. And as the young citizen grows up, he must himself cultivate good character, so that it will continue to grow and develop. A good character is the sum total of such qualities as honesty, truthfulness, kindness, courtesy, charity, sympathy, self-control, trustworthiness, loyalty, and cleanliness. These qualities cannot be acquired in a day; nor can they be absorbed from books. They come from the development of one's spiritual nature.

Americans now make their pledge of allegiance under God. A citizen is born first into a family. He is responsible to his parents who teach him to honor and obey God as the highest authority. He obeys God's commandments. He does God's will. He honors God as his Creator, Redeemer, and Sanctifier. Thus honoring God, he loves his neighbor as himself; thus loving his neighbor, he works for his neighbor's good as well as for his own. And so, he is a good citizen. As Polonius advises Laertes in Hamlet: "To thine own self be true, and it follows as the night the day, thou canst not then be false to any man."

So a good citizen is first, a God-fearing man; then he is a neighbor-loving man; and finally, he is a patriotic man.

H. R. 5550

EXTENSION OF REMARKS
OF
HON. RICHARD M. SIMPSON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Monday, May 14, 1956

Mr. SIMPSON of Pennsylvania. Mr. Speaker, I wish to call to the attention of the House that officials of 635 predominantly small industrial concerns, agricultural producers, and labor unions from all over the United States, have filed with the Speaker of the House petitions protesting against passage of H. R. 5550, now pending before the House, and instead urging that the General Agreement on Tariff and Trade be brought before Congress in accordance with the treatymaking provisions of the Constitution.

The industries for which these petitions were signed are located in 42 States. They have their main offices or plants in such industrial centers as New York, Chicago, Los Angeles, Philadelphia, Detroit, Baltimore, Cleveland, St. Louis, Boston, San Francisco, and Pittsburgh, and, in addition, in 183 other congressional districts—approximately 350 districts affected.

The various industrial and agricultural products represented by the petitions include:

Cotton and wool textiles, thread cordage, lace, carpets, felt, blankets, narrow fabrics, elastic fabrics, hats, gloves, hosiery, embroidered articles, wearing apparel, glue and gelatin, colors and pigments, coal, chemicals, steel, nonferrous ores and metals, aluminum wares, silverware, wood products, leather, paper, plywood, building materials, scientific instruments and glassware, surgical and medical supplies, optical goods, tools, electrical equipment, machinery, antifriction bearings, refractory materials, bicycles and motorcycles, clocks, guns and ammunition, metal closures and fasteners, miscellaneous metal products, counting devices, fishing tackle, toys, games, plastic products, buttons, glassware, chinaware and pottery, ceramics and tiles, rubber products, pencils, brushes, sugar, figs, olives, raw wool, and miscellaneous food products.

Petitions were also signed by officials of labor unions and employees of many industries including: leather, glass, pottery, knit glove, scientific apparatus, rubber, lace, woolen textile, and wall products.

The petition which these officials signed reads as follows:

PETITION MEMORIALIZING THE PRESIDENT OF THE UNITED STATES, THE PRESIDENT OF THE UNITED STATES SENATE, AND THE SPEAKER OF THE HOUSE OF REPRESENTATIVES ON THE SUBJECT OF H. R. 5550

We, the undersigned, respectfully petition and memorialize you in accordance with amendment I to the Constitution of the United States of America, to refrain from enacting H. R. 5550 and instead to bring the General Agreement on Tariffs and Trade before the Congress of the United States in accordance with the treatymaking provisions of the Constitution, for the following reasons:

1. Passage of H. R. 5550 would impair the right of petition and redress guaranteed in our Constitution, since tariff policy and foreign commerce would be made subject to determination by an international agency.

2. H. R. 5550 would hinder labor and business from obtaining effective action by the Congress of the United States, as guaranteed by article I, section 8 of the Constitution, which declares: "The Congress shall have power to lay and collect taxes, duties, imposts, and excises * * * to regulate commerce with foreign nations, and among the several States * * *"

3. H. R. 5550 would remove from Congress its full and effective freedom to exercise its constitutional responsibilities in these fields.

4. H. R. 5550 would remove tariff and trade policy determinations from the Federal Government and subject them to an international organization in which the people of the United States are not adequately represented and where the United States delegate

would have but 1 of the 35 votes, the same as the Grand Duchy of Luxembourg, Haiti, and other countries with populations less than many cities and States in this Nation.

Now, therefore, we request that this petition and memorial be formally placed before the Congress of the United States.

Nasser Aspires To Be the Napoleon of the Entire Arab and Moslem World

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 2, 1956

Mr. MULTER. Mr. Speaker, the article that follows plainly documents the activities of Egyptian Colonel Nasser in his attempt to imitate Napoleon and become the emperor of the entire Arab and Moslem world, and all of Africa. The article appeared in the May 4, 1956, issue of Israel Speaks:

MEMO TO AMERICANS: WHAT DOES NASSER WANT?

The military dictatorship of Gamal Abdel Nasser has its eyes focused upon a goal of fantastic magnitude—leadership of the entire Arab and Moslem worlds and of the continent of Africa.

Nasser's book, Egypt's Liberation—The Philosophy of the Revolution (Cairo, 1955), bluntly reveals this ambitious objective: "to lead the Islamic nations to head the Arab peoples and to become the spokesman of the Arab (Africa) continent."

He writes further: "If anybody tells me that the place for us means this capital where we live, I differ with him. And if anyone tells me that the place for us means the political boundaries of our country, I also differ."

Nasser's blueprint of empire embraces the Middle East to the north and the North African seaboard to the west of Egypt, and the African continent to the south. These, together with the Moslem world as a whole, he defines in his Philosophy of the Revolution as the "three circles" of Egypt's destiny.

To achieve its ends, the Egyptian dictatorship is pursuing a policy of intrigue and incitement in countries all the way from the Atlantic to the Indian Ocean and from the Mediterranean to Lower Africa. Its agents include a swarm of renegades, exiles, and terrorists gathered together in Cairo from all parts of the Middle East and North Africa. Never before in modern times has there been built up in the Middle East a ramified network of such intense and widespread subversion.

FIRST GOAL: DESTROY WESTERN INFLUENCE

Having succeeded (with powerful United States help) in securing the fulfillment of Egypt's own major national aspiration—evacuation of the Suez Canal by the British and transfer of its control to Egypt—Nasser's first objective on the road to Egypt's aggrandizement is the destruction of every vestige of Western influence in the Middle East.

His initial onslaught has been against the defensive Baghdad Pact, which he pursues with bitter hatred in all the Arab countries, including Iraq itself. He has termed it "the imperialist big prison . . . meant to enslave all Arabs."

In seeking to destroy the Baghdad Pact, Nasser is intent also on isolating Iraq, Egypt's only rival for ultimate undisputed leadership of the Arab world. Iraq has officially accused the Egyptian Embassy in Baghdad as being the center of a subversive movement "aimed at the assassination of Iraqi statesmen." Nasser replied: "Egypt will never forsake the Iraqi people, no matter what the government does." (Cairo Radio, January 27, 1956.)

The immediate nucleus of Nasser's empire was tentatively formed in October 1955 by the creation of the axis between Egypt, Syria and Saudi Arabia. On April 10, 1956, Yemen's adherence to it was announced. Overtly designed to counter the Baghdad Pact, it is the basic instrument of Nasser's ambitions. The recent meeting in Cairo of the heads of these states left no doubt of its complete domination by the Egyptian dictator.

The military forces of the axis nations have been placed under a joint command headed by Egypt's Minister of War and Commander-in-Chief, Major Abdel Hakim Amer. Egypt has begun bringing in cadres of Syrian and Saudi Arabian troops for training in the use of Soviet heavy arms. The logical development of this process is for supplies of further heavy Soviet arms to find their way to Syria and Saudi Arabia, directly or funneled through Egypt. (Syria, meanwhile, has contracted to obtain certain types of Soviet arms directly.)

With the help of Saudi Arabian money, the bribing of Jordanians in key places and of Jordanian newspapers, and incitement and threats, Egypt played a major part in organizing the rioting in Jordan against the Baghdad Pact that almost brought about a revolution. The momentum of these intrigues was directed next to securing the expulsion of the British commander of Jordan's Arab Legion, General Glubb.

Nasser is now working to bring King Hussein under his domination and finally eliminate all British influence in Jordan. Failing that, he will plot to overthrow Hussein's shaky throne. In the collapse of Jordan's independence that would inevitably follow, Jordan would come immediately under total Egyptian domination and be a puppet state headed by the ex-Mufti of Jerusalem, Haj Amin el-Husseini.

Reports from diplomatic observers leave no doubt as to Nasser's determination to secure control of Saudi Arabia. That country's oil wealth and its significance as the religious center of world Islam make it a valuable prize. The weak and corrupt regime of Kind Saud could offer little resistance to a well-planned Egyptian coup. In the context of these plans, Nasser's attempts to secure possession of the southern Negev from Israel is self-explanatory: it would give him a land bridge directly connecting Egypt with Saudi Arabia.

NASSER OVER AFRICA

A projected all-African conference in Cairo to establish a leadership for the national movements which have arisen in the continent to find a solution to current problems by getting rid of the white race, was one of the first schemes of Egypt's military junta. (Al Ahram, Cairo, December 2, 1953.) A Supreme Council for African Affairs was established in Cairo in 1955 to direct Egypt's political, economic, and social policies in Africa.

Cairo Radio, on four wavelengths and in different African dialects, is beaming a steady stream of incitement to the peoples of Africa. The largest African audience is reached by Cairo Radio's programs in Swahili, spoken by 20 to 25 million Africans in 10 territories extending from Somaliland in the northeast to northern Rhodesia and Mozambique in the south.

Direct contact with Mau Mau leaders was established in the early days of Egypt's military dictatorship. The Mau Mau leader, Abulu Komaro, urged the Egyptian dictator "to place Egypt at the head of the liberation of my country (El Misri, November 5, 1953). Egypt promised and gave Mau Mau fullest support.

Uganda Tanganyika, Nigeria, Northern Rhodesia, British island protectorates off East Africa and other British, French, Belgian, and Portuguese territories are being urged to liberate themselves. Nationalist delegations from them are invited to Cairo. The Egyptian Government subsidizes selected African political associations and newspapers. It is sending teachers to some of these territories and has promised to send more. Arab and other Moslem leaders in all these areas are gradually being organized to serve Egypt's campaign.

At the International Fair at Mogadiscio (Italian-administered Somaliland) in October 1955 vast quantities of Egyptian materials were distributed stressing Egypt's "big brother" mission in Africa; it included 250,000 photographs of Nasser. (Al Ahram, Cairo, November 5, 1955).

Egypt's role in the North African rebellion against France is notorious. Since 1953, it has taken direct part in the North African uprising with a constant stream of money, arms (including British arms), propaganda and guidance. North Africa rebels are trained in Egypt and in Libya under an Egyptian-sponsored program.

Libya (site of the great United States Wheelus Field base and British bases) is the scene of one of Egypt's latest anti-West offensives. An extremely backward territory, Libya is well on the way to becoming an Egyptian satellite. It is dependent upon Egypt for leadership in almost every field. Officials at all levels and all its teachers, lawyers, engineers, etc., are Egyptians. Most of its supreme court judges and the legal advisers to the king are Egyptians, with their salaries paid by Egypt.

AGGRESSION AGAINST ISRAEL

Since the Anglo-Egyptian Agreement on the Suez, the Nasser regime has progressively intensified its policy of military, political and propaganda aggression against Israel. A mounting toll of death, destruction, and tension has resulted.

As Egypt grows swiftly stronger as a result of the Czech arms deal, and the United States continues to withhold defensive arms from Israel, the Nasser regime approaches it day of decision with Israel with growing self-confidence.

The war against Israel serves several purposes:

For Nasser, deliberately maintaining Egypt's and the Arab world's enmity of Israel in a state of ferment serves him as a major rallying point for the whole Arab world.

Within Egypt, this ferment has helped enormously to divert the nation's attention from the spurious character of the revolution and the hollowness of Nasser's alleged reforms. His failure to make any real dent in Egypt's social and economic plight and his justification for large-scale mililtary expenditure can now be blamed on the "menace" of Israel and the needs of "defense against aggression."

The elimination of Israel is also important in the context of his ambitions for Egypt's future role in the Middle East and the world. For Israel's presence is a physical barrier in the way of Egypt's uninterrupted junction with the rest of the Arab world that he is determined to dominate.

THE WEST'S REACTION

Through its arms deal with the Soviet, Egypt has opened up the Middle East to a major confrontation of the Great Powers in this area. This is not only a central fact in the contemporary history of the Middle East, but from the viewpoint of world history, it is a development of revolutionary importance.

The reaction of most of the Western Powers to Nasser's machinations has been

slow to manifest itself. Recently, however, the Western World appears to have begun to move quickly to a realistic appraisal of the character, nature, and intentions of the Nasser regime. In Britain, there is a rising indignation. In the United States, public reaction is gradually becoming outspoken. In France, there has been outraged reaction for some time.

Yet the truth about the Nasser junta's goals and methods is still far from generally recognized. In part this is due to the double-talk that emanates from Cairo—one voice speaking to the West in a great stream of reasonableness and assurances of moderation and conciliation, while the other speaks to the Middle East and Africa in its authentic tones.

The actions of the Nasser dictatorship have begun, however, to talk loudest of all.

"Take Six" With the National Guard

EXTENSION OF REMARKS
OF
HON. ERRETT P. SCRIVNER
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 8, 1956

Mr. SCRIVNER. Mr. Speaker, as a part of the day-long festivities, Saturday, May 5, in Kansas City, Kans., in connection with the dedication of the new million-dollar National Guard Armory, a luncheon was held, attended by many city, county, and State officials, and in addition, many Army, Navy, Air Force, and National Guard officers.

The speaker at this occasion was Maj. Gen. Edgar C. Erickson, Chief, National Guard Bureau. His talk, which stressed the value of the 6-month Reserve training course available to young guardsmen, follows:

The dedication this afternoon of the fine armory which will house eight units of the National Guard is, I am certain, an occasion in which the people of this city take great pride.

I am very happy to be here.

I share your joy in the completion of the armory, particularly because it is a home-grown product, so to speak.

The people of Kansas City, Kans., and the State of Kansas are to be heartily congratulated on their financial initiative in raising the funds for erecting this splendid building.

The completion and dedication of a new armory is an event of great significance to the National Guard, for the armory has come to be a symbol of accomplishment and service.

It is a memorial to the thousands of guardsmen, and the militiamen preceding them, who have served in every war of this Nation.

An armory such as yours provides a sense of security for the citizens of a community because it is a constant reminder that there is a reserve force always on hand and training to defend America's free way of life, or to assist in any local or State emergency.

Most important, I feel, the armory here and the hundreds of others standing in communities across America, are symbols of the spirit of cooperation in our defense effort—between community, State and Federal Government.

It is this cooperation which makes possible today's modern National Guard.

That the National Guard has continued to be, through the years, a strong military reserve force is a credit to the determination of the States to preserve the traditions and concepts of the early militia.

This concept has been workable and effective from the days of the first colonists. It is equally workable and effective in this day of highly complex military forces.

There is an unbroken lineage from the minutemen who fought America's first wars with musket and powder horn, to the minutemen of today who patrol the skies in jet planes, man our antiaircraft guns, and train with all the other modern weapons of war to be ready should the time come when America must, again fight to preserve its rightful heritage of freedom.

This heritage, of which the National Guard is so proud, is typified by the National Guard of Kansas and its 35th Infantry Division, which it shares with Missouri.

Even the 35th's name, Santa Fe Division, calls to mind vividly the historic associations of the people of this area with the name Santa Fe, the old Santa Fe Trail and its iron successor, the Santa Fe Railroad, both integral parts of your tradition.

This association is carried still further in the 35th's distinctive shoulder patch, the Santa Fe Cross, a wagon wheel superimposed on a cross.

I'm told this is a copy of the old wagon wheel markers which were erected at intervals at the side of the Santa Fe trail to keep the covered wagon trains from losing their way during the blinding dust storms.

Back in 1846 during the Mexican War a force of Missourians, part of what is now the 138th Regiment of the 35th, was sent southwestward from here to guard the region of the Santa Fe Trail.

The 138th Regiment, elements of which date to the St. Louis Grays of 1932, is the division unit with the longest continuous history, a history flavored throughout with the words Santa Fe in all their meanings.

I am dwelling deliberately on the history of the 35th and its Santa Fe associations because such traditions are and should be one of the most important sources of esprit de corps in National Guard units all across the Nation.

They serve to link the National Guard solidly with the background of the States and localities where it serves.

The cause of esprit de corps is likewise served in a unit's wartime accomplishments.

The Santa Fe Cross was worn into battle for the first time in September of 1918 when the 35th Division attacked squarely in the center of the great Meuse-Argonne offensive which eventually smashed the Germans' celebrated Hindenburg Line.

The 35th made a major contribution to the final defeat of the German armies in World War I.

The 35th was again ordered to active duty in December 1940, when it became apparent that this country could not long postone its involvement in World War II.

With its strength constantly being drained by thousands of men going to officer training schools and others being transferred out to activate new divisions, the 35th underwent several reorganizations during this time, with selectees filling in the vacancies.

The division went overseas in May of 1944, stopped briefly in England, and by July was heavily engaged in the Normandy campaign in France.

It had a major part in the historic siege of St. Lo and then continued in the pursuit of the German armies retreating eastward across France.

Shifted from the First Army to Gen. George Patton's famous Third Army, the 35th Division had fought its way into Germany and had been pulled back for rest near Metz, France, when Von Rundstedt launched the heavy attack which has come to be known at the Battle of the Bulge.

The 35th was ordered to move out immediately to help stop the Nazi armored columns in the Ardennes Forest to the north.

For nearly 3 weeks the Division battled the German armor, and finally the enemy attack was beaten back.

After fighting 30 miles along the Siegfried line defenses, the division crossed the Rhine, March 26, 1945, and drove into the Ruhr Valley where it captured 3,770 prisoners in 18 days.

Driving on eastward across Germany, the division, then with the Ninth Army, ended up on the Elbe River as the American troops nearest Berlin.

Meantime, the Division's 137th Regiment, four units of which will use the new armory here, had set an impressive mark of being in contact with the enemy for 111 of its 139 days on French soil.

Company F, of the 137th, one of the units to be housed here, was cited for outstanding performance of duty against the enemy.

The company attacked a key defense position on the approaches to the Siegfried line, engaged two enemy companies in hand-to-hand combat, and sustained numerous counterattacks and severe pounding by enemy artillery and mortars.

But it won the battle.

The events I have described illustrate concretely Kansas' part in the great national defense team that is the National Guard.

This team consists of more than 5,600 units of the Army and the Air National Guard, organized in 2,400 communities in every State, the District of Columbia, Hawaii, Alaska, and Puerto Rico.

The strength of the Army and the Air National Guard today is the highest in history—more than 466,000 men.

The people of Kansas should remember always that into the National Guard of your State goes a tremendous amount of effort and sacrifice required in the day-to-day building, training, and maintenance of units.

In addition to the weekly training sessions and the 2 weeks of summer field training, some National Guard units are actively engaged today in defense missions, and are standing a 24-hour-a-day watch, 7 days a week in some areas of the country.

There are National Guard antiaircraft batteries manning guns in operational readiness at key industrial and population areas.

There are National Guard pilots on runaway alert duty at a number of important airfields in the country.

Members of these units are prepared, on short notice, to man antiaircraft batteries, or fly the jet fighter planes of the Air National Guard, against any surprise attack by enemy planes.

The Guard is ready and anxious to accept any added responsibilities it may be given as the country seeks to build a stronger Reserve Force.

The Military Establishment is now putting into operation an act of Congress it is hoped will increase the size of the Ready Reserve and improve its training standards.

This act is known as the Reserve Forces Act of 1955.

The proper implementation of this law will, I am sure, assist the National Guard, as well as the other Reserve forces, to fill up the ranks and increase the level of training of all units.

The main feature of this act which is of interest to National Guard men is the special training program which applies to the young man who enlists in the Guard between 17 and 18½ years of age.

He may enlist in the National Guard and volunteer to perform 6 months of active duty with the Regular Army.

Upon completion of this 6 months of service he returns to his home and continues to serve in the National Guard until he has completed a total of 8 years of service.

This service in the National Guard offers the young man a means of fulfilling the military obligation placed upon him by the Universal Military Training and Service Act.

This programs offers him an opportunity to become a skilled basic soldier at the beginning of his National Guard career and places him in position for early promotion to a noncommissioned officer grade in which he can qualify for a commission as a second lieutenant in the National Guard.

At the present time we are engaged in an effort to sell this new 6 months' training program to young men between the ages of 17 and 18½ through enlistment in the National Guard.

Young men who are between those ages and attending high school may enlist in the National Guard and postpone their entry into active duty until they graduate or until they become 20 years of age, whichever comes first.

While we are making an all-out effort to enlist new recruits for this program, we are also making an effort to obtain volunteers for this special training from men who are already in the National Guard and meet the age requirements.

I recommend this program for serious consideration and support of all of you who are interested in making this Nation strong militarily at a minimum cost to the taxpayer.

That the National Guard continues to grow in size, and that armories such as the one you will dedicate this afternoon are being constructed in every State, is certainly proof of the determination of the States to do their part in our national defense effort.

The people of this city can well be proud of their National Guard men and proud of themselves for the part they have played in making this new armory possible—not only for the training of the local military units but also for community affairs of all kinds.

I congratulate you on a truly worthwhile accomplishment.

Logic of Arguments Against H. R. 4090

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES

Monday, May 14, 1956

Mr. PELLY. Mr. Speaker, H. R. 4090 would amend part 2, title 3, of the Communications Act of 1934, so as to require the installation of an automatic radio alarm device on United States cargo ships of 1,600 gross tons or more carrying less than two qualified operators. Under this legislation, the device would be capable of being set manually to simultaneously receive and respond to international Morse Code signals as follows: First, the ship station call signal; second, the international distress signal; third, the international safety signal; fourth, the international urgency signal; and, fifth, any other emergency code desired.

As a former member of the Interstate and Foreign Commerce Committee, I became familiar with this legislation at a hearing on a somewhat similar bill, H. R. 6004, which was held before this committee during the 83d Congress.

First, let me say that while my careful study of the report on this bill convinced me that there is no justification for making this device mandatory, at the same time, I recognize that the interest of the sponsor of this measure, the distinguished majority leader, is safety at sea, a very meritorious motive.

Since it may be that Members will not have an opportunity to read the entire 130 pages of testimony, I think that they should at least know that outside of the splendid statement in behalf of the objectives of his bill by the gentleman from Massachusetts [Mr. McCORMACK], the only other proponents were Abraham W. Sereysky, the son-in-law of the owner of the patents to this device, and Benjamin B. Green, the owner. These witnesses should be somewhat prejudiced. Also support was given it by Mr. Morris Harvey Strichartz, a representative of the Radio Officers Union. Since the ultimate effect of this bill might well require the employment of extra radio officers on cargo vessels that now only carry one operator, it might be surmised likewise that Mr. Strichartz would be an interested party. So outside of the author of the bill the proponents—all three of them—have a stake in the passage of this measure.

By the same token, representatives of certain groups opposing the legislation might have biased viewpoints. So let us discount the fact that the American Tramp Shipowner Association testified the equipment was "unnecessary from the standpoint of safety, efficiency, or sound operation." On a similar count, discount the testimony of the American Merchant Marine Institute and their statement that it was "inappropriate and premature to consider the mandatory installation of an unknown and untried piece of equipment" and, finally, discount the statement of the Pacific American Steamship Association. These opponents might be prejudiced.

Now the remaining part of the report on this legislation comes from agencies of Government which certainly should be completely objective. Two Departments, Treasury and Navy, have stated that they have no opposition. The Bureau of the Budget "suggests further study and experimentation before enacting." The Commerce Department recommends against enactment. The report of the Federal Communications Commission based on tests and technical examination states it is not convinced that the uses are clear enough to justify making the device mandatory. Of particular importance is the individual testimony of the Honorable Edward M. Webster, a member of the Commission, which boils down to the conclusion that H. R. 4090 is unnecessary and premature. So there are no Government agency reports favoring the bill—and three against its enactment.

Being against safety is like being against sin or motherhood. It just is not always the easiest position to take, but if this device had been in use in the past as far back as the sinking of the *Titanic* in 1912, I cannot find that any disaster would have been averted or any lives saved. The degree of safety that this equipment would add if installed onboard a ship, to my mind, is exceedingly limited. Otherwise, cost, which is probably somewhere around $3,000 per unit, would have little bearing on the matter. The real cost, however, is not installation. Take, for example, the fact that tests indicate under favorable conditions during a 16-hour period when no radio operator might be on duty, the overtime for answering the alarms would amount to $32.90 per day, or estimating the ship to be at sea 50 percent of the time, approximately $6,000 per year per ship. Obviously, however, no radio operator could stand the strain of 10 alarms during his rest time, so the indirect cost would be actually the cost of a second operator, estimated to be in excess of $12,000 per year.

On the 266 Government-subsidized vessels, the Federal Government would pay the entire added cost estimated to be $3.3 million. On the 771 nonsubsidized vessels, the industry would have increased operating costs of $9.5 million.

These figures do not include any indirect expense such as that of providing space for a second operator. If such additional expense was arrived at by agreement through collective bargaining, we could find no fault with it, but passing legislation on the basis of the testimony presented in the hearings on this and former bills would be the triumph of emotion over good judgment and reason.

That H. R. 4090 duplicates existing equipment with an untested and untried device and bypasses international safety and communication conventions certainly suggests referring the bill back to the committee for further study. Any regulation having to do with navigational messages outside domestic waters and safety should be by international agreement and not be established by a law of this nature, particularly when it would set up a monopoly on an extremely limited and highly questionable system of safety communications.

H. R. 4090 is cloaked in respectability. The Commerce Committee sought to eliminate its private-interest element by an amendment providing that the patents on the device owned by the one organization must be available at reasonable cost to other organizations. How naive can we get?

There are presently approximately 1,000 cargo vessels that would come under the provisions of this legislation. In manufacturing so limited a number of pieces of equipment there would be no place for competition. There would only be one manufacturer whether it would be the present owner of the patents, or another organization which would acquire the rights. The bill could not help but create a monopoly. And the measure is private-interest legislation. It should be pointed out that through increased subsidy the Federal Government would have to make up a good part of the cost.

The Commerce Committee tried to keep the measure from being an out-and-out unconditional signed order for the owner of the patents. It provided an amendment saying the device must be found workable by the Federal Communications Commission.

Of course, this would open the door to political pressure on the Federal Communications Commission to approve the device even though it is subject to false

alarms and other weaknesses. Why the hurry? The Federal Communications Commission is testing other equipment to perform the same function. Why hand one favorite patent owner an advance order and give his patents priority?

I do not charge there is anything wrong here, but I certainly think suspicious people would draw their own conclusions and I feel it would be a favor to the bill's sponsor to defeat the measure.

I know how busy Members are, and all I say to my colleagues is just read Federal Communications Commissioner Edward M. Webster's testimony in opposition to this legislation. That will convince any fairminded person of the logic of arguments against H. R. 4090.

The Chotiner Case: Impropriety Does Not Have To Be Successful

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, April 27, 1956

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to call to the attention of my colleagues an editorial entitled "The Defense of Chotiner," which appeared in the St. Louis Post-Dispatch on May 8, 1956:

THE DEFENSE OF CHOTINER

Some of the Nation's press which was loudest in condemning "influence peddling" in the Truman administration is defensive about influence peddling in the Eisenhower administration.

As a glance at today's Mirror of Public Opinion will show, some newspapers do indeed take a critical view of the private activities in Washington of Murray Chotiner, Vice President NIXON's campaign manager. A good many, however, are suggesting that Mr. Chotiner did little wrong in going to the White House in behalf of his clients, and the defense raises 3 points which have little to do with the principles involved.

Point 1 is that Mr. Chotiner did no wrong because his clients lost their cases with the Government. (By implication, at least some of the 5-percenters of the previous administration at least earned their 5 percent). Of course, the answer to this is that impropriety does not have to be successful.

Point 2 is that whether Mr. Chotiner did wrong, whatever he did cannot be blamed on Vice President NIXON. (Let us not be guilty of guilt by association.) The answer to this is that Mr. Chotiner misused his position as friend and adviser to the Vice President to try to help private clients engaged with official business. Mr. NIXON did not disassociate himself from these activities, has yet to criticize Chotiner for them, and declines even to discuss the case.

Point 3 is that whether or not Mr. Chotiner did wrong—and whatever this has to do with Vice President NIXON—it is a fact that the Eisenhower administration stands foursquare against influence peddling because the President has said so repeatedly. The answer to this is that after the President reread his rules against influence he refused to apply them to Mr. Chotiner. President Eisenhower indicated he saw nothing wrong in what Chotiner had done.

We await the day when moral homilies alone may wipe out impropriety in Washington, with some hope that somebody will also apply the ethics so grandly preached. But pending that time, Congress ought to heed Senator HUMPHREY's advice that the Chotiner case needs much more thorough investigation.

Fortunately RICHARD M. NIXON himself is on record in favor of digging out all the facts on influence peddling. He said: "This inquiry has too many loose ends to call it closed, and I think we'll have to resume hearings."

The only trouble is that these words were spoken by Mr. NIXON October 5, 1951, when he was a freshman Republican Senator hot after Democratic influence peddling in connection with the Reconstruction Finance Corporation in the Truman administration.

In May 1956 the Republicans are in office in Washington. The shoe is on the other foot. Now the Vice President has nothing to say.

Not One Federal Department Favors Enactment of H. R. 4090

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Monday, May 14, 1956

Mr. PELLY. Mr. Speaker, H. R. 4090 would require an automatic radio alarm device on United States cargo ships of 1,600 gross tons or more carrying less than 2 qualified radio operators.

That I oppose H. R. 4090 in no way diminishes my regard for the objective of safety-at-sea, or recognition of this being the desire of the sponsor of the bill. I shall outline clearly the reasons why I believe the rule when it comes before the House next week should not be adopted, but first in fairness to the majority leader, who introduced H. R. 4090, I refer briefly to an article in the Baltimore Sun. It quoted me as saying the gentleman from Massachusetts was a friend of the owner of the patents for the device which would become mandatory under this bill.

I assure the House publicly as I have the gentleman from Massachusetts privately, I never made such a statement and consider it regrettable. Perhaps I should not dignify the newspaper article by this reference. It embarrassed me and makes my opposition to H. R. 4090 more difficult.

As to the reasons why I believe the rule should be defeated, let me say that one of my reasons is the high regard all of us have for the author of H. R. 4090. As I fear it was in the Interstate and Foreign Commerce Committee, it might well be if the measure reaches the floor, it might be adopted out of sheer deference to the majority leader. That, in my opinion, would be unfortunate.

Mr. Speaker, this is a highly technical subject; it deals with complicated and delicately balanced labor agreements; it deals with maritime law and intricate shipping regulations; it deals with involved electronic questions. The influence and personality of a zealous advocate of safety-of-life-at-sea should be matched by technical knowledge and testimony which the Intstate and Foreign Commerce Committee in reporting the bill ignored.

I am not in the well of this House representing the selfish interests of shipping companies. I am here, opposing this rule, because not one agency of the Federal Government from which the Commerce Committee requested a report, not one Department favored enactment of H. R. 4090.

The Department of Commerce flatly recommended against enactment, and the Federal Communications Commission's report found no justification for making the installation of this device mandatory even though it could be developed to a point where it is considered satisfactory. With such reports it is inconceivable that this bill if passed by Congress would not encounter an Executive veto. Why, under such circumstances should the valuable time of Members be taken for consideration of a bill which will never, in my judgment, become law?

If, as I hope will not prove to be the case, a rule on H. R. 4090 is voted, I intend to offer amendments to defer effect of this bill: First, until reliability of operation of the device is assured by international standardization of criteria governing characteristics of signals to which the device is required to respond; second, until it is determined that agreement cannot be effected internationally to permit use of the present auto-alarm for the purposes which would be served by the call selector device; and third, unless and until an automatic radio call selector is required by the next International Convention for Safety of Life at Sea to be installed on all vessels subject to such Convention.

Frankly, Mr. Speaker, I believe granting of a rule and the adoption of these amendments is a waste of this body's time. But if we adopt a bill, for heaven's sake let us limit coverage until we can include foreign as well as domestic cargo vessels. Communications on the high seas should be on an internationally uniform basis. Otherwise we would have chaos.

Commissioner E. M. Webster, of the Federal Communications Commission, out of his wide experience and background testifying on this bill, emphasized, in opposing it, the desirability of a common standardized system in the world.

I hope the rule will be defeated. The legislation will add about $12 million to the cost of our merchant marine. If it would save lives it would be well worth the expense, but it will not; it simply would require installing a duplicative and unnecessary alarm system—if the patented device owned by one person can be perfected. I cannot gnd that any life in any sea tragedy from the disaster of the *Titanic* on down to the present, would have been saved—not one life—if this device had been in operation in United States cargo vessels.

And referring again to the cost, bear in mind Americans owning cargo vessels

affected by H. R. 4090 can register their vessels under Panamanian or other foreign flag. They can, and have been in increasing numbers transferring ships foreign and replacing the personnel with low-wage foreign crews. The cost of $12 million to the American shipping industry under this bill would encourage that sort of thing.

There were five basic reasons advanced by Commissioner Webster in his testimony against H. R. 4090: First, there can be no operational reliability of this device because radio operators do not have a uniformity of speed in sending dots and dashes—the device is technically impractical and has, of course, never been tested under actual operational conditions at sea; second, no device should be made compulsory until after there has been sufficient experience and acceptance upon which to base an intelligent analysis; third, any merit to the device is convenience—not safety; fourth, cost is discriminatory against United States Merchant Marine and cannot be justified; and fifth, present international system is performing its job satisfactorily.

Finally, let me add one point more. Listen to this. Can any member of the Commerce Committee or the author of the bill state that the presently used outa-alarm which this new device, the automatic call selector, would duplicate—can anyone say the present alarm cannot be altered to serve exactly the same safety purposes as the device—the monopolistic device—under H. R. 4090 is proposed to serve.

There should be an investigation into alternative and more reliable methods.

I urge strongly defeat of this rule. Send H. R. 4090 back to committee for further study when it comes to the floor of the House.

Plutonium: Stranger Than We Know

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 14, 1956

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to call to the attention of my colleagues an article entitled "Plutonium: Stranger Than We Know," which appeared in the St. Louis Post-Dispatch on May 8, 1956:

One of the great misfortunes of the pall of secrecy which has hung for 15 years over everything concerned with atomic energy is that we have been prevented from savoring the full magic of some of the things which have been done in the atomic energy research establishments.

To most people plutonium is merely a name, or a synonym for atomic bombs. It does not suggest a real material—like copper or gold—which can be turned on a lathe or dissolved in acids.

Certainly it does not suggest that the metal—if such it may be called—is of high interest in its own right as well as the most fabulous material the world—or part of it—has ever seen in bulk.

To make plutonium from uranium is much more remarkable than to make gold from lead in an alchemist's laboratory.

For, unlike gold, plutonium was not known to exist at all in nature when men set out to make it.

Since then radio-chemists of the United States Atomic Energy Commission have sought and found plutonium in nature—mainly in ores of uranium.

In the ores which are richest in plutonium there is roughly one atom of plutonium for every million million atoms of uranium. Finding natural plutonium is more difficult than it would be to find a needle in a haystack. The main sources of plutonium are the atomic reactors in Great Britain, the United States, and the Soviet Union. Altogether 12 different isotopes of plutonium are now known, each of them radio-active. These endure for times which range from a thousand millionth of a second to 900,000 years.

Because of its radio-activity plutonium is one of the most dangerous poisons known. Roughly a third of a millionth of a gram of it, inhaled during a person's lifetime, is a hazard to be reckoned with.

A millionth of this amount is dangerous if it finds its way into a wound, or is otherwise injected into the bloodstream.

The radio-active material finds its way to some part of the human body where it can destroy the blood-forming organs in bone marrow, and hence bring about the radiation sickness which made its first public appearance at Hiroshima.

A cubic foot of it weighs just over half a ton at ordinary temperatures. It is dull grey in appearance.

The behavior of the metal at temperatures of 1 to 200 degrees centigrade is one of the reasons why people ask whether plutonium should be called a metal at all.

Delta-plutonium actually decreases in volume as it is heated—a property which is not possessed by any other known metal, though water just above its freezing-point does the same sort of thing.

It is evident that the conversion of plutonium from a "bad" metal to a "good" metal as temperature is increased is a reflection of the number of radically different structures which the atom can assume.

There are even suggestions that small granules of the material are spontaneously combustible—though, naturally, the experiment is not a safe one to carry out.

Keep the Case Open

EXTENSION OF REMARKS
OF
HON. JAMES M. QUIGLEY
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 8, 1956

Mr. QUIGLEY. Mr. Speaker, under leave to revise and extend my remarks, I include an analysis from the Carlisle (Pa.) Sentinel of the activities of Mr. Murray M. Chotiner and his associations with high administration officials.

The editorial follows:

KEEP CASE OPEN

Murray M. Chotiner, the breezy California lawyer, who is not only a friend of Vice President RICHARD NIXON but was Mr. NIXON's campaign manager in 1952, was called by the Senate Permanent Investigating Subcommittee to testify on April 26 on alleged graft in Army clothing contracts. The subcommittee, in its investigations, sought to find out about influence telephone calls to the White House in behalf of Mr. Chotiner. To get the proper perspective on the political aspects of those telephone calls, it is apparently necessary to reflect back to 13 days ago—if you will—and then place the maneuvers of Messrs. Chotiner and NIXON in sequence, to get any sense out of the matter.

Going back 13 days, the sequence is this:

Mr. Chotiner is scheduled to appear before the subcommittee where he will give testimony that will be embarrassing to both the President and Mr. NIXON.

Mr. Chotiner does not appear on the day summoned. Instead, waits a full week.

In the meantime Vice President NIXON obtains clearance from the White House and announces that he will run for reelection in 1956.

After everything gets into the record and Mr. NIXON's candidacy is "accepted with enthusiasm" (on the part of some of the GOP), Mr. Chotiner brings forth before the subcommittee a revelation that during the Truman administration would have been called a terrible scandal, such as when William M. Boyle, Jr., J. Howard McGrath, and Matthew J. Connelly were denounced by the press for their influence calls to Government agencies. What did Mr. Chotiner disclose? He disclosed that Maxwell M. Raab and Charles F. Willis, Jr., two White House staff advisers to President Eisenhower, made telephone calls concerning Chotiner clients. When questioned by the subcommittee on whether he attempted to use the name or influence of the Vice President, Mr. Chotiner's answer was: "Unequivocally no."

Now, going back 5 years to October 5, 1951, a Senator is speaking—a Senator who is a member of the Permanent Investigating Subcommittee—California's Senator RICHARD M. NIXON. He is on the trail of Democratic influence in the affairs of the Reconstruction Finance Corporation. The future Vice President says: "This inquiry has too many loose ends to call it closed, and I think we'll have to resume hearings."

That, we foresee, is exactly what a lot of the people of this Nation are going to think about the whole business of the White House-Chotiner-Nixon influence case. At any rate that's what we reckon most people will think.

To Assist Farmers in Planting Woodlots, Windbreaks, and Shelterbelts

EXTENSION OF REMARKS
OF
HON. BEN F. JENSEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 3, 1956

Mr. JENSEN. Mr. Speaker, on May 7, I introduced a bill H. R. 11030, which will assist and encourage farmers to plant greatly needed woodlots and shelterbelts.

The bill is as follows:

H. R. 11030

A bill to provide assistance in soil and water conservation and the establishment of proper land use to farm owners and operators who convert small tracts of crop or other land to woodland and to cooperate and assist the States in carrying out such development

Be it enacted, etc., That it is hereby recognized that the planting and development of woodlands on small tracts of cropland

and on other farm lands not suitable for cropping contributes to the public welfare in that it assists in the control of soil erosion and destructive floods, results in more favorable conditions of water conservation and flow and provides for windbreaks, shelterbelts, and woodlots yielding a more adequate supply of timber and other tree products; and that the growing of trees involves a deferment by the landowner of income from the land. It is hereby declared to be the policy of the Congress that in order to promote woodland conservation on privately owned lands and provide other assistance to owners and operators of small tracts of land, the Secretary of Agriculture shall assist in the establishment and maintenance of woodlands thereon.

SEC. 2. In order to effectuate the policy of this act, the Secretary of Agriculture (hereinafter called the "Secretary") is authorized—

(a) to approve plans for a conservation program of woodland tree planting submitted by State oil conservation committees, boards, or commissions in cooperation with State officials and State foresters for the purpose of assisting owners of small tracts of land in affecting the policy herein stated: *Provided, however,* That any such plan, insofar as it affects private land within the boundaries of legally established soil conservation districts, shall provide for the carrying out of the plan in cooperation with such soil-conservation districts, and to avoid duplication shall provide that the technical and other assistance provided such districts under other Federal authorizations for assistance in developing and carrying out their soil and water-resource programs shall be utilized in the planting of trees on farm woodlands and for windbreaks;

(b) to assist the State in carrying out such plan as he has approved under this act, which assistance may include giving of advice and technical assistance and furnishing financial contributions including the cost of planting, replanting, and other operations necessary to the establishment of woodland tracts as he shall deem proper, provided that the financial contribution expended by the Federal Government for tree planting and woodland development on non-Federal land within the State during any fiscal year shall not exceed the amount expended by the State for the same purposes during the same fiscal year, and the Secretary is authorized to make financial contributions on the certificate of the State official(s) in charge of the administration of the plan as to the amount of expenditures made by the State; and

(c) to give technical advice and assistance to owners of such tracts, including the marketing of the forest products produced therefrom.

SEC. 3. In any plan that coordinates woodlands under the jurisdiction of any Federal agency other than the Department of Agriculture, the Secretary shall obtain the cooperation, assistance, and approval of the Federal agency having jurisdiction thereof.

SEC. 4. The Secretary may prescribe such rules and regulations as may be appropriate to carry out the purposes of this act.

SEC. 5. There are hereby authorized to be appropriated such sums as may be necessary to carry out the objects of this act, such sums to remain available until expended.

Mr. Speaker, the bill to assist farmers in planting and developing windbreaks and small woodlots is to complement title IV, the forestry provisions of the Agricultural Act of 1956, H. R. 10875. That section authorizes additional cooperative activity between the Department of Agriculture and the States in tree planting and reforestation—to build up and maintain a level of timber growing stocks adequate to meet the Nation's domestic needs for a dependable future supply of industrial wood. This bill seeks to provide farmers needed assistance to plant and manage woodlots and windbreaks largely for protection purposes and to supply wood for fuel and rough lumber for local farm use only. It is not intended to help commercial tree growers and large forestry enterprises.

I am particularly interested that this Congress give as much help and assistance as possible to those farmers who are in need of it, particularly those who have misfortune come to them because of drought or other circumstances over which they had no control. I want to see the farmer along with labor and business get an even break.

Somehow we have managed to do away with the rows of trees and the woodlots that served to protect farm crops from the hot winds of summer, and to save the livestock and buildings from the cold winds of winter. Of course, there were areas in my State of Iowa, and in the States to the west where trees were not native. However, it has been demonstrated that trees will grow in most all of these areas, but farmers do need help to get them established.

Of importance right now is getting cropland out of production. Actually many farmers are trading crops for land. By that I mean crops are being harvested from land unsuited to cropping. This land is becoming poorer and poorer because of being cropped. Erosion is so serious on such land when it is cropped so as to reduce the yields and make such use unprofitable. Part of this kind of land should be converted to woods not only putting it to its best use but further reducing production of crops now in surplus.

Farmers need windbreaks to protect crops from hot winds that sear corn tassels and burn up grain. This is particularly true in the western Corn Belt. The cycle of dry hot weather that has persisted in the South and Middlewest since 1950 has cut yields on many farms to the point where farm income has been meager irrespective of the price of the product. Also, windbreaks are needed around every farm for shelter and protection for livestock and buildings throughout the central and northern parts of our country.

Wind erosion in the southern Great Plains has damaged over 5 million acres again this blow season. This is the seventh year that drouth has seriously damaged the wheat crop and reduced the productive capacity of much of the land in five southern Great Plains States. Shelterbelts have been successfully established in most of the Great Plains area and most of them could do a great deal toward holding the soil in place.

Nearly 40 million acres of cropland in this country are still being damaged at a critically rapid rate by erosion. Much of this acreage is in small tracts on thousands of farms. These small acreages make some contribution to crop surpluses too and they should be taken out of cropping and planted to trees. Not only will erosion on this land be reduced, but putting the land to trees will contribute immeasurably to reducing water runoff.

Farmers have been establishing good land use through the soil conservation district program for nearly 20 years. During that time some 20 million acres of cropland unsuited to continued cropping have been converted to grassland and woodland. The immediate need for further reducing crop acreage stimulates me to offer additional assistance to farmers in order to speed up the program of cropland conversion. The emphasis that has been placed up to this time on Federal assistance to private landowners and operators in forestry problems other than in the soil conservation district programs has been limited. Of course, under the Clarke-McNary Act, cooperation with the States has materially increased the production and distribution of trees and other planting stock. Also, the Secretary of Agriculture is directed under the Cooperative Forest Management Act to cooperate with the States in respect to management of woodlands and to provide technical services in the harvesting, marketing, and processing of trees. All of the work under these acts is done largely in cooperation with the States, and material contributions to the problem are being made. It is my intention in introducing this bill for stepping up the woodlands program that additional funds and assistance from Federal sources be made available to farmers cooperating with their soil conservation districts. It will augment the small amount out of the total Federal funds now being appropriated for forestry purposes which are utilized to assist farmers to plant and develop small woodland tracts.

Mr. Speaker, there is a clear difference between the provisions for tree planting in the soil-bank bill recently passed by the House, and the provisions and purposes of my bill, in that the soil-bank bill puts emphasis on commercial forests for the production of lumber, whereas my bill provides for small wood lots and shelter belts for farmsteads. For the past half century we Americans have carried on a tree-slaughtering program with a vengence, and in addition we have been straightening our small streams and creeks. Had we planned a desert here, we could not have made a better start. Our soil-conservation program on our farms has been most effective so far as water and soil erosion and flood prevention are concerned, and in which I have long taken a leading role in Congress.

But we are annually losing millions of acres of our priceless topsoil and crops from wind erosion. About 3 years ago I drove through the best agriculture section of France. There I saw what small wood lots and trees along the fence lines can do to stop wind erosion, and certainly it is now a national must here in the United States of America. Some may say trees along fence lines shade too much of otherwise productive cropland, but the greater area they protect from hot withering winds far exceeds the shaded area, also a fertilizer has now been developed which, when applied to

shaded land, will produce about equal crops to unshaded land.

Taking the Seventh Iowa District as an example, I am very sure that, if every farm had a small woodlot, say 2 acres, as a windbreak for the buildings and a row or two of trees along the southernmost boundary of each farm the loss of crops from hot winds and drought would be greatly reduced. True it will take a few years before the trees will be big enough to be greatly effective, but there is no time a start can be made earlier than now. Maybe all of us will not be here long enough to enjoy and reap all the benefits but our children will.

Trees not only serve as windbreaks but the amount of moisture which a good sized tree will hold is almost unbelievable, which serves to moisten the dry destructive winds so only with a few hundred trees on each farm the combined benefit of thousands of trees in a neighborhood would be of untold benefit to exerybody.

I sincerely hope and pray that this tree-planting program will be put into effect at an early date.

Labor and Politics

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, May 14, 1956

Mr. SMITH of Wisconsin. Mr. Speaker, I am including as part of my remarks the following article which appeared in Human Events for May 12 on the subject of labor in politics:

LABOR IN POLITICS

In reply to Democratic National Chairman Paul Butler's offer to "publicly apologize" to Senator GOLDWATER if the Senator could prove his contention that "compulsory union dues are used for political parties and candidates," the Arizona GOP Senator has sent the following evidence to Butler:

Gus Scholle, president of the Michigan CIO Council and chairman of the Michigan Political Action Committee (PAC), told a reporter for the Detroit Free Press on April 24, 1955, that the PAC was being financed by "dues money allocated by local unions."

Fay Calkins, analyst for the AFL-CIO, gives several examples in her book The CIO and the Democratic Party. On page 45, she notes that over half of the money spent by the PAC in Ohio's 18th Congressional District came "from a monthly per capita tax on locals."

Emil Mazey, secretary-treasurer of the CIO Auto Workers, told the Detroit Free Press, July 7, 1955, that "the union makes no bones about the fact that payment for radio and television programs containing campaign politics came from the UAW general funds." Mazey filed an audit report for the UAW-CIO, for the period of June 1, 1950 to May 31, 1951, showing that the PAC received $120,434.56 out of union general funds. For the 6-month period ending November 30, 1952, the PAC received $66,086.41, also from union general funds. For the year ending December 31, 1954, PAC expenses disbursed from the union general fund amounted to $384,443.33. Mr. Mazey's reports are only for this single International union and do not include the funds diverted from other Internationals or from local, county and State union treasuries into political activities.

The financial statement of Ford Local 600 of the UAW-CIO, dated October 9, 1955, signed by W. G. Grant, financial secretary, shows that the Wayne County CIO Council endorsed John Dingell, Jr., in the Democratic primary election of Michigan's 15th Congressional District. The report reads: "Approval is requested of the council for concurrence in the above endorsement and also to authorize the local officers, in line with past procedure, to incur and pay expenses in connection with said election."

The then director of Labor's League for Political Education, Joseph D. Kennan, was quoted in the January, 1950, issue of the American Federationist, official publication of the American Federation of Labor at that time, as saying, "I have been asked by many local union officers whether any local funds can be voted out of the treasury for political work. The answer is 'Yes'—so long as none of that money is used for a national candidate such as Congressman or President. You can use union funds or assessments to help local and State candidates (in most States)."

"This construction," said GOLDWATER, "places the sole emphasis on legal interpretation. Nowhere in it is there any concern for the problem of using compulsory union dues in politics as a moral or civil rights problem. LLPE Director Kennan would seem to be indifferent to the civil rights question involved in taking the compulsory dues of a union member and using them to pay the campaign expenses of a candidate whom he personally votes against, thereby nullifying his vote and creating a second class citizen."

The Senator concludes his letter to BUTLER: "Upon examination of this sampling of the available proof, I hope you will avail yourself of the earliest opportunity to clear up the record by making your public apology as you agreed to do on May 1."

On April 30, in Fort Worth, Gov. Allen Shivers charged that organized labor was sending "large sums of money into Texas in an effort to capture control of the State's Democratic Party." Shivers said he had photographic copies of deposit slips showing that money had been received by the Rio Grande Valley Democratic Club from the AFL and from "Walter Reuther's CIO."

Eisenhower Administration Shrugs Off Responsibility in Battle Against Stream Pollution

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, April 27, 1956

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to call to the attention of my colleagues an editorial entitled "Mr. Aandahl's Passive Role," which appeared in the St. Louis Post-Dispatch on May 8, 1956:

MR. AANDAHL'S PASSIVE ROLE

Assistant Secretary Aandahl's address to the American Waterworks Association convention here was more notable for what it did not say than for what it did. In more than 4,000 words of prepared text the Interior Department official found not one word to acknowledge the Federal Government's responsibility for nationwide action against stream pollution.

He found not one word in recognition of the by-now obvious fact that the poisoning of interstate streams can be stopped only with the initiative of strong leadership at Washington, including sizable sums of money and strict laws strictly enforced. Instead, Mr. Aandahl disclaimed that there is any national water problem. He said "There can be no overall plan." He foreswore bureaucratic control and vowed to provide the local people a greater voice, which is the new gobbledygook for "we won't do it."

The Assistant Secretary of Interior recognized the great and growing demands on water supply. He recognized that agriculture and industry, even habitation itself, will be affected for the long future by what is done now to insure adequate supplies of clean water. But: "Will the corrective actions now being taken provide adequate water supplies for the future?" Assistant Secretary Aandahl's only answer was to say to the waterworks operators: "You men are better able to answer that than I."

That is shrugging off the problem, not dealing with it.

Armed Forces Day Celebration at Coney Island

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, May 14, 1956

Mr. ANFUSO. Mr. Speaker, I desire to bring to the attention of all my colleagues and the public at large a most interesting event which is scheduled to take place this coming week-end at Coney Island, in Brooklyn, N. Y. I refer to the Armed Forces Day Celebration which will be held on Saturday, May 19, and Sunday, May 20, under the auspices of the Area IV Armed Forces Day Committee.

The event will be featured by many aerial and amphibious activities which will be observed by as many as 1,500,000 to 2,000,000 people. Perhaps no other place in the United States or elsewhere in the world could attract a larger audience than Brooklyn's famous Coney Island, known for over a half century as the playground of the world. Coney Island is host each season to some 50 million visitors.

The demonstration area for this event is that part of the Atlantic Ocean which is immediately adjacent to the beach, the boardwalk, and the amusement area of Coney Island. I understand that all aerial activities will take place over the ocean, so that there is no civilian hazard involved.

The reason I call attention to the event at this time is that I hope it will prove to be the forerunner of many successful celebrations in the future devoted to our Armed Forces and their achievements. I believe that if properly developed on a huge scale as befits our country, plus the huge audience potential provided at Coney Island, these events could serve as our answer to Moscow's famed Red Square flyover on May 1 each year which attracts such worldwide attention. I propose that we have a 2-day Armed

Forces celebration on the third week-end in May each year for that purpose.

Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to insert the text of a release issued today by the Armed Forces Day Committee in connection with the celebration at Coney Island:

AREA IV ARMED FORCES DAY COMMITTEE

Mayor Robert F. Wagner, Brooklyn Borough President John Cashmore, Area IV Armed Forces Day Commander Lt. Gen. Thomas W. Herren, and John G. Ward, president of the Coney Island Chamber of Commerce, have authorized the Public Information Subcommittee of the Armed Forces Day Committee to issue the following announcement in their name:

"GOVERNORS ISLAND, N. Y.—The establishment of the area on and over the Atlantic Ocean off the Coney Island Beach, boardwalk, and amusement area as a newly designated demonstration area for Armed Forces Day weekend aerial and amphibious activities is jointly announced by Mayor Robert F. Wagner, Lt. Gen. Thomas W. Herren, Area IV Armed Forces Day Commander, Brooklyn Borough President John Cashmore, and John G. Ward, president of the Coney Island Chamber of Commerce.

"This is the first of a series of special events scheduled to implement the conception of utilizing the Atlantic Ocean, off the Coney Island Beach, and boardwalk, as the world's largest theater, capable of accommodating the world's largest primary audience. The concept was developed by Milton H. Berger, director of special events for the Coney Island Chamber of Commerce, who interested the Armed Forces Day Committee in its utilization for their activities program.

"Of particular interest to the Armed Forces and to the municipal government of the city of New York is the lack of civilian hazard inherent in staging aerial and amphibious events on and over the Atlantic Ocean.

"Of additional interest to all concerned is the easy accessibility of the Coney Island demonstration area to New York and adjacent communities both by subway train and automobile highway. Coney Island is serviced by the "D" train of the Independent Line Subway as well as the Sea Beach, West End, and Brighton Lines of the BMT system. For vehicular visitors, Coney Island is convenient to auto traffic via the East Side and West Side Highways and the Bronx as well as by the Belt Parkway system from Queens and Long Island. It is also serviced by surface buses of the New York City Transit Authority.

"With Coney Island already having recorded upwards of half a million visitors a day during the past several weekends, the audience potential for Armed Forces Day weekend demonstrations is potentially the largest possible primary audience in all the world.

"For Saturday, May 19, and Sunday, May 20, a hundred plus flyover of Air Force and Navy planes is scheduled. Also scheduled for Sunday, May 20, are a series of special activities including Coast Guard helicopter rescue demonstration, air-sea rescue by amphibious plane, landings on, taxiing along, and takeoffs from the Atlantic Ocean by pontoon planes.

"The Army Signal Corps is investigating the possibility of setting up a public address system along the Coney Island boardwalk for one-half mile in either direction from Steeplechase Pier as an announcing center from which the various activities could be described to the assembled viewing public. Other aerial activities are being planned. These will be announced next week along with specific times and other details of the events to be scheduled for May 19 and May 20. Announcement will be made through the Armed Forces Day Area IV Public Information Officer, Capt. Bertrand R. Brinley."

Technical Assistance Under the Foreign Aid Program Should Operate Under a Separate Agency Divorced From Politics

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 2, 1956

Mr. SMITH of Wisconsin. Mr. Speaker, on Friday, May 4, Dr. John H. Reisner, who is a consultant to the Agricultural Missions, Inc., in New York City, and who has had considerable experience in programs that deal with self-help to people abroad, made an important statement before the House Committee on Foreign Affairs. Under leave to extend my remarks, I am including his statement:

TESTIMONY OF DR. JOHN H. REISNER BEFORE THE HOUSE FOREIGN AFFAIRS COMMITTEE, FRIDAY, MAY 4, 1956

My name is John H. Reisner, at present consultant to Agricultural Missions, Inc., New York City, and from 1931 to 1953, served as its executive secretary. Since 1949, I have served as an official observer to the Food and Agriculture Organization of the United Nations. From 1914 to 1931, I was an agricultural missionary in China and for most of this period was dean of the College of Agriculture and Forestry of the University of Nanking. From 1951 to 1953, I was an active consultant to the Director of Food, Agriculture, and Natural Resources Personnel of the Technical Cooperation Administration. For 42 years my major activities have been concerned with what is now referred to as technical assistance. I have traveled widely in the Near East, Asia, the Far East, and Africa.

I

My testimony will deal principally with title III of the Mutual Security Act of 1956—technical cooperation—and particularly the section dealing with United States bilateral program.

II

Lest my observations seem unduly critical, let me say at the beginning that I believe firmly that technical cooperation must be considered an extremely important phase of our foreign policy. I have always felt that the organized exchange of technical knowledge on a worldwide scale, so that the benefits of human advancement in any one country can be applied wherever they are desired and needed, represents one of the greatest advances of all time in international relations. I am proud of the pioneer part which the United States has played in the development of the idea and we must go on to greater accomplishments.

III

But it is possible to take a good idea and implement it in a way that significantly decreases its effectiveness and I think this has been especially true of our technical cooperation program. In 1949, I testified before the House Foreign Affairs Committee to this effect:

"The point 4 program which can really be effective will not be completed in 2 or 3 years. Bringing help to the mass of the people in the underdeveloped countries is a huge and complicated problem. It is not simply better seeds and more quinine. Unless our Government and the American people are willing to undertake such long-term programs and supply continuing funds, it would be better to drop the whole matter before it is begun. To raise high hopes for a year or two, then to stop appropriations will cause more ill will than if the point 4 program had not been started. From the very first such a program should be recognized as a definite part of a bipartisan foreign policy."

IV

The mutual security bill before Congress represents the seventh annual request for funds for technical assistance. For 6 years the program has been operating on a year-to-year basis. Total appropriations have passed the half billion dollar mark. While it is true that the International Cooperation Administration can contract obligations for 2 years, the program is essentially a July 1 to June 30 operation. I most heartily endorse the request of the President that the technical cooperation be placed on a long-term basis, so that wise and adequate planning can be done and with assurance that the program can be carried out. I understand certain Members of the House, including some members of this committee, have already expressed themselves in favor of such a long-range policy. To be specific, I suggest a minimum of 10 and preferably 15 to 20 years.

V

The program has suffered severely because of administrative changes. It was first under the Technical Cooperation Administration, within the State Department and with the State Department doing much of the planning and programing. TCA had in 2½ years 2 administrators and 1 acting administrator. The program in August 1953 was made a part of the Foreign Operations Administration under Mr. Stassen. The new setup provided for a Deputy Director for Technical Assistance but was without such director for about 8 months. On July 1, 1955, the technical cooperation program was made part of the International Cooperation Administration, which latter organization has semiautonomous status in the Department of State. So in about 5½ years, we have had 4 administrators, 1 acting administrator, 1 deputy director and 1 acting deputy director. As one would reasonably expect, the administrative changes in Washington resulted in uncertainty and frustration in the field. The point I want to make is that these administrative uncertainties create a difficult climate in which to plan effectively and to accomplish our objectives in the countries in which our technical cooperation programs are operating.

VI

The technical cooperation program must rest on bipartisan support which I understand is the case in Congress. May I respectfully suggest that it needs a bipartisan approach in administration. I am not suggesting that the Democratic administration was blameless in this respect but it is true that most of the high ranking experienced officials in the TCA were relased by Mr. Stassen and the administrative posts given to people without similar experience. In a study by the National Planning Association's special policy committee on technical cooperation, dealing with the administration of bilateral technical cooperation, the statement is made "Political clearances were made a standard requirement for all technical cooperation employees under FOA. This practice started on a large scale with the change of administration in 1953." And to quote again: "Some country directors have been appointed on a political basis despite their lack of special qualifications for leadership in technical cooperation." I take no particular pleasure in reading this paragraph but I think it is part of the record and part of the problem. I plead that we take bipartisanship just as seriously as we know how. We cannot have a successful technical program without it in both the legislative and executive branches of our Government.

VII

Our technical cooperation is less effective than it should be because the country programs are overextended. In the early phase of our technical-assistance operations, part of our foreign policy was to make an impact on the countries that had signed agreements with us. That meant quickly using as many people and as much money as possible. By 1952 we were using not only technical-assistance funds, but special economic-assistance funds. Too many of the early programs were our programs and represented what we thought was good for the country. We were transferring our technological fruit—not technological seeds and roots. We were in too great a hurry to get the job done before we really knew what the job was. A few days ago I was talking with a Congressman who had visited Asia. He had asked a chief of mission how many projects were being operated in the country. The reply was 89. The Congressman suggested that was too many. The chief replied that instead of criticizing him, the Congressman should compliment him for the number had been reduced from 239. I can best sum up the point I want to make by quoting from the report of the Foreign Affairs Committee's mission to east Asia and the Pacific, of which mission Dr. JUDD was chairman:

"The projects ought to be only those that build upon the basic strength of the country rather than spreading the funds over an array of projects, however useful, that must be started from scratch."

VIII

We need to use more imagination in adapting our field administrative organization to the situations found in the host countries. In Latin America the Servicio has been used to advantage. But throughout Asia and the Far East, we operate uniformly, using the USOM, with the exception of the Joint Commission on Rural Reconstruction originally operating on the mainland of China, but now operating in Formosa. This joint enterprise has been signally successful because the two Governments have been operating as partners. Most of the countries where we operate vary greatly and need consideration in terms of their own situation. I am sure that the attitudes in many countries toward our cooperation would be more cordial if the joint commission idea were to be used. When I was in Formost in 1954, I was told that the decisions of the 5 commissioners—3 Chinese and 2 Americans—were invariably unanimous.

IX

The problem of personnel is still with us—really the key factor in the successful operation of technical cooperation programs. We are still appointing most personnel to a 2-year contract. It will be difficult to solve this important problem until Congress decides whether technical cooperation is to be given a reasonably continuing status. I believe many of our best citizens would elect service in technical assistance as a career if our administrative policies would make that possible. This complex problem is so widely recognized that I need only refer to it as part of the overall picture.

X

We need to resolve the growing confusion in the public mind as to what is technical cooperation and what is development assistance. Both categories are seemingly covered by the commonly used term "economic aid." It is highly desirable that the two types of assistance be kept separate in our thinking. In the Mutual Security Act of 1954, the Foreign Affairs Committee spelled out in detail what technical cooperation programs were. Development assistance is not comparably defined. Simply stated, it seems to me that technical assistance consists of those activities which (1) aim at developing the economy or raising the standard of living, primarily through (a) increasing technical competence or (b) helping to organize or improve public programs devoted to these ends; and which (2) are joint activities in which an agency external to the country is a participating partner. Development assistance consists of helping to develop the economy, or raise the standard of living of a country primarily through grants of commodities or funds which can contribute to these purposes. There is no clear line of division between technical cooperation and developmental assistance. On the whole, sending technical personnel to a country is a central feature of technical cooperation but is absent or a minor element in development assistance. In general, appropriations for technical cooperation are in modest amounts whereas grants for development assistance to a particular country in a particular year may run into many millions of dollars. Grants of funds for technical cooperation are legitimate to the extent they are needed to provide teaching and demonstration materials and to share sufficiently in financing certain joint programs that the host government is encouraged to undertake them and so that the external agency of technical cooperation (such as the United States Government) has a right to a voice in the administration.

Technical cooperation is popularly and rightly referred to as a self-help program. It is also thought of as a relatively inexpensive program. The amount requested of Congress for 1957 represents about 3 percent of the total 1957 mutual-security askings.

I am of the firm conviction that a properly administered technical cooperation program will be in the long run one of the best investments in international relations that the United States can make. It is now overshadowed by development assistance and other grant-in-aid and commodity programs. Technical cooperation is essentially a personalized program that should provide us with the personal contacts out of which international understanding and mutual respect can grow, and without which there can be no basis for lasting peace. It is a program for laymen, not for professional diplomats, though personal tact and diplomacy are essential for the laymen, too. Once the broad foreign policy with respect to technical cooperation has been laid down, the administration should be put in the hands of people who are culturally, technically, and administratively competent and allowed the necessary latitude to do the kind of a job that needs to be done in partnership with the other countries concerned. Under the circumstances under which technical cooperation must work at the present time, I see little hope for more than very mediocre success.

XI

For those who had high hopes for the influence which our original point 4—now the Technical Cooperation Program—might have, it is a depressing experience to follow the growing criticisms of the program which appear in the foreign dispatches of our newspapers, in syndicated articles and in congressional reports. It would seem that more criticisms grow out of our larger scale development schemes than from technical cooperation but both are involved. Surely by now we have learned that money can't buy friends and are we so bankrupt otherwise that money and more money is the one major resource on which we must fall back. Are we going to be drawn into a competitive dollar diplomacy race and what will the limits be? Do we not have to learn that in some circumstances, the citizens of our Government rather than the Government itself are the best avenues for attaining national objectives?

XII

Finally, as in 1953 and 1954 before this committee, I would again appeal to Congress to provide a status for our technical cooperation program that will allow it to function effectively. I have referred to the necessity for a long-term policy, to the administrative changes to which the program has fallen heir, to the lack of bipartisanism under which it is administered, to the diffusion of projects in the field, to the acute personnel problems involved, to the necessity of elasticity in our country to country relationships, to unwise and over-extended country programing, the seeming necessity of spending annual appropriations before June 30, and to the rising tide of criticism.

No one would question the responsibility of the president and the State Department to make overall foreign policy with respect to international economic aid. Indeed that has been quite clearly stated. But as suggested above, one policy has been laid down, the technical-cooperation program should be given the best possible chance to succeed. Helping people and governments is a difficult task and with the right kind of personnel dedicated to a long-term job, I see no reason for program and broad policy conflicts.

There are four reasons why technical cooperation should be given an independent status, possibly as a corporation as originally provided by Congress to the still existing Institute of Inter-American Affairs:

1. To separate it, in administration, from developmental assistance (since it is the much larger appropriations for the latter which keep technical cooperation in jeopardy).

2. To allow technical cooperation to be assured a long-term continuity without requiring, or seeming to require, a similarly assistance.

3. To allow it to develop personnel policies, and administrative and fiscal procedures which are well-adapted to the operating field needs of technical cooperation, rather than to standard departmental procedures within Washington.

4. To give it greater insulation from short-run fluctuations of political opinion.

Only in some such radical reorganization do I see any hope for the future of technical cooperation. More money at this stage will only aggravate the situation.

Presidential Inability

EXTENSION OF REMARKS
OF
HON. JAMES M. QUIGLEY
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 8, 1956

Mr. QUIGLEY. Mr. Speaker, under leave to revise and extend my remarks, I include the following pertinent editorial from the Carlisle (Pa.) Evening Sentinel:

WHO SHALL DECIDE?

There is danger that an important, though secondary, subject for possible legislation will be lost in the congressional scramble this year. That is the matter of who should decide whether a President has become incapacitated.

To say that this question should be promptly settled is in no sense a reflection on the incumbent in the Nation's highest office. The matter should be considered, insofar as that is possible, without regard to who is now President. There is no escaping the fact, however, that President Eisenhower's attack last fall sharpened the national awareness of this problem.

This awareness prompted various responsible citizens, including former President Herbert Hoover, to study the matter and make recommendations. Some have pro-

posed that the Cabinet be charged with the decision; some would leave it up to the Supreme Court; other suggest a committee of top Government officials advised by a panel of physicians.

Perhaps quite another proposal, or a combination of some of those already made, would win out if the question were debated in Congress. It is important, however, that the matter not be dropped. The next time a Chief Executive is stricken, the Nation may not be as fortunate as it was when President Eisenhower recovered from his grave illness, or when Franklin D. Roosevelt died and Harry Truman became President and master of the situation.

Our Foreign Aid Program Will Not Work As Presently Designed

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 2, 1956

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks, I am including a statement by Mr. Elgin Groseclose before the House Committee on Foreign Affairs in which he points out that our foreign aid program, as presently operating, is based upon certain facilities. I am inserting his statement at this point:

THE FOREIGN AID PROGRAM

(Statement by Elgin Groseclose, economic consultant of Washington, D. C., before the House Foreign Affairs Committee on Monday, May 7, 1956)

The bill under consideration authorizes an expenditure of approximately $4,900,000,000 for foreign aid. During the first quarter of the current calendar year, the Treasury collected by deductions from wages and salaries of Americans some $6½ billion. This sum will therefore meet the bill for foreign aid here presented and allow a small excess toward the running expenses of our own Government.

It is a paradox of the conduct of our foreign policy that we have shown greater concern for the fiscal stability of foreign governments than for that of our own. For some years, the expenditures under the foreign aid program have been a major factor in the United States budget deficit. Upon this deficit the American taxpayer must pay interest charges. Yet these foreign aid billions are spent essentially to cover the deficits of foreign economies, if not the actual deficits of foreign governments.

FOREIGN AID PROGRAM INFLATIONARY

It is axiomatic that a sound money depends upon a sound fiscal policy and that budgetary deficits are inflationary. A sound United States dollar is essential to domestic well-being. Today, more than ever, it is essential to the well-being of those countries to which we are ministering through the foreign aid program. This is because the dollar has become the standard of value throughout the world, even in Soviet Russia. Happenings that affect the value of the dollar, or confidence in its value, have worldwide effects.

At a time when the inflationary tendencies in the United States economy are causing concern, the inflationary effects of the foreign aid program should be looked at. In addition to its effect upon the fiscal balance, it has disturbing potentials in the money market. The Federal Reserve is currently engaged in tightening the supply of dollars to the United States economy. At the same time the State Department is making dollars available to foreign governments through the foreign aid program, with no strings attached, little or no interest to pay, and with the general result that they may take down these sums, or their equivalents, in gold or in credit balances with United States banks.

What has happened is visible in the monetary and banking statistics. Foreign governments, with the aid of credits made available to them for economic assistance, have been salting away American gold, or piling up balances in our secure American banks, while individual foreigners have become heavy investors in American securities. In the past 5 years, gold under earmark for foreign government account has increased by over a billion dollars and is now around $7 billion. Meantime, the United States gold ratio to money and deposits has been declining and is today at a lower figure than during the depth of the depression in 1933. In addition, net foreign bank balances—mostly for government account—have climbed to around $10 billion. As these foreign deposits can be drawn down in gold—a privilege denied to American depositors but extended to foreign governments—they constitute a further potential drain upon the reserves behind the dollar.

Ten billion dollars, if spent to feed the hungry populations of the countrise to which we are ministering through the foreign aid program, would of course do much to solve our own farm problem.

Under the monetary laws in effect in many foreign countries, dollar deposits are counted the same as gold in the monetary reserve. Thus these foreign dollar balances that we have made possible through our foreign aid largess provide the means and incentive to inflation abroad. Foreign aid dollars are thereby doubly inflationary. First, as deficit dollars moving into the United States banking system through Government bonds, they provide the basis for credit expansion and inflation. Second, as foreign bank balances here they become the base for currency inflation in the recipient country. It was just such a situation, coupled with thinning gold reserves, that brought on the 1929 collapse.

Even when these dollars are spent in the recipient country under United States supervision, their inflationary and other harmful effects cannot be predicted. Dollars appropriated for domestic purposes stay within the orbit of the United States economy, and to the extent that they are wisely appropriated and spent, they generate business activity, demand for capital and consumer goods, payrolls and taxes. Dollars donated to foreign governments pass out of United States control. We hope, but we cannot say, that they will be spent productively and without extravagance. The best judgment of the departmental experts who pass out these doles in inherently unreliable because of the distance and the difference in conditions upon which this judgment must be exercised.

Let us say that dollars are supplied to finance a cement plant. To a limited extent these dollars may come back to us in the form of engineering fees, or orders for plant machinery and other supplies, but there the beenfit ceases. We do not know, and our experts are only able to guess, whether this cement plant will operate profitably, or whether it will require continuing Government subvention to keep it running. We do not know what harmful effects to the local economy will result from this effort to modernize and industrialize livelihood systems that are often primitive, agricultural, and feudal in nature.

AID PROGRAM DEMORALIZES FOREIGN ECONOMIES

Furthermore, by "forced draft," "crash," and other hurry-up programs to hasten modernization, the aid program has frequently demoralized traditional livelihood systems and created the very unrest and unsettlement which it was designed to allay.

We are dealing here with a condition and not a theory. This may be illustrated by two cases which have recently been exposed to public view. The first is Turkey. When I was there in 1951 that country was baking in a glow of prosperity induced by United States largess. Everywhere I journeyed I saw in the countryside bright red American tractors purchased with counterpart funds. It all looked very progressive; but having lived in these lands and also having some personal experience with the problems of farming in this country, I questioned how successful this effort would be to impose a tractor economy upon a people that had since Roman times been getting along with an ox and wooden plow economy. It was very well to have tractors supplied practically as a gift, but who was to pay for the repairs and for the gasoline, and from where was the money to come? From Turkish wheat, when wheat was already a glut on the world market and United States grown wheat was accumulating in storage? And if so, how were the Turks to get their wheat to market without highways and farm-to-market roads? Would Uncle Sam be asked to provide these too? I raised these questions and have been raising them ever since where opportunity presented.

FOREIGN AID PROGRAM PROMOTES UNREST AND REVOLUTION

The payoff to this incautious policy began to appear something more than a year ago, in reports from our representatives in Turkey, telling of mounting economic difficulties, restiveness and public dissatisfaction that were beginning to affect United States-Turkish relations, if not the stability of the Turkish regime. Eventually as you know, we have had to come through with additional largeess to subsidize this unnataural and unbalanced economy which we have fostered through our aid program.

In Afghanistan, our attempts to impose a twentieth century economy on a feudal culture have created tensions and unrest that have played into the hands of Soviet Russia. American engineers, aided by American dollars from the Public Treasury, have created the husk of a Tennessee Valley economy in the wilderness through which the Helmand River flows. The engineering has been relatively simple, however, compared to the difficulties of persuading nomads accustomed since the days of Abraham to settle down to tilling the soil under the watchful eye of a government overseer.

Meantime, the Afghan Government has been saddled with fiscal and administrative problems beyond its competence, while the people of Afghanistan have been burdened with heavy new taxes to finance this fiasco. Prices have risen, and the middle classes are in an inflationary squeeze. No one is happy about the situation. The New York Times, an advocate of foreign aid, reported on the Afghanistan situation in its issue of March 18 of this year in which it refers to the aid program as a "boon" that "has become a bitter burden that seriously threatens Afghan economy and presents the United States with a critical problem in a politically strategic area."

Even when the foreign-aid effort is limited to simple agricultural techniques, it is a hazardous thing for a government such as ours, representing a highly industrialized and developed people, to go into the more primitive areas of the world and attempt to counsel the peoples there on how to improve their lot. The noted anthropologist, Margaret Mead, with a group of fellow scholars,

studied this problem for the United Nations, and reported on the pitfalls in a document entitled "Cultural Patterns and Technical Change."

Even so simple an innovation as an iron plow may have catastrophic consequences, Dr. Mead points out. It throws the carpenter out of work and upsets age-old community patterns. It requires heavier draft animals, which in turn need more fodder than may be available. The wooden plow is light and can be carried from plot to plot, and as a farmer may have several widely scattered plots or strips to farm, the iron plow makes necessary a general rearrangement and consolidation of holdings.

I am not suggesting that modernization would not be good for those cultures and peoples, but this is a task for missionary and philanthropic agencies whose personnel dedicate their lives to the people they serve and who acquire from long experience an understanding of their needs and what can be accomplished. It is not a job for United States Government officials who go out for 2-year stints and who inescapably stand in the eyes of those people as representatives of a distant and alien power.

I pass over the incentives to graft, corruption and extravagance among the recipient countries which this gushing fountain of United States dollars provides, since these are presently under scrutiny by another committee of the Congress. I may only add that Washington has been on notice of these pitfalls. I was in Iran when the aid program was getting started—supposedly as a simple technical assistance program—and I saw the amazement of our officials there when they were notified by Washington that they were to have $50 million to spend during the following year. I am confident that their misgivings were reported to their superior officers.

FOREIGN AID PROGRAM PROMOTES SOCIALISM AND COMMUNISM

A further criticism of the foreign aid program is that while the domestic policy of this Government is to preserve the system of private enterprise among us by getting the Government out of business, in the conduct of our foreign policy it is putting foreign governments increasingly into business, financing programs that promote statism and socialism and in other ways weakening attachment to the system of private enterprise. The United States is in fact doing concretely what Soviet Russia has been doing through propaganda: it is pouring out vast sums to promote totalitarian and communistic economic and political systems. It fosters 5-year plans, 7-year plans, state planning boards, imitation TVA's; it has put governments into the electric power business, into cement manufacture, into slaughter and meat processing, textile manufacture, tanning, sugar refining, milk processing, and other commercial undertakings. The list, if exposed, could be expanded enormously.

POLICY OF SUBVENTION

The trouble with the foreign aid program is that it is too much concerned with dollars. It is a policy of statecraft by subvention that is familiar to history but rejected by the founding fathers as repugnant to the American spirit and character, as well as ineffective and illusory. When the French Directorate in 1797 asked for money in return for French political favor the cry of protest arose, "Millions for defense but not one cent for tribute." Instead, Congress voted money to establish an American Navy.

The story of how the American Navy came into being can hardly be found in the high school history texts of today, and a generation has grown up unaware of the traditional American repugnance to statecraft by subvention. Today, the policy that the United States does not buy allies or favor has been dumped. To placate the Arabs and Jews we offer to develop the Jordan valley. To the Indians, we offer locomotive and steel mills; to the Egyptians we dangle the prospect of aid on a fantastic billion dollar power and irrigation scheme which will permit Egypt to double its population and its capacity for mischief. If subvention is a hard word, how else explain the official anxiety over Soviet bidding in the game? If the State Department is so piously concerned about a rising standard of living as an antidote to communism, then why its dismay at Soviet offers of economic assistance?

Actually, the question is not who is being bought but who is being sold. On several counts the State Department has not dealt frankly with the American people on the subject of foreign aid for Asia and the Middle East. The American public was given the idea at first that the program was in the nature of a simple agricultural experiment but from the start it has been a program of subvention. In Iran, where the program started, the largest single item the first year was for the purchase of sugar—some $10 million, I believe. Today, while the foreign aid strategists make much in the public press about the value of foreign aid in raising living standards, in close policy conferences the concern is about projects that make a show. The current officialese for such projects is monuments. One official seemed to argue that a steel mill in India should be located near the pilgrim centers so that as many millions as possible could see it, presumably with a large multilingual sign in neon—"Made in United States of America." Five years ago these officials were content with a less expensive model village set in the middle of a desert.

The Department speaks reassuringly about "our friends abroad." But who in the Department or outside—can say which are our friends and which are not? The unkind words of our French friends uttered a few days ago come like an echo of the nineteen twenties. Who can predict what allies we may have in case of war? The armies of Asia and the Middle East that we are equipping, do we know that they will fight, or if so with what zeal, or that they will remain neutral, or possibly turn their American-made weapons against the very people who supplied them? We have the recent case of the reversion of our good friends the Ceylonese, whose sentiments we had considered to be of the firmest.

AID PROGRAM FAILS TO MEET BASIC PROBLEMS ABROAD

The foreign aid program is based on a misconception of the nature of the problem with which it deals. The foreign aid program is dedicated to the notion that the ills of Asia and the Middle East are economic at root, curable by the application of scientific techniques of production and by sufficiently large doles of money (U. S. variety). It goes on the theory that communism breeds on poverty and that the antitdote to revolutionary unrest is a "rising standard of living."

Yet official reports in the files of the agencies show that there is no observable correlation between standards of living which the United States Government has spent billions of dollars to raise throughout the world and the political unrest and drift to communism in those areas where this money has been and is being spent. In Italy, for instance, communism is more widespread in prosperous northern Italy than in proverty-ridden southern Italy; in Italian factories Communist strength is often greatest in those where working conditions are best, wage scales the highest, employees benefits the most liberal. Despatches to the New York Times from its German correspondent last December reported that "the consensus of year-end messages by representatives of the government, industry and organized labor, is that prosperity in itself has not been an effective weapon against the Communist Party" (issue of December 29, 1955).

In Asia, it has been observed, the centers of unrest are frequently the universities, and the leaders of antigovernment and anti-American movements have been the well-fed, well-clothed, well-housed, and presumably well-educated students. This was my personal observation during a year of travel in the Middle East in 1951.

One can but wonder at the lack of official courage in coming to grips with the true causes of unrest in Asia and the spread of communism. The facts are well known or should be well known to the departments from their many competent observers abroad. These are that Communist strength in Asia arises primarily from dissatisfaction with misrule, economic and political injustice, official corruption, and like evils which the governments of the regions either condone or fail to attack. And anti-Americanism arises in large part from our indifference to these conditions in a preoccupation with what has come to be called abroad point 4 colonialism.

During some 8,000 miles of travel through the Middle East in 1951, studying the village and pastoral economy, I made many inquiries of peasants and nomads as to their dissatisfaction. The answers brought forth no complaint of living standards, despite the evident poverty, but much of such things as unjust landlord exactions, corrupt judges, indifferent policy, military conscription, denial of the right to bear arms, and the like.

When the citizens of Boston dumped 342 chests of tea into Boston Harbor on the night of December 16, 1773, they did not do so because of its quality, or its price, or because they preferred coffee, but because they were subjected to taxes, as Samuel Adams said "without their having a legal representative where they are laid." The foreign-aid program assumes that the peoples to whom it ministers are somehow different from Americans, that they are obtuse to the political and social conditions of their existence and are responsive only to the material.

The dollar approach to the problems of the world's ills, the theory that greater production is the key to prosperity and peace ignores, or dismisses as inconsequential, the political and social causes of unrest, such as the faulty organization of government, official laxity and corruption, government intervention in the market, statism, inequitable taxation, imperfect judiciary systems, and venal courts, police brutality, chaotic civil service, nepotism, uncertain paydays, bureaucracy and overstaffing, loss of morale, official impotence and feeble leadership—these and others that could be named.

The hunger for improvement which is prevalent abroad, or the "revolution of expectations" which we observe abroad is a hunger that will not be satisfied by the stones of superior mechanical and scientific techniques. As Minoo R. Masani, the Indian industrialist, speaking at Mount Holyoke College, said, "You have a feast to spread but you give us only the crumbs. Among the qualities which the United States might well share with the East," he went on to say, "were love of freedom, belief in the dignity of labor, the spirit of adventure, and a world-sized mind."

And I might add, it needs the informing ideas which govern activity in this country; it needs the dedication to a task which only attachment to a great religious faith can provide. I mention this because the only observable fruit of the foreign aid program in Asia and the Middle East has been the fires lighted by the personal witness of some of the more dedicated officials of the program. This is worthy of mention in a hearing such as this, because it goes to the

very core of the question of American responsibility to the world, and the means by which this responsibility may be discharged.

President Eisenhower, speaking impromptu and from his heart at the fourth annual prayer breakfast held in his honor on February 2 of this year in Washington, explained the background of the prayer which he said at his inauguration, by saying that he wished to lift up a witness to the fact that a new chief executive was being inaugurated over a Nation that was founded on a religious faith. "We are telling people that this Nation is still a Nation under God" he said, and added, "This is terrifically important today."

What the President told the Nation at his inaugural, however, the foreign-aid program is failing to tell the peoples of the world; but rather it is saying in effect, through its emphasis upon money and techniques and scientific paraphernalia as the cure for the world's ills, that we are a Nation that worships Mammon. "Too much of the world believes the United States to be completely materialistic," the President declared and it may well continue to do so if the concepts and hypotheses of the foreign-aid program are to become a permanent element in American foreign policy.

SUMMARY

In summary, the foreign-aid program is bad policy for the following reasons:

1. The program is inflationary both at home and abroad.

2. The program is frequently demoralizing to recipient countries by:

A. unsettling traditional livelihood patterns,

B. fostering booms and fiscal extravagances,

C. inducing grafts and corruption;

3. The program stimulates statism, socialism, and communism abroad.

4. The program is a statecraft of subvertion that is contrary to American tradition and historic policy, that it is self-corrupting and ineffective.

5. The aid program nurtures frustration, political unrest, revolutionary tendencies, and anti-Americanism among recipient peoples.

6. The aid program gives a wrong idea abroad of the true sources of American vitality, well being, and prograss;

7. The aid program fails to meet the basic problem to which it is dedicated.

(EDITOR'S NOTE.—Elgin Groseclose, an economic consultant of Washington, D. C., was Treasurer General of Iran in 1943 and is the author of Introduction to Iran and other works dealing with the Middle East. He recently served as consultant to the Administrator of the Small Business Administration and as acting deputy director of the Office of Economic Affairs (Department of Commerce).)

An Open Letter to Secretary of State Dulles

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, May 14, 1956

Mr. MULTER. Mr. Speaker, Secretary of State Dulles has recently stated to congressional committees that he does not know what Communist arms Egypt has received. I accordingly address him as follows:

DEAR MR. SECRETARY: Is it not a fact that as of April 16, 1956, your files record that Egypt had a minimum of the following: 50 Ilyushin jet bombers, 200 Communist jet Migs, 50 Stalin tanks (60 tons each), 400 Katushka rocket launchers, 6 Soviet submarines, 18 battle cruisers, Communist-made motor torpedo boats?

Please do not say the information is classified.

Nothing can be classified that the whole world knows about.

Sincerely yours,

ABRAHAM J. MULTER.

Cleveland: How To Beat Slums

EXTENSION OF REMARKS
OF
HON. CHARLES A. VANIK
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, May 14, 1956

Mr. VANIK. Mr. Speaker, I want to call the attention of the Members of the House of Representatives to the efforts that are being made in the city of Cleveland to arrest the spread of slums and blight by local efforts. The Cleveland effort was recently reported in the Christian Science Monitor of Wednesday, May 9, 1956, in an article prepared by Robert C. Bergenheim, staff correspondent, and entitled "Cleveland: How To Beat Slums."

The citizens of my community are extremely anxious for a liberalization of housing laws to permit a widescale Federal participation in slum clearance and urban renewal. They have manifested exuberant citizen interest in this important work. Mr. Bergenheim's report of May 9 is as follows:

CLEVELAND: HOW TO BEAT SLUMS

(By Robert C. Bergenheim)

CLEVELAND.—Imagination, good business sense, and local pride can turn the tide against slums and preserve healthy neighborhoods. Cleveland is proving just that.

A group of private citizens here pitched in to prove to homeowners through demonstration that well-kept properties are worth more than dilapidated, gloomy structures.

The national interest which has developed in Cleveland's experiment is proof of the true proportions of this program of arresting blight. National statistics show that more than 24 million dwelling units in the United States are in need of repair.

In Cleveland alone one-third of the 300,000 dwelling units were found in need of repair or renovation. An additional 36,000 are beyond saving and must be demolished. There are many cities—particularly the older ones—which are far worse off than Cleveland.

Cleveland citizens and public officials fully recognize the urgency of the problem. Many cities are well underway with Federal urban renewal projects. So is Cleveland. But, in addition, private enterprises have joined together in Cleveland as a major and effective movement against potential slums.

Six months ago a nonprofit organization—Cleveland Modernization, Inc.—was established, with an 18-member advisory committee representing every segment of community interest. This group supports Operation Demonstrate. It is being studied by communities with similar problems from coast to coast.

Operation Demonstration—or OD, as it is being called—is an all-out effort by private enterprise to keep sound residential housing from sliding downhill into slums. It wants to save neighborhoods while they still have their local charm and value. Working with OD has been the American Council To Improve Our Neighborhoods, a national nonprofit organization which hopes to use Cleveland as an example of what can be done to save neighborhoods.

DRAMATIC STEPS NEEDED

Local and family pride are factors just as important as comfort and protection of the real-estate owner's pocketbook. Blight is such a slow, creeping process that it takes dramatic action as supplied by OD in Cleveland to open the public's eyes to the danger.

Instead of telling homeowners what a remodeling job can mean to them, OD has shown them. The slogan "Paint up, fix up, and clean up" doesn't inspire many homeowners to action. But concrete examples of the wonders of the paintbrush, hammer, and saw can stir the imagination, especially if it is a neighbor doing the sprucing up.

Most dramatic part of the Cleveland project has been the remodeling of two houses that were slated for demolition in a Federal urban redevelopment area.

With the permission of Mayor Anthony Celebrezze and other city officials, these houses were moved to the mall. Architects, decorators, and home suppliers were turned loose on them. One was turned into a home of traditional design, the other to contemporary.

These were the first two demonstration houses. Others have been tackled in various sections of the city. Public interest has gone beyond initial expectations. More than 40,000 persons visited the 2 model homes on the mall in the first 4 months they were open.

National magazines, local newspapers, radio and television stations have joined with bankers, real-estate firms, contractors, painters, department stores, and many other groups to sell the idea of Operation Demonstate.

The unprecedented enthusiasm of some of the outside interests has caused some local criticism, however. For example, one local observer claims that the houses moved to the mall were more than redecorated. "They were rebuilt. Only a few pieces of the original lumber survived," he said.

Such a job, he continued, proves only one thing—that with unlimited financial resources any house can be made modern and beautiful.

In defense, some supporters of OD say that visitors to these model homes are not expected to make all the changes shown, but might come away with one small idea which they wish to adopt for their own home.

Expensive decorations supplied by downtown department stores and local merchants also made the model houses good ammunition for the before-and-after photographs for national magazines.

While serving this purpose, some viewers were discouraged, realizing that their modest incomes in no way equipped them to duplicate these show places.

Sponsors of Operation Demonstrate, however say they are more than satisfied with the success of their project. They say that during the first 2 months of the program remodeling permits issued in the city increased 22 percent in number and 49 percent in value compared with corresponding months of the previous year.

Last year $34 million was spent in Cleveland for additions and alterations. In the same period new construction totaled $44 million, according to permits issued.

Some observers, however, do not concede that these percentages are significant nor are necessarily due to Operation Demonstrate.

Realizing that money spent on remodeling must be considered as a wise investment,

Operation Demonstrate set out to prove that remodeling protects a homeowner's financial position.

One 75-year-old house bought by the Cleveland Real Estate Board for $5,300, for example, brought an offer of $10,800 after $2,500 was spent on it, OD officials report.

Such figures have not gone entirely unchallenged by some local observers.

For example, they point to an elaborate remodeling job of a big Victorian-style house in a Negro area where most large houses have been converted into multifamily houses. Local merchants reportedly put between $35,000 and $40,000 into this house that may now sell for approximately $20,000, critics say.

STUMBLING BLOCKS

This sort of situation highlights one of the major dangers to any program aimed at dramatizing the preservation of properties. If a group or community goes overboard on remodeling, the total effect for that particular project is lost. As previously stated, if only proves that with enough money any house can be made as good as new.

A modest remodeling job is more likely to win public approval and get owners to follow suit. It would be practical.

Supporters of Operation Demonstrate constantly warn other civic-minded groups around the country of such dangers. "Biting off more than you can chew is the worst mistake of all," warns Harold Eckes, cochairman of OD.

Other stumbling blocks can be too ambitious programs by outside interests who leave the scene as soon as their needs for the project are satisfied.

Before doing anything, Cleveland OD officials warn other groups to get all their plans on paper, as well as commitments from those who are going to support, work on, and take an interest in the project. Deciding what the operating budget must be and raising it are fundamental steps.

Financial aid for individual property owners expected to go along with the neighborhood conservation program also must be considered. To the owner of a $5,300 house the initial investment of $2,500 for remodeling is often out of the question. On the other hand, a family looking for a $8,000 home might be persuaded to buy a $5,300 house and remodel it, as OD claims often can be done. A rundown house often hides its true value under a shabby exterior or a peeling coat of paint.

When OD started in Cleveland 6 months ago open-end mortgages were difficult to get. FHA home modernization loans require full payment within 3 years, which makes monthly payments too high for many persons.

Operation Demonstrate recognized this bottleneck immediately.

LIBERAL TERMS OFFERED

Five local banks—the Cleveland Trust Co., National City Bank, Society for Savings, Central National Bank, and the Union Bank of Commerce—developed a liberalized remodeling loan, repayable over a period of 8 or more years. Increased monthly payments, therefore, were kept within the reach of the homeowner.

Another stumbling block currently is being removed. The local building code specifies that remodeling must conform with a new construction code. A special home rehabilitation code is currently being tested in the Garden Valley area of Cleveland. After it has been tested and if it proves adequate, supporters of OD will push for its adoption for the entire city.

While recognizing the importance of remodeling, Cleveland Modernization, Inc., has done must to advance urban renewal plans for the city. Formed by 100 of the city's largest corporations, this foundation set up a $2 million revolving fund. At present the city is concentrating on two redevelopment projects, Longwood and Garden Valley.

Longwood, no more than 1 mile from downtown Cleveland, has turned from a dreary slum area into a revitalized, progressive community.

Garden Valley is 2 miles southeast of Longwood. Instead of waiting for approval of Federal funds, the foundation and the five commercial banks formed a $2 million mortgage pool to pick up all the mortgages on Garden Valley's private housing if necessary and to underwrite the entire central residential area rebuilding if necessary. Months were saved by this move by private enterprise.

Albert M. Cole, administrator of the Housing and Home Finance Agency, used Cleveland as an example of what can be done by integration of Federal, State, city, and private-business interests in an address before the United States Conference of Mayors this year.

"One advantage Cleveland has enjoyed in late years," he said, "was the habit early established of viewing itself with critical eyes. * * * Cleveland has looked again and again with the vision of what can be built. As a result, in its central area, this city has cleared or is now clearing more than 26 square miles of land—or about 17,000 acres—for transformation into decent, commodious, and financially sound living space. And Cleveland continues to look forward. Its motto might be, 'What past is prologue,'" Mr. Cole suggested.

Classics of American Democracy

SPEECH
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 25, 1956

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 10721) making appropriations for the Departments of State and Justice, the Judiciary, and related agencies for the fiscal year ending June 30, 1957, and for other purposes.

Mr. ROONEY. Mr. Chairman, I yield 5 minutes to the gentleman from Illinois [Mr. O'HARA].

Mr. O'HARA of Illinois. Mr. Chairman, peace will come to this old troubled world of ours and victory will light on the banners of democracy only when we have won the war for the hearts and minds of men.

Until now we have been losing that war. Today is the turning point. What we are doing this day will have profound repercussions all over the world. I think it is safe to say that, measured in the future by the result of the action we now are taking, today will go down as a day of great historical significance. It marks the beginning of the frontal decisive attack in the war for the minds and hearts of men that up to this day of decision has been going steadily against us.

It was the force of reason that gave strength in vision and in deed to those who built for the dignity of man a fortress of democracy on American shores. There is no difference among men of various races and nationalities in common physical needs and in their basic desires and aspirations. The force of reason will be generated in any country and in any clime, in relatively equal measure, when the sources for reasoning are available and in a form of presentment to make them understandable. This I believe.

What we are doing today is to make available to mankind in every clime and translated into every tongue the classics of American democracy that are the sources of the eternal truths of government by, of, and for the people, government that upholds the dignity of all men and respects the purposes of the Creator of both men and nations.

CLASSICS FOR ALL THE WORLD

My colleagues will recall that a year ago when the appropriations of 1956 were under consideration I offered an amendment to provide for funds for a Classics of American Democracy program. While the amendment was ruled out on a point of order, the suggestion embodied in the amendment, I am happy to say, was sympathetically received by the House. That was a year ago. Much has happened in the intervening time. Later in my remarks I shall sketch briefly the events that marked the progress of an idea and its growth in the brief period of about a year into reality.

The important point is that with the increased appropriation for USIA in the bill now under consideration, and with the endorsement and cooperation of the commission on books of which the distinguished Dr. Mark May is chairman, and under the able guidance and experienced direction of USIA, the Classics of Democracy that inspired our forefathers are to be made available to peoples everywhere in inexpensive editions and translated into many tongues.

Heretofore these works were available only in the larger libraries and in editions priced beyond ordinary reach. There were few translations, none at all of some of our most precious national documents. Now they are to go on sale in the book stalls of the world, selling at prices comparable to those for which the literature of the Soviet is sold, and translated by outstanding scholars.

ON SALE IN ORIENT MAY 1

I am happy to be able to report that on May 1, now only a few days away, the following books in paper back editions will go on sale in the Far East at the prices given:

John Adams, Political Writings, 223 pages, 15 cents.

John C. Calhoun, Disquisition on Government, 104 pages, 10 cents.

Benjamin Franklin, Autobiography, Other Writings, 218 pages, 15 cents.

Thomas Jefferson, Representative Selections, 15 cents.

Hamilton, Madison, and Jay, Selections from the Federalist, 231 pages, 15 cents.

Henry D. Thoreau, Selected Writings on Nature and Liberty, 10 cents.

Thomas Paine, Common Sense, 184 pages, 15 cents.

From the Declaration of Independence to the Constitution: Roots of American Constitutionalism, 71 pages, 10 cents.

Lord Charnwood's Abraham Lincoln, 501 pages, 10 cents.

WILL MEET SOVIET PRICES

This is the first time that American classics have been sold at prices comparable to those at which communistic books have been sold. With no publicity, the advance orders ran over 5,000 copies in a week. This is an index of the interest at grassroots level. It is in a field that heretofore we have not touched, leaving it to be monopolized by the Soviet. Now we are moving in, and I can assure my colleagues that what we are doing today in supplying the funds for the expansion of the present USIA pilot program will have tremendous results in our war to win the minds and hearts of people everywhere.

Within a matter of months our American classics will be translated into 25 languages, printed and distributed by local dealers in the respective countries, and sold in all the bookstalls of the foreign world at 10 and 15 cents a copy. Too much credit cannot be given American book publishers for their fine cooperation in developing a program from which their only return will be the satisfaction of rendering a patriotic service.

GRATITUDE DUE SUBCOMMITTEE

The distinguished and most able chairman [Mr. ROONEY] and members of the subcommittee are to be congratulated on the manner in which they have handled the appropriation request of the USIA. While the sum granted is $25 million less than the amount requested by the agency it nevertheless is a considerable increase and provides funds for the agency to carry on the classics of democracy program and to increase its overall work in several critical areas of the world. Some of us believed the full amount requested should have been granted because of the many new and difficult duties which have fallen upon USIA as a consequence of the latest Russian propaganda offensive. Nevertheless, the chairman and members of the subcommittee have done a great and patriotic job and deserve the gratitude of the Nation.

It is next to impossible to speculate with accuracy as to what the Russians might do next in their drive to conquer the world. In the past they have not hesitated to engage in armed aggression to accomplish their objectives. They have long depended upon internal subversion to aid them in destroying the independent action of nations and men. They have demonstrated a capacity to stop at nothing in their fanatical drive to eliminate competition of every sort in the countries occupied by communism.

HOW SOVIET SPREADS DOCTRINE

We also know that the Communists have made tremendous gains in deceiving large numbers of people in many lands as to the true facts about communism in practice. One of their principal weapons to misguide public opinion has always been books carrying the theories and doctrines of communism.

In every country of the world the Russians have put out inexpensive books in the native language in order to get their propaganda story across. By inexpensive books I mean books within the easy reach of students, laboring people and youth. In instances where important groups are made a special target of the Communists thousands of doctrinal books are spread among them at no monetary cost to the victim whatever. In the case of colleges, universities, and outstanding intellectuals the Communists have deluxe, leatherbound editions of the basic works of Marx, Lenin, Engels, and so forth, which are presented as gifts. All in all they make certain that anyone who can read will not find it difficult to come by one of their doctrinal books.

Moreover the Communists have developed the know-how for distributing great volumes of their books. For example, in India the Communists have a virtual monopoly of the inexpensive book market. This accounts in large measure for the confusion among the people of India on the true nature of communism and their so-called neutralism on the question of communism. A captive audience in any country cannot make fair judgments on world issues when they only get one side of the issue. That is one of the major problems of the Indian people.

TWENTY MILLION TRANSLATIONS

The increase in budget granted the USIA will permit the Agency to carry through with its book program planned to counteract the damage done by Communist books and to present the truth about the United States, including our political and social institutions. The Agency has planned to make available over 20 million books in 25 languages to the people of key countries in the free world. These will be inexpensive editions costing between 5 cents and 15 cents per copy. Thus students, laboring people and all interested will be able to get reliable books about the United States at a cost they can afford. This program will be concentrated on those areas where the Communists have flooded the bookshops, colleges, and libraries with their cheap books carrying Communist ideology.

BIRTH OF A PROJECT

In this connection it was my privilege and my pleasure to play a part in launching the project called Classics of Democracy. This project is now known to practically every Member of the Congress and has gained the support of important national organizations and prominent individuals in every part of the country. The Committee on Books Abroad of the USIA has given long and careful study to the project. Recently on the suggestion of the group backing the Classics of Democracy program a pilot project was launched to bring about the production of inexpensive books in some 10 different languages. A number had been recommended by our group as the type best expressing our American political and social philosophy. This project already has blazed the trail for a winning-books program and maximum utilization of the many fine suggestions which have developed from the original project and campaign for the Classics of Democracy.

I hope the USIA will not find it necessary to cut any funds from the book program. I have been assured that it will not. That program is the best weapon we have to help us win a just peace by making the political and social ideals which have made America the leading peace-loving nation of the world, known to millions of people who are hungry for knowledge and the true facts about the American people and the philosophies of democratic government by which we abide.

Again, I congratulate the subcommittee on a job well done.

HOW PROGRAM DEVELOPED

Mr. Chairman, I have stated that I was privileged to have a part in the Classics of Democracy program. It was a part which I shared with the distinguished statesman, the gentleman from Ohio [Mr. FEIGHAN]. The concept was born in, and the dynamic drive in its development came from, the discussions and activities of a small group in Chicago composed of:

Dr. Harold Fey, executive editor of the Christian Century, probably the most widely read Protestant periodical in the country.

Dr. Jerome G. Kerwin, chairman of the Charles R. Walgreen Foundation, University of Chicago. He is nationally known as an educator in the field of political science and a prominent Catholic layman.

Dr. Richard P. McKeon, professor of philosophy, University of Chicago, a State Department visitor to universities in Indiana, and a former member of the United States National Commission for UNESCO.

Dr. Emery T. Filbey, vice-president emeritus of the University of Chicago.

Thomas B. Stauffer, Humanities instructor, Wilson Junior College. He has a rich background in foreign service and was at one time aid to the Honorable Jefferson Caffery.

John McGinnis, President, Pennsylvania Railroad Lodge, No. 225, of the Brotherhood of Railroad Trainmen.

A. T. Burch, executive editor, Chicago Daily News.

Van Allen Bradley, literary editor of the Chicago Daily News.

It began with informal discussions in Chicago motivated by observations made by members of the group during world travel both in an official and unofficial capacity. Their spadework brought them a letter of approval from the Committee on Books Abroad for the United States Advisory Commission on Information. Dr. Mark A. May, chairman of the committee, called upon the Chicagoans to supply a list of books to be considered.

OUTSTANDING JOURNALISTIC ACHIEVEMENT

In February of 1955 the Chicago Daily News called upon its foreign correspondents in different parts of the world to investigate the extent of the Communist book campaign and what the United States was doing to meet it. The reports from Paris, London, Bonn, Rome, as well

as uncommitted parts of Asia and Africa all pointed to the fact that in the words of Van Allen Bradley, the literary editor of the News, "The United States is losing the Battle of the Books." In an editorial which appeared in the Chicago Daily News and in all the Knight newspapers on June 6, 1955, Mr. Bradley pointed out:

Russia is turning out in many languages millions of volumes of inexpensive editions of the classic Communist statements of Marx, Lenin, Stalin and other writers whereas we have nothing to compare with the Communist cheap book distribution plan.

The illuminating and revealing survey of the foreign book situation by the Chicago Daily News was one of the year's outstanding American journalistic achievements. The report will be found on pages 6746–7 of the CONGRESSIONAL RECORD of June 8, 1955.

QUESTIONNAIRE SHOWS APPROVAL

The public response was instant and widespread. Further evidence of the depth of the popular interest in the Classics of Democracy program was furnished by the response to the questionnaire mailed in December of 1955 to 3,500 outstanding industrialists, editors, educators and recognized leaders in labor, veteran and women's organizations to sound public reaction to the proposed program. Another purpose of the questionnaire was to ascertain what books in the judgment of a jury of American enlightened public opinion were entitled to inclusion in the list of books Americans as a whole would agree constitute the imperishable classics of our democracy.

Many of the letters received in response to the questionnaire were published in the CONGRESSIONAL RECORD, as follows: January 18, 1956, pages A488–495; January 19, pages A581–88; January 20, pages A602–607; January 23, pages A666–76; January 26, pages A816–20. The reading of these letters, I can safely say, furnishes a liberal education in the subject. Most of my colleagues, I am sure, are familiar with them. As one colleague remarked, "Once one starts reading, he cannot stop until the last word of the last letter, they are that interesting, inspiring and patrioticly thrilling." Moreover, the letters reflected the thinking of the highest scholarship of the country. If you have not read these letters, you really have missed the substance of a cost enriching hour or two of reading time.

CONFERENCES WITH USIA CHIEFS

Meanwhile conferences had been going on with Theodore C. Streibert, the able director of USIA, Dr. Franklin L. Burdette, Edward O'Connor, Dr. Claude E. Hawley, and others of USIA in which Congressman FEIGHAN and I participated. On January 27, 1956 Director Streibert gave the glad announcement of the launching of the pilot project in the following letter:

DEAR MR. O'HARA: May I extend to you my appreciation for your leadership in highlighting the necessity for creating and distributing overseas inexpensive editions of American classics of democracy as one of the principal means for furthering United States information objectives.

In accordance with our conversation and with discussions you have held with members of the Agency staff, I should like to recapitulate certain related activities the Agency is now pursuing. Inexpensive editions of 25 United States titles in English are being prepared and will be distributed commercially in Asia beginning February 1. Of these, 10 express our basic American social and political philosophy. In February a pilot project will be undertaken to publish 10 titles in foreign languages to be made available in the most inexpensive form possible. Through this project we expect to develop the necessary channels to permit the launching of a large-scale program which will accelerate the overseas distribution of books about the United States. Several of the titles used in this project are planned to be of the type advocated in your proposals.

Looking to the future, we are requesting funds from Congress to permit expansion of the program for the distribution of inexpensive books in English to a level of 80 titles, plus some 440 editions of inexpensive translations, encompassing publication in more than 20 languages. For the most part, these will be available in foreign markets for the equivalent of 10 cents retail, although in some instances individual titles may be priced at the equivalent of 15 or 20 cents, depending upon the requirements of the program in different parts of the world. In all cases, commercial facilities will be used in order that the books may be accessible through normal means.

It is hardly necessary for me to tell you how much all of us in the Agency appreciate the interest you have shown and the work you have done. It is certainly gratifying to learn of the response you have received from hundreds of outstanding citizens and organizations throughout the country. Please extend our thanks to the group of Chicagoans who assisted in promoting the idea of worldwide distribution of the Classics of Democracy and particularly to the Chicago Daily News for its pioneering efforts. We hope they will all continue their interest in this work and that we will have the benefit of their continuing advice.

Sincerely yours,

THEODORE C. STREIBERT.

CONGRESSMAN HAUNTS BOOK STALLS

It would be impossible to overstress the importance of Congressman FEIGHAN'S trip to the Orient after the adjournment of the first session for first-hand information. For days and weeks he haunted the book stalls. Perhaps no American with the single exception of Dr. Richard P. McKeon ever before made such a thorough inspection of what people in the Orient at grassroots were buying and reading. The American people are greatly indebted to Congressman FEIGHAN for the weeks of grinding, fatiguing work he gave to this work. What he found verified in every detail the reports from the foreign correspondents of the Chicago Daily News that we were losing the battle for the minds and hearts of men because the classics of our political philosophy, the classics that inspired our own forefathers, just were not available in translated and inexpensive editions.

On December 9, 1955, Congressman FEIGHAN reported to the Advisory Committee on Books Abroad on his trip to the Far East where he observed the distribution of Communist and other books through commercial channels. His report made a profound impression.

On February 21, 1956, I reported to the subcommittee of the Committee on Appropriations chaired by Congressman JOHN J. ROONEY on the findings of the Chicago group and the results of the nationwide questionnaire among leaders in American public opinion. The testimony will be found on pages 377 to 383 of the public hearings on USIA. I am deeply grateful to Chairman ROONEY and the members of the subcommittee for the lengthy and sympathetic hearing they accorded the presentment of the views of the Chicago group and the larger group nationwide that had responded to the questionnaire. I wish to take this opportunity of expressing the appreciation of all those interested in the Classics of Democracy program to Chairman ROONEY and Congressmen PRINCE H. PRESTON, ROBERT L. F. SIKES, DON MAGNUSON, FREDERIC R. COUDERT, JR., FRANK T. BOW, and CLIFF CLEVENGER.

ADVISORY COMMITTEE ON BOOKS

In February of 1956 the Advisory Committee on Books Abroad of the United States Advisory Commission on Information gave a much appreciated and significant recognition by devoting one of its sessions to a discussion of the project. Congressman FEIGHAN and I were honored by an invitation to appear before this most distinguished body. We were accompanied by Mr. Stauffer, representing and presenting the views of the Chicago group.

The United States Advisory Commission on Information was created by Public Law 402 of the 80th Congress. The members of this Commission serve without pay and represent a cross section of professional and business experience in the communications field. The chairman of the commission is Dr. Mark A. May, director of the Institute of Human Relations of Yale University. Other members of the commission are Erwin D. Canham, editor of the Christian Science Monitor, Sigurd S. Larmon, president of the advertising firm of Young & Rubican, Inc., and Philip D. Reed, chairman of General Electric Co. Assisting the commission in formulating policies there are advisory committees, each chairmanned by a member of the commission.

Dr. May is the chairman of the Advisory Committee on Books Abroad. Its members are George P. Brett, Jr., president of the Macmillan Co., Robert L. Crowell, president of Thomas Y. Crowell Co., Robert B. Downs, director of libraries at the University of Illinois, Charles W. Ferguson, Sr., editor of the Readers Digest, Freeman Lewis, executive vice president of Pocket Books, Inc., Keyes D. Metcalf, former director of libraries at Harvard University, and Charles E. Odegaard, dean of the Colleges of Literature, Science, and the Arts of the University of Michigan.

COMMISSION RECOMMENDS PROJECT

In its 11th semiannual report to Congress, made on March 30, 1956, the Commission approved the recommendation of its advisory committee that "in view of the present world situation resulting from the Geneva 'summit' meeting it is imperative that large quantities of books be translated and widely distributed in certain areas." The Commission stated:

In view of these facts we agree with the Advisory Committee on Books Abroad that it is in the public interest for the Congress of the United States to increase its appropriations for the translation and distribution abroad of selected American books at prices which will compete with those of subsidized Communist books.

In recent months, a group of citizens in Chicago has expressed interest in the translation and distribution abroad in low-priced editions of the Classics of Democracy. We agree thoroughly that a substantial number of the books to be included in the Agency's program of low-cost translations should be of this nature. Some should be complete volumes in original form, others could be collections of basic documents, assembled and described by eminent scholars.

We are glad to note that Congressmen BARRATT O'HARA, of Chicago, and MICHAEL FEIGHAN from Cleveland have been working with this group of citizens on this matter and are taking an active interest in the need for a greater distribution abroad of American books and particularly translations of the Classics of Democracy.

VICTORY NOW IN SIGHT

Mr. Chairman, we now are on our way to victory in the war for the hearts and minds of men. That is why, as I have said, this is a day of historical significance. Again I commend and congratulate the distinguished chairman and all the members of a great and far-visioned subcommittee.

In closing, permit me to cite one recent illustration of how all the world is hungering for the classics of our democracy that heretofore for the most part have been unavailable in translated editions. At long last an edition of the Federalist Papers in Italian has been placed before the people of Italy. The University of Rome recently undertook the translation and publication. The volume is more pretentious than the 10- and 15-cent editions to which I have referred. It is selling for $2.60 per copy. Already it is second on the list of best sellers in Italy.

What, Mr. Chairman and my colleagues, may we expect to come to our country and to the cause of democracy as dividends on what we are doing today when all over the world are classics of democracy, translated into all tongues and selling for 10 and 15 cents a volume, within the reach of everybody?

American Firms Boycotted by Arabs

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 2, 1956

Mr. MULTER. Mr. Speaker, I desire to call to the attention of our colleagues the following article from the May 4, 1956, issue of Israel Speaks. The article describes the manner in which the Arab Middle East is carrying out a directive by the Arab League to discriminate against American firms:

ARAB BOYCOTT HITS UNITED STATES JEWS

(EDITOR'S NOTE: The traditional American firmness in protecting the rights of its citizens in international relations, regardless of race or religion, has received a number of setbacks in recent years. In the face of a defiant and concerted campaign of discrimination against the mistreatment of American Jews by the Arab states, the Government has retreated on all fronts: Where it has not been weakly apologetic for Arab hostility, it has voiced perfunctory disapproval or, worse, remained indifferent to the blatant violations of the rights of American citizens.

(The worldwide Arab campaign against "international Jewry" has concentrated its animus against the Jewish community of the United States. This has taken many forms: A hate-pronaganda drive in this country, launched by official Arab agents and cooperating closely with the native anti-Semitic lunatic fringe; denial of visas to American Jewish tourists and American military personnel; discrimination in employment of American workers for private and Governmental projects in the Arab Middle East; and an open blacklisting of American firms owned by Jews or employing Jews.

(The latter is the subject of the present article. Future pieces in this section will take up other aspects of the Arab campaign against American citizens.)

NEW YORK.—On February 3, 1956, General A. K. Gailani, of the Iraqui consulate in New York, made the following declaration:

"Our policy is that all firms, be they Christian, Jew, or Moslem, are not allowed to do business with the Arab countries if they have a subsidiary or branch in Israel. This was a decision of the Arab League, not of Iraq alone, and the reason is that Israel is at war with the Arab countries."

This was only one of several official statements confirming the Arab League directive boycotting business enterprises throughout the world which maintain commercial relations with Israel's firms. The Arab blockade against Israel herself, an attempt to strangle her economically, had been expanded, several years ago, to include all of Jewry all over the world. The intention was not only to hurt Jews economically: The campaign had all the earmarks of a fullblown anti-Semitic movement directed at Jews as such.

The tactics here has been to bring pressure against non-Jewish firms employing Jews or doing business with Jews by using the threat of boycott. This has been applied not only to the matter of doing business with such firms but even to the import of their products. Gradually the program has been expanded to a blacklisting of all businesses, whether or not they have affiliations in Israel, so long as they are either owned by Jews, employ Jews or even subscribe to Jewish charity appeals. The Economic Bulletin of the Arab League, published in Cairo, reports a total of 162 such firms on the blacklist: 45 British, 44 American, 23 French, 14 Swiss, 11 Argentinian, 10 Canadian, 8 Belgian, 6 Dutch, and 1 Australian. The character of this economic reprisal is clearly anti-Semitic.

SAUDI ARABIA MOST ACTIVE

Most of the members of the Arab League are participating in the boycott, but most active has been the Saudia Arabian government.

Correspondence from Saudia Arabian firms cancelling contracts with American businesses, in the files of the American Jewish Congress, indicate the effectiveness of the campaign. A directive issued by the Saudi Arabian chamber of commerce, at the behest of the Saudi Arabian Government, instructs all firms in the country to discontinue all relations with firms controlled by or employing Jews.

The directive makes clear that any contract drawn up in violation of such orders will be automatically cancelled and that any merchandise imported into Saudia Arabia from such firms will be confiscated. This has forced importing firms in the country to get definite assurances from their business associates abroad that they are free of all Jewish connections.

The nature of such demands is clearly revealed by letters received by American firms from Saudi Arabian companies. For example (letters or quoted verbatim, and follow punctuation and capitalization of originals):

"We very much regret to inform you that our Government has duly published a notice announcing that any Importers of Suadi Arabia must not be permitted to import the goods, any kind of goods, from any Jewish Firms of the world.

"We are obliged to ask you to let us have full particulars as to what faith your firm is belong, to Jewish or Christian? And until we have full particulars from you we are obliged to stop our business with you."

On October 1, 1953, an American firm was informed that:

"In connection with our request for not effecting the shipment of our order by any steamer which belongs to any Jewish steamship company. This is in compliance with our Government's regulation announced recently, further this ordinance warns that any shipment by such steamers will not be allowed to enter Saudi Arabia."

The boycott includes goods manufactured by Jewish firms, though handled by non-Jewish exporters, as evidenced by the following excerpt.

"We have also to inform you that you are well aware we are prohibited to import any goods manufactured in any Jewish factories."

CERTIFICATION DEMANDED

American firms are asked to certify their freedom from Jewish association before any business deal is consummated with Saudi Arabians.

"It is forbidden to deal with a Jewish company or with a company whose any of its workmen is Jewish or has branch in Israel, and if a merchant intended to deal with a company and knows that the same company is not Jewish, should also be asked to submit a letter of certificate issued by the chamber of commerce certifying that neither of its workmen is Jewish."

In a letter of November 27, 1955, it is the Saudi Arabian legation that American firms are referred to for certification.

"According to Saudi Arabian Government's regulation all invoices for the goods supplied, must be legalized by Saudi legation of your side. We are strictly prohibited to deal with Jew firms and therefore it will be appreciated if you can furnish us with a certificate duly legalized by the Saudi legation stating that your firm is not Jews firm."

One of the letters cited above was received by an American firm which, prior to the boycott, did a $2 million business with Saudi Arabia by export of wheat, flour, rice, and textiles. Under the International Wheat Agreement, the United States pays 70 cents for each bushel of wheat shipped as a subsidy to American exporters. American submission to the Arab boycott means, therefore, that such benefits are denied Jewish firms simply on the basis of their religion.

BOYCOTT IS WORLDWIDE

The Arab boycott is world-wide in scope and has as its goal the exclusion of Jews from international trade. Press reports have recently indicated Arab boycott efforts in various European countries, resulting in a number of protests in England, Italy, Switzerland, and Holland. A letter received by Verkoopantoor Van der Heen N. V., The Hague, Holland, begins by explaining that the Arabs are at war with Israel and are "making an economical siege around that Israel" and then proceeds to ask for information about the firm, including the following items:

"Do you have any Jewish employees in your company, if yes, how many and what are the positions held by them?

"Are there any Jews in your board of directors as members?

"Is any of your managers or branch managers a Jew? if yes, please give the name of the department headed by such a man.

"Is any of the persons authorized to sign on behalf of your company a Jew?

"What is the number of Jewish laborers in your factories and offices?

From the evidence already cited, it is clear that the boycott is inspired and directed by the Arab League and the individual Arab countries, and that it is not simply a policy instituted by private Arab firms, as some United States Government officials have declared. It is, besides, impossible to assume any private initiative impinging on international relations in a rigid despotism such as Saudi Arabia, for example.

Moreover, official representatives of Saudi Arabia in the United States have been directing the boycott and channeling all certification. Affidavits filed with the American Jewish Congress show that the Saudi Arabian consulate in New York has labeled some American firms as "undesirable" and has refused to legalize commercial invoices.

Representatives of American firms have been questioned closely by the consulate as to their Jewish affiliations and Jewish personnel. Even messengers delivering papers from American firms to the Sauri Arabian Consulate have been questioned about their religious affiliation. It is indisputable that the anti-Jewish discrimination is the official policy of the Arab governments, zealously executed and promoted by their authorized agents in the United States.

STATE DEPARTMENT INACTION

What has been the attitude of our State Department on this official discrimination against a segment of the American population and the high-handed behavior of Arab diplomats in this country?

When the matter was first brought to the attention of the State Department in 1952, it was taken up with Saudi Arabian representatives informally. In a letter to Senator HERBERT LEHMAN, Assistant Secretary of State Jack K. McFall declared that these efforts had been successful and that the broad restrictive Saudi Arabian decree has been superseded as of April 4, 1952.

But the boycott has continued and has, in fact, become more open and more brazen.

Further efforts to bring the anti-Semitic campaign to the attention of the State Department and suggest some action in defense of American citizens' rights have been met with indifference or with attempts to evade the issue by labeling it a private boycott.

"The Department hopes [wrote the then Assistant Secretary of State Thruston B. Morton on December 15, 1953] that these instances are in the nature of sporadic, out-of-bounds actions based on excessive zeal or misunderstanding on the part of certain individuals rather than an indication of fundamental intensification of boycott practice by the Saudi Arabian Government."

That the Arab boycott is not a sporadic, out-of-bounds affair of some individuals is abundantly evident from the letters cited which refer to the Government ban, and from the statement of Arab officials themselves. On December 29, 1955, for example, the New York Mirror reported the Saudi Arabian blacklist of Jewish firms and added:

"At the Saudi Arabian consulate in the Chrysler Building, a trade attaché admitted that American firms either owned or headed by Americans of the Jewish faith cannot do business with the Arab country."

DUTCH ACT, STATE DEPARTMENT DOUBLETALKS

The attitude of the State Department has been hesitant and uncertain: It has indicated apprehension about possible repercussions more than concern about the violation of the citizens' rights. The Dutch recently set an example of courage and integrity by calling on its chamber of commerce not to supply information on the number of Jewish executives and employees in Dutch export houses as demanded by Arab firms. But the United States State Department speaks of the delicacy of the problem and an informal approach and even attempts to fly in the face of the facts by suggesting the boycott is due to the excessive zeal or misunderstanding of some individual Arabs.

A more recent illustration of the quality of State Department thinking on the issue is found in the testimony of Secretary of State Dulles before the Senate Foreign Relations Committee on February 24, 1956. In a colloquy with Senator HUBERT HUMPHREY, of Minnesota, Mr. Dulles launched into a discussion of Moslem religious practice in Saudi Arabia, and then continued:

"Now, we do not like or approve of or acquiesce, except perforce in any such practices, such as that, but we do have to recognize the fact that Saudi Arabia is an ally, became an ally in the first instance through the conversations and subsequent communications with President Roosevelt, and we have a very special relationship there with that Government.

"That does not mean we approve of all its practices at all. It does mean we get along together in a way which is of mutual advantage.

"We, perforce, accommodate ourselves to certain practices they have which we do not like."

There are a whole host of precedents in American history where the American Government insisted that its nationals be protected, without regard to race or religion, and upheld the rights of American citizens without discrimination. Today, the American Secretary of State declares that we must accommodate ourselves to an antisemitic campaign launched by the Arab States, directly affecting American citizens, and being conducted by foreign diplomats in America.

As Senator LEHMAN wrote to Secretary Dulles on January 25, 1956:

"Would you not agree that our Government has an obligation to its citizens, and its own ideals, to let the Government of Saudi Arabia know not only on one occasion but on repeated occasions that we view with utmost distaste this policy of antisemitic discrimination?"

MOHAMED ALI MOHAMED SULEMAN,
Manufacturers' Representatives,
Importers, and Commission Agents,
P. O. Box 37 Jeddah,
(Saudi Arabia).

It may also be noted that according to Saudi Arabian Governments' regulation all invoices for the goods supplied must be legalized by Saudi Legation of your side. We are strictly prohibited to deal with Jew firms and therefore it will be appreciated if you can furnish us with a certificate duly legalized by the Saudi Legation, stating that your firm is not Jews firm, otherwise we regret we shall not be able to enter into business with you.

However, we are obliged to ask you to let us have full particulars as to what faith your firm is belonging, to Jewish or Christian, or until we have full particulars from you we are obliged to stop our business with you.

DEAR SIRS: Our Government has announced today that your firm is Jewish one. Therefore, you must ship all our goods or orders through your sister English or American firm, otherwise we shall be unable to honor your drafts and we shall both be on a very, very unexpected loss.

We regret to have to inform you that our chamber of commerce has published a notice of our Government's order which warn all importers of our country that no one should cooperate with any Jews firms of your country. Along with the notice a list of some names of Jews firms is attached, and among these names your name is also mentioned as Jew's firm. This order is strict, and it warns that if anyone will import the goods from these firms their goods will be held out by Government and no application will be considered for its exemption.

We very much regret to inform you that our Government has duly published a notice announcing that any importers of Saudi Arabia must not be permitted to import the goods, any kind of goods, from any Jewish firms of the world.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the daily RECORD at $1.50 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

"We Who Are About To Die—"

SPEECH

OF

HON. CLARENCE CANNON

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 10, 1956

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 10986) making appropriations for the Department of Defense for the fiscal year ending June 30, 1957, and for other purposes.

Mr. CANNON. Mr. Chairman, the bill before us is the most important bill of the session. It deals with the most vital and most important issue before the American people today. It carries inevitable, imperative, and inescapable allocations and it appropriates vastly more money than all the rest of the appropriation bills that have been passed or that will be passed by this Congress. It provides the money for national defense. It carries funds for the preservation of free government around the globe. It is the last hope of civilization. If it fails, if America falls, there is no other people, no other government left to take up the torch stricken from our hands.

So we have little option, little latitude in the drafting of this bill. It is merely a matter of how much money can be used effectively by our technicians, our masters of strategy, and our agencies of production. So the committee is going along, largely, with the budget. We are accepting in general the decisions of the President and the Pentagon as to amounts and allocations, although there are some of us on both sides of the aisle who must reserve judgment on some items.

We are reaching a critical period in a time of our greatest national danger. The situation demands sane and constructive thinking divorced from political interest or partisan influence. We must have the facts. The stakes are entirely too high for us to take a chance on the slightest uncertainty.

The principal editorial in the Washington Post of this morning says:

> The military structure ought to be scrutinized from top to bottom.

Then it continues:

> A study by independent men of stature could help to bring to bear by appropriation time next year some of the fresh thinking everyone talks about and seemingly no one does.

That is a rather drastic castigation of this budget, but it is the considered opinion of one of the great newspapers of the Nation. The duty of such scrutiny and such thinking devolves upon this House and for the time being no one else can discharge that responsibility. It has been in the hands of the committee since January, and we now submit it to you for your adjudication.

Let us look at the fundamentals.

First, can we avoid war? Will we ever be called on to use the armaments for which we are spending this $33 billion or $35 billion? Of course, all of us are by nature optimists. We prefer to believe that there will never be occasion to defend our families, our cities, our Nation, against predatory murder and rapine, against the Tamerlanes, the Genghis Khans, the Stalins in Russia, the Mao Tse-tungs in China, the Ho Chi Minhs in Vietnam, or the Kim Il Sungs in North Korea.

We hope we shall never have to defend our Nation against these barbarians who torture body and soul as in the case of General Dean and Cardinal Mindszenty and thousands of others who have suffered unspeakable martyrdom, a martyrdom which they threaten to inflict on every American in the United States.

We are a peace loving, peace prospering people. All our interests lie along the paths of peace and international amity. We have endeavored in every way possible for the past 10 years to reach an honest and honorable agreement with Russia. We have humiliated ourselves in numerous conferences, and all without avail. Just a little more than a month ago, the United Nations Disarmament Subcommittee with representatives from France, Canada, Britain, and the United States resumed discussions in London with that in view. All were agreeable except Russia. Russia alone dissented. Russia alone insisted upon maintaining the present status and continuing the race of armaments which is disturbing the whole world. The Kremlin offered only lip service and in the meantime Russia has continued to manufacture more arms; has made more progress in scientific warfare than any previous year in the history of that nation or any other nation in the world in like time.

There can be no cause for apprehension on the part of Russia. The United States by its long and consistent course of honorable associations with other nations of the world has shown itself to be a friend under all circumstances. We established the Cuban Republic when that fertile island was thrown in our lap, and we could have had it for the asking. Instead of appropriating and exploiting it as a dependency, we preferred to make it an independent nation. In the Philippines we spent billions of dollars rebuilding the war-torn islands and rehabilitating the people and establishing schools, roads, and commerce and self-government to such an extent that everyone there today is our friend. We could have taken the Philippines over, without opposition, had we entertained any disposition toward colonization. Instead we made them a free and independent people in the family of nations.

In our relations with our sister Republic, Mexico, on all occasions we have accorded her the most deferential and amicable treatment, leaving no doubt in anyone's mind of the peaceful and friendly attitude of the United States toward all the peoples of the world. We entertained the same friendship for Russia and the Russian people. We saved her in her war with Germany. But for American ships, American planes, American arms, and American food she could not possibly have survived. But no sooner was the danger past and peace assured than the Soviet Government, seizing every adjacent nation, announced her policy of extending Russian communism and Russian rule throughout the world. In pursuit of that policy she closed down the Iron Curtain and prepared to subjugate the globe by force. And from 1945 down to the present day, the factories and laboratories of Russia producing war materials have been running on 3 shifts, 24 hours a day, in the feverish effort to prepare themselves to take us over, as they have taken over Poland, Estonia, Czechoslovakia, Latvia, Bulgaria, Lithuania, Hungary, Rumania, Albania and adjacent territories. One by one their inhabitants were subjected to selective massacre and their property carried to Russia and all are today abjectly under the heel of the Russian tyrants.

When they have so often and so emphatically expressed their hatred for us, our form of government, our religion, and our way of life, what reason have we to believe that, once they have enough long-range bombers, America and Americans would receive any different treatment?

In this continuous preparation for war throughout the last decade the Soviets could have no other possible purpose than the subjugation of America, the wholesale destruction of the majority of our people, and the looting and confiscation of everything we possess to such extent that the miserable remnant of the American people would be decimated as completely as the famine-stricken Kulacks of Russia, who were starved and exterminated by the millions in the purges instituted by Stalin to establish his dictatorship.

But even if we could secure a covenant with the Soviets, it would not warrant a slackening of our preparations for defense. The Soviets have never kept a single international agreement they have ever made. That is a sweeping statement, but wholly justified by the facts.

The distinguished gentleman from Missouri [Mr. SHORT], former chairman of the Committee on Armed Services,

now ranking minority member of that committee, called attention to this situation when he reminded us in January that the Reds have consistently broken the Korean truce in order to build up their airpower. They realized that airpower is critical and supreme. They solemnly agreed when they signed the truce that they would not increase their forces or their war facilities. At that time they had 12 airfields. Today they have 39. When the armistice was signed, they did not have a single Mig plane. They now have 350. On the night of July 27, 1953, the day the armistice was signed, planes were detected entering North Korea from Manchuria. If they broke their word the very day the treaty was signed, what can we expect in the future?

They have all these years publicly proclaimed their hatred of us and their determination to destroy us and they have never retracted or deviated from that purpose.

But now there are alarming developments. We have always believed that our superior Air Force rendered us immune to attack. It has never occurred to us that any nation, much less backward Russia, could develop intercontinental bombers or nuclear bombs which could be used against us. Now, within the last few months it has become increasingly evident that we are losing our battle with communism. Those in a position to know have testified before House and Senate committees that Russia is attaining a frightful lead over the United States in long-range bombers and guided missiles.

Although in 1945 the United States had the most powerful Army, the greatest Navy, and the most effective Air Fleet in the world, top-ranking military officers now inform us that the Soviets have a numerical advantage in long-range bombers and the rate of production of nuclear aircraft.

With a continuation of the present trends they will have a greater striking power than we in 1958 or 1960, if not before.

General LeMay testified that even today the Soviets have more Bisons and Bears—that is the equivalent of our B–52's—in their armory than we have B–52's; and that statement is not disputed. And the ominous feature of it is that we are told by our military authorities that the United States Air Force does not now plan to increase the rate of production of the B–52's, even to equal to the combined production of the Russians in modern-type bombers. They are producing more rapidly, and we agree they are producing more rapidly, yet we have no plans whereby we propose to remedy that situation.

To further impair American defense, Russia has just announced they will soon have an intercontinental missile with a hydrogen warhead they can place anywhere in the world. There is no known defense against a ballistic missile.

Already Russia claims to be on the way to production of a missile with a practical range of 1,500 miles. That would bring within range all our European allies.

Air Force Secretary Quarles said on April 24 that in view of our past experience with Russian claims there is little room to doubt her announcement of an intercontinental missile. For example, he said Molotov boasted in 1948 that Russia had the secret of the atomic bomb. At that time we were certain nobody but the United States had the secret, but that very year they exploded their first bomb 4 years in advance of the shortest time we had reason to expect they could possibly develop it.

Again in June of 1953 Malenkov announced they had the secret of the hydrogen bomb which we considered unknown to anyone outside the United States, and the following August they fired their first hydrogen bomb.

The Russians in the past have made good on their claims, said Secretary Quarles, and there is no reason to disbelieve them now.

In this connection, while we have had reason to believe we have the most advanced scientists in the world, we are now warned by the Chairman of the Atomic Energy Commission, who certainly should know what he is talking about, that the Russians are surpassing this country in the training of technicians of all kinds. They have today more young men studying in approved scientific schools than we have and they are turning out more than twice as many as the United States is training. According to estimates by the Engineers' Joint Council of the United States Bureau of Labor Statistics, our minimum need for engineers from our graduating classes is 40,000 each year for the next 10 years. Last year we graduated only 23,000. I have just spoken to the gentleman from Illinois [Mr. PRICE] here, who has been long a member of the Committee on Armed Services and also a ranking member of the Joint Committee on Atomic Energy, and he tells me he is thoroughly familiar with that situation and fully agrees with the estimate.

Mr. Chairman, here is something of which we should take particular note. You remember very well when we used to laugh at the idea of the Russians knowing anything about mechanics. We were told that when we delivered an automobile over there it was shortly out of commission and nobody could repair it. We thought they were just inept, incapable of mechanical training. As in everything else we underrated them. But we have discovered that frequently they are outmatching our own scientists and mechanicians.

Mr. Chairman, America won the First World War and the Second World War by outproducing our enemies. What is the situation today? We are falling down on the job. Our factories have shown themselves to be remarkably deficient. Hundreds of our jet planes will not fly in battle. Out of every 100 bombers delivered, 30 do not fly. You cannot get 30 of them off the ground. And out of the remaining 70, an average of 15 always turn back before they reach the target.

That is the fault of the plants. It is inefficient production. It is inefficient supervision of our production facilities. Up to this time our plants have delivered to our military authorities only 78 B–52's, when they are the heart and life of national defense. It is the one and only weapon with which we can reach the heart of the enemy. In the coming war we must strike Moscow and the production plants of Siberia. We must drive straight to the center of Russia. Yet there is at this time only 78 planes that can deliver bombs on those targets. Out of the 78 B–52's that have been delivered only 47 have been accepted. What is the matter with our factories? What is the matter with the supervision of production in this country? What is the matter with the strategic command that temporizes with this tragic situation? We must have B–52's. Nothing else will fill the bill; still we have only had 78 delivered and out of those 78 only 47 can fly.

In February, March, and April of this year, down to May 1, our factories have delivered only 17 B–52's, while the Russian factories are in full production. Out of the 17 B–52 planes delivered to us only 2 were accepted in more than 3 months—2 of these vital planes in 3 months, and in the moment of America's greatest danger. Think of it. When only a show of strength will keep us out of war, how can we hope to avoid attack when the B–52 is the only weapon Russia fears?

These defects and these delays may have been the responsibility of the manufacturers. But what about the responsibility of the Department? Fifty-six planes were ordered by the Navy Department at a cost of $1,350,000 each. They were delivered at intervals, one by one, over a period of a year and a half. All delivered and all paid for. And not a one of them would fly. They could not even get them off the ground. The first plane was delivered and the Navy paid for it. It would not fly. The second was delivered and again the Navy paid for it. It would not fly. And so over a year and a half the remainder of the 56 planes were delivered and paid for. Who was asleep at the switch in this critical period while Russia was taking the lead in airpower?

Secretary Wilson, who comes to us from one of the most efficient production plants in the world, seems to be somewhat confused as to why or whether Russia is ahead. During the inquiry when he was before the committee, I asked him about our relative production and he declined to commit himself. I tried to get him to say "Yes" and he would not say "Yes." I tried to get him to say "No" and he would not say "No." But when he was pressed for information by the newspapers, he gave them information he would not give the committee. He said both "Yes" and "No," and at the same time. On May 2 he told the reporters, and I quote what he said:

> The best information I have is that Russia is currently building at a somewhat higher rate than we are.

But on May 9, as reported in the Washington Post of that date, he flatly denied that Russia is, and I quote again: "far outstripping the United States in terms of airpower."

I am certain that when you consider the phraseology the two statements can be harmonized.

But, again on May 8 Secretary Wilson said:

The production schedule of B–52 bombers, which has been 6 per month against the planned rate of 17 per month, will be stepped up to 20 a month.

And only 2 out of the 17 were accepted.

From January 1 to May 1, 1956, only 6 of these planes have been accepted. That is less than two a month. Is it any wonder that Russia is forging ahead of us in terms of production?

So, the newspaper men, despairing of securing detailed information from the Secretary, appealed to the President. President Eisenhower told them that the fact that Russia was ahead of us was nothing to worry about.

Nothing to worry about.

In that respect the President differs from every magazine and, so far as I am informed, from every newspaper in the United States which has referred in its news or editorial columns to Russian superiority in rate of aircraft production. The Reader's Digest, for example, with the largest circulation of any periodical in the world, and the Saturday Evening Post, with the largest circulation in the United States, have carried for the last 2 years comprehensive and emphatic articles by eminent authorities in which they predict the most ominous results unless something is done to step up our production of long-range planes. Many other periodicals have carried similar articles, a number of which have been inserted in the CONGRESSIONAL RECORD.

Articles and editorials in this week's papers, notably the Washington Post, carry instructions from the civil defense authorities, who after more than 3 years study of the situation, advise all citizens to prepare food and work out a route over designated highways and at the first signal to evacuate the cities in such haste as not to wait for members of the family in other parts of the city. Gen. Earl Partridge, head of the Continental Command, told a congressional committee he could not defend this country against even a small atomic attack.

After more than a century and a half during which America has never been invaded, Americans do not take kindly to the idea of a second-best Strategic Air Command.

The CHAIRMAN. The time of the gentleman from Missouri has expired.

(Mr. CANNON asked and was given permission to extend his remarks.)

Mr. MAHON. Mr. President, I yield the gentleman 10 minutes additional.

Mr. CANNON. Mr. Chairman, I shall condense as much as possible.

Mr. Chairman, the President, for whom I have the warmest personal regard, and whom I have followed implicitly in all defense recommendations, did not deny that Russia is outstripping us in rate of production. He did not deny that Russia now has more effective long-distance bombers than we have. He did not comment on the claim that Russia has better planes than we have.

He said:

We have the most powerful Navy in the world and it features one thing—air power.

Then he said:

We have bases around the world established for the particular purpose of using the medium bomber.

The medium bomber is the B–47 which must be based abroad or be refueled in the air. As was pointed out in the hearings we are short on tankers and we especially lack long-distance tankers. And tankers which supply bombers in midair are particularly, almost fatally vulnerable. A high-ranking officer asked significantly what chance a tanker, or a B–47 in need of fuel, would have with a pursuer on its tail.

"The strongest navy in the world" will not be a factor in the next world war. The President was talking in terms of 50 years ago—in terms at least prior to the last war. The submarine and the airplane have relegated the navy as a fighting factor to the limbo of the past. Germany had only 58 of the old-fashioned submarines, which had to surface to recharge their batteries, in the last war. But they drove our shipping from the Atlantic and all but froze New England for lack of oil. Russia has 426 modern snorkel submarines which can stay under for weeks. And airplanes flying so high and so fast they can neither be heard or seen would complete the work. But granting the navy could stay afloat, why would Russia bother to fight the Navy when her planes can fly overland all the way?

The committee report quotes:

In time of war, the great oceans become a giant, interconnected battlefield. * * * He who has command of the seas can, in his own time, assemble and motivate these vast human and material resources against the land of his enemy. * * * Once control of the seas is lost, he can do little more than postpone the inevitable defeat which he faces.

Could anything be more ridiculous? What attention would a B–52 or a Bison en route to bomb Detroit or Moscow pay to a thousand ships or 10,000 ships?

Again, the committee report quotes:

The aircraft carrier today represents one of the most important parts of our overall security program. It makes possible the location of air power in areas into which we might not otherwise be able to put United States air power. * * * The carrier introduces an element of uncertainty on the part of the other fellow. He cannot always know where they are.

General Twining said in testifying only this morning before a congressional committee that the ability of the Navy to strike telling nuclear blows in a strategic air war with Russia was out of the question. He said the contribution of Navy carrier-based planes in such an attack would be small. He also noted that the range of carrier aircraft is relatively short compared with land-based craft.

You cannot defeat Russia by nibbling around the edges and no carrier-based plane could ever reach Moscow or touch the war factories in Siberia.

General Vandenberg said more than 2 years ago that with his Air Force he could sink every carrier afloat regardless of any defense that could be provided.

And General LeMay said here the other day he could sink every carrier at sea in 2 hours.

So far as the element of uncertainty is concerned, even if the carrier were no larger than the traditional mustard seed, Russia's incomparable espionage system, which stole the atomic bomb and ran rings around our own secret service, would know where it was every minute in the 24 hours. And when in fact a carrier, with its auxiliaries and protecting escort covers miles of sea, it would be as impossible to conceal it as it would be to hide the moon. No carrier could live a day in the Atlantic much less in the Mediterranean or the North Sea.

The Navy carrier is the greatest handicap to national defense. The cost of a carrier fully equipped with its full complement of planes and auxiliaries and its defense fleet is close to a billion dollars. But the cost is its least obstructive impediment. Its construction consumes the largest amount of rare and strategic material, and employs the greatest amount of technical and skilled labor of any mechanism ever built. The Air Force now limits use of tungsten and columbite tantalite in jet engines because our suppplies are short. Russia uses considerably more in her jets. But Russia is not wasting a major part of her strategic stockpiles on carriers. The extent to which this scarcity applies is shown by the fact that only this week, the week of May 7, the Air Force turned down pleas of three leading aircraft manufacturers for permission to use more tungsten. As Chairman MAHON has frequently said the reason we cannot use more money in the building of B–52's is that we do not have the plants and facilities and specialized labor to build them. The largest allocations of material, labor, and engineering is consumed in building carriers, none of which could survive a day at sea after war started. For this reason we do not have the needed material, men, and manufacturing plants to build more B–52s, the only weapon that can defend us when war starts.

But the most significant development in our defense program is one about which less has been said than any other. In order to get a practical demonstration of the place of airpower in modern warfare, the Department staged a tremendous campaign covering 12 States simulating as nearly as possible actual wartime conditions. An equal number of planes was assigned to each side, one representing the enemy and the other the defenders. The enemy attacked and the defenders used every means to protect the homeland.

Although months were consumed in planning and arranging the test it was over in a few minutes. The defenders were protected by the usual radar screens the counterpart of those actually protecting America from attacks from abroad, but the enemy planes, by flying too low for the screens to register, took the defense by surprise. Within 17 minutes after the warning signal the enemy

bombers were in contact with the defenders and in 23 minutes, as reported in the local papers, had destroyed 80 percent of the home airbases, knocked out half the defender striking force, and taken complete control of the air. The decisive phase of the war was over in 40 minutes and the United States had lost.

We come now to the inevitable aftermath. Russia is developing a mighty war machine. We have faltered while Russia forged ahead. It is becoming increasingly apparent to our allies that we cannot protect them if the present gap between Russian planes and American planes continues to widen. Already our allies are falling away. They have little option in the matter. If they are to be under Russian's bombs and missiles, they must make their peace as best they can and they are inviting visits from the Russian leaders and Churchill is inviting the Russians to join NATO. NATO was one of the most brilliant achievements in the history of American diplomacy and it was impregnable as long as we controlled the air. And Russia used every means to destroy it. But now that there is a very definite prospect that Russia may dominate the air, our allies have no choice but to seek cover.

We are confronted by an aggressive and triumphant communistic empire reaching from the Elbe in Germany to and including a large section of Indochina. It has been victorious in the field and at the conference table. It has defeated and exterminated the finest troops France could mobilize at Dien Bien Phu, and it won everything at Geneva.

General Twining said in a speech at Boston last August that an air attack "could pour out of the Soviet Union engulfing and overwhelming not only our cities and States but our entire Nation."

And Nikita Khrushchev, who visited London smiling and left with a bitter scowl on his face, said between his teeth, "Don't shake your fist at a Russian. If anyone believes our smiles involve abandonment of the teachings of Marx and Lenin, he deceives himself poorly."

Time works against us. Based on programs already in existence, the strategic air strength of the United States will decline in relation to that of the Soviet Union until in 1960, or sooner, when without allies and without dominant air power we face the inevitable.

What Is the Fleet Reserve Association

EXTENSION OF REMARKS
OF
HON. BOB WILSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 15, 1956

Mr. WILSON of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following:

WHAT IS THE FLEET RESERVE ASSOCIATION

The Fleet Reserve Association is an organization composed of career enlisted men of the United States Navy and Marine Corps. The association was founded in 1924 and is chartered under the laws of the State of Pennsylvania and is listed by Dun & Bradstreet. Membership requirements are, that the applicant has not less than 6 years' service in the United States Navy or Marine Corps; that he be on active duty.

Presently, there are approximately 50,000 members of the association, 70 percent of whom are on active duty in the Navy or Marine Corps. The 30 percent who are retired are the wheelhorses for the administration of the association. Many of these men have assumed a place of importance in their respective communities. A Ladies' Auxiliary to the Fleet Reserve Association numbers approximately 12,000. These women are active in all phases of community welfare and betterment.

Branches of the Fleet Reserve Association number 200, and are located throughout the United States and wherever the American Navy serves. Overseas branches include those in Alaska; Guam; Philippine Islands (4); Japan (3); Hong Kong, China; Taipei, Formosa; Bremerhaven, Germany; Newfoundland; San Juan, P. R.; Panama; Cuba; and Naples, Italy.

One of the mandates of the constitution of this organization is that the organization aid in obtaining the best type of American manhood for the Navy and Marine Corps; and secondly, to use every effort to assist in the career incentive program of the Navy, that is presently making every effort to retain the services of highly skilled, Navy-trained, enlisted technicians.

The Mrs. United States Navy 1956 program will be, we hope, part of the answer to the question of retaining the services of the trained enlisted men. As over 60 percent of the enlisted men in the United States Navy are married, it is reasonable to assume that their wives play an important part in any career decision they may make.

Mrs. U. S. Navy 1956 Contest

EXTENSION OF REMARKS
OF
HON. BOB WILSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 15, 1956

Mr. WILSON of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following:

MRS. U. S. NAVY 1956 CONTEST

The Secretary of the Navy has approved a plan submitted by the Fleet Reserve Association to sponsor a contest among wives of enlisted men (bluejackets and chief petty officers) to select an outstanding wife and confer on her the title of "Mrs. U. S. Navy 1956."

Mr. William F. Hickey, a veteran of 30 years' naval service, national president, Fleet Reserve Association, announced that the contest will be a worldwide contest since wives of Navy men on board ships and stations throughout the world will be eligible to enter the contest. The Fleet Reserve Association while sponsoring the contest will accept donations of cash and prizes from industrial firms or private organizations or individuals. However, it has been decided to limit the total value of all prizes to no more than $100,000. The list of prizes have not yet been compiled and will be announced by the Fleet Reserve Association at a later date. Among the contributors to the contest has been Mr. Joseph Massaglia, president of the Massaglia hotel chain consisting of the Wilton Hotel in Long Beach, the Raleigh Hotel in Washington, D. C., the Hotel Miramar in Santa Monica, the Waikiki Biltmore in Honolulu, and hotels in other principal cities. Mr. Massaglia will contribute to the first prize by offering an all-expense trip to Honolulu and other cities of the United States, in addition to a cash award.

The headquarters for the contest will be located in the Wilton Hotel at Long Beach, Calif. and the finals will be also held in Long Beach on September 15, 1956.

The winners will be selected on the basis of how much she has contributed to her husband's decision to make the Navy his career and how she expresses her sincerity in an essay entitled "Why I Am Proud To Be a Navy Wife." Final judging will be by enlisted men of the fleet.

The Fleet Reserve Association is an organization composed of career enlisted men, retired and on active duty of some 50,000 members and 200 local branches throughout the United States and overseas. Overseas branches include those located in Alaska; Guam; Philippine Islands; Japan; Hong Kong, China; Formosa; Germany; Puerto Rico; Panama; Cuba; and Naples, Italy. The aim of this organization is loyalty, protection and service to its members.

The intent of this contest as expressed by Mr. Hickey is to pay tribute to the wives of the career enlisted men of the United States Navy.

Vice Adm. James L. Holloway, Chief of Naval Personnel has assigned Lt. Comdr. George Beck, United States Navy from his office in Washington, D. C., to be naval liaison officer, and his representative in connection with the contest and to work with the Fleet Reserve Association.

The contest will be administrated without cost to the Government. Applications and contest rules are currently available on board all ships and stations as well as at branches of the Fleet Reserve Association. All entries must reach contest headquarters not later than June 15, 1956.

Brooklyn: The Wonderful Town

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, May 14, 1956

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Mr. Andrew S. Roscoe, president of the Equitable Savings & Loan Association and president of the Downtown Brooklyn Association before the Rotary Club of Brooklyn at the Hotel St. George on May 9, 1956:

BROOKLYN: THE WONDERFUL TOWN

(Address by Andrew S. Roscoe, president of Equitable Savings & Loan Association and president of the Downtown Brooklyn Association before the Rotary Club of Brooklyn at the Hotel St. George, May 9, 1956)

President Wes Meytrott, my ladies, fellow Rotarians, and guests: This is my third visit with Rotary in Brooklyn, and I am deeply grateful for the privilege of speaking to you again. I had the honor to discuss with you in 1951 the problem of shelter. In 1952 I had another nice

visit with you. We chatted about our relationship with our neighbors. We chatted about economics, sociology, and a bit of political science. Today, I should like to continue that discussion. But, today, this address has a quite different, yet definite purpose, to inform, to shock, and to inspire to action.

As you probably know, it is my privilege to serve as president of the Downtown Brooklyn Association, an organization dedicated to the economic and social development of Brooklyn in general and to the Downtown area in particular. It is an organization representing all types of enterprises, and I offer no apology for my appreciation of the great contribution that Brooklyn business, along with labor and the body politic, is making to the progress of Brooklyn.

I have great faith in the integrity of the profit system, in the sound and ethical progress of our labor movement, and in the gigantic service job that our Brooklyn body politic is doing for all of us.

To understand our community means to understand its history—Brooklyn history as part of the broad panorama of national history. For Brooklyn, believe me, is a most important part of our Nation. The recent development, and perhaps the most significant event in the history of modern Brooklyn was the War Between the States—the Civil War. That unfortunate struggle severely sapped the vitality of this young Nation; its toll of manpower and material was tremendous. Commercial banking collapsed, savings banks failed, and America became a debtor nation. Our great country faced grave economic and social problems; and sad to relate, there was no money for shelter and tax collections presented serious implications.

But our American genius for resourcefulness, our political ingenuity, solved some of these problems by the consolidation and merger of political units. Thus it was that Brooklyn, 25 years after the War Between the States, became part of the greater city of New York.

At that time, we had two vigorous production groups within the economy of Brooklyn: the first group was engaged in agriculture and fishing; the second group worked in the dense, slowly developing industrial sector of our economy; and the third, the tertiary production group—the service group—at that time contributed only a modest fraction of the total family income.

You are familiar with the history of the movement from the farm to the industrial city, a movement which provided employment to a larger percentage of our people in the industrial group, the second production group. Today, however, we no longer treat with only two production groups. We no longer consider the primary production group as consisting of men producing raw materials, men engaged in agriculture, fishing, mining, forestry and related field, and the second group of production as consisting of people working in industry as the only two production groups. A tertiary production group provides services in distributing the goods produced, furnishing utilities, transportation, financing, insurance, in medical health services, in government services and in teaching. This tertiary production group enjoys the highest income level. Therefore, it attracts people from the farm as well as industry. Brooklyn, today, has no farming. Its fishing and shell fishing industries, located in Brooklyn a century ago, have moved away. Brooklyn's family income derived from the primary production group today is nominal at best.

Our Brooklyn Chamber of Commerce tells us that manufacturers' payrolls in Brooklyn in 1955 amounted to a total of $900 million out of a total family income of $5 billion.

In the past 10 years manufacturers' payrolls have grown from $575 million to $900 million. But total family income has soared from three and a half billions to over five billion.

These figures indicate that less than 20 percent of our income is derived from industrial payrolls—in other words, less than 20 percent of income comes from what we know as the second production group. This is very important because we know that as long as our income position in the primary production group is nominal, and less than 20 percent from the second production group, it is apparent that more than 80 percent of our income comes from the tertiary production group. As I mentioned, this is the group that enjoys the highest level of income and is proof that the economy of Brooklyn is far from being that of a community relegated to the status of an anemic, underprivileged community.

Let us develop this thought further and in the light of what is ahead. Eugene Black, the great President of the International Bank, has estimated with great courage that the total income of the Western democracies will double during the next 20 years. This includes the United States and its trading allies. Now we know that during the past 10 years Brooklyn's family income increased from 3½ billion to 5 billion, an increase of 50 percent, and that all indications support Mr. Black's forecast. I am taking the liberty in including Brooklyn as a vital part of the Western democracies. Beyond the application of the laws of averages, which I call the laws of probabilities, there are other factors in Brooklyn's favor.

The average family disposable income in Brooklyn is about $5,700. Now we realize that there are areas in our suburbs which enjoy a higher average family income. For the purposes of proving my point, I shall compare the potential of Brooklyn with that of an imaginary Utopian community that enjoys a family income of $25,000, which means a disposable income of $18,000 at best. We know that we do have a few such hamlets in our suburbs. We know that heavy Federal, State and local taxation will continue because of the demands of national defense and civic improvement. It seems certain that the benefit of any increase in the average national family income will favor the more moderate income brackets. I cannot foresee any significant lowering of taxes at upper income levels in the near future. Therefore, the Brooklyn families disposable income, its purchasing power, and its standard of living will continue to increase through the normal functions of our economic progress, economic progress which is the most assured, most solid in the whole world.

Brooklyn is a great international seaport, and considering the gigantic plans of that great partnership that we call enterprise and Government, which has been made evident in that very sound deal of the New York Dock Co. with the Port Authority, it is virtually certain that our family income from shipping will also continue to increase. Every merchant ship that docks here, please remember, leaves almost $100,000 in Brooklyn.

Let me speak briefly of the tremendous potential of our own Brooklyn. The velocity of capital formation in Brooklyn is a source of much hope for still greater attainment. Let me give you a few figures. Savings banks deposits doubled in the 10 years following December 31, 1945. In 1945 the amount was two and one-half billion. In 1955 it reached the staggering figure of five billion. Savings and loan assets, which amounted to a modest $25 million in 1945 have enjoyed a sixfold increase to more than $160 million. While accurate information concerning life insurance equities and thrift deposits in commercial banks in Brooklyn is not available, I think we are on sound ground when we say that our position is better than the national per capita average, and on that basis the pro rata life insurance totals would seem to indicate an increase from seven hundred and fifty million to one billion, four hundred and seventy-five millions. Thrift deposits in commercial banks, as adjusted, can be estimated as showing an increase from three hundred millions to five hundred millions. Therefore, during the past 10 years capital formation in principal savings media have indicated almost a 100 percent increase, an increase of $3½ billion to a total of more than seven billions within a single decade. Obviously, this community is not lacking capital. What this community truly needs (in Brooklyn investments) is greater confidence on the part of the managers of this capital, following the inspiring leadership of Edward A. Richards and George C. Johnson.

In the matter of home financing, you will see from the data which you have, that more than 35 percent of our people are still compelled to seek home financing from nonbanking quarters. At this point, may I say to you that Brooklyn Savings and Loan Associations, which now provide 25 percent of the home mortgage money, are confident that within 10 years the continued increase of their resources will enable them to provide financing for every homeowner of this great borough.

Many estimates indicate that in 1956 our family income will increase by about $60 million. I am more optimistic than that conservative forecast indicates. Applying the same yardstick upon which Mr. Black's forecast was based, supported by that 50 percent annual increase in family income during the past 10 years, I visualize that by 1965 Brooklyn's family income will reach at least $7 billion. This increased income means greater business and a higher standard of living.

Education is very much a part of a high standard of living, particularly in a community where major employment is to be found in the tertiary production group, which is the service group. (And, incidentally, I am grateful to the metropolitan press for pointing up some of remarks made at the dedication of the new building of the Institute of Design and Constructoin, when I dared to say that Brooklyn is one of the greatest college towns in the world.) May I repeat that we have our Polytechnic Institute of Brooklyn, we have Pratt, we have Long Island University, St. John's College, our State Medical School, Brooklyn College of Pharmacy, our Brooklyn College, Brooklyn Law School, St. Francis College, St. Joseph's College, the Packer Collegiate Institute, the Community College, and now a State-chartered Institute of Design and Construction. These institutions were organized because there was great need for them. Most of them are expanding their facilities, preparing additional manpower for our tertiary production group. Our colleges have high standing. Take the Polytechnic Institute of Brooklyn; it is not only one of the most distinguished engineering colleges in the country, but is accredited and esteemed in every nation of the world.

The expansion of our colleges constitutes an important contribution to the expansion of our family income and to the raising of our standard of living. It is particularly timely to mention these facts today as thousands of Brooklyn students face the accomplishment of their great dream as graduates of these colleges, ready and able to join this tertiary group.

It is with some regret that I have to cast a sad note at this point. I have mentioned

the State Medical College, which is developing into a great institution. However, this college is the successor of the Long Island College of Medicine, a highly respected and accredited medical college that passed on into the hands of the State because of lack of financial support. I want to be very careful and not detract from my feeling of gratitude to the body politic for providing for the continuation of this college, but I cannot help but feel that if we are to retain the essentially free character of our Republic, we must support our free institutions. We cannot be half free and half subjects of State welfare. I am told that the first step to socialized medicine starts with the abandonment of the privately supported medical school. Somehow or other we do not always learn from the lessons of the past. We often continue repeating the errors of history. Too often we take the path of least resistance, turning to the State, the responsibilities of the individual.

This reminds me of the plight of Queen Maria Theresa, who appeared on the balcony of her imperial palace with her infant son, pleading with the Austrian-Hungarian nobles to defend her empire. The nobles assured the queen of their support, drew out their swords, and pledged their lives and blood. You know that the famous shibboleth "Vitam et Sanguinem." But, later the war effort required money. When the queen levied added taxes, the nobles refused to pay. They said to the queen—"Vitam et Sanguinem sed Avenam non." "You can have our lives and blood, but you cannot have our oats."

"Vitam et Sanguinem sed Avenam non" appears to guide our thinking on many actions. We are ready to give our lives and blood for private enterprise, but we are unwilling to give up our oats.

The world knows of no greater irony than a group of businessmen imbued with the ideals of private enterprise opposing the very minimum requirements of other sectors of private enterprise. I am referring to the applications of the Consolidated Edison Co. and of the New York Telephone Co. for rate increases. In both cases we are treating with two great corporate public servants, generous employers of large groups and enterprises that have demonstrated meticulous respect for other people's money. During the dark days of the depression these corporations continued to pay dividends on the investments of the aged, widows, and the orphans. Yet when Consolidated Edison Co. recently applied for a rate increase on a very sound basis, business groups have recorded opposition.

With respect to the telephone company I am wondering how many of us took the time and trouble to write to the Chairman of the Public Service Commission, the Honorable Benjamin F. Feinberg, telling him that we value the contributions of the utilities to our economy and to our social structure very highly and that we believe that their cause is just.

It seems that history repeats itself, "Vitam et Sanguinem sed Avenam non."

My fellow Rotarians, let us make sure that the Long Island College of Medicine is the last of our educational institutions to be abandoned to the State.

At greater length I might discuss the importance of our relations with the body politic. With 80 percent of our people engaged in the tertiary production group, the service group, Federal, State, and municipal payrolls are most important. The Director of Internal Revenue has reported that tax collections at his Brooklyn office in 1955 were in excess of $1,200,000,000 dollars representing about 2 percent of the national tax collections. Unfortunately, we are unable to obtain figures from the State, but it is fair to assume that the people of Brooklyn contribute at least 20 percent of the revenue of the State. The city collector's office tells us that Brooklyn tax collections in 1955 amounted to $261,500,000, representing 36 percent of the city's revenue.

While we recognize that good housekeeping on the part of the Federal, State, and municipal governments does not permit the full and complete reallocation of tax moneys to the locality of their source, I believe that in Brooklyn we do have an ethical and moral right to say to the Federal, State, and municipal governments: "We are contributing taxes; therefore, we would like to have our share of the economic and governmental patronage."

We are told that we are very much a part of the greater city. Well, if that is so, I should like to see a few of our State offices, Federal, and municipal offices in Brooklyn.

Our professional men, our retailers, our hotels, our restaurants, and all other segments of our economy have a right to a fairer share of their tax dollars. Now how can we accomplish the objective of greater distribution of tax moneys to our own community? We have splendid leaders within our body politic. Our elected representatives, and I mean our Congressmen whom I consider members of the board of directors of the United States, our assemblymen, and our State senators, who are members of the board of directors of this great State, and our councilmen, who perform the same function on the board of directors of the great corporation of the City of New York, are real public servants of demonstrated ability and unquestioned integrity. They have done much for Brooklyn, but they can do much more if we stand solidly behind them. We must show greater interest in our own progress through our support of the body politic. We have our political clubs that have a great record as service organizatiotns in our borough. During the darkest days of our history, the political clubs demonstrated their ability to act as social welfare organizations, alleviating much human misery. Their services include effective advice and guidance for anyone who has problems and calls on them. These clubs are maintained entirely out of private contributions. Too often the need for political contributions is questioned. Aside of the very important service angle, the political clubs provide the services of several men, 3 or 4, in each election district for each party on election day. These men are known as poll watchers who contribute their time and the use of their cars to get the vote out. If the modest sum of $20 is allowed to each of them to cover the cost of their breakfast, lunch, and dinner, and the use of their car, the requirement of our political parties for this purpose alone runs several hundred thousand dollars for each in Brooklin because we have 1,441 of election districts.

Political parties are confronted with the maintenance of headquarters, entailing rent, light, telephone, clerical services representing a very substantial expense on one hand, but these are expenditures involving funds that stay in the community. In a virile, healthy community, such as Brooklyn is, our political parties should not be exposed to crucial financial problems, nor should they be dependent upon the State or National Treasuries at any time. Proper support, financial and moral, of our political leaders should make their position stronger in obtaining for Brooklyn economic and social benefits controlled by the body politic under our Constitution. This is practical, political realism.

We live in a community with an economic position second to none. Social standards are continuously increasing, and our political leadership has an unsurpassed record. Due to the character of employment of our people, and social security measures, our total family income today is subject to diminishing risk of danger caused by economic adversities than ever before in our history.

Gentlemen, our future is bright. There is light ahead of us. Can we follow the clear path of light—the light of destiny directed for us?

My dear fellow Rotarians, in speaking of Brooklyn's social improvement, its economy, and its future to you, I feel that I am speaking to true companions, men dedicated to great ideals. As I said at the outset, I am proud to be with you and confident that you will always seek and always find the greatest good for the greatest number.

Let me thank you for your gracious attention:

Brooklyn—the wonderful town

Revolt in the Wheat Fields

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES

Tuesday, May 15, 1956

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial appearing in the Louisville, Ky., Courier-Journal of April 2, 1956, entitled "Revolt in the Wheat Fields Is an Old Dakota Story."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

REVOLT IN THE WHEATFIELDS IS AN OLD DAKOTA STORY

There is word that North Dakota's Non-Partisan League is changing its political association from the Republican Party to the Democratic. This is more than a local note, both in its picturesque quality and its bearing on today's national political turmoil.

As natural rebels and radicals, the leaguers comprise a sensitive instrument for registering farm discontent. The league is a blood-brother of the Farmers Union, Minnesota's Farmer-Labor Party and Wisconsin's Progressives of the La Follette strain. It is by populism out of agrarian revolt. It was a precursor of many a New Deal operation, and in its limited geographical field it is still a thing of great vitality.

Back in 1912 there was trouble in the northern wheatfields. North Dakota voters, mainly dwellers on flat quarter sections, felt they were being exploited by the millers and grain elevators. They got together and in a fling at initiative and referendum voted for State grain elevators. The legislature, controled by Minneapolis millers, brushed them off. One representative told a farmers' delegation to go home and slop the hogs.

That tore it. An impoverished farmer named A. C. Townly, he admitted to having only "an idea, a Ford, and $16," set out to organize the Non-Partisan League. The idea was that league members should go into the Republican primaries and pick legislators pledged to their interests. The Republican Party was picked for infiltration simply because there were too few Democrats in North Dakota to provide a practical medium.

Leaguers knew what they wanted, and this was half the battle. The list of objectives included mills and elevators owned and operated by the State, hail insurance (State administered), laws for fair grading of grain, easier rural credits, tax exemption of farm improvements. The inspired organization elected Lynn Frazier, Governor, and a majority in the State house of representatives. Leaguers got what they wanted and a few embellishments as well, like a home-building association, a graduated State income tax, an 8-hour day for industrial workers and one of the early workmen's compensation laws.

The State elevator plan was reincarnated in the New Deal's ever-normal granary. The hail insurance blossomed later in the Federal crop insurance law. The Federal law to insure bank deposits and the Federal housing program of the midthirties were practically modeled on the Bank of North Dakota, a creation of Non-Partisan League influence.

All the time, as the leaguers elected governors, Congressmen, and State legislators, they kept on as political mavericks, uncomfortable and at times in downright agony in their Republican association. A typical leaguer is Senator LANGER, nominally a Republican, but perpetually a burr under the saddle of Republican leadership at Washington.

When LANGER was Governor of North Dakota he performed such league-like acts as declaring a moratorium on foreclosures for debt. He called out the National Guard to stop foreclosure sales. Nobody doubt that BILL LANGER will adjust easily and perhaps even gratefully to the league's new habitation within the Democratic Party when he runs again in 1960.

At the same time the league has been insistently local and nationalistic. In this it is like most of the spawn of populism. LANGER and Henrik Shipstead, the Minnesotan of Farmer-Labor ties, were, for example, the only Senators who voted against the San Francisco Charter. What with this and that, nobody may doubt that the leaguers will run into times of discomfort as Democrats no less than that they felt when they ran with the Republicans. They are of the strain that likes lost causes, like the Lemke candidacy for President in 1936, being never quite easy in any man's fold but their own. But they carry weight on their own grounds. There may be some changes made in North Dakota, which has gone Democratic in only 4 of the 16 presidential campaigns since Grover Cleveland.

Age of Maturity

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES

Tuesday, May 15, 1956

Mr. HUMPHREY. Mr. President, recently there appeared in a British publication entitled "The Listener," the British Broadcasting Corporation magazine, an excellent article by Congressman EUGENE MCCARTHY of the Fourth District of Minnesota.

Mr. MCCARTHY is an outstanding scholar in the field of political science and political philosophy. His mature understanding of American government, coupled with his broad experience as a legislator and teacher of political science, qualifies him to interpret the American political scene. In his article entitled "Nation's Age of Innocence Becoming One of Maturity," Congressman EUGENE MCCARTHY has related the historical growth of American participation in international relations. It is an article that should be read by every student of government and, in particular, every officer of Government. I commend it to the attention of my colleagues.

I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

NATION'S AGE OF INNOCENCE BECOMING ONE OF MATURITY

(By Representative EUGENE J. MCCARTHY)

Politics in the United States reflects the Amercan belief in the basic innoncence of Americans, a belief which has agitated the American mind since the time of colonial settlements. American colonists even before the Revolution considered themselves a people set apart and above; they were without the sense of inferiority which usually marks colonial societies. It was common for religious and civil leaders in the colonial settlements to speak as did William Stoughton in the 17th century, asserting that "God has sifted a whole nation that he might send choice grain over into this wilderness."

This belief that Americans, as inhabitants of a new land, and as people living under a new government, were themselves also new and innocent, set apart from the stream of tradition, has continued. It holds that Americans live in a condition of natural goodness, a state of existence or of mind labeled "Adamism" by R. W. B. Lewis, and one which leads us to accept, as Donald Creighton, a Canadian, has written recently, that we are the inhabitants of God's chosen continent, that in North America, Canadians and citizens of the United States are all just "folks," all members of one great big happy family.

The concept of innocence is basically antagonistic to government and government action. One of the earliest American political philosophers, Thomas P. Paine, expressed

it in these words: "Government, like dress, is the badge of lost innocence. The palaces of kings were built upon the ruins of the bowers of paradise. Were the impulses of conscience clearly and irresistibly obeyed, man would need no other lawgiver."

A point of view nearly identical with that of Paine was expressed recently by Clarence Manion, former dean of the Law School of Notre Dame University. In his book, the Key to Peace, Manion states that government is a necessary evil, and that in a community of saints the moral law would be the only law needed to provide such a community with perfect peace, complete order, and universal justice.

According to the theory of both Paine and Manion the state arises from the evil or bad will of men, and moreover this evil and bad will remains the lasting justification for government. A philosophy of government built upon this concept permits the state only regulatory functions.

This American attitude of innocence is reflected not only in the attitude toward government and government officeholders, but even more sharply in reference to political activities. Political party participation is considered degrading by many citizens. The person who claims to be nonpartisan, or an independent voter, generally makes his claim without apology, and as one who has chosen the better part.

It is popular to attribute to citizens power of discernment, simplicity, and soundness of judgment. It is not popular to call upon the voters for self-examination or self-criticism, or to ask them to question their own previous judgment.

It is common to label political campaigns at every level of government crusades. The presidential campaign of 1952 demonstrates most clearly the use of the technique of the crusade.

When candidate Stevenson in the 1952 campaign suggested that the morality of public officials reflected the general level of morality in a democracy and that in a democracy all citizens had some responsibility for political decisions, his opponent rejected the suggestion, and went on to ask whether the individual United States citizen was responsible for the fall of China, the scandal-a-day Government, or for the treadmill prosperity. The expected answer was a very positive "no."

Stevenson and other Democrats asked for patience and forebearance, especially in foreign affairs. The crusaders shouted that we had had enough of these virtues, and raised the question as to whether they were really virtues becoming to Americans.

It cannot be said with certainty that the crusading technique and the appeal to righteous simplicity was responsible for the victory of the Republican presidential candidate in 1952. There were other issues of vital concern. The appeal to innocence, however, ran throughout the GOP campaign.

The effects of the approach of innocence and simplicity have been most clearly evident, and I think most harmful, in our approach to international affairs. The current American attitude toward foreign countries and their problems as described by Mr. Creighton is very much in agreement with the views of Thomas Jefferson, who in 1823 urged the people of the United States never to take an active part in the affairs of Europe.

The early years of American history encouraged the attitude of indifference and separatism. Europe was absorbed in war; the war of 1812 and other disputes generally discouraged any move to establish closer ties with the old world on our part. At the same time the western lands were being opened to settlement.

Earlier immigration weakened the homogeneity of existing culture, but it did not strengthen the bonds between Europe and America. If anything, it had an opposite effect. Most of the immigrants came seeking asylum; most were refugees from famine, poverty, or from political oppression. If anything, their coming strengthened the antipathy toward Europe and fortified the American sense of superiority.

Involvement in World War I was looked upon as temporary, to make the world safe for democracy in one great effort, and then to return to our own affairs was the American hope. After the failure of Wilson's idealistic, if not utopian, efforts in the post-war period, the attitude of innocence and aloofness asserted itself again. The League of Nations was not perfect—therefore we would not join it.

We were certainly not ready for World War II; or, when the war ended, ready to accept great international responsibilities. We did not, however, withdraw from world affairs as we had done after World War I. The United States participated in the formation of the United Nations, and has joined in the deliberations and in the programs of this organization. We have given economic and military aid to allies and former enemies. We carried the major burden in the Korean war, and have obligated ourselves under the North Atlantic Treaty Organization and through the mutual security program.

But the United States is restless in its new role in world affairs; political leaders make a point of saying that we did not seek the position we now hold, as though it would have been bad to have done so. Many Americans look back to the days when the Nation could stand aside from the struggles for power, passing judgment upon the contestants and making fine, clear choices. There remains a strong temptation to return to the isolation and pleasant simplicity of early days when power and responsibility both were limited.

No such violent change is likely. If we really ever accepted what Denis Brogan calls the "illusion of American omnipotence," we'd be disillusioned. Considerations of self-preservation and of defense make the position of the extreme isolationists untenable. Self-preservation, however, is not our only motive. There has been a change of attitude. The age of innocence and of innocents, both at home and abroad, is changing to one of greater maturity.

Prohibition of Liquor Advertising

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, May 15, 1956

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter addressed to me by A. Haverkamp, stated clerk of the Particular Synod of Iowa, of the Reformed Church of America, encouraging me in connection with my work of combating liquor advertising.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

PARTICULAR SYNOD OF IOWA,
REFORMED CHURCH IN AMERICA,
Pella, Iowa, May 7, 1956.

The Honorable WILLIAM LANGER,
Member, Senate, Congress U. S. A.,
Washington, D. C.

DEAR SENATOR LANGER: At the 37th annual session of the Particular of Iowa, a legislative body of the Reformed Church in America, representing a communicant membership of 31,027 souls, spread thoughout the States Iowa, Minnesota, North Dakota, South Dakota, Nebraska, Kansas, California, Washington, and Alberta Province, Canada, convened in the Zion Reformed Church, Chapin, Iowa, a communication was received regarding liquor advertising.

The communication requested Particular Synod "to counteract excessive liquor advertisements, and that synod send a letter of encouragement to Senator WILLIAM LANGER who is sponsor of legislation in our Nation's Capitol to outlaw liquor advertising in interstate commerce."

The communication was referred to the Committee on Overtures and Judicial Business, which submitted the following report:

"Your committee is in accord with the spirit of the overture, and therefore instructs the stated clerk of the Particular Synod of Iowa, RCA, to send a letter to the Honorable WILLIAM LANGER, United States Senator, encouraging him in his work of combating liquor advertising, and promising him our hearty personal support of the pastors and of the 162 churches of our synod."

I am very happy to have the privilege of forwarding this recommendation of the committee which was enthusiastically adopted by the Particular Synod of Iowa.

Very sincerely yours,

A. HAVERKAMP, *Stated Clerk.*

P. S.—Particular Synod was in session May 2-3, 1956.

The Bunker Hill of Desegregation

EXTENSION OF REMARKS
OF
HON. HUGH SCOTT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 15, 1956

Mr. SCOTT. Mr. Speaker, under unanimous consent I include the following article by Donald Gross in the New York Times magazine of Sunday, May 13, 1956, on the first major attempt to desegregate the Nation's schools. The stage for this was set in Boston in 1829:

THE BUNKER HILL OF DESEGREGATION

(By Donald Gross)

The Negro honor students accepted their awards politely and thanked the mayor. For outstanding scholastic achievement they had been given copies of a modest little book entitled "The Life of Benjamin Franklin." However, the students were not overly enthusiastic. They were pupils at a segregated public school and knew that the prize students from the white schools not only had received shiny Franklin medals but had been invited to a public dinner in their honor.

This happened in Boston—in 1829—and it set the stage for the first major attempt to desegregate the Nation's schools. Boston, which put up a statue to honor the first American to die under Redcoat fire—a Negro—hardly seems the place to look for racial oppression. The North of a century ago, however, practiced formal discrimination very much like the South today.

But the Negro's voice was beginning to be heard. In Boston it was the voice of a Negro by the name of William Nell. He was one of the Negro students awarded a copy of the Life of Benjamin Franklin at the Belknap School for colored children in 1829.

William Nell got to attend the dinner for the honor students that year—as part of the Negro dining-room help. He decided then,

as he later recalled, "to hasten the day when the color of the skin would be no barrier to equal school rights."

As a Boston citizen and Negro civic leader, he launched a campaign, in the 1840's, to integrate Boston's schools. It was a campaign that eventually attracted national attention and set precedents, still followed today, wherever segregation is attacked or defended.

Nell had no Supreme Court decree to help him. He began his campaign quietly by visiting the colored people who had children in school. Wouldn't they prefer to have their youngsters go to a school closer to home? Wouldn't they like a school better equipped than the school for colored children? Didn't they agree that going to school with white children would help everybody understand that whites and blacks were all Americans, deserving equal opportunity? Wouldn't it give the Negro children better opportunities when they grew up?

The response was disheartening. Life was hard enough for free Negroes in white society. The jobs they got were shabby. The pay was low. They were quickly abused when they made mistakes. There was trouble enough without asking for more. William Nell told his friends to think it over. He would be back.

He turned to the Abolitionist Party, headed by William Lloyd Garrison and Wendell Phillips. These leaders promised, to assist him through publicity, by drafting petitions, and by helping to get signatures for them. The first petition, submitted to the Boston School Committee, was flatly rejected.

The integrationists steeled themselves for a long fight. But the continued intransigence of the school committee and the prodding of William Nell gradually aroused the Negro population. Meetings were held. Pamphlets were printed. Pickets were stationed at one of the Negro schools to discourage parents from sending their children to it.

Finally, in 1846, the Boston School Committee, faced with mounting pressure, agreed to a formal investigation. The result, after a lengthy debate, was a decision to retain separate schools for colored children. The majority report stated bluntly: "In our opinion, the less the colored and the white people become intermingled, the better it will be for both races. Amalgamation is degradation."

Discouraging as this was, William Nell's forces knew they had raised the issue to the level of public discussion and concern. They had also stirred the courage of certain Negro people who were willing to stake their jobs and reputations as peaceful citizens on some form of militant action.

One such Negro was Benjamin Roberts, father of Sarah Roberts. In April 1847 Sarah applied for admission to the primary school nearest her home but was refused. She, like other Negro youngsters, was requested to attend a segregated school much farther away than the white school near her home.

The following year, Roberts instructed his daughter to enter the nearby white primary school without permission. When she was rejected, he filed suit under a Massachusetts statute which provided that a child unlawfully excluded from public-school instruction could recover damages from the city or town where the exclusion took place.

Legal action was pressed to the State supreme court where Charles Sumner, later to become reconstruction leader in the United States Senate, pleaded the cause of Sarah Roberts and integrated schools in eloquent terms. Much of what he had to say was prophetic of the Supreme Court's historic decision of May 17, 1954, which was based on the premise that separate but equal school facilities do not provide equality.

"A separate school, though well endowed," Sumner argued, "would not secure that precise equality which they [the Negro children] would enjoy in the common schools. Segregation from the mass of citizens is of itself an inequality. It is a vestige of ancient intolerance against a despised people."

The State supreme court, however, handed down a decision adverse to Sumner and his client. This decision, too, was prophetic, for it served as a precedent for many of the segregation laws enacted by the South up to the present. It held that the prejudice that Sumner claimed was fostered by separate schools was "not created by law, and probably cannot be changed by law."

Boston's Negroes and their friends decided to change their tactics. They went outside Boston where communities with proportionately lower Negro populations had already integrated their schools. A campaign was started to lobby for a State law forbidding segregated schools.

Finally, in 1855, the legislature passed a bill to abolish separate schools for Negroes throughout the Commonwealth of Massachusetts. The bill was signed by the Governor on April 28 of that year.

To make certain the changeover would go smoothly when it became effective the following September, William Nell spent much of his time during the summer months visiting school authorities throughout Boston, talking with Negro and white parents, calling meetings and writing pamphlets urging cooperation from both races.

When school opened Nell and a delegation of Negro mothers made the rounds of the city's schools "to see the laws of the old Bay State applied in good faith" and to iron out any difficulties that might develop. None did.

Thus ended the first struggle against public-school segregation. Efforts to do away with segregated schools in other northern cities continued through the years of the Civil War and after. It was not easy. New York City's public schools were not legally desegregated until 1884.

But, wherever citizens acted to end segregated schooling in the large cities of the North, they had Boston as a precedent and a successful example.

Acquittal of George Brigner

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, May 15, 1956

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Jury Finds George Brigner Not Guilty," from the Mandan Daily Pioneer on April 27, 1956. It states that George Brigner, 77-year-old Dunn County farmer, was found innocent of a charge of using threats to rob Government officials of a grain marketing card in September of 1954.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

JURY FINDS GEORGE BRIGNER NOT GUILTY

George Brigner, 77-year-old Dunn County farmer, was found innocent Thursday afternoon of a charge of using threats to rob Government officials of a grain marketing card at Killdeer in September of 1954.

A United States district court jury of 8 men and 4 women returned the verdict after about 1 hour and 45 minutes deliberation.

Brigner had been charged by the Government with entering the Killdeer Agricultural Stabilization and Conservation Committee office on September 17, 1954, and threatening two ASC officials with a jar of mysterious liquid.

It was brought out in cross-examination that Brigner had made no threats to "blow up the place."

The elderly farmer, who lives with his sister on a 160-acre farm homesteaded by his parents near Werner, denied on the witness stand that he ever made any threats to anyone.

Brigner testified he customarily planted 50 acres of wheat each year as his only crop. He said that 17 of his 1954 wheat acres had been burned by the sun and were not worth harvesting.

Brigner admitted on the stand that he had made no effort to take part in the Government's wheat acreage allotment program, stating, "I just didn't like it. I never asked anything from the Government and I never got a nickel from it in my life outside of social security."

Government agents had informed him after measuring his crop in 1954 that he had 35 harvestable acres but that he had an allowable acreage of only 29.

"A man just can't live on 29 acres of wheat," Brigner said.

Position of Democratic Party on Civil Rights

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, May 15, 1956

Mr. HUMPHREY. Mr. President, recently there appeared in the Honeywell News, published by Honeywell Local 1145, a splendid editorial written by Mr. Robert I. Wishart, secretary-treasurer of Honeywell Local 1145.

I advocate that every Democrat read this editorial. It represents good political judgment and is written by a man who has demonstrated his political know-how and leadership qualities in a most commendable manner.

I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WHAT WILL IT BE, LEFT, RIGHT, OR CENTER FOR THE DEMOCRATIC PARTY?—CIVIL RIGHTS POSITION MUST BE FORTHRIGHT

The question before the Democratic Party today is what course to follow—left, right, or center—politically speaking, that is. The Republican Party has always been the party to the right; in other words, it has been the conservative party, the party that stood, more or less, on the status quo.

The Democratic Party, under Roosevelt and Truman, for 20 years, was the party to the left of center. By "left of center," of course, we mean a liberal party, a progressive party, a party that advocated and supported change, a party that advocated a program of advance, based upon the needs of the Nation and the needs of the people.

Under this left-of-center policy, we got social security; we got unemployment insurance; we got a farm program to protect the farmer; we got higher minimum-wage laws; we got the National Labor Relations Act; we

got a soil-conservation program; we got the Rural Electrification Act; we got all of these things that stood for programs for advancing the people of our Nation. This is left of center.

WHERE DO WE GO FROM HERE?

Yes, the issue today before the Democratic Party is, Shall we follow a center-of-the-road policy, or shall we continue to the left?

The answer to that is very clear: Will there ever be a period in American history when progress will not be needed?

We must bear in mind that social security, when it was proposed by President Roosevelt, was voted against by many Republicans of that day. It was considered socialistic; it was a left-of-center proposal. Yet today social security is accepted by everybody, Democrats and Republicans alike. And this is just 20 years later.

The Democratic Party must be a party of progress, as it was 20 years ago, or not only will it not win the election in 1956, but it never will win any election. It is what the party fights for that brings leadership to the people of our country, and leadership which brings people to vote for that party.

To offer the American people a little more than what the Republicans offer them is no inducement to voters. Certainly, today in America, progress is as badly needed as it was in the thirties.

TAKE THE RACE ISSUE

Today politicians are talking about the hard problem of whether to oppose the southern Democrats or to support an aggressive fight for racial tolerance. The question among some of them is which policy would be the best in an election year, which program would be best to get votes with.

We don't believe that the race issue should be determined on the basis of getting Negro votes. We think the race issue is an issue far above—should be an issue far above—partisan politics. We are proud of the fact that back 8 or 9 years ago, Local 1145 was instrumental in getting the Fair Employment Practices Commission ordinance passed in Minneapolis.

We didn't support the FEPC ordinance because we were looking for votes of a minority group. We were for the FEPC above and beyond political considerations. We were for the FEPC because it was a right thing to do.

It was a humanitarian cause; it was a Christian position, and any liberal, any decent-thinking American should be for equal rights for any minority race, regardless of how many votes they may have.

We believe that the right of a Negro to vote without fear for his life, that the right of a Negro to have a job on an equal basis with anybody else in America, are God-given rights. We think that politics should play no part in these things; and if a man is a liberal, if a man is a decent Christian, he ought to be for these things.

When Negroes in the South—yes; and in the North—are deprived of these rights—of any rights—every right-thinking American ought to aggressively fight to eliminate any discrimination, wherever it may be, and fight to eliminate it today.

WHY DELAY?

Some say we have got to delay this 10 years, or 20 years, or 30 years. Well, the South has had over 90 years to remove this vicious un-Christian policy, and they have doggedly stood firm against the rights of millions of decent American citizens simply because of their color.

This should no longer be tolerated in America, and we don't believe that 10 years or 20 years are going to change the minds of certain people here in America.

We in America are supposed to be giving leadership to the world. We are looking to allies all over the world, while the bare facts are these: If we are going to give leadership to the world, we must bear in mind that the colored race is in the great majority in this world of ours. If we are going to go before these colored races and say, "Follow our lead," they are going to look to find out how we stand before we can lead.

We believe that the Democratic Party at its national convention should take a forthright position on the question involving race relationships, and they should make it clear to America—north, south, east, and west—that it is high time that here in America we give equal rights to all of our citizens—to all Americans.

We also believe that the Democratic Party at its national convention should come out foursquare as a liberal, as a fighting political party; that it should truly be the party of Jefferson, the party of Jackson, the party of F. D. R., and the party of that great fighter, Harry Truman.

It cannot be a middle-of-the-road political party and expect the people to vote for their candidate as they did for Harry Truman in 1948 and for Franklin D. Roosevelt for four terms.

Yes; the Democratic Party is going to have to come out as a liberal, as a fighting force for good in America, if it expects small business, the workers, the farmers—the people of America—to follow.

Naming No Names

EXTENSION OF REMARKS

OF

HON. BOB WILSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 15, 1956

Mr. WILSON of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Evening Star of May 11, 1956:

NAMING NO NAMES

Harry Truman's speech in connection with the presentation of the Four Freedoms Foundation award to Averell Harriman stopped short of indorsing the New York Governor for the Democratic presidential nomination. But nothing said by Mr. Truman will discourage the rather widely held notion that he leans in the Governor's direction.

The former President went all out in praising Mr. Harriman as one of the wiser men of this day and age. The Russians, he said, were never able to pull the wool over Mr. Harriman's eyes. "He was not taken in," declared Mr. Truman, "as so many other political leaders were at that time (1945) by Russian avowals of peaceful intent. He is not taken in today, as so many of our leaders seem to be, by the smile on the face of the Kremlin."

Mr. Truman named no names. So we are left to guess the identities of the political leaders who were taken in in 1945. Presumably, Mr. Truman was one of them. At any rate, he was President at the time, he was the architect of the drastic cutbacks in the defense budget, and it was he who said in an expansive moment: "I like old Joe." Presumably also, it is the Republican leadership which, as Mr. Truman sees it, seems to be falling today for the Kremlin smile. We do not know which Republican leaders Mr. Truman had in mind. President Eisenhower is constantly cautioning the country against being taken in, and Secretary Dulles, more often than not, is denounced for talking about such things as massive retaliation—hardly the kind of language that would be used by one who is under the Kremlin's smiling spell.

This, however, is one of the nice things about making a political speech. The speaker is not obliged to name names except, as in this case, when he wants to praise someone. So it is just as well, perhaps, to concentrate on the nice things Mr. Truman said about Mr. Harriman—such things as this: "We miss his wisdom and energy and sure touch in our foreign policy today." We dare say that this and similar remarks, if passed over by the general public, are being read rather closely by Messrs. Stevenson and KEFAUVER.

Proposed Changes in Excise Tax Administrative Structure

EXTENSION OF REMARKS

OF

HON. JERE COOPER

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 15, 1956

Mr. COOPER. Mr. Speaker, on Monday, May 14, 1956, the Committee on Ways and Means conducted another executive session with respect to the recommendations contained in the report of the Subcommittee on Excise Tax Technical and Administrative Problems. In the CONGRESSIONAL RECORD for May 10, 1956, on page A3818, there appears a résumé of committee decisions with respect to this subcommittee report as of that date.

Today, Mr. Speaker, I would like to include in the RECORD for the information of the Members of Congress and the interested public a press release that I have issued as chairman of the Committee on Ways and Means announcing the decisions of the committee subsequent to the issuance of that previous release.

The committee is scheduled to meet again at 10 a. m. in executive session on May 16, 1956, to resume consideration of the subcommittee report.

The press release follows:

CHAIRMAN JERE COOPER OF THE COMMITTEE ON WAYS AND MEANS ANNOUNCES TENTATIVE DECISIONS OF THE COMMITTEE ON THE RECOMMENDATIONS OF THE SUBCOMMITTEE ON EXCISE TAX TECHNICAL AND ADMINISTRATIVE PROBLEMS

The Honorable JERE COOPER, Democrat, Tennessee, chairman of the Committee on Ways and Means, today announces the tentative decisions reached by the committee with respect to the recommendations contained in the report of the Subcommittee on Excise Tax Technical and Administrative Problems. On March 10, 1956, Chairman COOPER announced the decision of the committee with respect to section I relating to manufacturers excise taxes and section II relating to retailers excise taxes. In announcing today's committee action, Chairman COOPER indicated that the committee would resume its consideration of the subcommittee's report in executive session at 10 a. m., May 16, 1956. The decisions reached by the committee today are as follows:

III. TAXES ON ADMISSIONS AND CLUB DUES

1. The admissions tax should apply only to events which take place in the United States, but should apply whether or not the payment is made within the United States.

2. Admissions to privately operated swimming pools, skating rinks, and other places offering participation sports should be exempt from tax, in the same manner as in the case of admissions to such places operated by State or local governmental units.

3. The Internal Revenue Service should issue new rulings under the cabaret tax to provide that where a private organization conduct an affair in a room customarily and regularly used as a cabaret and negotiates with the proprietor to provide the dinner and any other services desired, but not for the entertainment, the cabaret tax will not apply if the private organization by independent negotiations provides its own entertainment and the entertainers are not regularly employed by the proprietor either prior to or after the affairs in question. In tentatively approving this recommendation, the committee adopted a clarifying amendment to make it clear that the limitation on employment of the entertainers by the proprietor would not preclude employment on a subsequent date.

4. The proprietor, owner, or lessee of a cabaret should be required to collect the cabaret tax due from concessionaires and include such amounts when making his other payments for admissions, refreshments, service, or merchandise.

5. The cabaret tax should be made inapplicable to what are sometimes called milk bars. More specifically the cabaret tax should be made inapplicable where the following conditions are met:

(a) No alcoholic beverages or setups are served;

(b) Only light refreshments are served;

(c) Space may be provided for dancing but without any charge for dancing; and

(d) Music may be obtained from phonographs or jukeboxes or from instrumental music (in the latter case only if supplied without charge to the milk bar operator.)

6. Under present law life members are required to pay annually a tax equal to the amount paid by active resident annual members for dues or membership fees. Life members instead should, as a general rule, pay an annual tax equivalent to the tax on annual memberships providing privileges most nearly like that of the life members (but note No. 7 below).

7. As an alternative to the computation of tax in the manner provided in No. 6 above, life members should be permitted to base their tax on the actual amount paid, if they are willing to pay the tax at the same time they pay for the life membership. This principle, that the tax should be based upon the actual amount paid, should also be extended to other types of club membership fees.

8. Dues for the purposes of the present club dues tax are defined as including "any assessment, irrespective of the purpose for which made." An exception should be made to this phrase to exclude from tax, assessments for a building fund to replace a building destroyed where it was destroyed by a hurricane or other event which would qualify as a casualty in the case of property belonging to an individual. Such a fund could be built up free of the club dues tax, however, only to the extent that the building destroyed was not covered by insurance and only to the extent of the replacement cost of the destroyed building.

IV. TRANSPORTATION TAXES

1. Ferryboat service should be exempt from the application of the 3-percent tax on the transportation of property.

2. This recommendation was passed over to permit further staff study. The recommendation of the subcommittee would provide that "any movement through lines of pipe within the premises," in addition, to including any movements interpreted by the Secretary or his delegate as being within the premises under existing law, should also include any movement which constitutes an integral part of the operation of a refinery, a bulk plant, a terminal, or a gasoline plant. Present law imposes a tax equal to 4½ percent of the fare charged for the transportation of oil by pipeline, with an exemption for any movement through piplines between the premises of a refinery, bulk plant, terminal, or a gasoline plant if the movement is not a continuation of taxable transportation.

3. "Air taxis" (I. e., airplanes under 12,500 pounds gross takeoff weight) where the aircraft has a seating capacity of less than 10 adult passengers, including the pilot, and where the aircraft is not operated on an established line should be exempt from the tax on the transportation of persons in the same manner as is presently true in the case of automobile taxis.

V. COMMUNICATIONS TAXES

1. An exemption for installation charges is provided under present law in the case of local telephone service and in effect applies to long distance telephone service and telegraph service. This exemption should be extended to the other communication taxes.

2. "Local telephone service" should be redefined so as to exclude all toll telephone massages, rather than only those for which a charge of over 24 cents is made and so as to exclude private leased wires in a local exchange area. (See Nos. 3 and 5 below for the extent to which these toll telephone messages and private leased wires should be taxed.)

3. The term "toll telephone messages" should be substituted for "long-distance telephone messages" and all toll messages, whether or not under 25 cents, included in this category. Shifting toll messages of under 25 cents to this category will extend slightly the exemption presently provided for the public press in the case of long-distance telephone messages.

4. Teletypewriter services are presently included in the 10-percent tax on leased wires, teletypewriters, and talking circuits special services. Teletypewriter exchange service should be defined as a service whereby teletypewriter subscribers are connected to central offices through which communications may be established with other teletypewriter subscribers similarly connected. In the case of this service, terminal facilities would continue to be included in the tax base as they are at present. However, the exemption for common carriers (such as railroads), telephone, telegraph companies, and radio stations, presently provided in the case of the tax on leased wires, teletypewriters, and talking circuit special services should be made inapplicable in the case of the new teletypewriter exchange service tax except where the service is purchased to render communication services.

5. In lieu of the present tax on leased wires, teletypewriter and talking circuit special services, a new tax should be imposed on wire mileage. The base of this tax would be the same as the present tax on leased wires, teletypewriters, on talking circuit special services, except for the separate treatment for teletypewriter exchange services, and except for the following revisions:

(a) Leased wire services within a local exchange area and involving oral transmission (presently taxed as local telephone service) would be added to the base of this tax.

(b) The base of this tax would be limited to charges for leased wires, etc., which may be obtained only from communications common carriers or in effect will exclude what might be called interior communications systems.

(c) The base of the recommended tax would exclude terminal facilities. It is the exclusion of these terminal facilities that accounts for the selection of the new name "wire mileage tax."

6. The base of the present 8-percent tax on wire and equipment service should be revised to exclude interior communication services, that is, those not making use of the franchises of communication common carriers for carrying wires along or over public rights-of-way. This would remove from tax fire-alarm and burglar-alarm systems, which are wired to give an alarm only on the subscriber's premises, as well as other types of purely interior communications systems.

7. The method of computing the communications excise taxes now appears to require a single tax computation for all items included in a single bill. A collecting agency should be permitted to base the tax computation on totals by groups of items or on specific items normally associated together for billing purposes.

VI. DOCUMENTARY STAMP TAXES

1. The so-called entity rule should be adopted for transfers of partnership interests in the case of the documentary stamp taxes. This would mean that the stock and bond transfer taxes and real-estate conveyance taxes would not be imposed with respect to—

(a) An adjustment of the interests of the partners;

(b) The sale or other disposition by a partner of his interest;

(c) The death or retirement of a partner;

(d) The admission of a new partner; or

(e) The liquidation of a partner's interest.

However, if in any of the above cases, stocks, bonds, or real estate are distributed by the partnership to a partner in either a current or liquidating distribution, or sold to a partner, a transfer tax would be imposed. Similarly, a transfer or conveyance tax would be imposed where a partnership is considered as being terminated under section 708 (b) of the 1954 code, and where the partnership sells or otherwise transfers property subject to the transfer or conveyance tax.

2. The purchase of stamps by clearinghouses of national security exchanges should no longer be required; instead such clearinghouses should be required to make daily payment by check to an authorized Government depository of the total amount of taxes shown on the broker-members' reports.

3. The present law provides no exemptions may be granted from the documentary stamp taxes in certain cases unless the delivery or transfer of the document qualifying for exemption is accompanied by a certificate setting forth such facts as regulations may prescribe. This statutory requirement for exemption certificates under the documentary stamp taxes should be liberalized by giving the Treasury the right to waive the requirement for certificates where they appear unnecessary.

4. The transfer tax should not apply to the return of stock or certificates of indebtedness deposited as collateral security.

5. Transfers made by an executor or administrator of certificates of indebtedness to a legatee, heir, or distributee should be exempt from the tax if the value of the certificates is not greater than the amount of the tax involved. This would extend the present rule for stocks to certificates of indebtedness.

6. The stock transfer and issuance taxes should be revised as follows:

(a) In the case of the stock issuance tax, the tax rate should be 10 cents on each $100 or major fraction thereof of the actual value of the total stock involved in a transaction. The minimum tax in any transaction should be 10 cents.

(b) In the case of the stock transfer tax where there is a sale or exchanges for value the tax rate should be 5 cents on each $100 or major fraction thereof of the actual value of the total stock involved in a transaction.

The minimum tax with respect to such transactions would be 5 cents.

(c) The committee will resume consideration of this recommendation when it next meets at 10 a. m. on Wednesday, May 16, 1956.

Statement Urging United States Membership in the Organization for Trade Cooperation

EXTENSION OF REMARKS
OF
HON. ROBERT W. KEAN
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 15, 1956

Mr. KEAN. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include a statement made by members of the board of trustees of the United States Council of the International Chamber of Commerce urging approval of United States membership in the Organization for Trade Cooperation.

The companies of which these businessmen are officers have farflung plants in almost every corner of the United States. A list follows of where these plants—each of which provides jobs for many American workers—are located:

STATEMENT URGING UNITED STATES MEMBERSHIP IN THE ORGANIZATION FOR TRADE COOPERATION

As American businessmen concerned with our Nation's welfare the undersigned, members of the board of trustees of the United States Council of the International Chamber of Commerce, urge the business community and the public to support President Eisenhower in his request for approval of United States membership in the Organization for Trade Cooperation.

Of the unifying forces within the free world, only the common love of liberty and independence has proven more important than the ties of international trade. This trade has grown in recent years under a system of economic cooperation centering on the General Agreement on Tariffs and Trade.

The recent renegotiation of the general agreement, or GATT, provides for the assignment of many essential parts of the agreement to the proposed Organization for Trade Cooperation. It also permits the Organization, or OTC, to administer the agreement more efficiently. Of even greater importance, the formation of the OTC represents a transition from a provisional postwar system of trade cooperation to one that is both permanent and flexible.

Failure by the United States to support this system will have severe consequences for ourselves and our allies. The growth of world trade under the GATT has contributed greatly to the strength and prosperity of the coalition of non-Communist nations. We cannot reject the OTC and continue to rely on the economic cooperation that has made this trade possible.

The issue of OTC is not freer trade versus protectionism. No provision of either OTC or GATT requires the United States to lower or raise a single tariff. But we cannot reject the OTC without reversing our traditional liberal trade policy and unleashing forces abroad that will increasingly turn American exports back to our own shores and trigger the chain reaction of economic retaliation.

Disruption of world commerce by economic warfare is not an imaginary threat. The failure to cope with the problems of economic nationalism after World War I was partly responsible for the economic collapse that destroyed free enterprise in large areas of the world. This experience demonstrated the importance of a formal system of consultation and cooperation on trade matters. It also influenced our statesmen who played a leading role in the creation of the General Agreement on Tariffs and Trade. The agreement has since become a bulwark of our foreign-economic policy. To undermine it now by rejecting the OTC would be the economic equivalent of dissolving our military alliances and disarming our allies.

Thus the real issue in the controversy over the OTC is whether or not the United States will continue to furnish strength and leadership to a workable system of international economic cooperation. Our Nation has accepted this responsibility in the past and we believe that it is essential for the American people and their leaders to accept it now.

Supplemental Appropriations of the Department of Agriculture for Mediterranean Fruitfly and Burrowing Nematode

SPEECH
OF
HON. WILLIAM C. CRAMER
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 14, 1956

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 11177) making appropriations for the Department of Agriculture and Farm Credit Administration for the fiscal year ending June 30, 1957, and for other purposes.

Mr. CRAMER. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, I take these few minutes for the purpose of directing a couple of questions to the chairman, and also to thank the committee for its consideration of probably one of the most important, or two of the most important agricultural problems in Florida today. One has to do with the Mediterranean fruitfly infestation which was recently found to exist in both Broward and the Miami-Dade County area and the other with regard to the activity of the Department of Agriculture concerning the spreading decline, a citrus disease which has meant much in the way of the destruction of many acres of citrus crops in the State of Florida. I want to thank the committee for the serious consideration which I know it gave to both of these all-important problems. But, I want to direct these questions to the committee in order to make certain that I fully understand the program for the future. It is my understanding that there was requested of the committee $856,000 for the purpose of additional customs' inspections, and I see on page 7 of the report where the committee has actually provided a new item of appropriation of $500,000 which is less than that requested for the purpose of working out a program for the use of this additional money to be transferred to the Bureau of Customs to develop a program which will prevent passengers from embarking in foreign ports on carriers destined for the United States with dangerous articles and materials and for domestic inspections. I would like to ask this question, Mr. Chairman: Was it the opinion of the committee, and did it have testimony before it, as to whether this amount rather than the amount requested would be adequate to provide 100 percent inspection by customs in the future, it being my understanding that since 1953 there have only been spot checks and it being understood that this is one of the possible reasons and one of the possible sources of this fruitfly infestation in this area.

Mr. WHITTEN. May I say to the gentleman that the language in our report on page 7 probably expresses it much better than I can here on the floor. But, primarily the point we make is this: We went through the customs an-

nouncements and things of that sort. We have been trying to have a thorough check on everybody who lands in the United States. We did have that at one time, but then we got into this spot-checking business. Spot checks do not work. Neither is it sound to let all these things be taken aboard in foreign countries, particularly on planes and ships and then try to catch them after they get into our own country. But if you try to meet the problem by giving customs all the money it, in turn, says it will have to have in order to do this work for the Department of Agriculture, it turns out that that becomes completely out of line with what is sound. After going over this with all the witnesses, we think, and I think I reflect the views of all of us on the committee, that this amount would be enough to substantially meet the requirements of this inspection service, depending on the time element, if proper notice is given to the embarking passengers in foreign countries prior to taking off for the United States. In other words, there was evidence that if the passengers had notice before they took this contraband aboard, we would not have one-tenth the problem over here that we do. So this is now trying to reconcile what we really need for the time being, but at the same time we are telling them to review the whole thing and stop these things before leaving the foreign shores.

Mr. CRAMER. I appreciate the chairman's explanation and the fact that the committee has shown great awareness of this problem. But, is it true that $500,000 that has been provided will be adequate to give 100 percent inspection at Customs in the areas in the State of Florida where it has been shown there is a definite need?

Mr. WHITTEN. We feel that if they will get busy on this, you can have 100 percent inspection prior to working the matter out. It is our opinion that the figures submitted by customs, which is a transfer, or at least they were in my own opinion, considerably higher than actually should be the case.

Mr. CRAMER. You feel that these funds are adequate to carry out the inspection?

Mr. WHITTEN. I do.

Mr. CRAMER. I want to thank the chairman and to say that as of last Friday, as a matter of fact, 100 percent inspection has been put into effect in the State of Florida. I have only one additional question which I want to ask the chairman with reference to the $1,500,000 contingency fund for the control of the outbreak of insect plant disease on page 3 of the bill. As you know, that has been a very serious problem in Florida with regard to spreading decline. Is it the opinion of the committee with regard to that as well as this Mediterranean fruitfly problem that that contingency funds is adequate?

Mr. WHITTEN. Of course, I may say to my friend that when we agreed on this figure and on that sum, we recognized the problem that needed to be met, otherwise, we would not have gone along with it. In our judgment, we think it is sufficient to meet the problem of the Mediterranean fruitfly threat which has developed in recent weeks. The gentleman, perhaps, is aware that it came to our attention after we had virtually gotten ready to mark up the bill. But we did reopen the hearings to hear testimony and I call the attention of the gentleman to the fact that it is an emergency fund. We told them it was adequate to initiate the program and we are looking forward to their taking it up in detail in the other body.

Mr. CRAMER. Then it is my understanding that you do contemplate sometime during the remainder of this session that a supplemental request will be made or, in the alternative, a request made in the Senate to take care of this, which is recognized as an emergency problem in Florida.

Mr. WHITTEN. I recognize that will probably happen. I would not want to commit myself other than as I have here. This would initiate a program, pending the working out of the problem.

Mr. CRAMER. I want to thank the chairman of the committee for the recognition which the committee has given to these two important problems in Florida and in the future, when the supplemental request is brought in, I trust it will be given the same careful consideration.

Mr. Chairman, I would take the opportunity at this time to compliment the Department of Agriculture on its effective and prompt action in regard to the two threats that have faced the Florida citrus industry this year.

Spreading decline—burrowing nematode—is an imported disease that is seriously threatening the great groves of our State and, since its appearance in the past 2 years, considerable research and many control methods have been effected. In conjunction with the State of Florida the Department has worked diligently to search out infected areas and to control the spread of this disease.

One hundred and fifty thousand dollars was appropriated from contingency funds in fiscal 1956 to make surveys of the infection which at the present time disclose, as of the 14th of May, that 878 acres of grove have been treated, 260 acres are ready for treatment and some 2,017 are being prepared for treatment. Total infection is known to have spread to 7,000 acres of our groves. Department of Agriculture requests for fiscal 1957 now total nearly $500,000 for further mapping and other steps planned to control spread of the disease and to prepare for elimination of certain areas and treatment of others. The State has fully participated in this program and has appropriated $1,800,000 for the biennium ending July 1957.

The Department has acted with sincerity and dispatch in moving to our assistance in this problem. We have been assured of their continued support as needed.

The Mediterranean fruitfly has recently been discovered in an area reaching from Pompano Beach to Kendall on the east coast of Florida. Those people familiar with the destruction caused by this infestation many years ago know how costly and dangerous it can be. Millions of boxes of fruit and millions of dollars revenue loss was suffered by the State by the previous infestation.

The fly was first identified by scientists in the Department of Agriculture on May 19 this year. Immediate action was taken on the two phases of protection needed to prevent spread of the infection and further infestation. Inspectors were immediately transferred to the State with 3,500 traps to determine areas of infestation. Ten thousand traps will soon be ready throughout the State and additional inspectors have been transferred to the area. With the interest of the White House being expressed, additional funds in the amount of $500,000 have been asked by the Department and approved today in the contingency funds to commence this work in the State. Additional supplemental appropriations requests will be made to meet the full need for fiscal 1957.

In the second phase of defense against further spread of this dangerous infestation the Department has set up $500,000 for 100 percent inspection by the Customs Bureau which has already gone into effect. Hearings were held May 9 on inspection quarantine methods for fruit shipment and will be effective this week on publication.

I think that the cooperation and action of the Department of Agriculture and customs is worthy of high commendation and I take this opportunity in the discussion of their appropriation requests in 1957 to make these remarks and point out the sincere efforts in the past of this administration to serve in the field of agriculture in a manner that is beneficial and of high importance. Their response to the need of a particular situation in a specified instance in the State of Florida is demonstrative of the attitude of the Department and its officials at all times.

The Committee on Appropriations has certainly to be complimented on its full realization of the needs of Florida in this instance in approving administration requests.

The CHAIRMAN. The time of the gentleman from Florida [Mr. CRAMER] has expired.

Pennsylvania's Scott

EXTENSION OF REMARKS

OF

HON. JOSEPH W. MARTIN, JR.

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 15, 1956

Mr. MARTIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Harrisburg (Pa.) Evening News of May 12, 1956:

PENNSYLVANIA'S SCOTT

Throw a stone on the national political scene—figuratively speaking, of course—and there are very good odds that it will hit a Pennsylvanian.

More and more, these postwar years, Pennsylvania men and women have moved into

top-echelon positions of power and influence in the national organizations of both political parties.

Latest to take over a top spot is Philadelphia's Representative HUGH SCOTT, whose appointment as general counsel for the Republican National Committee was announced just yesterday by GOP Chairman Leonard Hall.

It took a lot of looking among the 48 States to find someone with the unique qualifications for general counsel. He had to be (1) a topnotch lawyer and (2) he had to have an extensive knowledge of the ins and out of politics, varying from State to State across this wide Nation, and a wide acquaintanceship among the hundreds of party leaders in the various States. Pennsylvania's SCOTT filled the bill to a "T"—from the standpoint of top legal background and from his experience as a former Republican national chairman.

As we add Congressman SCOTT's name to the growing list of Pennsylvanians in key spots on the national political scene, we have just that much more ammunition for one of those "my State versus your State" arguments.

Come to think of it, though, it isn't much of an argument—even with a Texan—over which State turns out the most leaders in national politics. Pennsylvanians can start right up at the top of the list and work their way down. The President of the United States may have been born in Texas, but, displaying the good judgment that put him in the White House, he picked Pennsylvania for his real and permanent home.

Atlas Serves Cause of Peace

EXTENSION OF REMARKS
OF
HON. BOB WILSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 15, 1956

Mr. WILSON of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the San Diego Union of May 3, 1956:

DETERRENCE—ATLAS SERVES CAUSE OF PEACE

San Diego has become the free world headquarters for the design and production of a weapon which ultimately could provide the decisive deterrent to world war III.

Th Atlas intercontinental ballistics missile will exert an enormous influence on international politics. The leaders of the two great global powers both spoke of such a weapon as recently as last week.

In England Red Party boss, Nikita S. Khrushchev, boasted that Russia had a projectile capable of spanning continents.

At his news conference a week ago yesterday President Eisenhower discussed the intercontinental ballistic missile in typically temperate terms. He described it as a supplement "to a capacity which already exists."

He returned again to a fact which he frequently emphasizes: the psychological value of such a weapon. "It has sort of a terrifying result upon the human mind to think of something flying off through space at several times the speed of sound and at tremendous altitudes and coming down with these great hydrogen bomb bursts."

This capacity, this asset will pay huge dividends in peace other than its role as a deterrent. Much of the research and development already accomplished can be applied toward the conquering of man's last frontier: outer space.

Only last week Willy Ley, an authority on rockets; told a group of United States Navy officers that the last obstacle to an intercontinental ballistics missile was finding a way to prevent it from burning like a meteorite when it reentered the earth atmosphere. It would appear that the Atlas' designers have crashed this heat barrier.

The decision to locate the Atlas plant in San Diego—made at the highest echelon of the Eisenhower Republican administration—does more than assign to this community an activity which will eventually require the services of close to 7,000 employees. It means that San Diego will also become an increasingly attractive site for companies supplying parts, equipment, and services needed for the Atlas and its employment.

If the community is to be congratulated on having Convair's Atlas division here, that company deserves the highest praise for what must be a superb engineering achievement. It must be remembered that the Atlas is not a guided missile; when it is launched its trajectory is fixed.

To develop an aiming mechanism accurate enough to bring the weapon to its target 5,000 miles away is a technological triumph.

H. R. 11177

SPEECH
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 15, 1956

The House on Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 11177) making appropriations for the Department of Agriculture and Farm Credit Administration for the fiscal year ending June 30, 1957, and for other purposes.

Mr. DONOHUE. Mr. Chairman, I desire to join in complimenting the distinguished chairman and the very able members of his energetic committee who have labored so long and studiously to present this Department of Agriculture appropriation bill for fiscal 1957. This measure before us is obviously the result of the most studied effort on the part of the committee, after extensive hearings and the appearance of multitudinous witnesses, that could be exerted to provide for the full operation of the Department of Agriculture in the greatest public interest, while at the same time eliminating or reducing those items of expenditure which experience has demonstrated are of little or no value to the general welfare.

Among the great many important items provided for in this bill, there are two that have been of particular personal interest to me over the past several years. The committee has recognized the great importance of these items and very wisely insured their greater application and expansion.

The first one is the so-called school-lunch program for which I have earnestly advocated a substantial increase because I felt it was eminently justified. There is, I believe, no better investment this country can make than attempting to improve the health of our schoolchildren, the citizens of tomorrow. As we all realize, the number of students in our grade and high schools all over the country has been steadily increasing and is destined to continue so increasing for an undetermined number of years ahead. It is, then, practical as well as patriotic wisdom to reasonably guarantee that these guardians of tomorrow's national security receive during their school years the essential foundation of health that can come only from an adequate food intake during their most energetic days. The committee has seen fit to increase this item by over $16.5 million and directed the Agriculture Department to take other steps also that would appear to adequately cover the situation for the present at least, and the committee deserves the highest praise for this wise action.

In recognition of another serious problem, the control and eradication of the gypsy moth threat, the committee has provided a total of $2,295,200. It has long been authoritatively judged and warned that if the insidious infestation of this type of moth is not controlled, it would cause even greater damage than it already has to timber, recreational facilities, fruit crops, and ornamental trees. I understand that the increase in this year's bill of nearly $2 million is to encourage the use of a new technique in application of a most effective spray composition which promises to completely eliminate this dangerous insect and that an excellent cooperative program has been established between the Agriculture Department, and the various States and local governments and also private individuals and organizations. Certainly, such a program is in the general interest by promoting conservation of our physical resources and the committee has again demonstrated their patriotic wisdom in taking cognizance of the situation.

Of course, there are a great many other important provisions of this measure affecting the general welfare, such as soil conservation, agricultural marketing research and service, meat inspection to protect the general health, and so forth, all of which have been thoroughly explained by the floor managers of this bill and I do not intend to intrude unnecessarily upon the time of this House by repetitious recital. I very earnestly feel that the overall content of the measure has been conscientiously designed to economically promote our agricultural concerns in the greatest national interest, and I hope that the bill will be passed promptly and unanimously.

Senator Nixon Outspoken in 1951—Vice President Nixon Very Silent in 1956

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 15, 1956

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial which ap-

peared in the May 10, 1956, isssue of the St. Louis Post-Dispatch. The editorial entitled "Influence, Then and Now," follows:

INFLUENCE, THEN AND NOW

1951: A Senate committee rebukes William M. Boyle for making an appointment at the RFC for the head of the American Lithofold Co. Mr. Boyle, executive vice chairman of the Democratic National Committee, denies he used political influence to help the private firm. But according to Newsweek magazine, Senator Richard M. Nixon says: "The very fact that the introduction comes from the National Committee * * * constitutes influence."

1956: A Senate committee learns that Murray W. Chotiner went to the White House where two Presidential assistants made calls to the CAB in behalf of his clients. Mr. Chotiner, associate director of the Republican National Committee's campaign schools and former head of the regular party organizations in Los Angeles and California, as well as former campaign manager for Mr. NIXON, denies he used political influence to help his clients. But what does Vice President RICHARD M. NIXON say? Nothing. Absolutely nothing.

How times do fly.

Department of Agriculture and Farm Credit Administration Bill, 1957

SPEECH
OF
HON. JAMES A. HALEY
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 14, 1956

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 11177) making appropriations for the Department of Agriculture and Farm Credit Administration for the fiscal year ending June 30, 1957, and for other purposes.

Mr. HALEY. Mr. Chairman, I rise to pay tribute to the great wisdom of the committee in including in the agriculture appropriations bill for 1957 emergency funds to combat the menace of another disastrous outbreak of an unwelcome visitor to our shores, the Mediterranian fruitfly.

This destructive insect, which threatens particularly a citrus industry vital not only to the great State of Florida which I am privileged to represent, but will affect the economy of other States as well, first reappeared in the southern tip of Florida only a few short weeks ago.

Memories of a disastrous earlier invasion of the fruitfly still lingers in Florida, and the first warning of its reappearance was answered promptly and unanimously by the Florida delegation in this House and in the other body. After conferring with leaders of the citrus industry, with officials of the Florida Plant Board, we met with officials of the Agriculture Department to outline a recommended plan for control of the fruitfly.

Time was of the essence, for the fruitfly is such nature that immediate and urgent steps must be taken not just to wipe it out where ever it exists, but to isolate it promptly when it is found, thus preventing its spread.

I am happy to say that our efforts were not unrewarded. Officials of the Agriculture Department, recognizing as we did that the fruitfly knows no politics and has no partisanship in its destructive operations, leaped into the breach to begin the fight against this deadly menace.

And similarly, the subcommittee on this bill, under the leadership of the able gentleman from Mississippi [Mr. WHITTEN], has recognized the need for action now to implement the plans of the Department to control the fruitfly.

The committee has recommended, and I urge this House to concur, that $500,000 be added to the Department's contingency fund for emergency insect outbreaks, that another $500,000 be appropriated for transfer to the Bureau of Customs for 100 percent inspection of baggage coming into Florida, and that $110,300 be added for increased inspection at ports of entry.

For many years, members of the Florida delegation in Congress have recognized that the present system of spot inspection of baggage is not adequate to prevent the recurrence of the Mediterranean fruitfly, and guard against other unwelcome visitors. We do not believe the fruitfly would be with us now had there been 100 percent inspection.

But this is no time for looking backward to what might have been. We say that the subcommittee has been wise in its handling of the problem, and we are assured that the funds sought are sufficient not only for the immediate emergency work needed, but to initiate a total inspection program to avert further emergencies.

I also would like to commend the committee's action in providing adequate funds for assisting the State of Florida in its all-out fight against spreading decline of citrus, caused by a burrowing nematode which, in its long-range effects, appears to be capable of wreaking as much disaster as the fruitfly.

This, too, is a vital matter, and I am happy to be able to state here that it is not a responsibility which the State of Florida has sought to shove off on the shoulders of the Federal Government. The record will show that the State government is bearing two-thirds of the cost of the research and control programs needed.

Gas and Oil Leasing on Wildlife Refuges

EXTENSION OF REMARKS
OF
HON. LESTER R. JOHNSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, May 14, 1956

Mr. JOHNSON of Wisconsin. Mr. Speaker, the May 1956 issue of Sports Afield carries a statement by the former Secretary of the Interior, Douglas McKay, concerning his side of the controversy over the Department of the Interior order permitting oil and gas drilling on wildlife refuges. Because this matter is of such interest to conservationists all over the United States, I am putting in the CONGRESSIONAL RECORD Secretary McKay's article, The Truth About Our Wildlife Refuges. I might add that the two articles to which Secretary McKay refers have previously been reprinted in the CONGRESSIONAL RECORD. The first one, One Man Can Wipe Out Our Wildlife Refuges, by Arthur Carhart, was carried in the RECORD of May 23, pages A3537 and A3538. The second article, Refuges Doomed, was reprinted in the CONGRESSIONAL RECORD on page A1782 of the February 27 issue.

Secretary McKay's article, along with the note of the editor, follows:

THE TRUTH ABOUT OUR WILDLIFE REFUGES
(By Secretary of the Interior Douglas McKay)

(EDITOR'S NOTE.—It is Sports Afield's deep conviction that the greatest safeguard to the future of our wildlife resources is America's vast army of alert, well-informed sportsmen. In so vital a part of that future as the wildlife refuge program, it is imperative that these sportsmen have access to all the facts. In this connection, Sports Afield feels privileged to present this article by Secretary Douglas McKay, offering the Department of the Interior's side of the controversy over the recent order permitting oil and gas drilling on the refuges.)

Sports Afield readers have such a very real stake in the preservation of wildlife in this country that they are entitled to nothing less than the full truth about the operations of our national wildlife refuge system.

It is unfortunate and unfair that the truth has been distorted by articles such as those appearing in recent months under the headings "One Man Can Wipe Out Our Wildlife Refuges" and "Refuges Doomed?"

In this connection a moral can be drawn from the old fable about the boy who cried wolf once too often. False prophecies of doom can do great harm to the cause of conservation. Certainly, sportsmen-conservationists cannot and will not be fooled all of the time by glibly voiced cries of alarm when no danger exists. This could lead to the very real danger that champions of conservation might fail to rally in time when an actual threat to wildlife preservation arose.

Last June, for instance, Sports Afield readers were asked to believe the absurd charge that one man—the Secretary of the Interior—could "wipe out our wildlife refuges by merely signing a typewritten order." Moreover, it was insinuated that I was actually opposed to our excellent refuge program. The only hope of salvation, you were told, lay in appealing to the Congress to protect the refuges from the Secretary of the Interior.

It is ironic, perhaps, that shortly thereafter two congressional committees rejected the protests by sportsmen-conservationists against the proposed transfer of 10,700 acres of the Wichita National Wildlife Refuge to the Department of the Army and only the refusal of the Secretary of the Interior to sign a transfer order has protected the integrity of that vitally important wildlife sanctuary.

After barking up that wrong tree, uninformed alarmists recently have stampeded off in another direction to set up their cries of "Wolf, Wolf." This time the cause of true conservation is being harmed by widespread circulation of misinformation about the stringent new regulations governing oil and gas leasing on wildlife refuges.

Unfortunately, Michael Hudoba, Washington editor for Sports Afield, is among those who resorted to snap judgment rather than objective study of the new regulations. His article "Refuges Doomed?" presented an unfair and distorted picture of the effect the

new regulations will have on refuge protection.

What is a National Wildlife Refuge? Although Mr. Hudoba does not answer that question, he is quite willing to say how they should be run.

His article refers to actions which defeat the very purpose of the entire refuge system, reverse policies to preserve the integrity of the wildlife refuges, and now open wildlife refuges to oil and gas leasing. It does this without in any way defining what the real purpose of the wildlife refuge system is or stating the true facts with regard to the availability of wildlife refuge lands for oil and gas leasing as well as other economic uses for more than 20 years.

Anyone who is casually familiar with a Federal wildlife refuge knows that it has two principal purposes. One is the protection of game against hunting and the other is the furnishing of suitable habitat to encourage or supplement other nesting, resting, and feeding areas. Insofar as migratory birds are concerned, each of the wildlife refuges is used by the birds during only a few months of the year and in many instances only on portions of the refuges are there concentrations of such birds. The balance of the refuge lands are utilized for a variety of purposes including the production through ordinary farming methods of grain and other feeds.

In other words, wildlife refuges are not wilderness areas nor are they national parks.

Of the approximately 16 million acres of public domain that is administered in part for wildlife conservation, only half—8 million acres—is administered solely by the Fish nad Wildlife Service and about 7 million acres of that half lies in Alaska. On the other 8 million acres of land the Fish and Wildlife Service has rights along with the Bureau of Reclamation, the Bureau of Land Management for grazing, the Corps of Engineers, and other Federal agencies. Even where the lands were withdrawn for the sole use of the Fish and Wildlife Service, oil and gas leasing was permitted in many of the withdrawal orders. A total of 1,398,089 acres has been acquired by funds appropriated for the use of the Fish and Wildlife Service. Some of these lands, particularly in the refuges along the Gulf of Mexico, were acquired subject to the reservation of mineral rights and almost all of these areas along the gulf have producing oil and gas wells. More than half a million acres of lands have been leased by the Fish and Wildlife Service and its uses are subject to the terms of these leases.

The act of June 15, 1935 specifically contemplated that grants of privileges for economic use of refuges would be made and that part of the revenue therefrom would be returned to the communities where the refuges were situated. The term "privileges" includes not onyl sharecropping, grazing, timber removal, and similar activities, but also any other economic use of the areas as does not interfere with the use of the area for its primary purpose, namely, the conservation of wildlife.

Thus, to charges that any recent action of the Department "defeats and nullifies the basic refuge purposes" is to ignore completely the facts about the multiple uses which have historically been made of the refuges.

Are the wildlife refuges doomed?

Mr. J. Clark Salyer, chief of the Branch of Wildlife Refuges of the United States Fish and Wildlife Service, certainly is as well qualified to answer that question as Mr. Hudoba. While on the witness stand before the House Committee on Merchant Marine and Fisheries he was asked point blank:

"Now do you feel that under your regulations and operating plans, the wildlife will be protected adequately where an oil lease is entered into?"

Mr. Salyer replied:

"I do or I would be up here screaming bloody murder right now."

Is Mr. Salyer as well qualified as Mr. Hudoba to answer that question?

Mr. Salyer is a civil servant. He has no ax to grind. His record speaks for itself.

He is one of the dedicated group of wildlife conservationists who came to Washington with "Ding" Darling 22 years ago and laid the foundation on which the wildlife refuge system has grown from one-half million acres to over 17½ million acres.

Mr. Hudoba made the point that the new regulations would compel the Fish and Wildlife Service to prove the value of each acre of wildlife land. Mr. Salyer demonstrated the falsity of this conclusion in his testimony before Congress. He testified that before an oil lease could be granted the Fish and Wildlife Service would have to be satisfied that wildlife values are adequately protected. Representative Dingell then asked:

"So, in effect, the Wildlife Service, has to come forward and prove the need of protection of certain types in that area."

Mr. SALYER. "I wouldn't say we have to prove it. We have to state it."

Mr. DINGELL. "And you have to show that certain forms of action are necessary to preserve that?"

Mr. SALYER. "No, the shoe is on the other foot, with these new regulations. The oil companies have to do it."

Mr. DINGELL. "The oil companies have to do it?"

Mr. SALYER. "They have to show that they have a plan that will protect the wildlife interests."

Actually, it's a little surprising the new lease regulations didn't bring protests from oil and gas development interests. The new rules are that one-sided in their design to safeguard wildlife values on lands administered by the Department. They could not be more restrictive in favor of wildlife and still stay within the requiremen s and the intent of the various acts, treatics, and laws under which Fish and Wildlife Service areas were acquired and are administered.

An attempt has been made to mislead the public by an accusation that these revised oil and gas regulations—signed after 2½ years of study, conference and discussion by officials and experts of the Geological Survey, the Bureau of Land Management and the Fish and Wildlife Service—opened lands of the wildlife refuge program to oil and gas development for the first time.

This is not true.

Issuing leases for oil and gas exploration and drilling dates back to, and is authorized by, the Mineral Leasing Act of 1920. The intent of this act was later reaffirmed by amendment. The Mineral Leasing Act for Acquired Lands, and the act of June 15, 1935, relating to administration of wildlife refuges, also authorize oil and gas leasing on wildlife areas.

Under previous regulations pertaining to these acts, leases were in effect on approximately 4 percent of all wildlife areas administered by the Fish and Wildlife Service. Eleven separate areas were involved. The first lease for these areas was issued in 1947. From then until I became Secretary of the Interior in 1953, leases were issued on eight federally-managed wildlife areas: Creedman Coulee, Mont.; Desert Game, Nev.; White River, Ark.; Strawberry Valley, Utah; Bitter Lake, N. Mex.; Delta and Breton, La.; and Fort Peck, Mont.

Far from being the first Secretary of the Interior to open refuge lands to oil and gas leasing, I was actually the first one in the history of the Fish and Wildlife Service to close certain refuges to exploration in deference to irreplaceable wildlife values.

Soon after I took office it became obvious that Department of the Interior regulations relating to oil and gas leases, adopted in 1947, were not adequate in providing safeguards for wildlife values. Under those mildly protective rules an oil or gas lease had to be approved and issued automatically if certain minimum conditions were met by the operator-applicant. Several leases had been issued under such conditions, seemingly without anybody noticing that the Department's responsibilities for migratory birds and other wildlife were being overlooked.

I authorized a stop order on August 31, 1953, suspending leasing by the Bureau of Land Management under the 1947 regulations. The order was to stay in effect until new regulations could be drawn which would guarantee necessary protection to wildlife values on refuges, and at the same time reflect awareness of the publicly owned oil and gas reserves underground, and laws concerning those reserves. As Secretary of the Interior I cannot forsake one resource while catering to another. It would be remiss to ignore publicly owned oil reserves while safeguarding wildlife, as surely as it would be to disregard wildlife while protecting the public's rights in oil reserves under public lands.

Some unscrupulous conservation commentators charged that applications for oil and gas leases flooded the Fish and Wildlife Service as soon as the stop order was lifted and the new regulations were announced. The fact is that now, 3 months later, we can report that only the usual number of applications have been made, approximately the same number as under the old regulations. In fact, only one refuge—Lacassine Refuge in Louisiana—has been approved for oil exploration since the new regulation became effective. The new rules obviously have not encouraged oil and gas drilling operations on the refuges, as predicted.

Incidentally, applications for leases are not made to the Fish and Wildlife Service; the Bureau of Land Management is the leasing agency. One question would have set these reporters straight so their readers could have had accurate information.

The new lease regulations place absolute veto power, as well as the right to approve where wildlife values will not be harmed, with the Fish and Wildlife Service. Career wildlife management experts—some of them the same ones who have been responsible for developing the Service's refuge program over the past 22 years—will have sole authority to analyze probable effects of exploration and drilling. If they object to the proposals, no lease will be issued. This places authority where it ought to be, with the agency having primary responsibility and interest in refuge values.

This was not the case under the previous regulations. In the past it has happened more than once that in spite of Fish and Wildlife Service objections leases have been issued. The new regulations do not permit this.

Yet, it has been argued that placing responsibility for approving or rejecting lease applications with the Fish and Wildlife Service will force refuge personnel to neglect their fundamental duties and become oil and gas experts. I can't imagine a refuge manager not being delighted at the chance to have the say about what will be done on the area in his charge. I believe the refuge experts are the people who should decide what effect certain proposed activities will have on their areas. I intend to see to it that they do the deciding. Conservationists, in general, I am confident will say amen to this. If those people who are denouncing these protective segments of the code were responsible for carrying out the many mandates of the Fish and Wildlife Service I am sure they would welcome the reassurance the new regulations provide.

A look at some of the facts may tend to dispel unwarranted conclusions, and fears, and point out why so many refuge areas are not, and cannot be, entirely inviolate.

First, category A under the revised code, contains the so-called inviolate refuges, the areas on which no lease will ever be considered except in case of national emergency or when drilling may be required to protect publicly owned oil from being drained by other operations. These areas are the ones deter-

mined indispensable for rare or endangered species, remnant big game herds, and irreplaceable examples of unique plant or animal ecology. However, it should be noted that the Secretary of the Interior lacks authority to make even these refuges entirely inviolate. He can not prevent oil and gas developments where mineral rights within these refuges are privately owned.

At present category A contains about 3,200,000 acres. Of these more than 50,000 acres are subject to oil and gas rights retained by former owners. The Fish and Wildlife Service could not in the past, and cannot now, prohibit oil drilling on these 50,000 acres.

Category B, consisting of approximately 6 million acres, includes refuges designated as wilderness, recreational, and water development or marsh. These are refuges on which, the Fish and Wildlife Service has declared, oil or gas development might seriously impair or destroy usefulness of the lands for wildlife conservation purposes. Only after a complete, detailed operating program guaranteeing full protection of the particular refuge values has been approved by the Fish and Wildlife Service, will leases be issued for any of these B areas.

Of the 6-million acres of these group B refuges, more than 800,000 acres are outside the Fish and Wildlife Service's jurisdiction so far as oil and gas rights are concerned.

Of nearly 8 million acres of other National Wildlife Refuge lands, more than 2 million in the United States are available for oil and gas development, because under terms of their establishment as wildlife areas there is a provision that "nothing is to interfere with prospecting or development."

But there is reassurance in the fact that while heretofore this provision was interpreted as meaning that prospecting and developing could be permitted even over Fish and Wildlife Service objections, now operations on these areas require Fish and Wildlife Service approval. Wildlife values will be afforded protection they never had before.

Under the old regulations big-game ranges were open to leasing without consideration for wildlife values. This was true because most of these areas were administered jointly by the Bureau of Land Management for grazing and by the Fish and Wildlife Service for wildlife use. As a result, in the past many leases for oil exploration were granted on game ranges without the consent or even knowledge of the Fish and Wildlife Service.

This situation has been changed. Game ranges are to be accorded the same protection regarding wildlife values as all other areas in the Federal refuge program.

The frantic fear some conservationists have expressed over secondary uses on refuge lands is not justified. Multiple-use of many refuges has been pointed to with pride by both Department and Service people for years. Surplus animals have been transferred to restock underpopulated States areas. Timber—millions of board feet annually—and hay have long been harvested and sold. When certain fur animals, notably muskrats, become too numerous they are trapped and sold for their pelts. Grazing and share-crop farming have long been accepted as good refuge management practices. Numerous producing oil wells have been in operation on refuges for many years. Mr. Salyer has stated emphatically that those producing wells which are on Federal leases have not harmed wildlife values.

Over the years a good deal has been made of the fact that the law requires that 25 percent of revenues resulting from these secondary uses must go to the counties in which the refuges are located, for the local school and road funds. The point has been made that this compensation offsets loss to local tax rolls when lands are withdrawn for refuge purposes. Total revenue from these secondary uses last year was almost $2¼ million. It is clear that modern wildlife management as practiced by our refuge technicians is also good business.

Secondary uses are not limited to profit-making business. Last year 5¼ million people visited the refuges. Nature study, bird watching, biology classes, field trials for retrievers and pointing dogs and beagles, fishing, picnicking, and, on a few areas, hunting are some of the recreations that attracted these millions. We know the number of visitors will increase. Human values will have to be considered in future refuge program plans.

To make sure the people in the Fish and Wildlife Service who will be evaluating lease applications and drilling operation plans will understand fully the intent of the revised regulations definite guidelines have been prepared. These instructions tell which areas are to be inviolate refuges. They point out that where drilling may be consistent with an area's primary purpose it may be possible to gain improvements by establishing certain conditions in the lease agreement. For example, access road dikes may be used to create needed pools. Or eventually they may be cut to form nesting islands. Pest vegetation may be reduced and food plants established in sections where operations tend to spread the pest species.

To assure the refuge technicians that the new regulations have teeth in them, the instructions emphasize that refuge managers are authorized to suspend oil or gas operations where conditions of a lease are not being complied with. Indemnity bonds to guarantee conformance to approved plans are required automatically. Final approval for a lease can be given only by the Director of the Fish and Wildlife Service. He is sole judge, in case of dispute, as to compliance with operating plans.

There is no loophole. Every restriction and requirement suggested by the Fish and Wildlife Service has been incorporated in the regulations. The refuges have protection now they never had before.

Since becoming Secretary of the Interior I have frequently stated my belief that we need to expand our Federal refuge program. Nine new refuges comprising 28,095 acres have been established since January 1, 1953. The Migratory Bird Conservation Commission, of which I am Chairman, approved purchase of 30,189 acres of waterfowl habitat in 1955, and an additional 4,219 acres for the first half of 1956. Cost of these 34,408 acres of refuge land was $842,014. As of June 30, 1955, the number of refuges in our national program had increased to 276, having a total of 17,908,682 acres.

Our wildlife refuge program is healthier and bigger now than it has ever been. In addition, under the new lease regulations the refuges now have safeguards to insure their primary objectives.

Sports Afield Answers Secretary McKay

EXTENSION OF REMARKS

OF

HON. LESTER R. JOHNSON

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, May 14, 1956

Mr. JOHNSON of Wisconsin. Mr. Speaker, under leave to extend my remarks, I wish to place into the RECORD an article from the current issue of Sports Afield, Michael Hudoba's report from Washington. Preceding the Washington report, is a news flash describing the unanimous committee report of the House Merchant Marine and Fisheries Committee, criticizing the Department of the Interior oil and gas leasing order. I have known Michael Hudoba ever since coming to Washington and it is my observation that he does not cry "Wolf" unless there is justification for it. I also know that conservationists all over the country respect Mr. Hudoba's judgment and look to him for information on what is happening in the conservation field in Washington. The article follows:

MICHAEL HUDOBA'S REPORT FROM WASHINGTON

Flash: The following telegram was received from Mike Hudoba just before printing deadline for this issue:

"House committee scathes the Department of the Interior's wildlife refuge leasing policy. Following hearings of the wildlife refuge protection bill, H. R. 5306, introduced by Representative LEE METCALF, Democrat, of Montana, and the new oil and gas leasing order of Secretary of the Interior McKay, the House Merchant Marine and Fisheries Committee released a highly critical report of the oil and gas leasing order. This report was signed unanimously by the committee which includes both Republicans and Democrats.

"The report charged that the Department's oil and gas leasing order did not adequately protect the refuges: 'The new regulations fall far short of providing the degree of protection to the refuges which the activities in recent years prove to be necessary * * *. Superficially these regulations appear to give a veto power to the Fish and Wildlife Service.' But the report continues: 'The veto power exists only so long as, and to the extent that, the Secretary permits the regulations to control.' The report also charged extreme administrative confusion on the leases issued, and took sharp exception to the large number of leases issued during the Secretary's stop-order suspension.

"Representative HERBERT BONNER, Democrat, of North Carolina, chairman of the committee, revealed an agreement with the committee accepted by Secretary McKay that no further permit, entry, or disposal of a wildlife refuge area or lands under the Fish and Wildlife Service would be made without first giving the House Merchant Marine and Fisheries Committee 60 days' notice and obtain approval of the committee for such action. The agreement accepted by Secretary McKay would put in effect the objectives of Representative METCALF'S refuge protection bill which was introduced following Sports Afield's disclosures on the threats to the refuge system by the Secretary's authority.

"It is a clear-cut victory for sportsmen."

On page 156 of this issue, Secretary of the Interior Douglas McKay writes his answer to this reporter's criticism of his oil and gas leasing plans for national wildlife refuges.

Secretary McKay's article, for which he requested space, and which he titled "The Truth About Our Wildlife Refuges," is carried in full.

During all the years we have covered conservation in Congress and Government, we have followed the policy of sticking to pros and cons of conservation issues for the readers. We have stepped on a lot of toes and have had more than our share of personal abuse and insinuations.

Aside from the insinuations against your reporter, Secretary McKay's article contains his justification for the oil and gas leasing order which he signed. It is the same story which your reporter has heard presented on a number of occasions, including both the hearings of the House Merchant Marine and Fisheries Committee and the Senate Interstate and Foreign Commerce Committee.

This has been repeated so often that the Secretary and his spokesmen have overlooked the error of their basic premise.

Secretary McKay states that his oil and gas leasing order gives more protection to the wildlife refuges than earlier regulations which he revised, a point for which we had already given him credit in previous stories.

However, criticism of the Secretary's new policy for issuing oil and gas leases on national wildlife refuges is based on the question of basic policy as to whether the Secretary must open all or most of the national wildlife refuges to leases and oil and gas operations.

Unless the fundamental question is studied objectively by those concerned with the future of the wildlife refuge system, its individual units will be subject to continuing depreciation from their basic purpose.

What is the truth in this issue and who has distorted what?

The Mineral Leasing Act of 1920 authorizes the Secretary to issue leases on public land; but does not direct him to do so. The United States Supreme Court upheld a general order by former Secretary Wilbur (*U. S.* v. *Wilbur* (283 U. S. 414 (1930))) refusing to receive applications for oil leases, stating that the provisions of the Mineral Leasing Act "plainly indicate that Congress held in mind the distinction between a positive mandate to the Secretary and permission to take certain action in his discretion."

A few years later, former Secretary Ickes refused oil leases in the Federal domain. Once again, the Court upheld the Secretary in *U. S.* v. *Ickes* (143 F. (2d) 152 (App. D. C. 1944)).

Secretary McKay says he is the first Secretary in the history of the Fish and Wildlife Service to close certain refuges to oil and gas exploration to protect irreplaceable wildlife values. He also makes much of his "stop order of August 31, 1953" to suspend leasing of wildlife refuge lands while new regulations were being studied and prepared to improve the mildly protective regulations of 1947.

Since this is a basic point in the question, what is the real story?

From the Mineral Leasing Act of 1920 to August 31, 1953, the date of McKay's stop order, testimony before the House Merchant Marine and Fisheries Committee shows that a total of 16 leases were issued on wildlife refuge lands during the 33 years.

Under Secretary McKay's stop order, a total of 60 leases were issued between August 1953 and December 1955, on wildlife refuge lands during 2 years.

Efforts by Representative HERBERT BONNER, (Democrat of North Carolina), chairman of the House Merchant Marine and Fisheries Committee, and members of his committee to get the real story on these leases brought out numerous inconsistencies in the testimony of the Department of the Interior and required submission by the department of revised data on numbers of leases.

In addition to the 82 leases (which include 6 issued when the new regulations were signed) there was also revealed a total of 495 leases on game refuge lands.

By laborious cross-examination Chairman BONNER'S committee brought out testimony from the Fish and Wildlife Service to the effect that if there were a choice between a wildlife refuge without oil and gas operations and one subject to leases under the new regulations, the former would be preferred.

Secretary McKay says the new lease regulations place absolute veto power with the Fish and Wildlife Service—and I admit error in having written that Fish and Wildlife Service receive applications for leases.

Testimony at the hearings brought out that where an applicant for an oil and gas lease contended that his operation would not seriously impair wildlife values on the refuge contrary to Fish and Wildlife Service claims, the matter would then go to the Secretary for arbitration. Is that absolute veto power?

It is suggested that a careful study of the hearings held by the House Merchant Marine and Fisheries Committee on the oil and gas leasing issue, and from which Secretary McKay quotes portions of testimony to support his statements, will be more than revealing as to the reasons for concern by those supporting the refuge system.

Regardless of Secretary McKay's claims to the contrary, a leasehold gives certain privileges to the holder, and when this is on a wildlife refuge system area, there is something less than the original whole of the area needed for wildlife conservation left.

Secretary McKay ridicules the fact that we supported legislation to protect the wildlife refuge system areas from the Secretary of Interior, and points to the Wichita National Wildlife Refuge decision he made, and for which we have given him repeated credit. However, it would appear that any Secretary who was concerned with protecting the wildlife refuge system, as Secretary McKay seeks to prove, would welcome enabling legislation to help strengthen his hand for such protection.

Yes, Secretary McKay, we have cried wolf many times, and it is fortunate indeed that the sportsmen-conservationists of this country have their ears tuned so well. It is also true that there are many cases where the cry of wolf has appeared to be unnecessary for the threat did not materialize. But, for those who know the ways of animals, it is no secret that the realization they have been sighted sends them hightailing back into the hills or woods. We will probably cry wolf many more times, and may have to take them on alone if no help comes in time.

Primaries Versus Polls

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 15, 1956

Mr. PRICE. Mr. Speaker, it is getting late in the year for the primary season and we are rushing toward a national election.

I think, nevertheless, that an analysis of the primary in my own State of Illinois and of primaries in other States, as contrasted to the supposed trends exhibited by the self-proclaimed polls of what is called public opinion, may still be interesting.

The election contest this year will be an election—a conscious choice by the people of the party and personalities they wish in power—and not a pushover or runaway for anybody. The election will be fought hard and, from my side of the country, at least, with honest conviction and integrity. We intend to win if the people think we deserve to win.

Under permission to revise and extend my remarks, I offer excerpts from an analysis of the April Illinois primary and other primaries by Joseph C. Harsch, a very able correspondent for the Christian Science Monitor:

In the 1952 Illinois primary the Republicans obtained 68 percent of the total vote cast, compared with 32 percent for the Democrats.

In the 1952 presidential election in Illinois Dwight D. Eisenhower obtained 54.9 percent of the vote and Adlai E. Stevenson obtained 45.1 percent.

In the latest primary election in Illinois the Republicans obtained a little more than 50 percent of the total vote cast and the Democrats a little less (final totals are not in at this writing). And in Cook County Mr. Stevenson ran well ahead of Mr. Eisenhower.

One primary doesn't prove anything, as political history in the United States has demonstrated so often.

But two things about this latest primary are of extreme interest to politicians.

One is that ESTES KEFAUVER did not secure the 10 percent of writeins which his supporters had hoped for. This may have been small comfort to Stevensonians, but it was of comfort and it put him back in what one Democratic politician described as a "convalescent condition" after his misfortune in Minnesota.

Second, the Stevenson vote ran behind the Eisenhower vote, but by nothing like the proportions which public-opinion polls have been leading most people to expect whenever Mr. Eisenhower is pitted against any potential Democratic candidate.

There are probably many explanations of this second phenomenon, but there are some things about the political pattern in the United States which continue to be puzzling, and this is another one for the list.

For example, since 1952 the Democrats have:

1. Taken nine governorships and lost none.
2. Won some 500 State legislature seats and lost 5.
3. Won both Houses of Congress in a period of booming prosperity, whereas Herbert Hoover held both at his midterm election in spite of the fact that the country was in the depths of the depression.
4. Won 8 out of 9 special congressional elections.
5. Won many cities, including the surprising 1955 upset in the control of Indiana's main cities, an event which never has been explained adequately. The most surprising thing about these election results is that the Democratic Party which won them possesses no single acknowledged leader, is riven by deep internal rivalries and divisions, has no national set of policies, and has had most of its stock of old issues preempted by the Republicans.

Yet when it has gone to the polls locally it has done better than would be expected in a country which is booming with prosperity, is at peace, and is led by a President as undoubtedly popular as is Mr. Eisenhower.

There is no millstone on the Republican Party's neck today such as it had to carry into Herbert Hoover's midterm election of 1930 after the depression broke. And Mr. Hoover was not a popular President as Mr. Eisenhower is.

Yet it is a puzzling fact that the Hoover Republicans of 1930 did better than the Eisenhower Republicans of 1954. And now Adlai Stevenson, by no means a popular figure comparable to Mr. Eisenhower, comes fairly close to the Eisenhower vote in the Illinois primaries.

There are some facts about the Milwaukee vote in the Wisconsin primary which perhaps need a second look in the light of the Cook County vote in Illinois.

There was a general assumption after the Wisconsin vote that the Democrats had lost ground in the city vote in Milwaukee and the Republicans had gained.

But a reexamination of the Milwaukee vote shows that the Republicans took 67.3 percent of the primary vote in 1952 compared with 56.8 percent this time.

And if one looks at two wards which could be particularly meaningful as to labor and

Negro votes, the following comparison emerges:

The Milwaukee 12th ward is industrial. Republicans took 44.8 percent of the primary vote there in the 1952 primary. They took 40.6 percent this time.

The Milwaukee sixth ward is heavily Negro. The Republicans took 49.3 percent in the 1952 primary, and 42.9 percent this time.

None of this proves for a moment that the Democratic Party is enjoying a rising political tide in spite of Eisenhower popularity, peace, and prosperity. Each item in it does raise questions which have yet to be answered satisfactorily.

There is something puzzling about the voting pattern. It doesn't fit entirely with the polls of Eisenhower versus Stevenson or Kefauver popularity.

The voting fails to show the overwhelming Eisenhower strength which the opinion polls show.

Private Industry Can Solve Our Social and Industrial Problems

EXTENSION OF REMARKS

OF

HON. JOEL T. BROYHILL

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 23, 1956

Mr. BROYHILL. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following article by Joseph H. Deckman, chairman, public housing commission:

[From Home Builders Monthly of March 1956]

PRIVATE INDUSTRY CAN SOLVE OUR SOCIAL AND INDUSTRIAL PROBLEMS

(By Joseph H. Deckman, chairman, public housing commission)

America stands today on the threshold of a momentous decision. The question before the people is whether or not to continue to solve our economic and social problems within the framework of the free-enterprise system in the form of enlightened capitalism or to drift into state socialism.

Any honest thinking person will concede that the accomplishments in the rise of the standard of living in America, to heights never before experienced by any other nation, can be directly attributed to the productive results of an economy operating within an enlightened capitalistic system.

With this fact established we now find socialistic schemes being offered at every turn to solve both real and imaginary problems.

Foremost of these schemes is the physical manifestation of state socialism in the housing field in the form of public housing. Even though over 56 percent of our people are homeowners, continual pressure is being exerted to build more and more public housing. So great is the desire of the public houses to socialize housing that they are now proposing that from a third to one-half of all new housing be Government built and owned. This is taking place even though it is now admitted that public housing is not primarily built to house the indigent and needy or to clear slums.

The advocates of state socialism follow a clearly defined pattern which calls for subsidized public housing in the housing field, public power in the form of the tax-exempt and subsidized TVA approach in the power field, and at the retail business level the tax exempt, big-business farm cooperatives take over by supplying food, clothing, fuel, and other retail goods to any and all customers.

By a strange coincidence the promotion of all three of these forms of state socialism assume the same pattern. In each case a scapegoat is selected and then the propaganda machines go to work.

In the power field the regulated private power companies are represented as greedy bloodsuckers who will not go into the hinterlands to supply the rural communities with power. Never once is it explained that the utilities pay enormous local and national taxes and are regulated by utilities commissions. Besides this, uneconomic powerline projects cannot be financed just because it is desired to supply power to every sparsely settled rural area. The safety of the interests of the stockholders both small and large must always be considered by the power companies management.

TVA is held up as the answer to so-called greedy private power even though the taxpayer subsidizes outright in grants the cost of a large part of the power produced along with the public power rate reflecting lower costs due to tax exemptions at all levels.

To work socialism into the realm of small business, the local businessman in the small towns in rural communities is represented as one who gouges the farmer, so tax exempt big business cooperatives are chartered to move into this field. The general public is sold on the idea that the farmer is a member of the cooperative and therefore it is a fine thing. To carry out this fiction a form of stock known as script is given to the farmer and anyone else with each of his purchases. Then at the end of the year the script is redeemed in merchandise and the result is that the script is no more than the discount given a good customer by a private business for steady purchases and prompt payment or the green stamps issued by some privately owned stores to build up a regular trade.

In the housing field the home builder is the scapegoat for slums, blighted areas and the lack of new housing for the indigent, the needy and the lowest income groups. The great mystery of all the propaganda put out by the public housers, is why so many Members of Congress, other high officials and the American people have swallowed this flimsy case against the home builders.

From every conceivable angle it is impossible to understand how the home builder is at fault for any of the evils found in old city housing. It is the business of the home builders to construct new homes and to build rental housing with the tools of finance, materials, techniques, regulations and other requirements which are available or imposed on the builder.

The home builder does not own slum property as his function is to build and sell new housing and not to invest in old rental property. Neither does the home builder construct alley dwellings and tenements as most of the uncleared land which has come available in the lifetime of the home builder has been in the outlying areas of our cities.

Slums in blighted areas are the result of poor housekeeping and the state of repair in which housing is maintained by the owners.

The cause and cure for slums is the problem of city governments which should enforce sanitary housing codes that make it mandatory for both the tenant and owner to rectify the conditions if they constitute a public nuisance.

To offer public housing as a solution to slum clearance and redevelopment with its enormous costs and its impossibility of ever effecting the cure is comparable to returning, economically speaking, to the Dark Ages.

There is ample evidence now of record to prove that public housing does not house the needy or clear slums so there is no need to go into detail to prove that it is not the answer for redeveloping our cities. However, to clearly bring into focus the great wrong being perpetrated on the private builder when it is claimed he is failing to do the job of housing America the following comparisons showing the tools available to both public and private housers are herewith set forth.

Given financing, amortization time, and land costs comparable to that enjoyed by public housing, the private builder could build and rent for approximately the same rents as the full economic rents of public housing and still pay taxes, interest, and amortization charges.

When the advantages of public housing over private housing are shown and it is realized that slums have only been partially cleared by this method and not more than 25 percent of the public rents are written down for the needy to be housed in projects, it causes one to wonder how this socialistic scheme gets any consideration at all in the Halls of Congress.

Before it is too late the taxpayers represented by the 56 percent of the population owning their own homes, should demand that Congress either make comparable tools for housing available to private builders under proper regulations for the complete housing job and liquidate public housing or recognize that slums are the problems of each city and the cities should solve them at the local level.

Strict enforcement of comprehensive sanitary regulations will both solve the supply of low rent housing in rehabilitated safe and sanitary used housing and will also give our cities time to develop properly in the pattern needed for the automotive and atomic age.

Rent relief is the answer to housing the needy in good used housing the same as is now in operation.

Scarcely anyone at this time can tell what our cities will look like 10 years from now the same as we did not foresee the demand 10 years ago for downtown parking facilities in the quantity now needed.

It is an economic impossibility to tear down and rebuild our cities over night the same as it is a financial and economic impossibility to house all the needy and low income groups in new housing. The constant large percentage of the home owning population living in used housing cannot bear the burden of paying the rent for an increasing number of citizens living in subsidized public housing.

Before any more socialistic schemes are considered seriously in the housing, power and retail business spheres the people and Congress should fully appraise themselves of the situation.

The medium of this appraisal should be a thorough bipartisan factual study by a high level congressional investigating committee.

Private enterprise can solve all our economic and social problems at less cost and still maintain our traditional individual freedom.

PUBLIC HOUSING

Interest rate paid

Going Government rate of interest approximately 1½ to 2 percent.

PRIVATE HOUSING

Interest rate paid

Going private rate of interest approximately 4½ to 5 percent.

PUBLIC HOUSING

Financing

Money raised by tax exempt Government bonds.

PRIVATE HOUSING

Financing

Conventional private finance (often obtained by payment of a premium).

PUBLIC HOUSING

Building regulations

Limited compliance to local building codes.

PRIVATE HOUSING

Building regulations

Subject to all local code restrictions.

PUBLIC HOUSING

Taxes

No local, State, or Federal business taxes other than payments made in lieu of real-estate taxes—approximately 50 percent of assessed taxes.

PRIVATE HOUSING

Taxes

Full taxes paid. All real estate and other local, State, and Federal business taxes.

PUBLIC HOUSING

Amortization period

Forty to sixty years.

PRIVATE HOUSING

Amortization period

Twenty to thirty years.

PUBLIC HOUSING

Subsidy

Allowed and annual subsidy of 2 percent more than the going Government rate of interest. (Payment from Federal Government is equal to the interest and amortization charges on the cost of all housing projects.)

PRIVATE HOUSING

Subsidy

None.

PUBLIC HOUSING

Construction costs

Excessive.

Currently admitted in Washington, D. C., to be approximately $3,000 per rental room.

PRIVATE HOUSING

Construction costs

Twenty-five to thirty-three percent less.

PUBLIC HOUSING

Management costs

Approximately 12 to 13 percent.

PRIVATE HOUSING

Management costs

Not over 5 percent.

NOTE.—(Over 1 million public-housing units have been authorized by law to date and the subsidies paid will run into billions during the amortization period of the projects.)

Israel Seen Imperiled by Water Delay

EXTENSION OF REMARKS

OF

HON. J. GLENN BEALL

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Tuesday, May 15, 1956

Mr. BEALL. Mr. President, although reports of cease-fire agreements in the Middle East have recently reached our ears, the tension in that area is still acute. It is our duty, therefore, to keep as well informed as possible on developments there. To add to our knowledge of the situation, articles such as the one written by Paul W. Ward, and published in the May 13 edition of the Baltimore Sun, are of invaluable aid; and I ask unanimous consent that it be included in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ISRAEL SEEN IMPERILED BY WATER DELAY—ENGINEERS INDICATE ADVICE OF UNITED STATES AND U. N. ENDANGERS NATION

(By Paul W. Ward)

WASHINGTON, May 12.—The United States Government had under study today a report indicating that, by yielding to Arab threats, it and the United Nations Security Council are condemning Israel to a kind of slow death.

Presenting the combined judgments of six of this country's leading water engineers, the report points up such facts as these:

1. Israel's chances of becoming a viable State, able to feed its citizens and otherwise pay its own way in the world, depend on a rapid expansion of her fresh-water supplies.

2. Israel is being compelled by the present political situation in the Middle East to exploit the little water now available to her at a rate that entails a serious risk of her life blood being turned to salt and her tillable acres being ruined, in consequence.

3. Israel, accordingly, is under strong compulsion to go ahead with its Jordan River development project in defiance of the Arabs' threats to shoot if she does and of the efforts of both John Foster Dulles, Secretary of State, and Dag Hammarskjöld, United Nations Secretary General, to get her to yield to those threats.

WOULD GIVE THREATS PRIORITY

Hammarskjöld, reporting Thursday to the Security Council on his recent war-prevention mission to the Middle East, took the position that, at least until the Council itself rules otherwise, the Arabs' threats should be accorded priority over Israel's need of water.

Dulles some 3 weeks earlier had taken a like position at a press conference here and, it is understood, privately has been pressing that view upon Israel's Government.

The latter, meanwhile, has applied to the United States Government's Export-Import Bank for a $75 million loan to finance part of a 10-year water-development program. It is chiefly in connection with that loan application that the American engineers' report has come under governmental study.

ACTUALLY TWO REPORTS

In actuality, it is not 1 but 2 reports. There is, first, a 10-year master plan drawn up for Israel by J. S. Cotton, a San Francisco consulting water engineer, who had done similar work for Manchuria, Ceylon, and India.

Second, and corollary to it; it is a report by a five-man board of consultants, headed by Abel Wolman, professor of sanitary engineering at the Johns Hopkins University, who, since unveiling the report here Monday, has been given an award by the American Water Works Association for having drafted a report, in another connection, on what constitutes reasonable water service.

Wolman, a former president of the association, has been chairman of the United States National Water Resources Committee and is a consultant to the Atomic Energy Commission.

RECOMMENDS POWER DELAY

His board's report, incidentally, recommends that Israel defer its $46 million Mediterranean-Jordan Valley hydroelectric project and lists among its reasons a belief that "recent advances in the development of nuclear power are such that the construction of high-cost hydroelectric projects * * * may no longer be justified."

The other members of the Wolman board are:

Harry W. Bashore, of Mitchell, Nebr., who has helped India and Pakistan with their water problems and used to head the United States Bureau of Reclamation;

Samuel B. Morris, former dean of Stanford University's engineering school who, until he retired 6 months ago, was general manager and chief engineer of the Los Angeles Department of Water and Power;

John L. Savage, of Denver, who has been a consultant on water projects in Asia, Africa, the Near East, Latin America, and Australia, besides serving as a Bureau of Reclamation expert from 1924 to 1945;

John J. Hammond, of Denver, who used to be chief of the Dams Branch in that Bureau's Design Division.

EVALUATION ASKED

The Wolman board was asked by the Israeli Government to evaluate Cotton's recommendations and make recommendations of its own about carrying them out. Its report, completed March 8, was addressed in the first instance, to S. Blass, Director-General, Water Planning for Israel, Ltd., Tel Aviv.

Blass is the Israeli who thwarted the Arabs and confounded the United Nations Security Council a few years ago when the Arabs sought and got from the Council the equivalent of an injunction against Israel's Huleh Swamps drainage project. The injunction, issued one day, called for stoppage of work on the project at 8 a. m. the next.

Blass complied with the deadline but rendered the injunction moot by having the job completed by 8 a. m. He accomplished that feat by lighting the area and working all his men and equipment through the night at top speed.

SIMILAR TO JORDAN PROJECT

That project, referred to in the Wolman board's report, has similarities to the Jordan River project.

Both have been long on the drawing boards—the Huleh project for 50 years prior to the time that the Wolman board, in its initial report 10 years ago, recommended not only that Israel undertake it but accord it top priority as offering the cheapest acreage for crops in the whole country.

Both the Huleh and Jordan projects have run into Arab resistance which, backed by threats of war, has enlisted Security Council assistance, although in neither case does the land involved belong to any Arab government.

Statement Made to the President by the Nongovernmental Advisers to the United States Delegation Negotiating Tariff Agreements in Geneva, Switzerland, May 4, 1956

EXTENSION OF REMARKS

OF

HON. ROBERT W. KEAN

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 15, 1956

Mr. KEAN. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include a report released by the White House on May 4, which was made to the President by the nongovernmental advisers to the United States delegation in Geneva.

STATEMENT MADE TO THE PRESIDENT BY THE NONGOVERNMENTAL ADVISERS TO THE UNITED STATES DELEGATION NEGOTIATING TARIFF AGREEMENTS IN GENEVA, SWITZERLAND, MAY 4, 1956

Having had an opportunity to observe at first hand the tariff negotiations now drawing to a conclusion at Geneva, we are happy to report to you that the interests of our country have been well served. We have been greatly impressed by the competence of the career men from the nine departments and agencies of the Government who have handled these important negotiations. The members of the Trade Agreements Committee particularly have worked long hours for

many months with a high degree of concentration and effort.

We were particularly impressed with the unfailing concern of our negotiators to advance the broad interests of the United States. By no stretch of the imagination could the tariff negotiations, as we observed them, be called a giveaway program. The entire program is, of course, based upon reciprocal concessions and we found our negotiating teams and the Trade Agreements Committee to be bargaining in what seemed to us to be the best Yankee tradition. They insisted on obtaining concessions of full value for each concession made by the United States. There is great need for a better public knowledge of these facts.

The hard work and intelligence that went into the tariff negotiations are the more noteworthy because the present tariff session, following upon earlier negotiations, was restricted to a comparatively narrow range of trading. It required patience and persistence on the part of our representatives to obtain the many important agreements that are being reached.

On the basis of our observations in Geneva, we are strongly of the opinion that there is need for the permanent administrative machinery that is provided for in the proposed Organization for Trade Cooperation. The adoption of this administrative machinery subscribed to by all the interested nations would clearly be in our enlightened self-interest. It would help make all our trade agreements more truly reciprocal.

It would also strengthen both the resolve and ability of the member nations to continue their efforts toward an expanding and mutually profitable world trade. It would provide an effective, continuously operating instrument in giving fuller effect to existing commitments to remove such trade barriers as currency restrictions, quotas, discriminatory taxes, and other indirect devices that limit the exchange of our goods with other nations. Failure on the part of the United States, the world's greatest trading nation, to join in setting up this organization would cause great dismay and disappointment throughout the free world at a time when the Soviet Union is stepping up its foreign economic efforts.

Accordingly, we wish to support very strongly your recommendation for adherence by the United States to the OTC.

We appreciate deeply the opportunity that has been given us to participate as observers in these tariff negotiations. It has been for all of us an interesting and rewarding experience.

ELLIOTT V. BELL,
Editor and Publisher of Business Week; Chairman, Executive Committee, McGraw-Hill Publishing Co., New York.

HOMER L. BRINKLEY,
Executive Vice President, National Council of Farmer Cooperatives, Los Angeles.

BRYANT ESSICK,
President, Essick Manufacturing Co., Los Angeles.

STANLEY N. RUTTENBERG,
Director of Research, AFL-CIO, Washington.

Is It Just Ineptness?

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 15, 1956

Mr. PRICE. Mr. Speaker, under permission to revise and extend my remarks, I offer the following editorial on the natural-gas bill and the natural-gas lobby from the Sacramento (Calif.), Bee:

The United States Senate committee which probed lobbying activities in connection with the natural-gas bill makes one intriguing observation in its report.

Referring to John M. Neff, the Nebraska lawyer who offered the $2,500 campaign contribution to Senator FRANCIS CASE, of South Dakota, the report says he operated in an inept fashion.

One wonders what the committee's appraisal would have been had Neff conducted his maneuvering with a slick, professional technique.

Or does the sin lie in being clumsy?

Wichita Wildlife Refuge

EXTENSION OF REMARKS
OF
HON. FRANK IKARD
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 15, 1956

Mr. IKARD. Mr. Speaker, on Friday, April 25, Mr. Kenneth Foree, the outdoor editor of the Dallas Morning News, Dallas, Tex., made reference to the attempt that is being made by the Army to take over a portion of the Wichita Wildlife Refuge near Fort Sill, Okla. Mr. Foree's comments, in my judgment, demand the attention of all persons who are interested in preserving one of the most attractive spots in the Southwest for recreation, and one of the finest wildlife refuges in the country. Mr. Foree's remarks are as follows:

Tuesday morning this columnist took a cut at the Army brass for resuming the attack for enveloping Wichita Wildlife Refuge near Fort Sill, Okla., via H. R. 9665 in Congress. The refuge is a spot of the Old West like it was when the white man came, with the same animals that he found then, save the redskin and grizzly, in a charming place of rolling hills visited by many people annually.

But the Army wants it, contends it is needed for firing atomic cannon, has frightened Lawton by threatening to move Fort Sill, etc.

To the Inter-American Bar Association conference this week came an Oklahoma attorney, Paul W. Updegraff, 114½ South Peters Avenue, Norman, Okla., who writes:

"The thing that the Army is not telling the people the truth about, in their attempt to take over the wildlife refuge, is that the area is not needed at all to shoot the atomic cannon.

"What the brass of the Army wants the refuge for is to make a personal game refuge for the higher echelon of the Army. Even Herman Goering in the Black Forest never had such an exclusive hunting preserve as this will provide for the Army generals.

"After all, the Boy Scouts, Girl Scouts, and the 800,000 outdoors lovers who are now privileged to visit this beautiful, tranquil place should not thwart the will of the generals.

"If this emasculation takes place, then it will be because you, the people, are just plain too lazy to write or wire your Congressman about it. Incidentally, over 600,000 persons visiting the refuge each year came from the great Lone Star State."

How 'bout it, Texas? Got enough strength to lift a pen?

Faith and Freedom

EXTENSION OF REMARKS
OF
HON. GEORGE A. DONDERO
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 15, 1956

Mr. DONDERO. Mr. Speaker, I include as a part of my remarks a statement made by Alfred P. Adamo, celebrating 50 years in America.

This statement is excellent, and it expresses the appreciation of one who came from another land to our country. We can read between the lines the comparison he has made and the enjoyment of privileges, opportunities, and freedom which we of the United States have, and which people from other lands do not have.

Let every American read this fine tribute to our country and be grateful that he is an American citizen.

The statement of Mr. Adamo follows:

DEDICATION TO FAITH AND FREEDOM, MAY 4, 1956

We are gathered here tonight to dedicate this XVIII century silver plate and its inscription thereon to faith and freedom for which our forefathers fought and founded for you and me and the future generations of America.

America has been given to man by God with all its creation of beauty and abundance of wealth.

Faith and freedom are like a mighty rock of strength if you and I will stand together, protect its strength, and continue to build a better America.

Faith and freedom give man power to work to build without limitation, and to become proud to be an American citizen and be of service to his fellow man and country.

Faith and freedom are the guardians of civilization and of its character. If a man knows what he stands for he will not feel that he can invade other peoples' homes nor disturb his neighbors' peace.

Faith and freedom means that we must respect the rights of our fellow man regardless of his race, color, or creed and must all work and live together as one team. We must refrain from trying to be the owner of other people's rights and homes. America is not for the timid or fearful man, but for the energetic, vigorous, farseeing and far seeking man. This is the advantage of living in America, for which we are deeply grateful.

Faith and freedom are like the rain that falls during the month of April. It feeds the roses, the fruit trees. It brings the various beautiful blossoms and later the lucious fruit which all can enjoy.

Faith and freedom are like a gentle breeze in the middle of a hot summer.

Faith and freedom are like streams forming large rivers and uniting in the great ocean. Finally becoming so powerful that it can bear up under all obstacles.

Faith and freedom are like a mother feeding her lovely child. She is so gentle and so filled with the hope that some day her child may become a man of constructive ideas and produce good fruit. Her mother's pride will be her reward.

Faith and freedom give to man hope and promise. They are like the sun that shines before him in the day time, and like the moon and stars that illuminate his way by night.

The church is the champion of faith and freedom. She is the guardian and defender of the character and dignity of man in virtue of the permanent mission entrusted to her by God.

Communism does not recognize the principles of faith and freedom. It has nothing to offer but false promises. It can be destroyed if we quit babying, feeding, and break off all relationship.

Let us pray and hope, my friends, that God will help us and will deliver us from those evils which are among us and may He protect what America stands for.

Let us hope also that our present and future leaders will follow the American tradition of trade and friendship with all. Partnership with none.

ALFRED P. ADAMO.

Scarcity Won't Work

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 15, 1956

Mr. PRICE. Mr. Speaker, I would like to call the attention of the Secretary of Agriculture, Mr. Benson, to the remarks of a former Member of this House, Jerry Voorhis, of California, who is now devoting himself to his position as executive director of the Cooperative League.

Mr. Benson looks on our abundant production of food and fibers as a catastrophe—and during his 3 years in office a number of what he would call "suitcase farmers" have been driven off the land. A number of full-time farmers have been driven off the land. Our population earning a living from agriculture grows smaller; even their per capita income is now slumping under Mr. Benson's policies.

Mr. Voorhis looks on our abundant production as a blessing, not a catastrophe. He think our farmers should be praised, not ruined, for their inventiveness in increasing production. He thinks Mr. Benson's doctrine of holding down production is totally wrong—and this is entirely apart from the question of whether Mr. Benson is correct in his notion that the way to cut production is to cut prices.

Under permission to revise and extend my remarks, I offer excerpts from an article by Mr. Voorhis in the Los Angeles Free Press:

The United States is waking up to the fact that the distress of agriculture and the decline of farmers' incomes constitute a deep major national problem that has got to be solved.

The superficial approach is to say, "There is at present a surplus of farm products, so let's take measures to reduce production."

Only trouble is, it won't work. No really new ways of trying to reduce production have been suggested. And all the old ones have failed. They have failed because American farmers are too good at farming. Maybe they ought to fail as long as there are one billion hungry people in the world.

A basic cause of agricultural distress is the refusal of policy and opinion-makers in the United States to think in terms of abundant production and consumption.

Instead they insist upon "thinking" in 1890 terms about the 1950 world.

It won't work.

American farmers are geared both technologically and psychologically to produce an abundance. This column predicts that nothing—repeat nothing—is going to change this.

What can and must be changed are certain habits of thinking. Some people—in fact a good many people—still retain the idea that it is good for other people's character if they are somewhat hungry now and then.

There is no doubt that privation and sacrifice develop character—when they are necessary. If there is not enough to go around, then the finest people are the ones who deny themselves in order to leave more for others.

But it is an entirely different matter to insist that other people be in want when there is or could be enough for all. We have to learn to think in terms of distribution and consumption of an abundance of food and fiber. The Wallace-Homestead poll of farmers showed recently that farmers are already doing this. In this poll, farmers were asked which of six so-called "farm" programs they would most favor.

Fifty-three percent of them put at the top of their list the following measure: "Make the school lunch program reach twice as many children as now."

Forty-one percent said the same should be done with the special school milk program. And 38 percent proposed adoption of a food stamp plan to put food surpluses within reach of needy people.

These three measures led all others by a very substantial margin. No other proposal received support from more than 29 percent of the farmers answering the poll.

The fact is that if all the 8 million United States families whose incomes are less than $2,000 a year had adequate diets, their added consumption would equal all the so-called food surpluses of the past 3 years.

And what about the one billion people in the rest of the world who are downright hungry every day? Obviously the United States cannot sprinkle its agricultural surpluses over other countries just to be rid of them. It is no simple matter even to give food away—and not always even wise. But it does not seem beyond reason to believe that with chronic hunger on the one hand and chronic surpluses on the other, some rational plan of bringing the two together through some world food plan could be devised.

But it won't be done until we start preferring abundant production and consumption—and learning to live with them—instead of apparently preferring an artificial scarcity. Especially since attempts to impose artificial scarity on United States agriculture have never succeeded, and probably never will.

Survival

EXTENSION OF REMARKS
OF
HON. MARTHA W. GRIFFITHS
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 15, 1956

Mrs. GRIFFITHS. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following:

SURVIVAL—TRIS COFFIN BROADCAST, APRIL 4, 1956

There is one corner of the Capitol where politics ceases. Frightened men do not stop to ask each other whether he is a Democrat or Republican. This is an outwardly cheerful room. The window that invites sunlight shows the proud dome of the Capitol and the American flag fluttering in a spring breeze. A long committee table covered with a green cloth, like a pool table, takes up most of the room.

On entering this Chamber, you are struck by the look on the faces around the table. Most of them are people you know—Congressmen and reporters. But here they are not the same people you wave to in the halls or argue with at lunch. There is a set graveness in their faces, like soldiers who have just buried their buddies and have, for the moment, lost the gift of laughter.

This is a congressional committee studying the effects of atomic and hydrogen bomb attacks on the civilian population.

The witness was a handsome and very gentle person, Dr. Charles Dunham, medical director of the Atomic Energy Commission. He did not at any time use the words "horror" or "terror" and yet, when he was through, you sat stunned.

The chairman, a conscientious Congressman who runs a clothing store in California, asked Dr. Dunham a series of questions just to be sure he had all the facts.

"Let's see," said Congressman HOLIFIELD thoughtfully," the Hiroshima bomb had the power of 20,000 tons of TNT. Our latest bombs are equal to millions of tons. The sheer blast and burning of the bomb will kill tens or hundreds of thousands in a raid on a city, particularly if the fire ball touches the ground."

The doctor nodded. He had lived too long with this frightful knowledge to show any outward sign of disturbance. The only omen that he, too, hated to live daily, constantly with this information was the way he smoked. Too much.

The Congressman went on, "Then, there is the radiation damage, from the rays shed by the bomb. A lethal dose is, say, 800 roentgens or up."

The doctor nodded and said gently, "Nothing we know today can be done to increase the chances for survival of those who receive a lethal dose."

He described what happens to the body when it is hit by these invisible rays. It is like a great dose of cancer. It melts the bone marrow, which makes good blood. It removes all resistance to bacteria. And, after an attack, there is really no practical way to tell who has received a fatal dose, and who may yet be treated and brought back to the realm of the living. A doctor wandering in this maze of horror would have no idea whether the pretty child or the man had enough of their bodies shielded to prevent a fatal odse. His precious store of medicines might be wasted on the one who would die tomorrow.

Too, the angry winds may carry this radiation miles and miles away. Who knows where a breeze laden with the deadly fallout will go? It falls like a gentle white snow of ashes, and it burns wherever it touches.

Congressman HOLLIFIELD went on stubbornly, to make sure all the knowledge was spread out on an official record, "And, even among the survivors of the first week, thousands may suffer years later from leukemia, eye cataracts, shortening of life, injury to body cells?"

"Correct," the doctor said gravely.

"The cells may run wild and become cancers?" the Congressman asked.

"Yes," replied the doctor, "if exposure to radiation is sufficient."

"It may cause sterility and injure the genes?"

"That is correct."

A group of visiting high-school children filed in the rear of the chamber whispering and giggling. But the strange mood of the room affected them too. They stood as still as death. They were no longer kids on a vacation, but those who would have to inhabit this edge of doom we have willed to them.

Once, only once, was there laughter in the room.

Dr. Dunham was being questioned about shelters. What would hide a man from the

deadly radiation? He spoke of tons of earth and concrete and said, "Several persons in a canvas tent survived a radioactive fallout from a bomb during one of our Pacific tests."

Eyes lit up. Here was hope. A miracle. A few yards of canvas could shield a man. Some mysterious quality of canvas beat back the invisible rays.

It was a woman, a member of the ever-practical sex who asked, "How far away was the tent from the blast?"

Dr. Dunham said gently, "It was 180 miles away."

Then it was that laughter, a nervous, sickly laughter invaded the room. The questioner, Mrs. MARTHA GRIFFITHS, a Representative from Michigan, looked at the doctor reproachfully, but said nothing.

Another witness sat at the table, and Dr. Dunham moved away, smoking one cigarette after another.

The new speaker was also a doctor from the Atomic Energy Commission. He had studied at first hand the effect of fallout that swept hundreds of miles from a test site to the Marshall Islands. We are still examining the possible injuries to the natives who belong to no bloc of nations, have no army or guns or bombs, and have always lived a life undisturbed by our civilization.

Dr. Eugene Cronkite, for that was his name, had a sense of urgency in his strong face and the way he bit his words.

His words were like the shock of a slap on the face. He said, "Fallout may be either visible or invisible. It may contaminate the environment, food, water, clothing, and the skin. The penetrating component destroys the inner organs."

His head was bent down over his paper as he told of various attempts to cure this deadly sickness. Then, Dr. Cronkite looked up and his lips tightened. He said, "In all fairness to the public, it would be unjust to imply that we now have any means of curing radiation sickness."

The room was very still. You could hear a reporter's pencil moving over his yellow copy paper.

Finally, it was done. The words were out, and the conscience of the doctors was clear.

I walked back to the Capitol. I saw people I knew and enjoy, but when they called out to me, something was wrong. I could not force my face into a smile.

Capitol Alterations

EXTENSION OF REMARKS
OF
HON. RICHARD B. WIGGLESWORTH
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 3, 1956

Mr. WIGGLESWORTH. Mr. Speaker, at the request of a former colleague who served in this House with distinction, Hon. Edward Lowber Stokes, of Pennsylvania, under leave to extend my remarks I include the following letter, appearing in the New York Times, under the heading, "Preserve the Capitol":

TO PRESERVE CAPITOL—PLANS TO MASK ORIGINAL EAST FACADE ARE OPPOSED

(EDITOR'S NOTE: The signers of the following letter are members of the American Institute of Architects.)

To the EDITOR OF THE NEW YORK TIMES:

As a great nation grows its needs expand. Today the needs of the increased business of the Congress are threatening the destruction of the existing east front of the original central wing of the Capitol at Washington. Congress has made a preliminary appropriation to build a new east facade which will extend 40 feet beyond the front of the original building.

No doubt more space is needed. While this extension of the facade may be the most obvious way for gaining space, it is unfortunate that two misleading architectural reasons have been given in support of the proposed masking of the original facade.

First, it is claimed that the great dome of 1860 is not in the middle of the building measured from front to back. Second, it is claimed that the old east sandstone facade which was painted after the fire of the War of 1812 should not be painted again and ought to be replaced by a marble colonnade.

LATROBE DESIGN

Now it so happens that the original architects, although they were working in the classic style, showed a great deal of originality. Benjamin Latrobe didn't merely imitate, he designed in the classic idiom and he used American tobacco leaves in his capitals instead of the Greek acanthus.

The Capitol has been enlarged over the years so that the central section of the east front is the only substantial part of the original design that remains visible. Unfortunately, it is this one remaining original section which a Congress of lawmakers has now voted to replace with an imitation. Are not Americans entitled to preserve what is original and genuine?

Now for the other misleading reason for change: The dome was erected during the Lincoln administration. It replaced the original dome which had been dwarfed by the extensions for the Senate and House to the north and south, respectively. The enlarged dome had to be placed over the center of the original building. Hence, since the west front had been added to by Bullfinch, the dome is nearer to the east front. The east front, however, is the entrance and the intimate approach, whereas the west front is the front that is viewed from a distance along the Mall.

The relation of the old east front to the Lincoln dome gives the building its greatest charm and the appearance which all Americans treasure. If the old original front is screened off by a 20th century face lifting, the new front will fill up the existing forecourt. Not only would this hurt the scale of the forecourt but the dome would be partly cut off from view to those approaching from the nearby, intimate plaza.

ORIGINAL ARCHITECTS

Architect Latrobe's letters can be read today. There one finds that the lawmakers of a century and a half ago also lacked understanding of the architect's problems. We can be thankful that the original architects of the Capitol, however, at least had the support of two Presidents who had given serious study to architecture—namely, Washington and Jefferson. If President Eisenhower were made aware of the architectural loss that is threatened, we are sure that he, too, would use his influence to preserve the remaining visible facade of the original Capitol.

It is up to the American public to show architectural appreciation and to defend a monument that has been well done. The people must be heard from to prevent the obliteration of Latrobe's work.

The undersigned architects hereby testify that it is worth saving.

New York, May 4, 1956.

How Tight Can We Get?

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, May 14, 1956

Mr. MULTER. Mr. Speaker, the following article on the tightening of money is worthy of the attention of our colleagues. It appeared in the May 10, 1956, issue of the Wall Street Journal:

LOAN SQUEEZE: TIGHT MONEY MAY BE PUTTING THE BRAKES ON THE BUSINESS BOOM—EQUITABLE LIFE LOANED UP—BOSTON BANK TURNS AWAY NON-NEW ENGLAND LOANS—BUT DEBT TOTALS STILL RISE

Tight money may be putting the brakes on the business boom.

Some businessmen, intent on building up inventories and adding to plants, are running into trouble in lining up loans.

Many consumers find lenders are jacking up downpayment requirements and otherwise stiffening loan terms on homes, autos, appliances, and other goods.

State and local governments, with big highway and school construction plans, in some cases are shelving projects because of higher borrowing costs.

The Federal Reserve System, which has had a big hand in the tightening of money, says its actions are necessary to head off inflation. But administration officials—notably Treasury Secretary Humphrey—fear the money squeeze may lead to a full-blown business recession.

DANGERS MINIMIZED

Wall Street Journal reporters talked with lenders and economists in 12 major cities across the United States. Most of them welcome tighter money and tend to minimize its dangers. But lenders admit that the shrinking supply of loanable funds already is forcing some would-be borrowers to alter, postpone, or cancel their plans. If money continues to tighten, the number of disappointed borrowers is sure to rise. It remains to be seen whether this would merely dampen the boom or bring on a business dip.

Many lenders report the demand for funds now is pushing at the limits of supply.

"Where is the money going to come from to finance all the expansion plans on company drawing boards?" asks Ray D. Murphy, chairman of New York City's giant Equitable Life Assurance Society. "We're loaned up for the next 6 months, and I think this is true of other companies as well."

"We're offered a lot of business from outside our regular New England area," says a Boston banker. "Ordinarily, we'd take some of it, but now we don't. We need our funds to take care of our regular customers."

"I had lunch recently with a chap who has a pretty large borrowing program in mind," recalls Thomas S. Lowe, executive vice president of Pacific Finance Co., Los Angeles. "He wants to go ahead in spite of the tightening of money. He doesn't know it yet, but he'll be slowed down, because the money just won't be there when he comes around to borrow it."

SEVERAL CAUSES

Tighter money stems from several causes. The Federal Reserve System, worried over the prospect of more inflation, is restricting the funds banks have available to lend. Individuals earlier this year were adding to their savings somewhat more slowly than a year

ago. Businessmen are borrowing heavily to finance inventories and plant expansion. And consumer demand for auto and housing loans shows no signs of easing.

The impact of tight money on woud-be borrowers so far is hard to read in the overall figures. Consumer installment debt, for example, rose by $180 million in March to a total of $28 billion—nearly $5 billion above a year earlier. Business loans of major New York City banks—which account for some 20 percent of all bank loans to business—have risen by $474 million so far this year to a total of $9.7 billion. In the like period last year, the gain was only $71 million.

But these figures and other lending totals likely would have shown bigger gains if money had not tightened. A continuing scarcity of funds may cut sharply into borrowing, lenders agree.

Edgar Beard, vice president of Pittsburgh's Potter Bank & Trust Co., who sees no indication so far that borrowing has slowed, says the future may be another matter: "If money gets tighter or scarcer, there will be a tightening of credit standards or a shortening of terms and that would affect borrowing plans."

CREDIT POLICIES ALTERED

Many lenders already are altering credit policies. Some, like the Boston banker, are refusing business from customers outside their regular area. Others are trying to screen out "speculative" loans. A number of banks are turning down many loans that run for more than a year, in an effort to remain as liquid as possible.

"The tendency for banks will be to say 'no' more often, and not to make loans where they might have in the past," says Marsden S. Blois, vice president of California's big Bank of America.

"We're not expanding and would actually refuse outside loan business," reports George S. Metcalfe, president of Roosevelt Federal Savings & Loan Association, St. Louis. "We are just taking care of our regular customers."

What—in the banker's view—happens when a would-be borrower is forced to change his plans?

When a borrower can't get a bank loan, he may try to sell some stock, says Frank W. Norris, president of Jacksonville's Barnett National Bank. An official of Atlanta's Citizens & Southern National Bank says some borrowers who've found it difficult to line up long-term loans are marking time by relying on short-term borrowing.

DELAY FOR A GOLF COURSE

Herbert Adam, vice president of Penn Mutual Life Insurance Company of Philadelphia, believes the borrowers most likely to become discouraged are those who can most easily postpone projects. As an example, he cites the case of a Philadelphia area group that is planning to seek funds to build a golf course. "They'll be waiting a little longer now," he says.

"Speculative borrowing, such as loans to finance low downpayment housing, will be hardest hit by tighter money," in the opinion of an executive of a major Los Angeles bank.

So far, few lenders have noted any slowing of the rate at which loan applications are pouring into their offices. Quite the contrary, in some cases.

"You'd think that when money was tight, borrowers would hold off," says Mr. Adam. "But it doesn't always happen that way. It's like the last trolley coming along. Everybody tried to get on it."

"Customers that have established lines of credit in a number of cases have asked to increase those lines," says an official of Atlanta's Citizens & Southern National Bank. "But the bank has asked many of them to modify their requests."

An official of Cleveland's Central National Bank says he has not noticed any customers postponing or canceling borrowing. "When steel is short," he says, "everybody rushes to buy. When money is tight, everybody runs to get lines of credit established."

FEW BORROWERS DISCOURAGED

While no borrowers are happy about higher interest rates, few are discouraged by them, the lenders report.

"If a corporation needs money, it doesn't make too much difference whether the interest rate is 4 percent or 5 percent," says the president of a large Midwestern life insurance company. "Just as in 1953—the last time money was this tight—funds will continue to be borrowed and then, when rates are down, the borrowings will be refunded."

"It's not the cost but the supply of funds that's the issue," says Sherwin C. Badger, financial vice president of New England Mutual Life Insurance Co., Boston. "If the interest rate goes up one percentage point, the cost to the corporation rises only half as much because of the 52 percent corporate tax rate." Interest payments are deductible from taxable income.

Tighter money finds few critics among economists and lenders. Some believe total debt, or parts of it, already are too high. Others think the money squeeze may prevent debt from reaching dangerous levels.

"A VERY WISE MOVE"

Dr. John R. Stockton, director of the bureau of business research of the University of Texas, says the move by the Federal Reserve System to tighten money "was well-timed and a very wise move. The country's economy is operating at near full capacity and further expansion only runs up prices. There is no need for demand to be stimulated at a time like this."

Instead of borrowing heavily to build up inventories, says Dr. Stockton, "some of these business people should get off their chairs and get out and sell what they already have in stock." Manufacturers' inventories of durable goods at last report in March rose to a new high of $27.4 billion, on a seasonally adjusted basis.

"The Federal Reserve action was necessary," says an economist for a major Detroit bank. "All expansion phases tend to go to extremes unless someone puts on the brake." He believes home mortgage debt represents "a potential danger." "Foreclosures have been so infrequent in recent years," he adds, "that I think some people have forgotten that it's done."

AUTO, HOME LOANS

"Auto loans are higher than they should be," claims an economist for a major Los Angeles bank. "And some types of mortgage credit—where the low down payment prevents the owner from building up a real equity for some time—are higher than seems proper. There's more marginal paper than previously, but it's not tremendously dangerous—barring a major depression."

Some economists argue that tight money alone is not enough. Dr. George B. Hurff, director of the University of Florida's bureau of economics and business research, is one who favors reimposition of Government controls on consumer credit.

"Last month's increase in the discount rate (the rate at which banks borrow from the Federal Reserve) was a shotgun blast," says Dr. Hurff. "What we need are a few rifle shots to peg consumer credit."

Speech of Adlai Stevenson at a Luncheon of A. F. of L.–CIO Labor Leaders, Los Angeles, Calif., May 10, 1956

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 15, 1956

Mr. PRICE. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following:

SPEECH OF ADLAI STEVENSON AT A LUNCHEON OF A. F. OF L.–CIO LABOR LEADERS, LOS ANGELES, CALIF., MAY 10, 1956

I sometimes think that in the heat and turmoil of a primary election campaign we are in danger of losing sight of long-range objectives.

As you know, I am here to ask your support in the California Democratic presidenial primary on June 5.

And I hope to get it.

But I think we must look ahead to November, and to the next 4 years.

We must ask ourselves: What would a Republican victory in November mean in terms of jobs and social gains at home? What would it mean in terms of foreign policy?

I think we can predict what it would mean during the next 4 years on the basis of what the Republicans have done during the last 4 years. And it is of this that I would speak to you today—of the Republican record, on which the President says he is going to run.

The Republicans rode into Washington on a bandwagon 4 years ago crying loudly their promise: "Time for a change." And everything they changed—they changed for the worse.

They changed our foreign behavior—and we've lost nearly every friend we had in the world, while the Russians are gaining ground daily.

They changed our tax structure—they cut taxes for the benefit of the corporations, not the ordinary man.

They changed the character of the President's Cabinet—now they are all alike. In fact, there are three graduates of General Motors but not a single representative of the 18 million members of organized labor.

They stopped developing our natural resources for the good of all the people and began giving them away to a favored few.

They ended rent controls and slowed down on public housing.

They cut price supports—and you know what's happened to the farmers.

They packed the National Labor Relations Board with management men. And despite all their promises, they did not change one word of the Taft-Hartley Act. And I think it's past time to get ride of the union-busting provisions.

Now, of course, there are some Democratic programs for the people that the Republicans didn't change. And it's a good thing they didn't for only social security, unemployment compensation, and our other democratic defenses against depression cushioned the shock of the 1954 recession.

We wouldn't have had them if the Republican managers had done what they really wanted to do. But they know they didn't dare "sweep away the last vestige of the New Deal," as one of their orators proposed in 1952. So what they've done is conduct a

holding operation—holding still. It reminds me of the excited girl who said: "Don't do something; stand there."

They have talked loud and often about a Federal health program—but they've done nothing about it.

They have talked and talked about Federal aid to education—but it took 3 years to recommend anything but a conference.

They have talked about building highways—but it's only because a Democratic Congress has grabbed the ball there's any prospect of getting anything done.

They have talked in public about extending social security—but the administration recently came out flatly against lowering the retirement age of women to 62 years and paying benefits to workers who are disabled at 50. In short, an administration which has granted billions of dollars in tax benefits to large corporations would deny disability benefits to a man who has worked all his life, paid his social security tax, and then, at 50 years of age, while he still has a family to support, becomes totally disabled and unable to work. It is time these provisions were adopted.

The administration has changed something else in Washington. It has stopped telling the people the truth and instead is misleading them.

Recently President Eisenhower indicated that we are winning the cold war—at the very same time that the newspaper editors of the Nation said we're losing it.

They prate of peace—and boast of the brink of war we've visited.

They boast of our strength—and are contradicted by the generals.

They say all is well, and just then Ceylon joins the neutralists.

They say we have the initiative and just then the Russians challenge us to economic and political competition for the underdeveloped, uncommitted peoples.

They talk about our position in the world as if our stock were not at an all time low.

Now, all this is irresponsible.

Moreover, they tell us we are prosperous. Just the other day the Secretary of Commerce said that he felt, as he put it, "cheery" about the national economy which is, of course, most convenient in a campaign year. But the harsh fact is that thousands are being laid off in the basic automotive and farm equipment industries, and the farm depression, so long ignored by the administration, is showing ominous signs of spreading its repercussions from the Midwest to the east and the west coasts.

By prosperity, the Republican managers mean that the stock market is up and so are the profits of corporations. They believe, and they have often said, in filling the cup of corporations full to overflowing, on the chance that some of the wine of prosperity will dribble down to the rest of us.

But we Democrats believe that prosperity is built from the bottom up—that employed workers, and prosperous farmers, and successful small businessmen, together construct a sound economic foundation for all.

From President Hoover's veto of TVA to President Eisenhower's veto of the farm bill, from teapot dome to Dixon-Yates, it seems to me perfectly clear that the Republican Party under General Eisenhower, remains, as it has been throughout the recent past, the party devoted to the service, not of all the people, but of the special interests.

From the record of what the Eisenhower administration has changed, from the words they have uttered and the deeds left undone, from the promises made and the promises broken—from this record of the last 4 years, it seems to me perfectly clear that the Republican Party will no better represent all the people in the next 4 years than it has in the last 4 years.

What will a Democratic victory mean next fall?

It will mean an administration that will represent all the people, not just some of them; that believes in building prosperity from the bottom up; that will deal decisively with the mounting seriousness of economic dislocation; an administration that really cares when men are out of work.

And it will mean an administration that will tell the people the truth instead of soothing them, that will lead them resolutely through our grave crisis in civil rights at home and our deteriorating complexities abroad.

And it will mean an administration that will not just talk about but will work for, yes, and fight for, the things we believe in—the right of a man to do a job, the right of a man to be treated as a full equal by his fellow men, the right to think as he pleases, the right to send his children to a good school, to live in a decent house, to farm with protection against price collapse, and to go through life unhaunted by the fear of catastrophic illness.

But these are merely the issues now before us, the battlelines drawn, the programs begun.

I think we have to look further than that this year.

It is not enough to say we Democrats propose to resume the progress that we began and the Republicans interrupted. I think we have to look ahead.

We live in a time of great challenge and great danger—an atomic age, an electronic age, an age of automatic machinery, a television age, an age of leisure.

Only the wisdom of our political leaders will determine whether we use the atom for life or for death.

Only the foresight of Government will determine whether the new automatic machines will mean a more abundant life or unemployment. The Government cannot stand aside while the second industrial revolution takes place.

Only the Government can decide whether machines will serve man, or men, machines.

And the only the Government can set the tone, if you please, of the future—can by its leadership decide whether we will seek the truth or believe the fable, widen our lives or deaden our leisure, expand our freedom or harden our hearts.

Just think what this country of ours could be.

We know how to end poverty, if we would do it.

We know how to create full employment, if we would do it.

We can conquer the killing diseases, if we would try.

We have land enough, and water enough, for even our bursting populations, if only we used it wisely.

I believe this country is moving into an age that can bring an uplifting of its citizens such as mankind has scarcely dreamed of.

This uplifting will come only as we measure prosperity not in terms of refrigerator and television sets but even more in terms of the greater goods of education, health, security, peace of mind, only as we ask not merely "how much" but "how good."

And I suggest to you that on the record—the record of its vision in building the Marshall plan, and point 4, and the United Nations, the record it made in 20 years of boldness and imagination and new ideas—I submit to you that the Democratic Party is the one best equipped to lead the Nation to the new plateau of a better life only just beyond the horizon.

So, let us face the challenge of the future with boldness, courage, and good heart. The society of California has a motto, concerning the California pioneers, which reads: "The cowards never started and the weak ones died by the way." Let us too go forward, to build an America, and to construct a world, for our children that will be a better America, and a better world, than the one we were born into.

Now, if you will permit me, I should like to say a personal word on a subject of some urgency to me.

The California presidential primary on June 5 is crucial this year. It may decide the Democratic nomination and that in turn may well decide the outcome of the November election.

I think most of you agree that a Democratic victory is essential next November. And that means, quite plainly, defeating President Eisenhower.

We are now engaged in a primary campaign to decide who can best undertake that task.

We have to ask ourselves: Who can win? Not for the sake of winning, not for the sake of personal ambition, but for the sake of getting on with the job at home and abroad.

And we have to ask ourselves: Who is going to name the Democratic candidate this year—the Republican newspapers and the Republican editors of the slick-paper magagines, yes, and the big-money men of the Republican Party; or the rank-and-file voters of the Democratic Party?

I have just been informed today that a respected national columnist reports an incident that I have known about for some time: That heavy financial contributors to the Republican Party are attempting to influence the Democratic primaries this year. A man who helped manage the 1952 Eisenhower campaign recently attended a dinner at the Waldorf-Astoria in New York in honor of a foreign visitor, and at the end of the dinner he told the guest of honor that the men at the table were among the most influential in America, that in 1952 they raised a large amount of money to elect President Eisenhower, and that a few weeks ago in 1 night they raised all the Republican money needed to defeat me in Minnesota. I feel sure Senator KEFAUVER knew nothing of this.

But, nevertheless, if this report is true, it appears that the Republican leaders who helped elect President Eisenhower in 1952 are now trying to dictate the choice of the Democratic candidate this year. If this is so, it is not unlikely their money has or will turn up in Florida or California.

Well, I have only this to say: They, or men like them, used their money to try to defeat Franklin Roosevelt, they used it to try to defeat Harry Truman, and Adlai Stevenson is proud to be in such company as that. Moreover, he has had some previous experience with operation saturation—in 1952.

And it makes me want to fight all the harder for the things I believe in.

Flash Flood Warning Systems

EXTENSION OF REMARKS

OF

HON. JAMES T. PATTERSON

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 2, 1956

Mr. PATTERSON. Mr. Speaker, several weeks ago I called the attention of the House Appropriations Committee to the urgent necessity of more adequate flash flood warning systems. Since that time from all parts of the Nation I have received endorsements of my proposal for an additional appropriation of $3 million for flash flood warning systems.

The interest in this important matter is reflected by an editorial that appeared in the New York Times on May 5, 1956,

which I would like to here insert in the RECORD:

WEATHER BUREAU FUNDS

On the principle that a small fraction of a loaf is better than none we welcome the Weather Bureau appropriation for the fiscal year 1956–57 which the House of Representatives has now voted. Its most encouraging feature is an increase of $1.3 million for research, about $600,000 of which will be devoted to hurricane and tornado studies. On the other hand, meteorologists generally believe that at least three times as much is called for to do the job that should be done. At least as urgent—which last summer's catastrophe in New England amply proved—is the need for an adequate flood-warning system, especially for the flash type that caused such havoc in the wake of Diane. Next year's appropriation shows no increase on that score.

Congressman JAMES T. PATTERSON, of Connecticut, is pushing for a supplementary $3 million for flash flood warning purposes. This would be only about 1 percent of the annual average flood damage—not an exorbitant premium to pay for the protection it would give. The House should take another look at the adequacy of the Weather Bureau appropriation in relation to its needs, which are the public's needs as well.

The Promise of the New World

EXTENSION OF REMARKS
OF
HON. JAMES C. DAVIS
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 15, 1956

Mr. DAVIS of Georgia. Mr. Speaker, Hon. E. Smythe Gambrell, of Atlanta, Ga., the president of the American Bar Association, has during his incumbency of that high office delivered a number of outstanding addresses in various sections of our country.

Hon. Hatton W. Sumners, a former distinguished Member of this body from Texas, has forwarded to me a copy of the address which Mr. Gambrell delivered in Dallas, Tex., on April 20 at the ninth conference of the Inter-American Bar Association.

I have read this address with keen appreciation, and under a unanimous consent request granted today, I insert President Gambrell's address herewith:

THE PROMISE OF THE NEW WORLD

(Address by E. Smythe Gambrell, Atlanta, Ga., president of the American Bar Association, at the ninth conference of the Inter-American Bar Association, Dallas, Tex., April 20, 1956)

President Storey, Dr. Salazar, Mr. Justice Garwood, other distinguished guests, fellow citizens of the Americas:

May I express my warm thanks for the gracious hospitality you have accorded me here. I bring you the greetings of the American Bar Association and the legal profession of this country.

This is a truly inspiring meeting. This great audience; the eminence of those who are around us; the resonant voice of professional brotherhood; the deep respect for law which inevitably accompanies the progress of those who love freedom and their fellow man; the unifying, harmonizing note which the law thus adds to our common aspirations and the kinship of our history; all that kind and rank of ideas are racing through the mind on such an occasion as this. Whether in common law or civil law, and in whatever land, we serve as one great priesthood the common cause of justice. Ours is the happy privilege of calling men everywhere to worship at the shrine of liberty under law.

It is fitting and proper for the great brotherhood of law in this vast hemisphere to gather this week in this gracious city, in a State of great traditions. I know of no plainer call than a common loyalty to law and its appeal to reason. The world wants law. What is law? Law is the spirit of fairness and justice. It is the antithesis of greed and force. Law is the spirit of freedom—freedom according to law. It is the antithesis of autocracy and tyranny. Law is our common heritage, our common pride. We know and feel that in addition to the profound sympathies which we draw from community of history and outlook, there is the common bond of practice and of pride in the same learned, stimulating, and exhilarating profession. We at this meeting are living exhibits of the solidarity of the legal profession in the new world.

Someone has said that the things which we have in common are greater than the things which sometimes divide us. I think it would be more real to say that the things we have in common are those which do divide us—which give us each the right and power to move on independently, though in accord.

Nothing, I venture to suggest to you, is more truly calculated to keep alive and foster friendship between us than the common love of freedom and the devotion in common to those great principles of impartial justice which are the foundation—the sure foundation—of the common law and civil law. Democracy, self-government, liberty under law—these are still the passion of the people of this new world. Property we ardently desire, but freedom we will have; and faith in the constitutional structures under which that freedom has been enjoyed is the deepest force in our national existences.

With our imperishable heritage of civic ideals held in common for our separate advantage, it is indeed natural and right that we of the Americas should be generous in our praise of each other's achievements, kindly in our sympathy for each other's misfortunes, and true in our support of each other's rightful ambitions. For we must know that upon our common progress, upon the realization of our individual and just purposes, depend the peace and harmony of this hemisphere and to a large extent the welfare of mankind.

We are gathered from the length and breadth of two great continents, from the distant shores of Hudson Bay to the farthest reaches of Cape Horn. Our homelands stretch from pole to pole and cover half a world. Although in climate, in size, and in character, they range the spectrum of the globe, we are met in common purpose and mutual understanding, in quest of a single goal. The formal differences that would divide us are readily to be seen. For many of us, the patterns of life are a rich legacy of the gracious and gentle cultures of Castile, Aragon, and Portugal. For others, the manners and morals of the sturdy Anglo-Saxons have set the mold. Our ears may be attuned to the tongues of Iberia or to the language of England. As lawyers, some of us may take as the materials of our craft the work of art that is the Roman law, in its majestic symmetry and consummate order. For others of us, the medium of legal art is the accumulated wisdom of the ages, the record of a thousand years of human experience embodied in the common law. But more meaningful than our differences are the things we share. Beneath the varied surface ripples, run deep and steady currents of common purpose. Whatever heritage we prize, whatever tongue we speak, whatever law we practice and uphold, our professional quest is the same—to bring orderliness, regularity, and responsibility to our way of life. From the fusing and blending of these complementing cultures with each other, and with the many others that have invigorated the American peoples, has sprung a transforming spirit of brotherhood among men. This rich divergence in detail bids us to lift up our eyes toward the heights, to seek the higher common ground where differences are left behind. We are nearing the fulfillment of a vision, the vision of a great and devoted prophet of freedom, Father Juan Vidalsco, who clearly foresaw the dawn of a new world, of an America "peopled by men of all nations, and forming a single great family of brothers."

Today our countries of the Western Hemisphere stand as beacons to guide aspiring peoples everywhere. In this New World the fervent love of liberty is in the heart of every man, and the human soul is respected above all else. Here all stand equal before the law and none is above it. Here the long struggle of man to be free has reached its highest pinnacle. Should we fail in our resolve to keep bright the lamp of liberty, we would carry down with us the hopes of the downtrodden peoples of the world.

The blessings we enjoy are rooted in a common source and form our common heritage. From the beginnings of written history in the New World, our nations have moved together along the paths of destiny. To the bold far-sighted men who sailed in search of strange and unknown lands, this new-found continent was but a single country, bountiful and rich. To Columbus and Cortez, De Soto, and de Gama, Balboa and Pizarro, the continents they explored were not made up of separate nations. Only after the struggling of European crowns for the treasure here abundant were man-made boundaries raised to divide us. Together the lands were settled, and together in the colonies the settlers learned the hard lesson of the tyranny of distant and unresponsive government, and felt a hunger for the power to rule themselves. Whether the challenge of unconquered wilderness brought men already thirsting for freedom, or whether ordinary men who came to the New World were here imbued with a surging spirit of self-reliance, a devotion to liberty more fervent than the world had ever known welled up in all of these new lands. In the cabildos of the south and in the small colonies to the north, the ideal grew. At last it burst forth, an irrepressible clamor for emancipation and independence. Even as the colonies that were to become the United States rose up to cast off the yoke of English colonialism, to the south the men of Tupac Amaru and of Socorro rebelled against oppression. In the long struggles that followed, our peoples fought in a common cause. It is not coincidence that the great statesman and soldier Francisco Miranda served beside George Washington in the revolution of the northern colonies. Nor is it surprising that the magnificent liberator, Simon Bolivar, was a friend of Jefferson, Adams, and other leaders in the crusade that made this country free. Names like O'Higgins, Hamilton, San Martin, and Madison are written in glory together in the annals of human liberty. The battles at Concord and Carabobo, Valley Forge, and Boyaca, Yorktown and Ayacucho were fought by patriots who bled and died in a united sacrifice for freedom.

The spirit which animated our forefathers derived from the same wellsprings of thought. The stirring ideas of Locke, Voltaire, Rousseau, and Montesquieu all merged to kindle in north and south the unquenchable flame that illuminated the struggle. Their philosophies of freedom and the dignity of man were echoed in the hearts of Americans in every colony. In his writings in pursuit of personal liberty, the great Vidalsco enumerated what he proclaimed to

be "those natural rights received from our Creator, the precious rights which we may not alienate. The free enjoyment of these rights," he continued, "is the inestimable heritage which we should leave to posterity." There is the striking parallel to be found in the ringing words of Thomas Jefferson in his Declaration of Independence for the English colonies: "We hold these truths to be self-evident, that all men are created equal, that they are endowed by their Creator with certain unalienable rights." Whether from Spain, Portugal, France, Britain or elsewhere, the authors of our liberty were moved by a single purpose and had a simple aim—to secure the God-given rights of mankind.

In this philosophy, the emancipated peoples of America approached the solemn task of structuring a new government to replace the oppression they had cast off. It was an article of universal agreement in this enterprise that to heed the imperatives of human equality and freedom would require that government rest upon the consent of the governed, that only the voluntary concord of the citizenry could serve as the foundation of order. In each of the score of nations then established, the model of government adopted was the republic: each man was to be given a voice in the selection of those of his fellows who would be entrusted with the authority of the state, and each was to enjoy a share in the making of the laws that would rule him.

But it was not enough to erect the institutions of free election and representative lawmaking. In their wisdom, the far-seeing men who built our constitutional democracy recognized that majority rule alone cannot safeguard the integrity of the individual. A democratic majority, left unrestrained, could prove as ruthless and tyrannical as the earlier absolutist regimes. Seeing this clearly and fearing it, the statesmen enshrined in organic law, beyond the reach of simple majorities, the personal liberties of all men, whether they be alined with the dominant forces of the community or whether they stood in lone dissent. The people thus permanently denied to government the power to interfere with rights and freedoms proclaimed to be inalienable. In the structures of our institutions of government, we put our faith in the ability of a man to decide what is good for himself. But we have reposed less faith in his ability to decide what is good for others. We have been skeptical of the wisdom of a transient and temporary majority, and we have been suspicious of those who claim the prescience to divine the common good and to lay down the patterns to which all thought and all activity must conform to achieve that good. It was recognized that the capacities, drives, wants, and needs of the human being are beyond the powers of any man or group of men to comprehend and encompass at any single time, and that only experience can furnish reliable guides. Our constitutions therefore guaranteed to the individual the right to experiment, to be different, to disagree, to choose an untried path which the rest of us might regard as sheerest folly. By limiting the powers of government in the interests of individual freedom, we have sacrificed a measure of governmental efficiency. But the sacrifice is offered to achieve what we are proud to believe is a higher good. In declaring the rights of man in our written constitutions, we sought to preserve to each the freedom to grow, to employ his God-given powers as he, in the teaching of his conscience, believes best. Our concern rose above the creation of a favorable material environment where man can dwell in comfort. It is for us the supreme function of government to keep clear the ways for the enlargement of human personality, for the realization of the man's inherent dignity, and for the development of individual integrity.

The other stone in the foundation of our governmental structures that serves as the firm base for human freedom is the familiar principle that the concentration of power in any single man or group of men entails the risks of autocracy. The pages of history teach, above all else, the dangers of absolute power in the hands of any human, no matter how good his intentions or how pure his motives. To avoid these risks, and to dissipate the corrupting force of unchecked power, the builders of our way of life dispersed the authority of government among its several functional divisions, each to serve as a control upon the others. In its usual formulation, this fundamental of government is known as the doctrine of the separation of powers.

As the history of the art of government runs, the principle is old. We find glimpses of it in Aristotle's Politics, as he recognizes the three elements of political control—the deliberative, the magisterial, and the judicative. But he did not pursue the implications of his classification, nor did he perceive, apparently, the possibility of allocating these three powers to different hands, and of using their reciprocal balances to guard against authoritarian abuse.

Centuries later, when Greek and Roman principles of ordered liberty were rediscovered and restored, John Locke, a leading philosopher of the American Revolution, resurrected the tripartite division of sovereign power and conceived of the separation as a devise for securing individual liberty. But it remained for the great political thinker Montesquieu to bring the doctrine to full fruition, and it is he who bears the title of its oracle.

In the turmoil and strife that marked the birth of our respective nations, the hard lessons of autocracy were well remembered. A principle offering promise of an enduring freedom for the individual and a means for containing the centripetal forces of power found ready acceptance. The teachings of Montesquiev, already familiar to the Founding Fathers, were put to the test of practical application. The constitutions of all our American republics reflect the impact of this ideal. In all, the normative principle of government organization, and the first principle of the social compact, is the separation of powers among three coordinate and equal branches. As a tenet embedded in a constitutional structure, the doctrine of separation was a unique contribution in man's striving to rule himself, the distinctive genius of government in the Western Hemisphere. The common plan, by dividing the three grand branches of political authority and by allocating to each a checkrein over the others, left no power unrestrained. This is, for us, the essence of the rule of law.

As the eternal order of heavenly spheres is the resultant of the gravitational forces the stars exert upon each other, so in our constitutional scheme we have sought to bring order to the lives of men and the affairs of government through the interacting forces of distinct centers of authority. Knowing that power feeds upon itself, we have set power against power as the pattern of our system. We have learned through experience that in the long run we are better advised to commit matters of government to a pattern of procedural order than to put our faith in the untrammeled discretion of some men or group of men, however wise or altruistic. Without a controlling pattern and a limiting process, our noble declarations of human rights and our great guaranties of individual freedom would be as castles built upon sand.

We of the Americas take pride in the belife that we are governed by the rule of law. We contrast our system with those we call totalitarian, where people are subjected to the whim and caprice of absolute powers. In speaking of a government of laws and not of men, we do not mean that law is self-operating and immune from mortal influence. What we do mean is that the processes of law are obeyed, that those who wield temporal power for the time being are themselves governed by law, that our lawmakers are controlled by a discipline that subordinates personal ideologies. It is simply government by principle and process, rather than by people.

An enduring truth that made itself felt in the upheaval that marked our national beginnings was the maxim that the principal custodian of liberty is the judiciary. In any land and at any time, the human rights that can be said to exist are those that the courts stand ready to enforce. Through the work of the judges, life is breathed into the language of a constitution; through their judgments and decrees the ideals of freedom are transmuted into actuality. It followed inexorably that the peoples of America, in their fervent love of fredom, should establish by almost universal consent the principle that a court should regard as void an unconstitutional law, and that the institution of judicial review should be enshrined in our constitutional jurisprudence. More than a decade before the doctrine was to be pronounced by the Supreme Court of the United States, the far-seeing Francisco Miranda had drawn up his plan of government recognizing the essential power of the judiciary to nullify unconstitutional laws. In the northern continent, Alexander Hamilton, writing in the Federalist Papers, reviewed the guaranties of personal freedom of the United States and gave voice to the same sentiment when he added: "Limitations of this kind can be preserved in practice no other way than through the medium of the courts of justice; whose duty it must be to declare all acts contrary to the manifest tenor of the Constitution void. Without this," Hamilton continues, "all the reservations of particular rights or privileges would amount to nothing."

It is an awesome power that we have thus conferred upon our judges; it is a solemn responsibility that they must discharge. Freedom of the mind and of the conscience, freedom to labor as we choose and to seek our own destinies, all these depend wholly upon a judiciary free from influence. The courts are at once the conservators and the beneficiaries of the doctrine of the separation of powers. It is through the courts that the other branches are compelled to respect their appointed limits, but it is only if the independence of the judiciary is zealously maintained that its essential function can be fulfilled. In common accord, our fathers therefore set about to preserve the integrity of the judiciary branch free from encroachment by the others. They collectively have given these honored members of our profession security of tenure in office and security of compensation. The selection of judges has in large part been withdrawn from the arenas of partisan politics. The most consistent article of faith of the great liberator was his steadfast adherence to the principle of an independent judiciary. Speaking of his draft of the Bolivian constitution, Bolivar expressed his conviction in these words: "The judicial power that I propose, enjoys absolute independence; in no other plan of government is so much given it * * *. If the judicial power did not emanate from (an independent) origin, it would be impossible for it to be, in its fullest sense, the safeguard of individual rights. These rights * * * are the ones that insure liberty, equality, and security—all the guaranties of the social order. The real foundation of liberty is in the civil and criminal codes. The most terrible tyranny may be exercised by the courts, through the powerful instru-

ment of the laws. Ordinarily, the executive is no more than the custodian of public affairs; the courts are the arbiters of personal affairs, the rights of individuals. The judicial power is the measure of the welfare of the citizens; if there is liberty, if there is justice, they are made effective by this power."

These are the sources of our common heritage in the principles of liberty, the bright threads in the tapestry of our government of law, the warp and woof of the way of life we share. We have gathered tonight in the fraternity of our mutual traditions to enjoy the conviviality and good fellowship of professional brothers. In other sessions here this week, we have been concerned more directly with our professional endeavors. Recognizing the obligation of lawyers everywhere to work toward a more perfect administration of justice, we have compared ideas for solution of the problems that beset us all, and have considered means for eliminating or minimizing the differences in law that impede free and friendly relations among nations. If lasting peace and understanding are ever to come to this earth, I believe they will result not from the formal functioning of the diplomatic corps nor from official consultation of the chiefs of state. They will come from meetings like this, of men of good will animated by common ideals that transcend national boundaries, where mutual respect, understanding, and friendship are fostered.

But there is a more basic purpose that permeates our conference. The lawyer by tradition and training takes as his first concern the preservation of human liberty under law. Our predecessors at the bar in these lands were the ones who struck the spark that spread throughout the New World, leaving a love of freedom burning in every breast. They led the struggle that made us free, sacrificing their lives and fortunes to the cause. They hewed the framework of government that has preserved for us, their heirs, the blessings of the rule of law.

Today, as the threat of a global holocaust hovers over all, the lawyers of the Western World, charged to justify their glorious heritage, are faced once more by the ancient challenge to human freedom, now in a newer guise. "The destiny of America"—the words are Bolivar's—"The destiny of America has been settled irrevocably * * * the independence of America is required for the equilibrium of the world." The challenge that confronts us is to preserve the independence of our peoples, and to uphold the government of law for all mankind. It has fallen to us, it seems, to determine by our conduct and example whether societies of men are really capable of establishing good government upon sober reflection and voluntary choice, or whether men are forever destined to be oppressed by governments founded upon accident or force.

Today our countries stand together at the threshhold of a new era, at the dawn of a new day of promise. Ahead is an opportunity for unprecedented human advancement and growth. Before us lie new frontiers of science, education, industry, and commerce. New horizons in travel and communication are coming into view. New sources of energy may make man the complete master of his physical environment. To us is offered, in fuller measure than ever before, the promise of a richer and fuller life for ourselves and for those who follow us.

But this bright promise is not undimmed. Man has still to prove the capacity to control, in the political realm, the physical forces that his technology has unleashed. A restive world in bondage must be given a share in the blessings of freedom and abundance. More and more it is borne in upon us by current developments that freedom is not secure unless it is universal; that prosperity is not sound or lasting if it is merely localized or isolated; that civilization is not real or genuine on this earth if it is to be enjoyed by only the favored few.

In the current strife that has set one-half the world against the other, the struggle between communism and freedom is not alone a war of economic and military power. The greater war is the war of ideas, a spiritual conflict of religious and moral values. Our best weapon in this battle is to instill the spirit of freedom and faith in the hearts and minds of people everywhere. Even in this age of discovery, when science has released sources of energy of almost incomprehensible magnitudes, the forces of the physical world still pale in comparison with the power of man's great spiritual and political ideals. It is this power we have invoked to preserve and to spread throughout the world our precious heritage of freedom and order.

In the worldwide clash of ideology, the strongest armor of the Western World is the philosophy of law we share and uphold together. When ancient institutions are challenged and traditional ideals attacked, when unforeseen problems must be met and new frontiers must be conquered, we could only flounder blindly and aimlessly without a standard to measure against or a star to guide us. Only in a working philosophy of law and government can we find the essential sense of direction.

So long as we remain free to think for ourselves, we must, each of us, work out our own convictions regarding the functions and purpose of law. But as western advocates we must recognize that law is not devoid of purpose, and that a science of guiding human conduct must take account of the ends to be served, and the means to be employed. For us there is no separating of ends and means; for us the law cannot be defined as any rule that will be enforced, nor is law as we conceive of it simply a tool that may be used to remake the world in any image we may choose. We have learned through long experience that the validity and moral authority of a decision rests largely upon the processes and means by which the decision is reached, that the question of guilt cannot be divorced from the fairness of the methods of trial. We know that it is fatuous nonsense to talk about the utopian society without considering how that dream can be realized. In devising a government to protect and to foster the development of human personality and the dignity of man, we have chosen to put our trust more in process and pattern than in unrealistic declarations of the ends of government.

It is the Communists who have traded on common ignorance of these enduring truths, for they have sought to achieve their own version of the millenium through the ruthless and bloody use of sheer physical power. They have closed their eyes to the fact that no good can be accomplished by an evil means, and they have forgotten that the processes of law must leave an indelible mark upon the government wherein they prevail.

It is significant that the dialectic of Marx and Lenin has never produced a coherent philosophy of law. There is no rational conception of law that could support a state founded upon force and falsehood. How intimately our proud traditions of freedom are bound up with our philosophy of law can be illustrated, I think, if we ask ourselves how the totalitarian regimes behind the Iron Curtain could have been established, or how long they could have endured, if the only tools for the retention of power had been the institutions and processes of the common or the civil law. What passes for law in such regimes is only another convenient instrument of dictatorial authority. To conceive of the individual as existing solely for the exaltation of the state is to deny a place for justice between man and man between man and his government. So regarded, the individual is not a creature of God free to choose and to will, but only a product of social forces; all is inevitable and predestined. In such a system, the person who fails to fit into a current political plan is simply to be removed from the community, much as a branch would be pruned from a tree if it upset the symmetry. Individual volition, and familiar concepts like the dolus malus of the civil law and the mens rea of the common law are irrelevant in the totalitarian state. We have only to look to the travesties of justice committed in the so-called People's Courts of the Soviet Union to measure the vast gulf that separates the legal systems of the free world from those of the other half. It is not too much to say that the basic cleavage between the great powers of the world derives ultimately from the conceptions of law that prevail in each.

It would be supposed that the fundamental principles of the separation of powers would find no place in the totalitarian state. The notion that power should offset power to curb the authority of government is simply inadmissible in any philosophy that makes the state all-powerful. Separation of power is the antithesis of dictatorship. It was inevitable then, that Marx and Lenin should reject the use of checks and balances, for their dictatorship of the proletariat was nonetheless a dictatorship. The Communist theory is aptly described by the late Andrei Vishinsky, a leading authority on Soviet law, in these terms: "From top to bottom the Soviet social order is penetrated by the single general spirit of the oneness of the authority of the toiler. The program of the All-Union Communist Party * * * rejects the bourgeois principle of separation of powers."

There is of course nothing remarkable in Vishinsky's statement. Separation of powers relies upon honest differences of opinion among the three coordinate branches of government to restrain the unguarded zeal of any single branch. There is no room for such a principle in a political system that tolerates no disagreement and brooks no dissent. In Russia, an independent judiciary would be unthinkable. The courts there exist not to do justice or to protect individual freedom, but only to further the interests of the prevailing power.

The conflict with the enemies of liberty will be won, if at all, by unyielding adherence to the principles of Western civilization and by unceasing defense of our cherished ideals. We must lay firm hold on the institutions wrought at such great cost by an earlier generation of lawyers in the Americas. But we must not mistake stagnation for preservation, or changelessness for our national faith. We are all of us creatures of time. Each day marks the end of another page in the eternal story of human growth, and the turning of a new page yet unwritten. Chance and change will never cease, and there is for us no stopping, no turning back. Ours is a process of building, stone by stone, upon the lessons of the past, learning from the tragedies and triumphs of those who have gone before us in the procession of mankind, building ever better for those who are to follow.

The political creed that binds us is premised upon a simple belief: That each human being is a creature of God and endowed by Him with the dignity of individuality. Each must be free to shape his own integrity and to seek his own destiny, to develop and to grow. But growth is change. If each man is to be free to realize his own potential, to think and to build, then change is inexorable. Our peoples have set themselves free—free from physical restraint; free from ignorance and superstition; free from the delusion that rulers possess infinite wisdom; free from political doctrines that held men in bondage to government; free to work out their futures with their own minds and their own hands and in their own way, subject only to limitations that

would prevent them from interfering with the freedom of others. In the process of the emancipation of that portion of humanity, there has been released in society a driving force, an individual initiative, and an aggregate accomplishment previously unknown to the history of mankind. If we should stifle human growth in the name of security and conservatism, we would defeat the highest purpose of democracy. Whether the realm is intellectual or economic, resourcefulness and innovation must be encouraged and not suppressed. Resistance to change is a product of fear and lack of faith. It has no place among a dynamic people dedicated to the principles of ordered freedom. The cry for security is the call of the fearful and the faithless; the God-fearing man who is self-reliant and conscious of his powers calls for freedom, not security. The real security will be found not in repression, but in giving men free rein for their drives and their capacities. It is one of the paradoxes of labels that in common usage the man who puts his faith in eternal progress and growth is tagged a conservative, while the man who espouses the cause of the unchanging and stagnant social order is counted as a progressive.

Never before have the complexity and diversity of life so defied simplification and solution. Pyramiding scientific and technological advances have made us inextricably dependent upon one another. Each dependence marks a point of contact and constitutes a potential point of conflict. Each addition to our expanding populations increases these points of potential conflict not arithmetically but geometrically, since each new man must depend not upon one other but upon uncounted numbers of his fellow men. The tasks of the law have increased in proportion, for it is the function of law to ease the points of conflict between man and man and to minimize the inevitable frictions of society. The felt needs of the times have compelled us to concede an increasing role to government in the control of our daily lives. But it is a fundamental article of our mutual faith that we shall not destroy the ancient landmarks in our effort to accommodate the demands for governmental authority to cope with modern problems. The principles of our freedom must stand as fixed and immovable monuments above the ebb and flow of the currents of change. Paramount and above all other considerations, we must channel the flow of progress within the processes and limits of the structure of our form of government; the rule of law must hold firm.

The expanding role of government in the modern world intensifies the challenge to the legal profession whose obligations we bear. To guard the common heritage calls for constant vigil, for ceaseless effort in the cause of freedom. Concentration of power in a central authority tends to diminish the sense of participation in government and the role of local responsibility that fostered the conception of the state as the servant and not the master of the individual, and engendered the spirit that set us free. The flame of freedom may be extinguished unless we rekindle it with devoted service and unfaltering faith. The demands of efficiency in government regulation also have strained the limits of the doctrine of the separation of powers. In the world of today the functions of government cannot always be neatly assigned to mutually exclusive categories or watertight compartments, and some overlapping at the boundaries must be tolerated. But the resilient and flexible lines must not be broken down. Most important, the independence of the judicial branch must be preserved. The establishment of administrative tribunals outside the judicial power has been carried far in many nations. Freed of the disciplines and restraint the legal profession imposes upon the courts, these tribunals may present grave threats of absolute and unchecked power and the consequent risks of tyranny. It would be tragic indeed should the great freedoms we proclaim be lost through apathy and complacency.

In our eternal endeavor to fulfill the ideal of the rule of law, the measure of our achievement is not absolute success. In human wisdom, we know that the goal is not soon to be won, and that we in our time shall not see the dawn of the day of perfect justice. The battle for liberty can never be won and our arms laid down; there is no final victory. To succeed is only to gain the right to fight again tomorrow.

There are heartening signs that our cause may yet find vindication. Recent years have brought greater stability to our governments, a keener appreciation of fundamentals, and a rejection of alien ideologies. The close of the Second World War found the American republics joined in a solid phalanx against the powers of darkness, and ready to assume their rightful place of leadership in the work of uniting the nations of the world in an organized pursuit of lasting peace. The past week saw the 66th anniversary of the founding of the Organization of the American States, a day proclaimed by the presidents of nations throughout the hemisphere as Pan-American Day. Again the vision, the genius, and the foresight of Simon Bolivar are called to mind. In his wisdom he recognized the strength of our diversity and local responsibility, and rejected a proposal to make the Western Hemisphere a single nation. These are his words: "It is a grandiose idea to try to make one nation of all the New World, uniting all its parts by a single bond—but it is not possible, because varied climates, diverse situations, contrary interests, and dissimilar characteristics divide America—a great monarchy would be difficult to consolidate, but a great republic is impossible—a State too large in itself or its dependencies finally falls into decadence, loses its free nature, and becomes a tyranny, neglecting the principles which could preserve it, and finally lapses into despotism." But with prophetic accuracy he foresaw the opportunuity for a voluntary concord of the separate and independent nations to be formed. "How beautiful it would be," he said, "How beautiful it would be if the Isthmus of Panama should become for us that which the Isthmus of Corinth was for the Greeks. Would that some day we may have the fortune of assembling an august Congress of the Representatives of the Representatives of the several republics—to meet together and consider the high interests of peace and war."

Today the nations of the New World stand united in the love of liberty as the custodians of freedom for all humanity. It is the Americas that must lead mankind to the new birth of freedom for peoples everywhere. The glorious hopes are futile and the promise of the future will prove vain if we entrust our liberties to the written word alone; the constitution alone is not our salvation. It has fallen to us, the lawyers, nurtured in the traditions of government of law and imbued with its spirit, to preserve for all the world the light of human liberty. In our hands we hold the torch that guides the hopes and yearnings of all mankind. In firm resolve we face the solemn duty to keep it burning. The task shall not go undone.

Ruler or Executive

EXTENSION OF REMARKS
OF
HON. RALPH W. GWINN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 21, 1956

Mr. GWINN. Mr. Speaker, I desire to bring to the attention of my colleagues and the public at large the address by George E. Stringfellow, senior vice president, Thomas A. Edison, Inc., West Orange, N. J., before the Kiwanis Club of Jersey City, on April 5, 1956:

RULER OR EXECUTIVE

Mr. Chairman, fellow Kiwanians, and honored guests, I would like to speak to you for a few minutes about the trend to concentration of power in the executive department of our Government and its threat to our cherished liberty.

The Constitution of the United States expressly grants to each of us precious and inalienable rights and privileges. By implication it imposes upon each of us a continuing duty. One of those rights is that of free speech. The implied duty has been suggested by the immortal phrase, "The price of liberty is eternal vigilance."

The theory of government embodied in our national charter is that of a separation of powers, each restrained by "checks and balances."

For example:

Article 1 of the Constitution: "All legislative powers herein granted shall be vested in a Congress of the United States which shall consist of a Senate and House of Representatives."

Article 2: "The executive power shall be vested in a President of the United States."

Article 3: "The judicial power of the United States shall be vested in one Supreme Court, and in such inferior courts as the Congress may from time to time ordain and establish."

There are the three powers. Numerous provisions wisely keep them in balance, each with the other two. It is as nearly automatic and foolproof as human genius can devise. Gladstone termed it "The most wonderful work ever struck off at a given time by the brain and purpose of man."

But no work of mortal man is ever completely automatic or foolproof, and that is where you and I come into the picture. It is our eternal vigilance that will preserve our freedom.

While we marvel at the remarkable automatic features of our Government, we don't dare leave it exclusively to its self-adjusting mechanisms. We must watch it with "eternal vigilance" lest the brake be inadequate to the power, or the steering mechanism gets jammed for lack of lubrication.

I am disturbed by the trend to concentration of power in the executive branch of our Government. Lest you think I am an alarmist, let me assure you that I have good precedent for "viewing with alarm" this trend.

For example: Henry Clay, in 1935, 120 years ago, said:

"We are in the midst of a revolution, hitherto bloodless, but tending rapidly toward a total change of the pure republican character of the Government, and to the concentration of all power in the hands of one man"—meaning the President.

Subsequent history is replete with struggles between 1 of the 3 separate powers.

The Congress has exercised its legislative power to cut down the appellate power of the courts. The court has had to slap down the legislative. In struggles between the other two powers, the executive seems to pick the winner. And there, in my opinion, lies a danger against which we citizens should be vigilant.

In his Farewell Address, Washington enjoined his successors in the executive department to: "Confine themselves within their constitutional spheres, refraining, in the exercise of the powers of one department, to encroach upon another." He said further, "The spirit of encroachment tends to consolidate the powers of all the departments in one, and thus to create * * * real despotism."

Lord James Bryce in 1889 said of our executive: "Either House of Congress can direct a committee to summon and examine a Cabinet officer, who, though he might legally refuse to attend, never does refuse. The committee, when it has got him, can do nothing more than question him. He may evade their questions, may put them off the scent by dextrous concealments. He may with impunity tell them that he means to take his own course. To his won master, the President, he standeth or falleth."

That is what has been worrying me of late years.

For example: The newspapers reported the other day that the Secretary of Defense refused to disclose to a committee of the United States Senate the nature and quantity of strategic materials now being shipped to the Soviet bloc, giving as his reason that the information is "classified" by the executive department. Our enemies know what items they can and cannot get from us. Yet the Secretary of Defense denies information to our citizens that he gives to the Communists. Sounds impossible, but it is true.

The Constitution formally sets up three separate powers of government. But there is a salutary fourth power, that is not specifically identified as such, namely: The power of the people to amend their Constitution. We have availed ourselves of that power on 22 occasions, and I am wondering whether we shouldn't avail ourselves of it for the 23d time.

For example, the treaty power has been used to set up executive agreements which have the effect of superseding the domestic law of our land.

In some instances agreements are entered into without the knowledge of the United States Senate.

Hon. JOHN W. BRICKER, senior United States Senator from Ohio, has persistently urged an amendment to the Constitution that will limit the executive's treatymaking powers to things that are not outlawed by our Constitution and its several amendments.

You gentlemen of course know that a formal treaty requires the approval of the Senate and President, while an executive agreement can be made by the President without the knowledge of either house of Congress. The executive agreements have the same force and effect of a treaty.

When Gen. Dwight D. Eisenhower was a candidate for the Presidency, he said: "We shall see to it that no treaty or agreement with other countries deprives our citizens of the rights guaranteed them by the Federal Constitution." Subsequent to his election to the Presidency, he opposed the proposed Bricker amendment.

Mr. John Foster Dulles is reputed to be an able and experienced constitutional and international lawyer and is assumed to have known what he was talking about when on April 1952 he said: "Treaty law can override the Constitution—can take powers away from the Congress and give them to the Federal Government or to some international body, and they can cut across the rights given the people by their constitutional Bill of Rights."

Subsequently, Mr. Dulles said, "The treaty-making power is an extraordinary power liable to abuse. Treaties make international law and they also make domestic law. Under our Constitution, treaties become the supreme law of the land. They are indeed more supreme than ordinary laws, for congressional laws are invalid if they do not conform to the Constitution, whereas treaty laws can override the Constitution," concluded Mr. Dulles.

In the famous steel case (*Sawyer* v. *Youngstown, etc.* (343 U. S. 479)) only five of the judges of the Supreme Court condemned the presidential seizure of the mills. Three of the judges voted to uphold it on the ground that the United Nations Charter was a treaty overruling the Bill of Rights. Later, in the *Iowa* case (344 U. S. 1) the Bill of Rights barely squeaked through, with a vote of 4 to 4 sustaining the Iowa supreme court. Since then, there have been changes in the personnel of the Court which leaves the situation precarious as against the pleas for treaty law against constitutional law.

The feature of the proposed Bricker amendment that has aroused the bitterest opposition, is the provision that: "A treaty shall become effective as internal law only through legislation which would be valid in the absence of treaty."

Next to that, the one feature that raises the opponents' gorge is the provision that "Congress shall have the power to regulate all executive agreements with any foreign power or international organization."

It is well to keep in mind that even a formal treaty requires the assent of only two-thirds of a quorum, not two-thirds of the entire membership of the Senate, and that the quorum may be only a handful if nobody calls for a quorum.

What I have said gives point to the warning of Patrick Henry, American statesman and patriot, that "if treaties are made that infringe our liberties, it will be too late then to say that our constitutional rights are violated."

Even in the early days of our Republic, when government was less complex than it is today, Thomas Jefferson recognized the danger of giving free rein to a "good" man. He cautioned, "In questions of power, let no more be heard about confidence in man, but bind him down from mischief by the chains of the Constitution."

If we would avoid tyranny, we must reverse the trend to concentration of power in the hands of the executive department of Government. The proposed Bricker amendment is a step in that direction. It would be a strong link in that binding chain, safeguarding our liberties. It should have the wholehearted support of those Americans who think first of America.

Only you and I and others like us can decide whether we will have a ruler or an executive.

Baltimore Altar Boy Dies From Burns

EXTENSION OF REMARKS
OF
HON. GORDON CANFIELD
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 20, 1956

Mr. CANFIELD. Mr. Speaker, we are again given a tragic reminder of the need for unrelenting vigilance in maintaining the Flammable Fabrics Act, by the death of the little 10-year-old Baltimore altar boy whose cassock caught fire while he was lighting candles in the sacristy of his church.

The story is recorded in the following article by the Associated Press:

BALTIMORE ALTAR BOY DIES FROM BURNS

BALTIMORE, May 9.—Albert Longmire, 10-year-old altar boy, died yesterday of burns suffered April 25 when his cassock caught fire while he was lighting candles at St. Edward's Church.

The boy was lighting candles in the sacristy, adjacent to the altar. He ran into the church with his clothes afire.

The Reverend John Kerr interrupted a sermon to put out the flames with a woman's coat.

Remarks on Hon. Charles C. Finucane, at Dedication of San Antonio Dam

EXTENSION OF REMARKS
OF
HON. PATRICK J. HILLINGS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 15, 1956

Mr. HILLINGS. Mr. Speaker, on May 12, 1956, San Antonio Dam at Pomona, Calif., was dedicated. My distinguished colleague the gentleman from California [Mr. SHEPPARD] and I participated in the dedication along with civic leaders from Los Angeles and San Bernardino Counties.

The featured speaker was the Honorable Charles C. Finucane, Undersecretary of the Army.

The completion of San Antonio Dam will provide flood-control protection to thousands of people in southern California. It stands as a monument to men of vision and fortitude who profited by lessons of history and who built lasting protection before floods in southern California could strike again.

Mr. Speaker, I wish to include at this point in the RECORD, Mr. Finucane's most interesting remarks at this dedication:

Distinguished guests, ladies and gentlemen, it is an honor for me to be here for the dedication of San Antonio Dam. When Congressman PAT HILLINGS asked me to speak on this occasion—an occasion of importance to all of us who recall the disastrous floods of past years—I accepted with pleasure and have been looking forward to this gathering with you.

In preparing myself for this dedication it occurred to me that you might be interested in flood control and water conservation throughout the Nation and the important role of our Army engineers in water-resource development.

After the dedication of Folsom Dam near Sacramento last week, it is heartening to see still another important flood-control structure put into service in California. Each unit completed is another step forward in the joint efforts of local, State, and Federal Governments to make sure that disastrous floods like those of last December and January experienced in California will become things of the past.

The completion of this dam is the happy ending to a story which began with another disaster—the flood of 1938. Up to then the valley had been plagued by a series of disastrous floods. San Antonio Creek had overflowed and caused considerable destruction in 1916, 1921, 1927, and 1934. The 1938 flood wrought property damage estimated at more than a million and a half dollars, put

the rail lines which serve Los Angeles out of operation for 3 weeks, and caused traffic disruption in other areas for as long as 2 months. But meanwhile, in 1936, the Federal Government had assumed responsibility for flood control on a national scale. So the response to the 1938 flood was this Federal project authorized in that same year.

Since then—encouraged perhaps by the fact that no important floods have occurred for many years—more and more people and industries have been attracted by the rich advantages of this location. The project area has grown and developed. One hundred and twenty thousand people now live here and the present value of improvements is estimated at more than $600 million. Because of this tremendous expansion, the damage that could be done to valuable residential, commercial, agricultural, and industrial properties in and near your cities of Pomona, Claremont, Chino, Ontario, and Upland by a disaster-type flood has greatly increased.

Fortunately, the area was spared during the hectic years of World War II, postwar readjustment, and the Korean campaign, when many construction programs had to be interrupted or postponed. Now San Antonio Dam is in place, providing a good measure of protection against flood damage. We cannot yet say that protection is complete, for the channel improvements on San Antonio and Chino Creeks that are an indispensable part of the project have not yet started. But the preconstruction planning work on these improvements is approximately 50-percent complete, and we can look forward to seeing them brought to completion at an orderly rate.

These works in turn are part of the Army's flood-control program for the entire Santa Ana River Basin, which dollarwise is now about 80-percent complete. Similarly the Santa Ana Basin program is but part of the Army's program in California, and that in turn is only one portion of the national flood-control program. And the flood-control program is but one aspect of the total water-resources development effort being carried out in every part of the United States.

Just as the development of enterprise here has increased the necessity for control of these waters, as throughout the United States the vast expansion of industry and commerce since the war is increasing the necessity for the development of water related sources. The amounts of water the American people use today staggers the imagination. Many streams and rivers are seriously polluted. Irrigation continues to require ever-increasing quantities as sprinkler irrigation takes hold even in the humid Eastern States. Shortage of water for city and industrial purposes have become so widespread and chronic that it is a national problem, and threatens the future growth of important cities and strategic producing areas. Consequently the progress we make with conservation and development programs may in large measure determine the future welfare of our citizens. Meanwhile there is no major river valley in the United States, except for the Mississippi, in which the Federal flood-protection program is even half-finished.

Vast though our present use of water may be, the Department of Commerce has recently estimated that it will almost double within the next 20 years. In 1975 industry will require almost three times as much water as was used for all purposes in 1900. Steam electric plants—whether atomic or conventional—will require more than we are using today for irrigation. Total use in 1975 is estimated at 453 billion gallons a day, compared with our present use of 262 billion gallons. The Department of Commerce informs us that we are coming within sight of the limits of available water for consumptive purposes, and that we are confronted with a problem that will tax the utmost foresight and ability of our planning agencies.

It is clear that we must progress steadily toward the time when we will make beneficial use of every drop of water that falls on our land, is gathered into our watercourses, and speeds to the sea. We must control that water through well-planned engineering works to keep it from doing harm, and further utilize the same or related control works to make our water perform beneficial tasks. We must make it available to supply the needs of farms, cities, and industries. This involves the prevention of water waste through conservation, and if necessary the replenishment of underground supplies. We must reduce pollution, improve navigation, and put the water to work by making it turn turbines and carry vessels. In addition, we must preserve and enhance the important values not readily measurable in money terms, such as fish, wildlife, and recreation.

Each area and region faces different kinds and combinations of water problems. In one place, the need for irrigation supply to support the regional economy may be foremost. In another locality, the need to protect potentially important areas from recurrent destruction by flooding, or to stabilize channels and maintain streamflows, may be the dominant concern. Plans and projects for each area must be determined mainly on the basis of local needs and circumstances.

Hence the Federal Government should not and cannot be solely responsible for meeting all our water problems. The job is too big for any one group of persons or interests or for any one level of government. It is my belief, and the belief of your present national administration, that we must give more thought to defining the roles, relationships, and responsibilities of non-Federal and private agencies so that each may undertake its proper share of this task. President Eisenhower expressed it this way when he signed the Flood Control Act of 1954:

"In the development of the Nation's resources I believe that the Federal role should be cooperative, not preemptive; that the costs of such development should be borne by the Federal Government with the States, local governments, and private interests. I believe also that to the greatest possible exten those directly benefiting from resource development should be responsible for it and pay for it."

In order to play a more cooperative and a better coordinated part with other interests and agencies in the development of water resources, it is necessary for the Federal Government itself to achieve greater unity and consistency in its water programs and policies.

For more than a century and a quarter, the Army, through its Corps of Engineers—the agency which built this dam—has played a vital part in the harnessing and development of water resources. Its role has steadily grown in both size and range of activities as the Nation spread westward and its economy increased in complexity. Within the last 50 years, other Federal agencies also have been formed to carry out separate and special aspects of water resource development. These programs were launched to take care of various water needs as they occurred. Changes in the course of the Nation's economic development have been reflected in changes and modifications of these programs. Often such changes were piecemeal or stopgap measures, adopted without adequate consideration of their effect upon other water-resource programs, Federal or non-Federal.

Thus the efforts of your Government became increasingly inconsistent. State and local governments and private enterprises found it difficult to coordinate their plans and programs with the Federal effort. This lack of cooperation and coordination of Federal agencies with each other and with State and local interests has been called "the greatest single weakness in the Federal Government's activities in the field of water resources development."

To cope with this problem, 2 years ago this month President Eisenhower created the Committee now known as the Presidential Advisory Committee on Water Resources Policy. Its report and recommendations, based on 2 years of thorough study, were published last December. Like the report of the Commission on Organization of the Executive Branch of the Government, which also considered matters relating to water resources, it is proving an invaluable guide to executives and legislators in devising measures to improve Federal programs and policies in this field.

In addition to setting forth the need for improved coordination within the Federal Government, and for greater financial participation and initiative by non-Federal agencies, the Presidential Advisory Committee recommended an organizational plan for Federal water-resource activity, and made certain recommendations in important fields such as water rights, priorities in the use of water, the sharing of project costs, the evaluation of project benefits, and the method of authorizing projects.

The Army has been very glad to participate in the studies of the Presidential Advisory Committee and of the Hoover Commission. We believe that these studies will help bring about more efficient project operations, sounder bases of planning, simpler and more effective policies, and economies which will enable all our enterprises and agencies to proceed faster with the immense task of meeting the Nation's many pressing water needs.

We believe it will facilitate the necessary coordination between our efforts in California and those of your State Government. Few States rely so largely upon continued water-resource development to support future growth as does California, and few States have shown more initiative and enterprise in planning to meet water needs. The Army looks forward to cooperating with you by carrying out an appropriate role in which State, local, and private responsibilities are fully recognized.

We of the Army take pride in the part which the Army's construction and engineering branch, the Corps of Engineers, has played in the history of this State. From the days of Fremont and Halleck more than a 100 years ago, the Army engineers have been developing harbors and communications on your coast. They explored the highway and rail routes that opened your natural riches to development by and for the American people. Later they built the Panama Canal, linking the west coast with the East by sea as well as overland. They blasted out the rocks which made the entrance to San Francisco Bay hazardous, and opened the channel to Stockton. Later through a sub-agency, the California Debris Commission, they established the plan which has replaced the wasteful "every-man-for-himself" system that was ruining the Sacramento River with mining debris and floods. In the late 1920's they made their so-called 308 studies of California's water resources, upon which subsequent Federal water-resource programs in this State have been largely based. In making these studies, the Corps relied heavily upon material assembled by the State itself through its State engineer. Since then the Army and its engineers have continued to work with and through State and local agencies in gathering data, making plans, and constructing facilities like San Antonio Dam.

And we are very proud of the fact that on the 175th anniversary of the Corps of Engi-

neers, the State of California, through its Governor—then Earl Warren—officially recognized the Army's contributions to the development of the State. The proclamation said, in part:

"In times of peace the corps has improved the Nation's harbors and thus contributed much to the development of domestic and world trade. It has worked to harness our rivers for protection against floods, for the generation of hydroelectric power, and for the extension and advancement of waterborne commerce. * * * Throughout the years it has had a major part in the work of improving our rivers and harbors, in building dams, flood-control works, and other facilities, and in the construction of military establishments in our State."

The completion and dedication today of San Antonio Dam attest the fact that the Army's partnership with the people of California continues to be strong and productive. It will continue to be strong and productive as long as there remains a stream to be curbed and developed, a harbor to be improved, or a drop of water to be put to work, through jointly conceived plans and projects, in this State of California.

It is a distinct privilege for me to designate this dam to be known as San Antonio Dam.

We Should Concentrate More on Telling Our Own Story With Objective Commentary and Calm, Straightforward News

EXTENSION OF REMARKS
OF
HON. FRANK THOMPSON, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 8, 1956

Mr. THOMPSON of New Jersey. Mr. Speaker, in the New York Times of May 14, 1956, C. L. Sulzberger comments critically on American propaganda programs designed for overseas consumption, and advances some excellent proposals for improving the present product. I include Mr. Sulzberger's fine article here for the information of my colleagues:

FOREIGNS AFFAIRS: WHAT'S WRONG WITH AMERICAN PROPAGANDA

PARIS, May 13.—In this era of political uncertainty and uneasy coexistence propaganda becomes increasingly important in maintaining the views and prestige of the United States among captive peoples of eastern Europe. Yet, despite millions of dollars spent, we are unsuccessful. A tour of the satellite nations provides convincing evidence that our propaganda is a flop.

This is not for lack of technical ingenuity. Both Government and privately sponsored organizations have demonstrated imagination in getting our ideas across barbed-wire frontiers and a wall of radio jamming. Programs beamed by stations of the Voice of America and Radio Free Europe manage to circumvent these barriers and are heard. Pamphlets dropped from airplanes and windborne balloons have so saturated some countries that not even efficient sweeping operations of the security police have kept them from wide circulation. The criticism one hears is of the ideas themselves, not their means of distribution.

One American envoy in the area complains: "Our propaganda is utterly ineffective. Frequently our radios put out intelligence information that is entirely inaccurate or ridiculously late—information that could be verified within 10 minutes by any embassy or legation. Much that we broadcast no longer was any bearing on reality. Many political émigrée make good money compiling useless material."

STUNTS RESENTED

A friendly Ambassador in Czechoslovakia observes: "The BBC has its Bruce Lockhart, who is deeply respected here. But you have no one. Your balloons and leaflets bear foolish messages. For example, they sought to work up a campaign encouraging 10 popular demands for freedom. Leaflets and stickers were dropped bearing the mystic No. 10. This was an advertising stunt. It never took. People resented being incited to audacity by those dwelling safely abroad."

A highly intelligent Czech with pro-American sympathies adds: "All too often your radio either misses events; or it is late; or it is wrong. Once you get it through the jamming you'd like to know something.

"But the things your propaganda speaks about are frequently silly. Broadcasters give 15 minutes of statistics. Whom do they think they are talking to, professors of mathematics? Who cares about comparative steel production figures in 1952? Sometimes our emigrants working for you will denounce a man as a traitor when it simply isn't true. They are careless. This happened to a friend of mine and was infuriating."

One of our Eastern European envoys says: "The United States has always encouraged these people to overthrow the Government. Our propaganda still implies this purpose. We have done nothing or said nothing to give the impression that we will ever make our peace with this regime. Yet we must do business with it—and do. This schizophrenic attitude puzzles the local population."

The American Government sends selected films to our Embassies and legations not only to entertain them but to advertise the benefits of our society to local officials and diplomats. These movies sometimes are appalling. The Austrian chargé d' affaires in Bucharest used to attend our cinema showings. Eventually he remarked to our embarrassed minister, Robert H. Thayer: "This does you Americans more harm than good."

ALL SHOWINGS CANCELED

The writer attended an evening of films sent by our Government to Thayer's legation. The first was a 1946 picture with the sound track so worn it sounded as if Ingrid Bergman had a mouth filled with bubble gum. It had to be stopped. Then came an inferior commercial. Third was a ridiculous advertisement for Dutch tulips. Fourth was a fifth-rate thriller on Haiti. Thayer, in despair, canceled all showings scheduled for the coming week.

From Poland to the Danube Valley listeners complain that emigrees working for American radio stations have lost touch with changing local conditions. A Bulgarian anti-Communist protests: "They are like all emigree movements. They are unaware of some changes that we accept with pleasure while opposing the regime—such things as free medical care. Many people think the emigrees enjoy a better life abroad than is actually the case. Nevertheless, unfortunately, they resent it. Such is human nature."

It is embarrassing to criticize people who fled tyranny and from unhappy exile try to keep alive the flame of freedom behind the Iron Curtain. But, judging from results, their propaganda is neither conceived with sufficient skill nor adequately coordinated with our diplomatic policy.

Perhaps we should concentrate more on telling our own story, stressing forever the ideals we believe. Objective commentary and calm, straightforward news are durable psychological commodities. We cannot afford to lose touch with changing realities within the satellites. Nor should we be so blinded by emotion that we occasion resentment among those we court.

The 35th Division in World War I

EXTENSION OF REMARKS
OF
HON. ERRETT P. SCRIVNER
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 8, 1956

Mr. SCRIVNER. Mr. Speaker, the 35th Division, a National Guard Division, played a very important part in winning the victory in World War I.

Some of the units in that division come from Kansas City, Kans.

The dedication of the new National Guard Armory, Saturday, May 5, recalled to us oldtimers some nearly forgotten facts.

A special-feature story in the Kansas City Kansan of May 5 retells the story, recalling many interesting details:

GUARD CAMP SET UP IN WESTHEIGHT—KANSANS TRAINED HERE TEMPORARILY AFTER BEING CALLED FOR WORLD WAR I; MAJOR ROLE FOR 137TH

After the Kansas National Guard was called to Federal service on August 5, 1917, a training camp was set up in this city. The camp, a temporary one largely of tents, was in what is now called Westheight Manor.

The training center was in use for several months and was called Camp Hoel, in honor of the late J. H. Hoel, developer of Westheight. The area, which is north and west of 18th and Minnesota, had about one house in it at the time.

Now it is a heavily populated part of Kansas City, Kans. Camp Hoel was in use because the intended training center—Camp Doniphan, Fort Sill, Okla.—was full.

The United States declared war on the Central Powers (Germany, Austria-Hungary, and Turkey) on April 6, 1917, and Kansas guardsmen expected an early call to duty. The guardsmen had been defederalized the previous October, after service on the Mexican border.

The 137th Infantry Regiment came into existence on October 2, 1917. The 137th was comprised of the former 1st and 2d Kansas National Guard Regiments.

The 137th was part of the 35th Division and as such saw considerable action in the Meuse-Argonne offensive. It was on the morning of September 26, 1918, that the 35th, as one of the frontline units, went over the top in the drive destined to keep on until the armistice.

The division suffered 7,584 casualties during the battle.

But the story must back up a little. After 6 months of intensive training, the units of the 35th departed for embarkation. The German Army had broken through the western front and was threatening Paris.

"CHIN STRAP DIVISION"

In New York City, on the way to Europe, the 35th attracted much attention as each doughboy wore the conventional cavalryman's chin strap on his campaign hat. The wind of the plains area made the strap a necessity. At that time, there were 9,781 men from Kansas in the 35th, 14,282 from Missouri.

The 35th became known as the "chinstrap division from the West" or the "cowboy division." The 137th arrived at England on

May 7, 1917, and 2 days later arrived in France.

After several weeks of intensive training, the 137th's 3d battalion was the first to reach the frontlines. The Kansans got their first touch of action on June 2, 1917, when the Germans staged a raid on their lines.

The attack was repulsed without casualties and the regiment no longer was considered a green, untried one. Then came minor action and a rest. After a series of night marches ending September 12, near the city of Nancy, there was early morning artillery preparation which launched the first major American offensive.

MOVE TOWARD ARGONNE

The offensive wiped out the St. Mihiel salient which the Germans had driven into the Allied line in 1914. Then the 137th moved toward Argonne where the Allies were preparing another offensive.

The regiment was assigned a sector which contained the formidable Vauquois hill. The hill was regarded as impregnable and stood like a signal of death to the Kansans. It bristled with German fortifications.

Repeated French assaults against the hill had been unsuccessful and caused heavy loss. The attack by the 137th was preceded by a 3-hour bombardment with field guns massed hub to hub to blast the German positions.

After a bitter attack, with the 137th leading the 69th Brigade, the hill was taken and the advance continued. The morning of September 28, the Germans launched a stubborn counterattack but were finally repulsed with heavy loss.

HAD HEAVY LOSSES

Following heavy artillery bombardment, the 35th continued the advancement against increasing enemy pressure in the Montrebeau Woods area. The 137th then was relieved by the 1st Infantry Division.

The 137th in 5 days of action had taken every assigned objective, but had suffered extremely heavy losses, with 107 killed, 38 who died of wounds, 1,060 wounded, and 88 listed as prisoners or missing.

This represented 46 percent of the men engaged. Then came a much-needed rest. By mid-October the 137th again moved into the line near Verdun. The action was largely patroling and making exploratory raids until early November.

Then the division was moved toward St. Mihiel to join a large French-American force, which was being massed for an offensive on the fortress of Metz. The offensive never came because of the Armistice, November 11, 1918.

The division spent several months in Europe after the truce, and the monotony of winter was broken only by a review of Gen. John J. Pershing and the Prince of Wales on February 17, 1919.

PARADE IN PARIS

The parade ground was a duplicate of the one in Kansas City, Mo., where the 1st and 2d Volunteers marched in review before General Grant in 1880.

After receiving orders to return to the United States, the 35th marched down the Champs Elysees in Paris to the tune of The Old Gray Mare. The 137th departed from Brest, April 11, 1919, and docked in New York 12 days later. Many Kansans were there to meet the soldiers.

After a parade in Topeka, the men of the 137th received their discharges at Camp Funston, Kans., on May 9 and 10, 1919.

The Kansas City Kansas units which went with the 35th to Federal service on August 5, 1917, and the officers:

Company A, 1st Kansas infantry (redesignated company A, 137th), Capt. A. K. Rupert, 1st Lt. W. A. Simpson, 2d Lt. William Firstenberger.

Battery E, 1st Kansas field artillery (redesignated battery E, 130 th FA), Capt. P. S. Hoyt, 1st Lt. E. W. Poindexter, 1st Lt. Frederick H. Olander, 2d Lt. R. L. Barker, 2d Lt. G. A. Russell.

Company B, 1st Kansas engineers (renamed company B, 110th engineers), Capt. D. S. James, 1st Lt. H. J. Brownlee, 1st Lt. William Weidlin, 2d Lt. Hubert Hudson.

Company C, 1st batalion Kansas engineers (renamed company C 110th engineers), Capt. Orlin Hudson, 1st Lt. C. R. Fisher, 1st Lt. Carl E. Rouse, 2d Lt. Herbert T. Barclay.

Ambulance company No. 1, Kansas sanitary train (renamed 110th sanitary train), 1st Lt. William Rhodes, 1st Lt. Clark Mangun, 1st Lt. T. L. Jones, 1st Lt. Harold Gover, 1st Lt. Ralph Hartman.

Ambulance company No. 2, Kansas sanitary train (renamed 110th sanitary train), 1st Lt. Edwin Tenney, 1st Lt. Richard Speck, 1st Lt. Adam H. Adamson, 1st Lt. A. J. Bondurant.

The small arms section of the Kansas infantry division ammunition train, commanded by Lt. Col. Frank L. Travis, which came from the Rosedale district, was redesignated the 117th ammunition train and became part of the 42d division—the Rainbow division.

All the other Kansas units were part of the 35th.

Egypt Tramples U. N. Cease-Fire Agreement

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, April 27, 1956

Mr. MULTER. Mr. Speaker, the April 27, 1956, issue of Israel Digest gives concrete evidence of the way in which Egypt is treating the unconditional cease-fire agreement of April 18, 1956.

The information follows:

FOUR KILLED BY ARAB AMBUSH, URGENT LETTER TO U. N. SECRETARY-GENERAL BY FOREIGN MINISTER M. SHARETT

JERUSALEM.—Four civilian engineers employed by Tahal (Israel Water Authority) were ambushed and murdered in the Wadi Arava, north of Ein Yahav, on April 23. The vehicle in which they were traveling on the road from Eilat was found riddled with rifle bullets and burned. Two of the men's bodies had also been burned.

Investigation, carried out by the Israel police with the participation of United Nations observers, found that the attackers consisted of eight men who had entered Israel from Jordan territory, and that they had retreated there after the attack.

Foreign Minister Moshe Sharett, in an urgent letter to United Nations Secretary-General Dag Hammarskjold, emphasized that this brutal ambush bore all of the earmarks of Fedayeen activity. In the cease-fire arranged between Israel and Egypt last week, after a series of Egyptian Fedayeen attacks in which 14 Israelis had been killed and 32 wounded, the Egyptian Government had given assurances that all Fedayeen activity would cease.

OTHER ATTACKS

The ambush of the four Israel civilians followed a series of attacks originating from Jordan in which an Israel soldier was killed, and several water pipelines blown up.

On April 18, the water pipeline between D'vir and Lahav, in the eastern Negev, was blown up in three places. Investigations revealed tracks leading toward the Jordan border.

On that same day, infiltrators opened fire upon a Lahav shepherd watching his flock in the same area.

On April 18, Jordanian National Guard men attacked an Israel patrol near N'tiv Ha'Lamed Hey in the Jerusalem corridor. An Israel soldier was killed in the exchange of fire. When the patrol had been forced to abandon its vehicle, the Jordanians towed it across the border.

On that same day, fire was directed from Jordan at an Israel guard near Ma'ale Ha'-Hamisha, in the same area.

On April 19, an Israel Army vehicle traveling near Beit Govrin, in the northeastern Negev, was fired upon from Jordan.

On April 20, the water pipeline near Goren, in western Galilee, was blown up.

On April 22, Syrians fired upon Israel fishing boats plying their trade on Lake Kinneret. Four of the boats were forced to abandon their nets.

On April 23, Jordanians fired upon an Israel unit patrolling the Lahish development area.

Economic Aspects of Retooling for the Atomic Age

EXTENSION OF REMARKS
OF
HON. EDWARD J. THYE
OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, May 15, 1956

Mr. THYE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement by Harry A. Bullis, chairman of the board, General Mills, Inc., and director, Chamber of Commerce of the United States.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

ECONOMIC ASPECTS OF RETOOLING FOR THE ATOMIC AGE

(By Harry A. Bullis, chairman of the board, General Mills, Inc., and director, Chamber of Commerce of the United States)

For many years now I have been an economic optimist. This means that even in periods of downturn, I have never for a moment doubted America's power to develop the strongest and most dynamic economy known to man. Our recent history, spelled out in terms of payrolls and incomes, has more than justified that faith.

Now, as a confirmed economic optimist, I face this awesome era called the atomic age with confidence, tempered with realism and with the belief that some degree of wholesome fear of the future can be a positive influence.

When we speak of retooling for the atomic age, we are apt to regard it as a problem in higher mathematics to be solved on the drawing board. We tend to overlook the social changes it will demand, among them perhaps the uprooting of many of our deep-seated cultural prejudices. Instictively, we will resist drastic change. We will try to retard, rather than take advantage of, the atomic forces that must upset the status quo. That is why I said that some degree of fear of the future can be a wholesome influence. Intelligent, fully realized fear of the forces to be loosed in the future must become one of the dynamic factors in our plans for retooling for the atomic age. It is the force that will jar us out of our social rut.

Let's consider the phrase "retooling for the atomic age." Let's define just what it may

mean to us today, to our families and our business.

ECONOMIC COMPETITION

First of all, in my opinion, retooling for the atomic age means reshaping today's economy for the war that is on—not a shooting war. The atomic stalemate between Soviet Russia and the United States is keeping the bombs in reserve. But there is a war—a war for survival between communism and democracy, an economic war that is ruthless and ferocious.

Soviet Russia is out to strike us where it hurts—in the pocketbook. Once she has won in the economic area, she counts on easy victory in the political arena.

The Russian big guns and jet fighters in this economic war are trade and credit competition. Threats of military penetration for the moment are soft-pedalled. Instead, they are determined to shatter free world patterns of trade and international relationships, hoping thus to weaken us. The Soviet economic and political penetration into other nations, particularly into less-developed countries, is designed to bring the United States to its knees. Full well do the Soviets know that the destiny of nations is determined by trade.

During the past 6 months, Russia has been putting on pressure. They have penetrated countries which are politically unstable and whose people are inflamed with nationalism, countries staggering under low standards of living and financial woes. To these less-developed nations the Communists are offering economic aid, loans on unrealstic terms, trade and, in addition, arms.

These are not normal commercial relations in the historical sense. They are offered at the expense of the Russian slave labor economy, a system whereby each human being exists solely for the benefit of the colossus of state. The moneys and credits are offered on the classic Marxian dogma that the end, which is world domination, justifies the means of getting there. Above all, they are designed to upset economic relationships in the free world, to alienate millions of people from the ideal of democracy. With every cent of this cut-rate interest, goes a dollar's worth of political penetration.

Let us admit that the Soviet Union's tactics are immoral, deceptive, supercharged with political guile; that their entire scheme of living and propaganda is based on godlessness and slavery. But the fact remains that Soviet Russia is still our No. 1 economic rival. And the outcome of this long trade competition for the less-developed countries will very likely determine which way, communistic or democratic, the world will go.

All of us here today, businessmen and industrialists, have a fairly clear idea of what the Soviet policy is, how it is being applied, and where. We are beginning to feel the pull. We can gage the political consequences. But I think too many of us are so busy hating and fearing communism that we are a little fuzzy about what we have to do to combat these forces. You know the story about the two psychiatrists who met on the street. One said to the other, "Hello, you are fine. But how am I?"

I think that story applies here. We know about Russia's plans in the economic war. But we seem a little ignorant about our own industrial health and national state of mind.

CAN WE AFFORD FOREIGN AID?

Economically, we are doing all right in our Nation. In 1946 our gross national product was $209 billion, equal to about $290 billion in present-day dollars. This year it will be $400 billion, 40 percent higher. Ten years ago we were producing steel at the rate of 83 million tons annually. This year it will be 128 million tons.

Signs point now to a balanced budget in the near future. In each of the past 3 years our Federal Government has collected in taxes a sum almost as large as Soviet Russia's total gross national income. Yet our taxes are not killing us.

The percentage of Soviet national income devoted to military expenditures far exceeds the percentage of our income devoted to armament purposes together with foreign aid. All this should reinforce our faith in a free economy.

It is going to cost us money to fight the economic war with Russia. Yes, billions of dollars. But we have the substance and production techniques to do it. To win, however, we need more than that.

WE CANNOT LIVE ALONE

First, I think, we must accept the basic fact that we do not live alone in the world—or that we can live alone in the world. It is not enough for free enterprise to prosper in the territorial United States. We cannot afford to permit half of the earth's population to be economically sick. Less-developed countries lack the economic vitality to resist the bullying of the Soviets. Especially, when threats are disguised in easy credit and empty promises.

Our course is clear. To meet this evil, we must spend more money and we must adopt a reexamined policy of lending more freely to other nations.

Even in the face of Russia's infiltration into less developed countries, as well as into France, Italy, Finland, and Latin America, our economic aid to other nations has averaged less than 2 percent of our national income. The amount of private lending and investment is also low. With only 7 percent of the world's population we enjoy about 37 percent of the world's consumption. Surely we should be able to multiply our loans 2 or 3 times for the sake of world stability. That would be a small price to pay.

We Americans are setting a fast pace of industrial progress. We need to keep up that pace. Our record, if clearly understood, should inspire every unprejudiced observer with the conviction that a free economy, properly nurtured, can outperform centrally planned socialistic and communistic economies. If we make it evident that we want to help by sharing our know-how and our substance, we can spur what is left of the free world into enlarging its margin of productivity over the Communist-led part of theh world.

IS OUR STORY CONVINCING?

Yes, our record should inspire vast areas to follow our methods. But are we telling our story in the right way? Are we convincing enough in our offers of aid? Does the aid we offer require military concessions? Do other nations believe we are sincere when we say we want to help them strengthen their economies so they can help themselves? Remember, the Communist world is spending over $3 billion a year merely to spread their doctrines. How much are we spending ot explain the doctrine of freedom?

Russia has built up her military strength in airpower and atomic weapons so that she feels relatively secure. At the same time, she has built her industrial machine and made economic progress. Now she is able or perhaps finds it necessary to use economic devices to further her aims abroad and expand her pattern of trade.

She has served notice that she is extending the cold war to the economic front. To prove it, she made a deal with Egypt to supply arms from Czechoslovakia—in essence an incursion into Africa and the Middle East. She offered aid to Egypt in building a huge dam on the Nile, agreed to build a steel mill in India, promised to take surplus rice from Burma in exchange for industrial equipment, and will assist Afghanistan to build factories and oil facilities. Furthermore, she will exchange technicians with India, and has invited the countries of the Middle East and southeastern Asia to request technical help when they need it. She also speaks openly of financial assistance to the less developed countries to help them raise their standards of living. Communist aid to Egypt, India, Afghanistan, Yugoslavia, Indonesia, Syria, Burma, and a number of other nations is estimated to total about $500 million during 1955 and the first few months of 1956.

This communistic challenge on the economic front may be very effective. It may turn less developed countries toward the East and away from the West. Call it evil, political, packed with lies, but let us not be lulled into security by our feeling of moral superiority. It would be suicidal for us to underestimate its political and economic potentials.

Of course, we have been trying to promote economic development in those areas which are now dealing with Russia. We have programs of Government loans and grants; we have made an effort to stimulate private investment in foreign countries. Yes, we have a technical assistance program.

LESS DEVELOPED NATIONS NEED CAPITAL

But let's face it. Capital investment funds from the United States and other countries into less developed areas is at the rate of a little more than $1 billion a year. Most of that has gone to Latin America. The less developed nations, many of them new, which today are so vital in the fierce struggle between the free world and Russia, could use twice as much as that. In self-defense we must dig deeper into our pockets.

Our foreign aid is small as compared with our military expenditures. We are increasingly dependent upon the rest of the world for raw materials and it makes sense to invest capital in less developed areas in order to assure ourselves of sources of supply.

We should give sharp thought to supplying more investment capital to these wobbly nations. Private capital would be best, in my opinion. Public money should take the form of longtime loans at low interest rates, rather than grants. Our public funds should be used mainly for power, transportation, communications and irrigation projects essential to stabilizing these governments. We might also use our agricultural surpluses to promote economic development, if that can be done without disrupting international markets.

REEXAMINE OUR PROGRAM

Oh, yes; I know we have spent billions of dollars on foreign aid. Perhaps some of it was not wisely spent. Perhaps there has been mismanagement in spots. Not always has it worked in favor of the free world. We must now vigorously reexamine our programs in light of today's threats and junk old methods once highly cherished. All this will plunge many of us into political name calling, which of course is something every politician hopes to avoid during an election year. But the urgency cuts across party lines and sectional interests.

I spoke earlier of intelligent, fully realized fear. I was trying to point out its value as a dynamic force needed to blast a throughway to national unity in our fight against Russian economic and political penetration—penetration into areas the Western World must hold. Such a wholesome fear in the face of danger can dissolve opposition of isolationist groups. It might hold in check deep-seated prejudices against some of the less developed nations because of their ancient cultures and religions, both often difficult for Americans to comprehend and tolerate. That fear could also serve to make certain that industrial interests face the galloping need for expanded foreign aid even though their narrower self-interest might be a little hurt.

CONCLUSION

We are in an economic cold war of the atomic age. Our best offensive is to spread

our technological and managerial skills to help industrially backward countries, to help them put more food in their national bellies and more dollars into uncontrolled trade with the West. If we fail to do this, regardless of the money we might save, we will be creating an economic and sociological vacuum. Into that vacuum Soviet Russia will be quick to pour her ideologies and offers of economic aid.

It is the normal fear of such a vacuum which may strengthen our national will to prevent it. It can bring unified economic effort. It can awaken every American from a dream of fruitful security.

But we should not permit fear to stampede us into unwise action. We have an economy of abundance. We have the economic strength that can meet any reasonable competition. Why should this Nation fear economic competition? It has demonstrated its leadership in industrial production and its technology. Why should it not be willing to meet the challenge in exactly the fields where it is best equipped?

For the most part, trade is unemotional and seeks only the best advantage. That is precisely why certain borderline nations have eagerly accepted the Russian overtures. The enticement of material reward took precedence over whatever objections of idealism were present. In fact, whether we like it or not, we might just as well be resigned to the fact that the political orientation of nations like Japan and Indonesia will follow the routes of trade. These two nations, for example, are simply obliged to trade if they are to survive. In facing up to this fact realistically, we should consider the very real possibility that before too long we shall have to engage in trade between ourselves and certain Iron Curtain countries. By gaining markets, we might be able to weaken their ties with Russia. Our products speak louder than political jabber from the Soviets. In fact, American goods might be the best propaganda device at our disposal to weaken the Soviet position.

America can face the atomic age with confidence and with optimism provided it does not shirk its responsibilities. The price of freedom has always been dear. Our Nation's founders bought it with their blood, their fortunes, their families, and their all. We have an opportunity to pledge a certain part of our standard of living to its continuation. Quite frankly, we have got to inconvenience ourselves for freedom; go out of our way to lay some extra money on the line to see that it is preserved. Once we set our course to pay whatever price is necessary to win the economic war, we will have broadened the mantle of freedom to cover the underdeveloped nations that are now counted borderline or behind the Iron Curtain. Only then will these nations know the newness, the freshness, the dignity, and the rewards of the American system of democratic self-government. Only then will they recognize the Soviet system for the slavery that it is—the oldest and most depraved institution in human history.

Administration's Shifting Military Responsibility

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, May 14, 1956

Mr. MULTER. Mr. Speaker, permit me to direct the attention of our colleagues to the following open letter directed to the President by Mr. William Randolph Hearst, Jr. The letter appears in the May 9, 1956, issue of the New York Journal-American:

DEAR IKE: The more I think about our not supplying our men in Korea and the brave ROK troops with our most modern weapons of war, the more disturbed I get and the more I feel United States policy in the matter is a mistake.

When all is said and done—or not done—it is your policy.

Certainly the leaders of our Armed Forces don't agree with it, so it isn't their policy.

Secretary Dulles has indicated that, when he is asked by the military about this, he is obligated by his position to point to the long-range terms of the armistice, however big a bump he may have in his cheek. He has suggested that what the military leaders do is none of his business—so stop asking him and do what they think is in the best interests of the United States.

That leaves, then, only our gallant but timid allies, cosigners with us of the armistice under the bright blue flag of the United Nations.

If the Reds were to break out again in Korea I hope all our allies would rally around, but I know we would be doing 90 percent of the fighting and dying once again.

Under these circumstances, please, Ike, call the signals. If you don't and if anything should happen—you and no one else will be blamed.

I have just read that Admiral Radford, Chairman of the Joint Chiefs of Staff, said virtually these same things in secret testimony April 17. He said the Armed Forces may not be able to go on living up to the terms of the armistice, which, of course, the Communists began violating before the ink was dry.

WILLIAM RANDOLPH HEARST, Jr.,
Editor in Chief, Hearst Newspapers.

Has the Sun Gone Down on Reality?

EXTENSION OF REMARKS
OF
HON. LEE METCALF
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 8, 1956

Mr. METCALF. Mr. Speaker, I wish to call the attention of my colleagues to these words in the committee report on H. R. 11177, the Agriculture Department appropriations bill which we passed yesterday:

Farmers' Home Administration: • • • In the opinion of the committee, attention should be given to a thorough study of the organization and programs of this agency. Recent reports concerning the administration of this organization have been a source of concern to the committee.

Mr. Speaker, I, too, have had reports which have been a source of concern. Valid complaints about the harshness of Farmers' Home Administration collection policies first came to my attention at a meeting in Hamilton early in December 1954.

In general, they dealt with the impossibility of meeting a repayment schedule, set up several years ago, with today's farm income—which is down about one-third from 1951.

The result has been that many farmers, among them war veterans who have entered the industry in the past few years, do not even have enough money left over to eat or to dress their children properly for school—much less buy seed and fertilizer for another crop, repair and replace machinery, or meet other obligations such as mortgage payments.

I was told that the Farmers' Home Administration Ravalli County supervisor, Mr. Hector E. Rodgers, had stated that of 131 loans in Ravalli County, 80 had been made on uneconomic farm units and that he intended to close them out. Mr. Rodgers was quoted as saying 120 acres is the minimum economic unit in the county.

I asked anyone injured to write me, giving his experiences with the Farmers' Home Administration. Each of the specific cases I received was sent over to Mr. R. B. McLeaish, FHA Administrator. He, in turn, took up each one with the Montana FHA director.

On January 22, 1955, Mr. McLeaish came to my office at my invitation to discuss the situation which, at that time, I understood to be confined to Ravalli County.

He assured me that everyone whose financial condition had changed for the worse since the original contracts were made would be given an opportunity to get money for fertilizer, for feed, seed and for living expenses, even though such withholdings might reduce the Government's share below the required payment.

Mr. McLeaish said he was exploring the possibility of rewriting the payment contracts but, at that time, he did not feel that the notes themselves could be altered.

Although a delinquency would result from release of money for other expenses, including taxes, Mr. McLeaish said all those unable to meet their payments due to a change of markets or reduced farm income would have an opportunity to work out their indebtedness. He said foreclosure was the last thing they wanted to try.

There was discussion of Mr. Rodgers' statement relative to closing out the uneconomic units. Mr. McLeaish said that since the Department had made the loans on these farms, every effort would be made to help the people solve the problem.

This understanding was confirmed in writing by Mr. McLeaish last spring.

Because I heard nothing further from those concerned, I assumed Mr. McLeaish was keeping his promise to give sympathetic consideration to each individual situation.

I was shocked to learn that he was not—and that the attempt to make over a lending agency into a collection agency and thereby change a traditional economic pattern was not confined to Ravalli County.

Just before I returned home for the Easter recess, I was visited in my office by a farmer from Broadwater County. He described the same situation in his vicinity. When I was in Montana last month, I talked to farmers in the vicinity of Townsend and Polson. Several people came to see me about this when I was in Missoula.

As new cases come in, I am continuing to call them to the attention of the Administrator. In addition, I am making my files available to the House Committee on Agriculture which is holding hearings on farm credit bills, among them mine to declare a 1-year moratorium on 4 classes of FHA loans.

The situation in Ravalli County prompted the following editorial by Editor Miles Romney of the Western News, in the May 3, 1956, issue of the weekly newspaper published at Hamilton:

HAS THE SUN GONE DOWN ON REALITY?

Elsewhere in this edition is an astounding report of a situation which affects numerous farmers of the Nation and of our country. As I contemplate the matter I ponder over whether people should be indignant or appalled or both.

Some years ago the Congress, aware of the need for providing cheap money to salvage submarginal agriculture, enacted legislation providing the machinery for financing farmers on long- and short-term basis. These were generally cases where private financing was not available, at least at that time.

Through the Federal Farm Home Administration, and its predecessor Federal agencies, thousands of farmers were provided an opportunity to finance their operations with the hope of ultimate full ownership of their farm properties. Many achieved success and others were upon the road to success when the economy of the Nation, insofar as farming is concerned, came upon a decline.

As most people hereabout are well aware prices of farm products have dropped sharply. This decline adversely affected all farmers, and what hurts farmers injures the small-business men of farming communities. In turn everyone in such communities feels the economic consequences of adverse farm prices. It is quite obvious that farmers who had borrowed funds, from no matter what source, had secured such loans when prices were high for commodities they had to sell. When these prices dropped away materially, as they have in the past several years, loans which were predicated upon the higher price plane, became difficult or impossible to pay. Farmers went to their banks and negotiated new loans based upon the current situation. Bankers were generally happy to accommodate their agrarian customers because they recognized realities.

In turn farmers who had loans from the FHA expected similar treatment. Imagine their consternation when they found stern opposition to their prayers for assistance. Instead they were in many instances told they would have to pay upon the basis of their original contracts or be sold out. They were informed, in some instances that they were operating uneconomic units and should quit farming and go to the city and get a job in industry. They encountered no friendliness, no understanding of their cherished desires for homes and farm operations. Naturally their cups are filled with bitterness.

It is apparently the policy of the Eisenhower administration that small farmers whose properties are not paid for and whose operations are not vast in scope, are not desirable in the American economy. It has been pointed out that they cannot operate upon an equal basis with the gigantic corporation farms. It has been pointed out again and again and again by responsible administration mouthpieces that there are too many farmers today, despite the sharp cut in numbers of persons engaged in agriculture. There can be no denial that the administration's policy has been aimed at reduction of farms and farmers and particularly of the small farmers.

I believe it has been the belief of numerous Americans, during the history of the Republic, that the family farm, owned by those who operate it, has been the foundation of the Nation. It certainly has been the desire to own and operate such units that called the pioneers across the Appalachian Mountains into the new lands of Kentucky, Tennessee, and the Ohio. It lured them across the wide Missouri and thence over the plains. It called them to Utah, to Montana, to Oregon and California. Everywhere men, and their women, were seeking a home of their own, upon land of their own, where they could cultivate the soil, grow their crops and raise their families.

It was such a search by our expanding population that built America. Now there are those who would decimate our farm population. Strangely they are the same characters who screamed their lullabies of dismay and hatred upon the occasion of the destruction, for economic reasons, of the little piggies during the agricultural travail in the early 1930's.

I still think there is nothing finer than for Americans to own their own farms and homes, to operate their own small acreages, their own little shops and maintain an individuality. I think that the original idea of the Farmers' Home Administration's predecessor agencies was splendid and should be encouraged. It was not antagonistic to private banking for it filled a need in which the latter was not interested. It aimed at building a solid agrarian citizenry upon the basis of the family home. Anyone who doesn't like that foundation for America is entitled to his opinion but it is counter to our national practices of generations past, and seems to me to be bad economics.

Because of his personal attitude in handling the situation, the local administrator of FHA, one Mr. Hector Rodgers, has become anathema to Ravalli County borrowers from the agency. Certainly his usefulness in operating the agency here, from the standpoint of the people who are customers of the agency, is ended, except and unless his functions are entirely directed toward closing out the operation as quickly and as ruthlessly as is possible. If such is the aim of the Federal Government, they apparently have the right man on the job here. But I think it unwise to foist all of the blame for this imbroglio upon the shoulders of Mr. Rodgers. To be sure he probably lacks finesse in handling the situation, but he is merely a hired man. He must be taking orders from those who are his superiors in the State FHA setup. They in turn are following directions from their superiors in the national system of the agency and thence all the way up the administrative ladder to the Secretary of Agriculture, whose policies in other respects are akin to those discussed within the framework of this comment. And at the top of the heap, where final responsibility rests, is President Eisenhower himself. To be sure, he cannot be cognizant of such matters in every nook and corner of the Nation, nor can Mr. Benson, but agricultural strategy is their determination, and such goings-on as have afflicted scores of Bitter Root residents, and many, many more in other areas, is a direct consequence of their decisions. Although we may not like the indelicate manner in which Mr. Rodgers accomplishes his mission, real responsibility rests upon the shoulders of those at the top.

This is a sad situation. The administration should review the matter. It should either close the agency altogether and destroy its borrowers or it should alter its methods to bring them in line with economic realities. Nobody could make farming or any other business a success under rules based upon altogether different economic circumstances. I cannot conceive that even the contemporary administration should be so blind as to wish to ruin a healthy segment of the American economy. It is to be hoped Eisenhower and company will awaken to the damage their policy is accomplishing in this respect and speedily remedy it. The Farmers' Home Administration is not now a helping hand for the little farmers, as it was born to be, it is not what it is supposed to be, but instead constitutes a trap, into which unwary persons have been led in good faith, only to learn too late that a supposed friend is a deadly enemy. Let us hope those who have contrived this condition will relent or learn of their error before tragedy ensues.

It is almost inconceivable that just because Mr. Eisenhower knew nothing but destruction before entering the White House, due to having spent his entire manhood in the military, that he would be so blind to the needs of people in his own country.

Diamond Jubilee Assembly of New York Board of Rabbis

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, May 14, 1956

Mr. MULTER. Mr. Speaker, I am pleased to direct to the attention of our colleagues the following remarks made by the Honorable Robert F. Wagner, New York City mayor, on hte occasion of the 75th jubilee assembly of the New York Board of Rabbis, held at Town Hall, 123 West 43d Street, New York City, on May 9, 1956:

Rabbi Rackman, honored guests, ladies, and gentlemen, I am most happy to be with you this evening to extend the greetings of the people of the city of New York, and my own good wishes, on the occasion of this 75th anniversary jubilee of the New York Board of Rabbis.

I am told that today 700 Orthodox, Conservative, and Reform rabbis are joined together in your organization to serve the world's largest Jewish community. I know that you have spoken out as the representative of Judaism in many areas, while primarily concerning yourselves with the spiritual ministrations of your flock.

I know of your work in many ways. My office is in constant touch with you, as you from time to time recommend chaplains for the agencies of our New York City government. We have found working with you easy and natural. Your corps of 91 chaplains serve Jewish people in 160 separate institutions, including voluntary hospitals, municipal hospitals, city prisons, homes for the aged, convalescent homes and youth shelters. Our departments of correction, health, and welfare are all served by chaplains through the New York Board of Rabbis. The activities of your chaplains include also visiting, the distribution of religious and inspirational literature, conduct of religious services on the Sabbath and high holy days and the observance of religious festivals.

In other areas as well, I have found your advice and counsel helpful to me, as mayor, and to the city of New York. You have not hesitated to speak out on social and economic issues, as they arise, whether it is a continuing problem of juvenile delinquency, the rise in our divorce rate, the problem of social security, the problem of automation in industry, proper division of our discriminatory immigration and naturalization laws, or questions of civil rights.

You have continued to serve as watchmen for the Jewish community, endorsing

that which is beneficial or opposing the harmful.

You have moved into the field of mass education through radio and television and your board has been a regular sponsor of religious programs of interest to all faiths of our city. Through your department of human relations, your unique Institute for Pastoral Psychiatry has created, and continues to offer, a program of lectures of pastoral counselling by outstanding medical and psychiatric authorities.

In our own city hospital, at Bellevue, you have established a department of clinic pastoral training and a department of pastoral care, thus aiding in the instruction of your own rabbis and chaplains to better meet the problems with which they are continually faced.

I know that your activities are principally financed by the great organization for good, the Federation of Jewish Philanthropies of New York. I sincerely hope the day will come when work such as yours, and other institutional and charitable care, financed through Federation, is taken over by governmental agencies whether city, State, or National.

I wish you well in the future. I hope that I will be available for you to invite me back, even as a private citizen, on the occasion of your 100th aniversary, 25 years from now.

I am certain that that will be an occasion in which all the citizens of our city, of whatever religious persuasion, will join with you. I know that you state that you serve the whole Jewish community, as religion itself serves the whole human being. Without religion and faith and spiritual understanding, we are imperfect humans. Without the strength and the support that our city receives from the New York Board of Rabbis, we would be an imperfect municipality.

Again, my good wishes and congratulations on this anniversary celebration.

Thank you.

Make SUNFED a Part of Our Mutual Security Program and Avoid a Race With the U. S. S. R. as to Which Will Spend the Most

---

EXTENSION OF REMARKS

OF

HON. FRANK THOMPSON, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 8, 1956

Mr. THOMPSON of New Jersey. Mr. Speaker, an increasing number of thoughtful and prominent citizens are speaking out in favor of channeling more of our foreign aid through the United Nations. The logic of these suggestions seems apparent to me, and I am happy to add my support to the campaign. I include herewith a statement which I made in support of SUNFED during the hearings held by the Committee on Foreign Affairs:

STATEMENT OF HON. FRANK THOMPSON, JR., OF NEW JERSEY

Mr. Chairman, I am grateful for this opportunity to testify in behalf of the mutual security program for fiscal 1957. My support for the general purposes of the program is most emphatic, but I do object, as you shall see, to the emphasis and omissions which the proposals of the administration reveal.

Although not a member of this committee, I have followed with the utmost interest the testimony which you and the Senate Foreign Relations Committee have been receiving, particularly from the administration witnesses. One conclusion which I have reached about this testimony is that military necessity forms its leitmotiv. Not only are the President's requests wrapped up in categories which trumpet the military defense aspect and soft-pedal the nonmilitary, but also the supporting testimony consistently sounds the note of hard-headed American military need. One almost wonders, after hearing such advocacy, why we bother with the relatively insignificant technical cooperation and development assistance programs at all. One wonders, too, how anxious the nations who are slated to benefit from such assistance will be to receive their grants when they learn of the military context in which they were pushed through the American Congress. I hope that the embassies of Asian countries which read the administration's testimony for this legislation will take care to explain to their governments that the appeal of military necessity is a traditional sales technique on Capitol Hill.

If the nations which we propose to help through this legislation took the administration spokesmen completely at their word, I fear they might be frightened into other hands than our own for economic assistance. On the basis of much of the recent testimony, our own hand of economic aid lifts and pushes with the same motion. It lifts a nation's economy and pushes it into a more military posture. Our aid programs are described by the Secretary of State, before this Committee, as purely American in their origin, designed for our benefit, to economize on our defense needs, focused where we want them, and then worked out if possible in cooperation with the nations which receive them. Such a description may make the program more palatable to many American taxpayers in an election year, but I rather doubt that we can go on talking this way before a worldwide audience if we expect to retain the cooperation and respect of the underdeveloped nations which now receive such a large share of our aid. No longer can we offer foreign assistance programs designed in Washington with the assurance that if the needy nations do not accept our offer they will simply have to go without.

The Soviet Union has entered the field of economic and technical assistance and they have certain great advantages over us. The Soviet foreign aid promoters do not have to justify the expenditure of huge sums before a parliamentary forum such as ours. Not only does their dictatorial system of government not require it, but also much of what they offer abroad is based upon barter arrangements which their economy can easily support. Consequently, the agreements which they are ready to make do not become shrouded in the calculating self-interest which is wrapped about our own expenditures each year in Congress. The self-interest of the Soviets undoubtedly underlies their offers, but their system and their economy permit them to avoid professing it. In comparison, the United States must seem blatantly selfish, as our program has been presented this year.

This situation strikes me as terribly serious, Mr. Chairman, because we are only beginning to experience it, and we cannot accurately predict its effect. I regret that the administration has not demonstrated more sensitivity to the changed environment in which our economic and technical-assistance programs must henceforth be carried out. The present requests are made in the same manner as they were in the days when we had a monopoly in the economic-aid field, and the closest thing to recognition of the radically altered circumstances in which we must operate is the administration's acceptance of Senator GEORGE's suggestion that a special study be undertaken of the entire program. Perhaps the exigencies of preparing budget requests many months in advance have precluded the kind of ready adjustment to the Soviet economic offensive which we would like to see in the President's requests for fiscal 1957. Yet, even conceding such an explanation of the lack of fresh ideas in these requests, there are certain omissions from this proposed program which, to my mind, should be rectified now, without the need of any further study.

The project which I believe is essential to include in next year's mutual-security program is a United States contribution to the Special United Nations Fund for Economic Development. This special fund, which is commonly known as SUNFED, is an American idea, which has been repeatedly supported in principle by our delegations to the U. N. General Assembly, but which has never been put into action because of our refusal to make any financial contribution. Only 2 months ago, 2 distinguished members of this committee, Mr. BROOKS HAYS and Mr. CHESTER MERROW, issued their report on the 10th session of the General Assembly of the United Nations at which they, as American delegates, pronounced the official United States position that the actual creation of SUNFED must await the time when substantial savings have been effected through reduction of armaments. In their fine report these Congressmen professed their disagreement with this inflexible approach, stating that they "believe that the United States must not unequivocally insist upon postponing a start toward aid of this type until disarmament becomes a reality." Furthermore, they expressed the view that it would be "of tremendous value to the United States" if we would be prepared at the next meeting of the SUNFED committee to offer constructive modifications of the plan which, if accepted, would enable us to participate.

This is very much needed advice. It is quite incongruous for the United States to find itself as the major stumbling block to the creation of SUNFED, because our Government originally developed the concept of such a special fund. One of the most vigorous suggestions for such a fund was made in the report of the United States International Development Advisory Board on March 7, 1951. This Board, appointed by President Truman, was under the chairmanship of Nelson Rockefeller, who only recently terminated several years of service under President Eisenhower.

In spite of the national emergency of the Korean war at the time which this Board drew up its report, they declared that "strengthening the economies of the underdeveloped regions and an improvement in their living levels must be considered a vital part of our own defense mobilization." The Board recommended that an international development authority be created to finance a portion of the cost of public works which are essential to the underdeveloped countries and which cannot attract loans from existing financial agencies. To use the language of economists, this report recommended an international fund, making "the fullest use of the United Nations and other international organizations," to invest in non-self-liquidating projects, to provide the fundamental economic structure needed in countries before private investment capital can undertake to develop their economies. In the underdeveloped areas of the world the prerequisites to economic expansion—such as roads, railways, ports and aidfields, hospitals and schools, irrigation and drainage, clearing of land—most of these must be provided before private investors can be attracted in support of self-liquidating or profitable activities and industries.

The SUNFED proposal aimed at getting the wealthier nations of the world, which developed their economic foundations in the expansive frontier days of the last 100 years,

to contribute a small amount of funds to an international effort to lift their less fortunate neighbors over the first hurdle to economic self-development. By combining their efforts through the existing structure of the United Nations the "have" nations would give that essential first push, through long terms loans or outright grants to the "have nots" to get them underway economically. Once this could be done, the less fortunate nations would be able to run on their own resources. The underdeveloped countries could than begin to offer to private or public investors transportation facilities for moving products to market, communication systems, a trained and healthy labor force and a growing managerial class.

The logic of this proposal seems obvious to me. One does not need an advanced degree in economics to understand the importance of building the basic structure of a country before investing in the more complicated economic enterprises which will ultimately make it self-sufficient. It is hard for me to understand how a nation as proud of its business acumen as is ours can fail to support, with dollars as well as words, the SUNFED program. What sense does it make, from a strictly financial point of view, to go on investing in technical cooperation and economic assistance as we are going when we refuse to contribute funds which would enable the "have not" countries to lay a firm groundwork for the economies which we are helping to bolster on a piecemeal basis? It cannot be said that these countries can find private investors to develop their schools and hospitals and irrigation projects, because these undertakings are not self-liquidating and do not attract foreign capital. Only through the beneficence of some private or public agency can funds be obtained for such nonprofit yielding investments.

The special United Nations fund as presently planned would begin with capital amounting to $250 million, of which the United States is asked to contribute less than one-third. If our Government would put up the $80 million requested of us, the remaining funds would not be long in following. The amount which we are asked to contribute is less than half of what the President has requested for development assistance in this year's United States program. Eighty million dollars is only slightly more than half of the amount that we are asked to contribute to our own Technical Cooperation program. Yet, by investing this relatively small amount we would find it trebled through the contributions of other members of the United Nations, and we would not need to replenish it in the same or larger amounts each year, as we do with our unilateral development funds.

I realize that it is often argued that United Nations programs do not redound to our credit, as our own assistance projects are supposed to do. Of course, many Americans argue that we receive no gratitude whatsoever from our aid programs, and, though I disagree with this idea, I do believe that the credit which we receive for our projects is less than many taxpayers would like to think. Yet, granting that we do make some friends abroad from economic and technical assistance, it is time for us to reorient our thinking on this subject and drop the purely cold-war approach to foreign aid. Whether we like it or not, the Soviet Union has entered the foreign aid business and we cannot hope to keep them out by underselling or trading on our past generosities. Instead, it is time for us to adopt an attitude of long-range self-interest, which in short-range will be humanitarian and unselfish. We should face up to the fact that the economic development of the less advanced nations of the world will be to the greater economic advantage of all trading countries, and particularly our own; and we can no longer hope unilaterally to make this economic advancement possible and win exclusive political advantage thereby.

I ask the committee to consider the wisdom of shifting more of our economic assistance to the multilateral structure of the United Nations. By so doing we challenge the Soviet Union to demonstrate their own professed selfless desire for human betterment by contributing comparable amounts. We also increase the economic value of each dollar we invest, because it will be more than matched by the contributions of other member nations. We will find too that many more projects can be undertaken effectively under U. N. auspices than our own, because many nations, for political reasons, are more willing to have multilateral rather than United States sponsored projects undertaken within their frontiers. Also, U. N. programs often find personnel to draw upon who are more qualified in languages and tropical experience than are our own. If we are truly interested in our long-range objective of a more prosperous world trade, then the above considerations are of great importance.

Gradually some of our far-seeing leaders in both private and governmental positions are beginning to expound this insight. Willard Thorp, the former Assistant Secretary of State for Economic Affairs testified before the Senate Foreign Relations Committee in favor of SUNFED more than a year ago. The present Assistant Secretary for United Nation Affairs, Francis Wilcox, in a speech last January to the National Press Club, spoke in favor of SUNFED and expressed the hope that "ways and means will be found for the United States to participate constructively in such a fund." More recently, our Ambassador to the United Nations, John Cabot Lodge, has stated, as reported by the Washington Post of April 30, 1956, that the present world situation requires the United States to channel a larger share of its foreign aid through the U. N. The report of the Senate Subcommittee on Technical Assistance Programs, issued on May 7, 1956, states in cautious bipartisan language that an increase in the absolute amount of United States contribution to the U. N. programs "might be justified," provided other nations increase their amounts.

An increasing number of private individuals and organizations have also spoken out in favor of more aid through the United Nations and more concentration upon the humane rather than the cold war aspect of economic assistance. Chester Bowles made a strong plea for our joining SUNFED in a speech to the Cleveland Council of World Affairs on April 18, 1956. Adlai Stevenson has spoken in a similar vein. Victor Reuther of the United Auto Workers and Jacob Potofsky, vice president of the AFL-CIO have also supported SUNFED, for many years. Mrs. Franklin D. Roosevelt is prominent among the members of a new committee to support an expanded foreign-aid program, which strongly urges Congress to support SUNFED with an appropriation this year.

Mr. Chairman, it becomes apparent to me that our situation requires and public opinion is beginning to support a new concept of foreign aid which will give greater emphasis to multilateral programs and fundamental development, along with piecemeal projects. It would be an act of true statesmanship for this Committee to consider now including the long-awaited United States contribution to SUNFED as a part of this mutual security program. Such a step would redound to the benefit of our national interests and would win for this committee the utmost credit for imaginative response to the changing international situation which confronts us.

Why Shipping Association Opposes H. R. 4090

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 2, 1956

Mr. PELLY. Mr. Speaker, the experience of history in the way of accidents and development of inventions for greater safety has established a set of standard procedures and requirements in order to minimize the hazard to loss of life.

So that a ship, for example, regardless of what nation's flag it flies, may respond to a distress signal or hurricane warning, an international code as contracted with the individual nation's own signals is used. Thus, each nation's ships do not limit communication and response to its own vessels. Instead, under international agreement with uniform standards a common signal is used with an automatic alarm which is the same on all ships at sea.

Presently, under the provisions of H. R. 4090, which was given a rule for House debate and is expected to come to the floor of the House next week, a new device is proposed. This bill would require installation on cargo vessels, not passenger ships, of an automatic radio call selector device which would not come under international agreement or procedures or accepted universal criteria for safety and distress at sea.

The Pacific American Steamship Association covers, point by point, their objections to this legislation. For the information of Members, I include the association's letter which supports my conviction that H. R. 4090 should be defeated.

The letter is as follows:

PACIFIC AMERICAN
STEAMSHIP ASSOCIATION,
San Francisco, Calif., May 11, 1956.

To Members of the Committee on Merchant Marine and Fisheries, Committee on Interstate and Foreign Commerce, Members of Congress from Arizona, California, Colorado, Idaho, Montana, Nevada, New Mexico, Oregon, Utah, Washington, and Wyoming, House of Representatives, Washington, D. C.

COMMUNICATIONS ACT OF 1934: AMEND COMPULSORY RADIO CALL SELECTOR ON UNITED STATES SHIPS, H. R. 4090, 84TH CONGRESS

GENTLEMEN: The above legislation has been granted a 1-hour open rule by the Rules Committee and may come up on the floor at any time, possibly next week. It would require compulsory installation of a radio alarm device on United States cargo ships. The bill was voted out of the committee by a slim margin last year and a strong minority report has been filed in opposition. Mr. MCCORMACK is the author of the bill.

The steamship industry is alert to the ned for better safety conditions at sea, but is unalterably opposed to this legislation which lays claim to improved safety, but which would accomplish no such thing. As spokesman for the Pacific coast ship operators, I would appreciate your negative

vote when it comes up. We base our position on the following considerations:

1. The bill would make it mandatory to install on United States cargo ships an as yet undeveloped call-alarm device, which duplicates an existing device in use for 30 years. It would not affect passenger vessels.

2. If the device is not installed and the bill passed, United States-flag cargo ships would be required to hire another radio operator in lieu of installation. This would mean doubling the present radio-operator complement on United States cargo ships at a cost of $12,000 per year.

3. The Communications Act already amply provides for testing new safety devices, yet this bill by-passes this procedure and seeks congressional compulsion. If every manufacturer did this, it would create chaos in Congress.

4. The patent rights to the call selector described in the bill are held by a Brooklyn firm which makes fuse boxes, and which is not prominent in the marine field. They have made only one pilot model of the device, and FCC tests, ordered by the author of the legislation, showed major defects in the model and an extraordinary number of false alarms.

5. FCC opposes the legislation as making no significant contribution to safety at sea, and because the device duplicates existing compulsory equipment.

6. The Coast Guard, custodian of safety at sea, is not in favor of this legislation.

7. The Commerce Department is opposed to the legislation as unnecessary and premature.

8. The manufacturer, the Brelco Electric Co., in the late 1940's sold a few simplified models of its device to the Government and to 1 or 2 ship lines. But it is not now in use by private ship lines because it is inadequate and ineffective. None has been bought for a number of years.

9. Other safety devices, such as radar, have had to meet the test of actual use before they are compulsory. Even now, radar is not compulsory yet is universally used as a safety device. The call selector should meet the same test of usefulness and acceptability before becoming mandatory.

10. United States ships only would be required to install the device. In certain respects, the device in question is contrary to international regulation. Any maritime safety device must be coordinated internationally to be effectual.

11. A recent disaster occurred to a ship which had an early model of the Brelco device aboard.

12. Even if the device were installed aboard, it probably would necessitate hiring another radioman just to answer the numerous routine, nonurgent, and false alarms that would ring throughout the off-duty hours. Heavy overtime charges would be an inevitable result. One radio-operator's union supports this legislaiton. Other seamen unions have not supported it, though they are no less interested in safety at sea.

13. Genuine distress calls at sea can now be received by all ships in the vicinity at any hour, automatically, by the actuating of an alarm. But if alarms ring frequently for nonurgent messages like the proverbial man who cried "Wolf", an operator could become callous to answering alarms.

If the bill should pass, it is a safe prediction that a rash of private-interest schemes of this kind will seek congressional blessing in the future. In the interest of orderly procedure and in fairness to the industry which must pay the bill for unnecessary equipment, we hope this legislation will be defeated.

Very truly yours,

R. E. MAYER, *President.*

The Communists Are on the Move With Aid, Trade, Goodwill Missions, Student Exchanges, Athletes, and Neutrality Propaganda

EXTENSION OF REMARKS

OF

HON. FRANK THOMPSON, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 8, 1956

Mr. THOMPSON of New Jersey. Mr. Speaker, in an historic speech in Seattle, Wash., on February 14, 1956, Adlai E. Stevenson said:

We have been spending $40 billion a year for peace and security—and there is none. There isn't even preponderant power in the new weapons any longer, as we are now learning from escaping facts * * * the cold war has entered a new phase. The Communists are on the move again, with aid, trade, arms, goodwill missions, technical missions, student exchanges, athletes, and neutrality propaganda—while people in high places in our Government shout "No help to neutrals—you got to be for us or against us."

At an AFL-CIO luncheon in Los Angeles on May 10, Governor Stevenson reminded us of some campaign promises. He said:

The Republicans rode into Washington on a bandwagon 4 years ago crying loudly their promise: "Time for a change." And everything they changed—they changed for the worse.

They changed our foreign behavior—and we've lost nearly every friend we had in the world, while the Russians are gaining ground daily.

They changed our tax structure—they cut taxes for the benefit of the corporations, not the ordinary man.

They changed the character of the President's Cabinet—now they are all alike. In fact, there are three graduates of General Motors but not a single representative of the 18 million members of organized labor.

They stopped developing our natural resources for the good of all the people and began giving them away to a favored few.

They ended rent controls and slowed down on public housing.

They cut price supports—and you know what's happened to the farmers?

They packed the National Labor Relations Board with management men. And despite all their promises, they did not change one word of the Taft-Hartley Act. And I think it's past time to get rid of the union-busting provisions.

Now, of course, there are some Democratic programs for the people that the Republicans didn't change. And it's a good thing they didn't for only social security, unemployment compensation, and our other Democratic defenses against depression cushioned the shock of the 1954 recession.

We wouldn't have had them if the Republican managers had done what they really wanted to do. But they knew they didn't dare "sweep away the last vestige of the New Deal," as one of their orators proposed in 1952. So what they've done is conduct a holding operation—holding still. It reminds me of the excited girl who said: "Don't do something; stand there."

They have talked loud and often about a Federal health program—but they've done nothing about it.

They have talked and talked about Federal aid to education—but it took 3 years to recommend anything but a conference.

They have talked about building highways—but it's only because a Democratic Congress has grabbed the ball there's any prospect of getting anything done.

They have talked in public about extending social security—but the administration recently came out flatly against lowering the retirement age of women to 62 years and paying benefits to workers who are disabled at 50. In short, an administration which has granted billions of dollars in tax benefits to large corporations would deny disability benefits to a man who has worked all his life, paid his social-security tax, and then, at 50 years of age, while he still has a family to support, becomes totally disabled and unable to work. It is time these provisions were adopted.

The administration has changed something else in Washington. It has stopped telling the people the truth and instead is misleading them.

Recently President Eisenhower indicated that we are winning the cold war—at the very same time that the newspaper editors of the Nation said we're losing it.

They prate of peace—and boast of the brink of war we've visited.

They boast of our strength—and are contradicted by the generals.

They say all is well, and just then Ceylon joins the Neutralists.

They say we have the initiative and just then the Russians challenge us to economic and political competition for the underdeveloped, uncommitted peoples.

They talk about our position in the world as if our stock were not at an all-time low.

Now, all this is irresponsible.

We are facing the strongest and most skillful foes we have ever had to contend with, and enormous tasks must be borne if we are to win.

Our former Ambassador to Russia, George F. Kennan, who knows the foe as do few men in our country, had some important things to say at a symposium sponsored by the International Council of the Museum of Modern Art a year ago. I include this brilliant speech, by one of my constituents of whom I am very proud for the information of my colleagues:

INTERNATIONAL EXCHANGE IN THE ARTS

(Address by the Honorable George F. Kennan at a symposium sponsored by the International Council of the Museum of Modern Art, May 12, 1955)

Mr. Chairman, members of the International Council, friends and guests of the Museum of Modern Arts, all that I can offer to the discussion this evening consists of a few reflections based on about a quarter century of experience in the profession of diplomacy, which bears a somewhat peripheral but always friendly and, I think, sympathetic relation to the arts. I have the feeling that what I am about to say will seem to many of you to fall into the realm of the commonplace and really ought to be said to the audience that is not here rather than to the audience that is. But they are my thoughts, and if they seem to you to be commonplace, I can only say and hope that it will at least be interesting to know that what you believe in also commends itself to those who are long immersed in foreign service work.

The first thought to occur to me in this connection is one that may surprise some of you, coming from a person who is commonly supposed to be preoccupied exclusively with the international connotations

of all phenomena; but it represents a very deep conviction, and I give it to you for what it's worth. It is the belief that however great the importance of international cultural exchange from the standpoint of our relations with other countries, this is not the main reason why we Americans have need for cultural contacts with other peoples at this time. The main reason lies rather in our own need as Americans for just this sort of enrichment of our national spirit.

I am persuaded that any really creative development in the field of art or of literature is intimately connected with international contact and is, in fact, unthinkable without it. To test the proof of that proposition, I think you have only to glance at the roots of our own American culture and see how varied they are, and from how many types of soil, both in time and in space, they spring. No such culture could ever have developed in isolation, and, what is more important for us today, I am sure that no such culture can continue to retain its spiritual vigor if it is kept in isolation.

Now there are people, I am afraid, who think that cultural activity, once it is part of the tradition of a nation and once the educational facilities are there, is something that just proceeds by itself and would go on even though the respective country were entirely walled off from contact with the outside world. I am persuaded that there could be no more shallow nor dangerous assumption than this. When water is taken out of this great stream of international thought and inspiration and channeled into a closed national backwater—I have seen this happen to some extent in the Soviet Union—it quickly becomes stagnant and sterile. This is, of course, because creativeness is so intimately associated with divergence and contradictions. It is only in the reconciling of contrary phenomena that new perceptions arise as new form is created. There cannot be any progress of the spirit without trial; and trial, as Milton once observed, is by what is contrary.

It is particularly important for us Americans to be conscious of this, because in this respect great continental countries like our own are in a particular danger. In the smaller countries (I am thinking here especially of the small maritime countries of Europe), association with other people is something that you can hardly avoid. Travel becomes absolutely necessary, a knowledge of foreign languages likewise. The use of foreign educational and cultural media is common and known to practically everyone. But in the great interior spaces of our country—and, incidentally, this same thing applies to Russia—conditions are different. Here people can lead their lives with scarcely a single confrontation with that which is foreign or different.

The tendency of our own mass media today, involuntary perhaps but none the less compelling, is to eradicate even those divergencies in cultural stimuli and outlook that might otherwise spring from the real variety of tradition and psychology which we have inherited from the past of our own country. These media, as I don't need to point out to you, are centralized today and are becoming more so. Their product is increasingly standardized. They are aimed at passive amusement rather than at creative challenge. They are adjusted to mass needs rather than to the needs of that minority of people (and I think it always must be a minority) who are capable of participating in creative artistic effort and of leading other people to new levels of appreciation and expression.

I think this is a matter of great seriousness for us. I recently completed a trip across the country and back. I come from the Middle West, and I always look at it and the whole interior of this country with particular curiosity. I have no question as to the immense potential creative resources of our people in the world of the spirit. But I cannot help questioning whether those resources are likely to find anything resembling a normal degree of development and expression today, unless we can see some way or other of breaking through, as an educational experience, the monotony, and what I might almost call the narcotic effect of the modern commercial cultural product, and finding types of stimuli that are more kindly to the development of the creative spirit. In such a country as ours, faced with these facts of geography and of modern technology, the impact of foreign cultural values is needed just as rain is by the desert. And needed—I would like to reiterate this—for our sakes alone, for our development as individuals and as a nation, lest we fall into complacency, sterility, and emotional decay; lest we lose our sense of the capabilities of the human spirit, and with it much of our sensitivity to the possible meaning and wonder of life itself. For this reason I would be prepared to say, Let us by all means have the maximum cultural exchange, even if America had before it no problem whatsoever of outside opinion; even if we had no need of any sort for other people, and all that was concerned was our own development here at home.

Actually, of course, we have at this time the greatest and most urgent need to correct a number of impressions that the outside world entertains of us, impressions that are beginning to affect our international position in very important ways. I think we are gradually becoming aware for the first time of the frightening extent to which negative conceptions about us prevail to one degree or another abroad; but many of us still do not realize how largely these negative feelings are related to cultural rather than to political conditions. Here I, whose training has been in the political field, would say that I believe that many of the feelings about us which other people would think are political have their origins in the impression that we are a nation of vulgar, materialistic nouveaux riches, lacking in manners and in sensitivity, interested only in making money, contemptuous of every refinement of esthetic feeling. Now, it is true that this impression is in part deliberately fostered by others who wish us no good and would like to make us hated. It is also true that in some parts of the world, and particularly, I think, in Western Europe, these feelings are due to the fact that we have become identified in the minds of people with things and impulses of the modern age, which they hate in themselves—such things as modern technology, standardization, and mass culture, which they themselves are rapidly acquiring. And while they abuse us, they follow helplessly in what they believe to be our own path. But there is certainly a large area, and probably the predominant one, in which the prevalence of these negative feelings is the result of our own carelessness and neglect, our own failure to take any adequate measures to see that the impression we create abroad actually does reflect the real values of our civilization.

It seems to me that by and large until quite recently we have been content to leave the external projection of our cultural life almost exclusively to the blind workings of commercial interests, with results that from time to time, I can testify from personal experience, were absolutely frightening. This, of course, really has been the result of our failure to realize what the life of the spirit means to people abroad. I can think of few countries in the world where the artist, the writer, the composer, or the thinker is held in such general low esteem as he is here in our country. To the people in many other countries, for whom the prospects for material development are not so favorable as they are here, and who have never been taught to see personal relationships, and particularly the relationship between the sexes, as having the same sort of romantic glorification that distinguishes our folklore and literature—to many of these people, cultural life appears as the highest and the most hopeful form of human activity. And these people are apt to measure other civilizations by the degree to which they are considerate of cultural values and cause cultural activities to flourish within their confines.

Beyond this, of course, this world of art and the spirit has a symbolic value in international life which has been the subject of an appalling number of clichés, but is no less significant on that account. It is a fact that in the creation of beauty and in the great monumental works of the intellect, and there alone, human beings have been able to find an unfailing bridge between nations, even in the darkest moments of political bitterness and chauvinism and exclusiveness. In many years of living in totalitarian countries, both Germany and Russia, I have been struck time and time again by the fact that where every other manifestation of human life has been given some sort of a political coloration and planed, so to speak, for the political process, artistic creation, and the higher forms of scholarly thought have remained the only areas in which it was conceded, even by the totalitarians, that men of different political faith and allegiances might conceivably find a bond. Even at the blackest moments of the cultural isolation forced on the Soviet Union by Stalin—and those moments were black indeed—never was the principle really challenged that there were cultural values, universal in their meaning and their appeal, in the appreciation of which all men, regardless of class or social allegiance, could meet and find a common subject of understanding. Not even the crushing extent to which the Soviet regime tried to force the Soviet intelligentsia into the service of its own political purposes could obviate this underlying reality. In fact, subconsciously it was in a gesture of profound respect and, in a way, humility that the Soviet leaders were forced to come to the artists, to cultivate their favor and to seek their assistance in the propaganda activities of the party, knowing that these intellectuals enjoyed a form of confidence in the minds of men elsewhere which no political ideology could ever rival, and that they were capable of bestowing upon the regime a certain pattern of approval and legitimacy that nothing else could bestow. In this long, tortuous contest between the Soviet leaders and the cultural world of the people under their rule, a contest that has gone on now for some three decades, for all the terror and all the brutality, it has really been the politicians who were the supplicants, and the people who wield the pen and brush whose influence was courted. The totalitarians recognized that only if they appeared outwardly to enjoy the confidence and enthusiasm of the artists could they plausibly claim to have created a hopeful and creditable civilization. And I find it sad to think that they should have come to this appreciation so much sooner than many of our own people.

It is for these reasons that I personally attach such high importance to cultural contact as a means of combating the negative impressions about this country that mark so much of world opinion. What we have to do, of course, is to show the outside world both that we have a cultural life and that we care something about it—that we care enough about it, in fact, to give it encouragement and support here at home, and to see that it is enriched by acquaintance with similar activity elsewhere. If these impressions could only be conveyed with enough force and success to countries beyond our borders, I for my part would willingly trade the entire remaining inventory of po-

litical propaganda for the results that could be achieved by such means alone.

There are two reservations that I would like to voice about that proposition. One is concerned with what we give to others, the other is concerned with what we take from them. The first is this: We must not make the mistake of thinking that any sort of cultural product will do for interchange, as long as it is American, and that the content of our contribution is a matter of secondary importance. Of course, we can't be perfect in the arts; our things are always going to have deficiencies. A great deal is also going to depend on the modesty, naturalness, and humility with which we bring these things to other people. But we can be selective. There are a great many Americans who don't understand this. Fortunately, I think, not many of them are concerned with matters of international cultural interchange, though many of them are concerned with governmental affairs and with diplomacy. There are many who feel that we are such an interesting and glamorous people that any and all manifestations of American culture ought ipso facto to be welcome and helpful anywhere. I have seen American ambassadors, for example, in more than one instance exhibit one silly and inferior American film after the other to invited foreign audiences, in the happy confidence that no product of Hollywood could fail to be impressive and enjoyable to the foreign observer. So when we deliberately enter into this sort of exchange, let us by all means see to it that what we send is the best we can muster, and that it is something that is comprehensible and acceptable elsewhere. Above all, let us not make the common American mistake, so characteristic of the commercial media, of thinking that contributions of weak artistic talent or content are going to be accepable if only they are packaged in pretentious and elaborate frameworks of technical execution.

My second reservation relates, as I said, to what we take from others. It concerns quite simply, our graciousness as a host to foreign cultural activities in this country. It is not enough to let other people send things here and come here themselves. It is, of course, important to see that any cultural activity sponsored by foreigners that takes place within our borders is surrounded at all times with an atmosphere of hospitality and warmth, friendliness, and perceptive sympathy. Now, artists are peculiar people, sensitive people. They move unceasingly in a sort of painful half-world between the feeling of the artist and the level of public taste and appreciation. I think they can take a great deal of criticism, as long as they feel that it is honest and disinterested, but what they cannot stand is disrespect for their art itself, and they have not quite the same tolerance that most of the rest of us have for minor frustrations and tactlessness, stupidity, and bureaucracy.

Here, of course, is where our Government could be of help. Perhaps these words will reach it. The experience of foreign artists with American hospitality begins when they first come into contact with American officials abroad with regard to their visas. It is only too evident that this experience today is rarely a happy one, and I would like to raise the question once more whether this is really necessary, whether it is really beyond the resources of a great nation like ourselves to make arrangements whereby such visitors and others, too, would be given their visas in a relatively relaxed and civilized way. I would raise the question whether we have no alternative but to fingerprint them like common criminals. Let's remember that what was offensive to the Soviet student editors (and I think needlessly and undesirably so) is no less offensive to visitors from those countries with which we have long been associated by bonds of friendship. And, of course, these things are only symbolic of the treatment at all stages of their contact with this country. We have already created a situation, or we have had a situation in recent years (I hope it is passing now), in which the holding of scientific and cultural gatherings in this country has been so difficult that many well-meaning people quail at the thought of initiating them and refrain from doing so if they can. It is absolutely essential, to my mind, that we correct these conditions, that we learn as a nation to make distinguished foreign artists feel, whatever their origin or whatever the merits of their art, that they have come to a country where cultural values are respected for their own sake, where the obligations of hospitality are inviolable, and where they are surrounded at all times by appreciation and tact and good will.

While we are on these unhappy problems of security, let me mention one more thing. In recent years, it seems to me, there has grown up among us a most reprehensible habit, a totalitarian habit in fact, of judging the suitability of cultural contributions by whatever political coloration we conceive their creators to have acquired. I know of nothing sillier than this. A painting is not more or less valuable because the artist once belonged to this or that party or contributed to this or that group. The value of a symphony concert seems to me to be quite unaffected by the nature of the political regime under which the conductor may once have plied his trade. If we are going to encourage any form of artistic expression, for goodness' sake, let's do precisely that, and let's look, like mature people, to the content of what we are promoting and not to irrelvant personal attributes of those who participate. After all, cultural events are not political livestock exhibits in which we put forward human figures to be admired for the purity of their ideological features. And no matter how overwhelmingly important or significant those things may seem to some of us, they are not going to seem either interesting or pertinent to peoples abroad. To the extent that we let this sort of childishness enter into our approach to international cultural exchanges, to that extent it seems to me we are going to weaken rather than strengthen the effect of what we do.

All this is admittedly going to require something in the nature of a revolution in the attitude of many of us toward cultural activity generally as well as toward our obligations here in the international field—and that is not going to be easy. A country which is an indifferent home to its own cultural life, a country which, for example, can spend millions annually on horse racing or on the slot machines but cannot have an opera house in its own national capital, has a good distance to go, and I think there is no use deceiving ourselves about it. But we can at least begin with the realization that the realm of the spirit has a far higher rating outside of our borders than we have been accustomed to giving it at home; that a larger part of the hopes and enthusiasms of mankind are oriented to this realm than most of us have been inclined to believe; and that we are not going to make our way as we would like to make it, or find that pathway we seek to the feelings and understanding of other people, unless we learn to share something of this appreciation and this hope in the capacity of the human being to create beauty and to reach the higher and more subtle forms of apprehension of this life.

If we can learn to do this, if we can come to attach to this whole field of human endeavor a respect and a significance comparable to what is given to it abroad, then I think we will have come a great step on the way to the improvement of our international situation generally. But, as I said at the outset of this discussion, if we do that, it will not be in our external relations nor in what we mean to other people that our gain will be the greatest. These things will be important, to be sure. But our most important gain will be the gain for our own sakes, the gain in what we mean to ourselves—and in what, I suspect, life means to all of us.

Congressman Hillings Supports Old-Age Benefits

EXTENSION OF REMARKS
OF
HON. PATRICK J. HILLINGS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 7, 1956

Mr. HILLINGS. Mr. Speaker, during the 5½ years that I have had the honor to serve as the Representative in Congress from California's 25th District, I have been deeply concerned with some of the problems faced by our senior citizens. I believe it worth while to discuss some of these problems at this time because they actually affect every citizen, regardless of age. If we are not senior citizens ourselves, many of us have friends or relatives in that category.

Here are some of the highlights of old-age benefits which I have supported in recent years:

First. Social-security benefits increased: Increased social-security benefits in the form of higher payments to retired persons; extension of benefits to 10 million additional workers; allow beneficiaries of social security to earn more money on occasional jobs without loss of benefits; and more generous benefits to disabled persons.

Second. Value of retirement money protected: Inflation has been checked so that retirement benefits from social security and other sources retain their value. Since 1953, the purchasing power of the dollar has remained stable.

Third. Tax laws eased: Tax laws have been liberalized to give more credit for retirement income; medical deductions have been generously increasd; single persons supporting their parents receive more favorable tax treatment; and Federal income taxes in general have been reduced so that more money is left for our own uses.

Fourth. Job opportunities: I am pleased to support the action of the Department of Labor which has put into action a program to develop more job opportunities for older workers and demonstrate to employers the best methods of hiring and retaining senior citizens on the job. Because a person is advanced in years is no reason why he should be denied employment opportunities. I favor action to prevent job discrimination on account of a person's age.

Fifth. Active medical programs: Research and services in the fields of chronic disease have been greatly intenified. Since 1953, the Congress has almost doubled appropriations for medical research, much of which has been conducted by the National Institutes of Health. During 1955, the Institutes were supporting or conducting at least 170 research projects related to aging. Congress has also provided money for

Federal-State hospital construction and vocational rehabilitation.

Sixth. Federal Council on Aging: The Federal Government has established a Federal Council on Aging made up of representatives from 12 Government agencies to render assistance to older people, recognizing the fact that such individuals have led useful lives and have contributed so much to the development of our country.

The task ahead: Mr. Speaker, we in Government must do everything possible to assure continuance of sound programs designed to assist the Nation's senior citizens. They are not seeking charity or handouts, but opportunities to live out their lives in peace and comfort. We must acknoweldge a great debt for their productive efforts during their working years. The country's older people are the fathers and mothers who have raised us and indoctrinated us with a heritage which has made America unique among all the other nations of the world.

Adequate Air Service for New England

EXTENSION OF REMARKS
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 26, 1956

Mr. DONOHUE. Mr. Speaker, at this time I would like to include a resolution relative to the New York-Florida proceeding, Docket No. 3051, pending before the Civil Aeronautics Board, adopted by the Massachusetts House of Representatives on April 25, 1956.

The resolution follows:

RESOLUTIONS MEMORIALIZING THE CIVIL AERONAUTICS BOARD TO RESCIND ITS DECISION AND RECOMMEND THAT NORTHEAST AIRLINES BE GRANTED PERMISSION TO FURNISH AIR SERVICE BETWEEN THE NEW ENGLAND STATES AND THE STATE OF FLORIDA

Whereas the Civil Aeronautics Board has under consideration in the New York-Florida proceeding now before it (Docket No. 3051 et al.) applications of various air carriers for authority to furnish air transportation service along the Atlantic seaboard; and

Whereas Northeast Airlines is an air carrier having its headquarters and principal place of business in Boston, serves many important cities and towns in Massachusetts and elsewhere in New England, and is an applicant for authority to render air service between New England and Florida; and

Whereas an examiner of the board has recently handed down a proposed report in which he has recommended that Northeast's application in said proceeding be denied; and

Whereas exceptions to the examiner's report have been filed on behalf of the Commonwealth of Massachusetts in which exception has been taken to the failure of the examiner to recommend extension of Northeast to Florida, and in which it has been pointed out that extension of Northeast to Florida will provide far more first single-carrier service than proposed in any other application consolidated in the proceeding; and

Whereas Northeast Airlines, Inc., alone proposes a service which will connect the major cities and towns of New England with Florida, a service much needed by the public; and

Whereas Northeast must have access to long-haul traffic to the South if it is to have the financial strength needed for effective regional service within New England: Therefore be it

Resolved, That the house of representatives of the general court commends, as in the public interest, the exceptions to the examiner's proposed report filed on behalf of the Commonwealth of Massachusetts with the Civil Aeronautics Board in the New York-Florida proceeding and recommends that the attorney general, on behalf of the Commonwealth, continue to seek, on brief and at oral argument before the Board, the granting of Northeast's application so that Northeast may be enabled to render its proposed new and needed one-carrier service between Massachusetts communities and Florida, and so that Northeast may be strengthened and thus enabled to render efficient one-carrier regional service within Massachusetts and between Massachusetts cities and towns and other New England communities.

An Important Opinion by United States District Judge Weinfeld

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 15, 1956

Mr. CELLER. Mr. Speaker, under leave to extend my remarks, I am pleased indeed to insert herewith an important opinion rendered by United States District Judge Weinfeld:

UNITED STATES OF AMERICA *v.* T. VINCENT QUINN, MARTIN SCHWAEBER, AND JAMES D. SAVER—NEW YORK, APRIL 25, 1956

(Trial resumed.)

(Jury not present.)

The COURT. Since the court recessed last night, he has carefully gone over his trial notes, considered the briefs which were submitted by counsel, some of them upon the conclusion of the argument, and has also reviewed the law. Because of the pressure under which the court has worked since adjournment there has not been full opportunity other than to prepare certain notes. Under the circumstances, the court reporter is asked not to release the statement by the court until the court has had a chance to edit what he is about to say. However, in any event, the remarks represent the disposition of the court on the motions which were made at the close of the Government's case in chief.

The defendants move for a judgment of acquittal at the close of the Government's case of the various counts contained in two separate indictments which have been consolidated and tried together. The motion is made pursuant to rule 29 of the Federal Rules of Criminal Procedure on the ground the evidence is insufficient to sustain a conviction of offenses charged.

The indictment charges the defendant Quinn, who was a Member of Congress from January 1, 1949, to December 31, 1951, as a principal with violation of section 281 of title 18, and also charges the defendants Schwaeber and Saver, who were his partners in the practice of law at various times, with aiding and abetting in the commission of the offense. Section 281 in substance makes it illegal for a Member of Congress to receive or agree to receive compensation for services rendered or to be rendered in any matter before a Federal department or bureau in which the Government is interested, whether he personally or another performs the services.

In this case the charge is the receipt of compensation. The broad objective of the act is to secure the integrity of executive action against undue influence of Members of Congress upon executive officers and to insure efficiency in the conduct of public affairs. It was felt that the absence of pecuniary gain to Members of Congress would reduce or eliminate any undue influence upon executive officers or employees in those matters where they appeared before such executive officials.[1]

The issue presented in this case is novel, as Government counsel concede, in that it is the first prosecution under that statute where admittedly the defendant Quinn as a member of Congress did not personally appear nor render services before the Bureau of Internal Revenue, the Bureau involved, on behalf of any taxpayer or in any proceeding, with but one single exception, to which I shall make reference. All the services before the Bureau were rendered by either Quinn's law partners, codefendants Schwaeber or Saver, or associates of the firm. It is acknowledged that none of the clients have retained him, met him or in general that he had any contact with them. However, this circumstance in and of itself is no bar to a prosecution, providing that the Government establishes prima facie the essential elements of the offense sufficient to send the case to the jury.

Section 281 of title 18 of the United States Code, insofar as applicable, provides:

"Whoever, being a Member of * * * Congress * * *directly or indirectly receives or agrees to receive, any compensation for any services rendered or to be rendered, either by himself or another, in relation to any proceeding, contract, claim, controversy, charge, accusation, arrest or other matter in which the United States is a party or directly or indirectly interested, before any department, agency, court martial, officer, or any civil, military, or naval commission, shall be fined not more than $10,000 or imprisoned not more than 2 years, or both; and shall be incapable of holding any office of honor, trust, or profit under the United States."

Count 1 of the indictment charges as follows:

"Commencing on or about the 1st day of January 1949, and continuing thereafter until about the 31st day of December 1951, and at the several times of committing the offenses hereafter set forth in this indictment, T. Vincent Quinn was a member of the House of Representatives of the Congress of the United States of America, being representative of the Fifth Congressional District of New York, and also, at the several times of committing the offenses hereafter set forth in this indictment, was engaged as equal copartner in the practice of law in partnerships with Martin Schwaeber and James D. Saver, at times using the law firm name of Schwaeber, Quinn & Saver, and at other times using the law firm name of Quinn & Saver, but at all times herein maintaining a bank account at the Bank of Manhattan Co., 40 Wall Street, New York, N. Y., in the name of Schwaeber, Quinn, and Saver, and after March 12, 1951, maintaining a bank account at the Chase National Bank, 60 East 42d Street, New York, N. Y., in the name of Quinn & Saver.

"(2) During the period of time from about January 1950 until about December 1951, there was under investigation and consideration by the Bureau of Internal Revenue of the United States Treasury Department a certain matter consisting of a controversy, charge, accusation, and proceeding relating to income taxes due and payable on the income of Daniel D. Zell and Sophie B. Zell,

[1] *Burton* v. *United States* (202 U. S. 344).

for the year 1945, to which matter the United States was a party and in which it was directly and indirectly interested.

"(3) At New York, N. Y., in the southern district of New York, and on or about July 12, 1950, T. Vincent Quinn, herein named a defendant, being duly elected a Member of Congress and after his election and during his continuance in office, acting jointly and in concert with James D. Saver, also herein named a defendant, said defendant James D. Saver aiding, abetting, counseling, inducing, and procuring said defendant T. Vincent Quinn so to act, unlawfully did receive, directly and indirectly from Sophie B. Zell, compensation for services rendered and to be rendered by him, the said T. Vincent Quinn, and others, to wit, members of the law firm of Quinn & Saver and employees and associates of said law firm, in relation to the aforesaid matter, in which the United States was a party and was directly and indirectly interested, before the Bureau of Internal Revenue of the United States Treasury Department, said defendants well knowing that the United States was a party to said matter and was directly and indirectly interested therein, to wit, compensation in the sum of $7,500 by means of a certain check (and then the check is described) to the order of James D. Saver, which check was endorsed by said James D. Saver for deposit to the account of Schwaeber, Quinn & Saver and was deposited on or about July 11, 1950, by the said T. Vincent Quinn and James D. Saver in said law firm account of Schwaeber, Quinn & Saver, in the bank of the Manhattan Co., 40 Wall Street, New York, N. Y., and on or about July 12, 1950, final payment of said check in the sum of $7,500 was received by said T. Vincent Quinn and James D. Saver from the Chase National Bank at New York, N. Y., in the southern judicial district of New York and within the jurisdiction of this court, from the funds of said Sophie B. Zell, there and then on deposit, said compensation being received in return for services rendered and to be rendered by members of the law firm of Quinn & Saver, and associates and employees of said law firm, said services consisting of obtaining information pertaining to said income tax matter from officers and employees of the Bureau of Internal Revenue of the Treasury Department, and other officers and employees of the United States, as well as interceding and conferring with said officers and employees, presenting arguments, assertions, and allegations, and otherwise acting on behalf of Daniel D. Zell and Sophie B. Zell, to influence and persuade the aforesaid officers and employees in order to obtain favorable decisions and actions in and upon such controversy, charge, accusation, and proceeding."

This first count of the second indictment is the only one in which the defendant Schwaeber is not also named as a defendant, as an aider and abettor.

The remaining counts of the indictment are all of similar import, except the alleged violation is charged with respect to different matters and on different dates.

The key problem on this motion is what are the essential elements which the Government must establish and whether there is sufficient evidence from which a reasonable person might conclude that the essential elements have been established.

I hold that under the statute, and the indictment as drawn in this case, the essential elements which the prosecution must establish are:

1. That the defendant Quinn was a Member of Congress at the times referred to in the indictment. It is conceded that he was such a Member of Congress from January 1, 1949, to December 31, 1951.

2. That the defendant Quinn received, directly or indirectly, compensation derived from one or more of the matters specified in the indictment.

3. That the compensation was for services rendered either by him or another, in this case by either or both of the other defendants Schwaeber and Saver, or one of their associates in a matter before the Bureau of Internal Revenue in which the Government was an interested party.

Again it is conceded by the defendants that the Government was an interested party in each of the matters referred to in the indictment and as to which testimony was given upon the trial.

4. That Quinn knowingly accepted the compensation for the services which he knew had been rendered in matters before the Internal Revenue Bureau during the period he was a Member of Congress.

5. That the compensation was received in return for services rendered for the purpose of interceding with, or with the intent to influence and persuade, officers and employees of the Internal Revenue Bureau to obtain favorable decisions and actions in matters pending before the Bureau.

It is not necessary to consider all the elements I have outlined. It readily occurs that a prime—if not the crucial issue—since Quinn never met the clients, was not retained by them and did not personally appear or render any services before the representatives of the Bureau—is whether he received the compensation with knowledge that it was for services rendered by one or more of his partners before the Bureau while he was a Member of Congress.

In other words, was his conduct in receiving the compensation willful—which in this case I hold to mean knowingly, deliberately and intentionally, as distinguished from accidentally or negligently. In my view it is not necessary, as the defendants contend, to find a specific criminal intent—a conscious purpose of wrongdoing, or evil motive—but nonetheless knowledge there must be that Quinn did in fact know that the compensation received by him was for services rendered before the Internal Revenue Bureau and that he also knew that such payment was for services rendered during the period he was a Member of Congress, and, fully aware of these facts, he knowingly, deliberately, and intentionally received such compensation.

Is there any competent evidence on which to go to the jury on this element, or putting it in the language used in this circuit, is there "evidence from which a reasonable person might conclude that the charge in the indictment was proved," so that the jury must decide the issue?

It is admitted that no direct evidence of knowledge such as admissions by the defendant, statements made to others or writings or documentary proof has been offered. It is recognized that this type of proof on the issue of knowledge is unusual. Reliance here is placed upon facts and circumstances from which it is contended that the reasonable inference is warranted that the defendant had actual knowledge.

But in either case, whether proof be direct, or by circumstances or by inference from circumstances, the proof must be of a character as to satisfy beyond a reasonable doubt that the defendant did in fact have knowledge. It should be pointed out that it is not sufficient to find that as a reasonable person Quinn should have known the facts. What must be determined is whether there is sufficient evidence upon which the jury would be warranted in finding that in fact he had actual knowledge.

That the defendants were partners or that services were rendered by one or the other of the partners or associates does not establish that Quinn knew of the receipt of the fees or that they were derived from services rendered in matters before the Bureau during his incumbency.

While partners may act for one another in civil matters this is not true so far as criminal liability is concerned, which is personal. In criminal cases a partner is not chargeable with acts of his copartners unless he has knowledge.

Let us turn to the evidence upon which the Government urges that a permissible inference of knowledge may be charged to Quinn so as to send the case to the jury.

The partnership of Schwaeber, Quinn & Saver was embarked upon in August 1948 when Quinn had not yet been nominated for Member of Congress. This firm succeeded Schwaeber & Saver. Each partner had a drawing account of $200 per week against profits. Within a short time Quinn was nominated for Member of the House of Representatives and was actively engaged in his campaign from September 1948 until his election early in November, following which he took a vacation until he assumed the duties of his public office on January 1, 1949.

Up to this point he rendered little if any service to his law firm.

Following the assumption of his duties, the Government's evidence establishes that as little as he gave of his time and services to the firm up to December 1948, he devoted even less time thereafter.

He appeared at the firm's office on Fridays in some weeks for about an hour or two, where he then took care of his public functions, such as writing letters for, and seeing, his constituents. In other weeks he was not at the office at all. There is no suggestion—indeed not a scintilla of evidence—that he took any part, direct or indirect, in his firm's work.

The Government proof, in the words of the witness called to establish his activity to show knowledge, "is that he did nothing," and at another point this witness testified: "He performed no services during the period in which he was in Congress."

It would be stating the fact to say that his relationship to his law partnership was that of an absentee partner.

There is no evidence that he ever conferred with other members of the firm as to matters, source of income, or that he was ever advised as to the matters from which fees were derived. A number of these matters antedate his membership in the firm, some by as much as almost 2 years, and in a number of others substantial services were rendered before he became a Member of Congress. In still other cases much of the work was carried on by Schwaeber when he was no longer a member of the firm, commencing in February 1951, and when there was no professional relationship between him and Quinn.

There is no basis upon which to find that Quinn knew or was informed of these services when Schwaeber was no longer his partner.

The Government relies upon the fact that in his individual income tax returns for the years 1949, 1950, and 1951, Quinn listed income from the law firms. But there is no proof of any breakdown to show that the income came from any of the matters pending before the Bureau which are the subject of the indictment, and the fact that the bulk of the firm's business concerned tax matters in so-called intelligence items before the Bureau is not sufficient, absent other proof, to bring home knowledge to him as to the source of compensation and that it was related to matters in which his partners appeared before the Bureau.

The analysis of fees as submitted by Buratt was simply a tabulation constructed from the entries in the checkbook and was a crediting of fees in particular matters, as they should have been credited for distribution according to the partnership arrangement, but made long after the event.

So far as this record goes, fees were entered in the stub of the checkbook which was used to arrive at the profit and loss statement. Nothing has been presented to warrant the inference that the defendant Quinn, who rarely put in a visit at the firm's offices,

ever saw the checkbook, which, incidentally, listed the name of the client from whom the fee was received without specifying the matter. Indeed, there is direct testimony offered by the Government that the books and work papers were never shown to Quinn.

Finally, the evidence is uncontroverted that for a period of 6 months, from April to September 1950, when some of the services in one or more of the matters were rendered, or, I believe, some of the fees were paid, Quinn was completely removed from any form of activity, congressional or otherwise, due to a severe heart attack.

The Government suggests that in 1 matter out of the 14 specified in the indictment, Quinn telephoned an Internal Revenue agent. In this matter Quinn had appeared before the Department of Justice in 1948, prior to his election as a Congressman. It had been pending since 1947, before he was a member of the law firm. In October 1948, before his election, the Department of Justice, to which the matter had been referred by the Internal Revenue Bureau, declined prosecution.

In January 1949, Quinn inquired of the regional counsel of the status and made similar inquiries on 2 occasions, 1 in February and the other in March. These calls were solely, as the witness readily acknowledged, to inquire of the status of the matter; the merits of the case were not discussed.

I cannot agree with the Government contention that this was the rendition of services of the nature contemplated under the statute. The only other alleged services claimed in this particular matter are telephone calls to the defendant Schwaeber by another agent of the Bureau assigned to make a supplemental investigation, who requested Schwaeber to supply documentation of the taxpayer's contention raised before the Department of Justice to which Schwaeber's sole response was a letter that he had nothing to add to the case.

In this instance there was no proof that the services were rendered within the contemplation of the statute before the Bureau either by Quinn or his partner, but, more important, there is no proof that he knew of the payment of the fee which occurred in January 1950, and which, as all fees, went into the common fund.

So much on the issue of knowledge.

Finally, there is not a scintilla of evidence to support the allegation of the indictment that the compensation was for services, which also included interceding with officers and employees of the Bureau of Internal Revenue and "otherwise acting * * * to influence and persuade (them) in order to obtain favorable decisions and actions." There was no proof of any attempt by Quinn, directly or indirectly, or by his partners in any single respect, to support the allegation of interceding and influencing the judgment of the officers of the Bureau.

The Government concedes as much but contends this is not an element of the offense. However, it has made that very specific charge in the indictment in this case and so it is unnecessary to consider in the abstract whether, absent such allegation, an element of the offense is a purpose to intercede and to influence. The leading case of *Burton* v. *United States*,[1] as well as others, touch upon this as an element of the offense. It should be pointed out that although Count 7 in the Burton case which charged the receipt of compensation did not contain an allegation of a purpose to influence (as distinguished from Count 6 which charged an agreement to receive compensation and a specific purpose of influence), nonetheless the Supreme Court quoted with approval the judge's charge[2] under Count 7 which required the jury to find influence as an element.

In sum, the Government has failed in its case in chief to submit evidence, either direct or indirect, upon which the essential element of knowledge could be found—this apart from its admitted failure to establish that Quinn, either directly or indirectly, sought to intercede and to influence Internal Revenue officers in order to obtain favorable decisions and actions.

I hold there is no basis upon which a jury could reasonably, upon the evidence presented, draw an inference to establish beyond a reasonable doubt, actual knowledge on the part of Quinn.

The rule on a motion for a judgment of acquittal has variously been stated, but generally it is that "if a judge is of opinion that upon the evidence a reasonable mind could not find guilt beyond a reasonable doubt, he must not let the jury act, because to do so would be to let it speculate without evidence adequate in law."

To submit this case to the jurors upon the evidence—or rather the lack of evidence—would permit them to engage in speculation and conjecture on the issue of knowledge. Suspicions are not a substitute for evidence.

Accordingly, the motion for a judgment of acquittal is granted.

Since the motion is granted as to Quinn, it follows it must likewise be granted as to Schweber and Saver, the codefendants who are charged with aiding and abetting.

The clerk of the court is requested to bring the jurors in.

(Jury in box.)

The COURT. Members of the jury, I am sure you know when we adjourned last night the court remained in session, and, as I told you when you left, there were certain matters of law with which you had no concern but which were to be presented to the court for argument.

We sat here until almost 6 o'clock last night, and, thereafter, the court—while the hours are not important—was engaged in a consideration of this matter. The defendants had made a motion for a directed verdict of acquittal on the ground there was insufficient evidence to go to the jury to pass upon the guilt of the defendants.

I took this motion under advisement throughout the course of the night, reviewed the evidence and the law that is applicable to the case. Now, generally, as I have just indicated to those who have been in the courtroom, there is a rule of law that "if a judge is of opinion that upon the evidence a reasonable mind could not find guilt beyond a reasonable doubt, he must not let the jury act, because to do so would be to let it speculate without evidence adequate in law."

One of the principal issues in this case was whether or not there was sufficient evidence upon which a reasonable mind could draw an inference that the defendant Quinn had actual knowledge that the compensation which the Government claimed he had received came from the specific matters referred to in the indictment. You will note I said "actual knowledge," and, as I commented a few moments ago, it is not a question of whether or not as a reasonable man he should have known, it is a matter of a jury having sufficient evidence to make a determination that he in fact did know.

To make it short, I have concluded that the case is not to be submitted to you, and I have directed a verdict of acquittal of all three defendants.

Before you leave, I want to say this to you: while perhaps you would have wanted to pass upon the case, sitting in close attention as you have, the fact that you were ready to do so is just as important as if in fact you did decide the issues. Each of you was fully aware of what was going on with the case, and it was clear that you followed the testimony with perception.

With that statement I have nothing more to say than that I happen to be one judge of the court—and there are others—who never thanks a jury for their services, just as I never permit anybody to thank the Court for the rendition of a verdict. This is what you and I are called upon to do in the trial of a case. Your reward must come from the knowledge and satisfaction that you performed your task in this case, and were fully prepared to perform your task if called upon.

With that the court discharges you.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the daily RECORD at $1.50 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

Appendix

Range Control

EXTENSION OF REMARKS
OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Wednesday, May 16, 1956

Mr. NEUBERGER. Mr. President, in the State of Oregon there are many lumbermen who subscribe wholeheartedly to a comprehensive program of conservation and who practice it at every opportunity. The Pilot Rock Lumber Co. in eastern Oregon is an example of a company which tries to use 100 percent of every tree cut from its forest lands. Someone has said that in its desire to eliminate waste conservation-minded lumbermen will eventually process the shadow of the tree.

How comprehensive the conservation program of a lumber company may be is made evident in the speech Mr. Al Moltke, vice president of the Pilot Rock Lumber Co., delivered to a recent meeting of the American Society of Range Management.

Mr. President, the East Oregonian, of Pendleton, Oreg., printed the speech in the issue of May 5, 1956. I ask unanimous consent to have this reprinted in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

RANGE CONTROL SEEN LUMBERMEN'S JOB

Range management today is part of the responsibilities of all owners and managers of private forest lands. There was a time when a lumberman gave little thought to anything besides how much timber was on the tract when evaluating a purchase. His primary objective was, of course, to cut as many boards as possible from the land. Then, he was through with it. Also, his objective was to make as big a profit from the forest in the shortest possible time and that profit was only represented by timber. Many cut out and got out, made a good profit and that was all there was to it. When that stand was cut, they would get more timber and repeat the process.

In recent years many lumbermen have come to realize that there are no forest frontiers left in America. If they hope to stay in business and, by so doing, support the towns that have grown up around them and have come to depend upon their industry for their existence, then they must stay in one place, get the most productivity from the ground they own and manage. This happens to be the position of the Pilot Rock Lumber Co.

Many lumbermen have now taken a second look at the timber-growing potential of their lands for the first time They have come to realize that timber could be looked upon as a crop, and economically so, like any other crop. As much of the western forest lands could also grow grass—why not get the most from the grass potential of those lands. Several lumbermen operate cattle ranches in connection with their lumber business. However, we at Pilot Rock are staying out of the cattle business and sticking to one headache at a time.

We are earnestly trying to get maximum utilization from every tree we cut. We are also retaining the maximum payroll for lumber processing for our community. Our grass and grazing permittees are watched zealously because we know that being lumbermen we are not supposed to know or care much about our grass. To disprove this theory, we have employed an expert with practical grazing and cattle business know-how. For that job, we selected a successful retired cattleman, who learned through experience that it does not pay to overgraze.

While I can't say how many lumber operators are doing exactly as we are, I believe that today most timber operators of substantial size in the Pacific Northwest have grazing programs integrated into their forest management plans.

We are cutting our timber on a sustained-yield basis, leaving thrifty trees to grow the future crop for the future generation of loggers. In this way, we get the maximum in wood growth from our lands. This is economically feasible in view of the collateral value incorporated in our cutover lands. While consideration has been given to the wood productivity of these lands, up until recently not much thought was given to the grass productivity of the same land. We found that both crops do well together, so we have included grass in our forest management plan.

Our range management starts with seeding our skid trails to a good, locally recommended range grass. We depend upon the Forest Service recommendations to be as near correct as is presently possible in view of the fact that they have a special department set up for range management, and are familiar with our local conditions. Advice on the correct time to seed has also been taken from the Forest Service. In our area, this is considered to be either in late fall before the first snows, or on the first light snow. There is danger in waiting too long, as access to the area may become quite difficult if deep snow comes early. Thus seeding, like burning brush is limited sometimes to a very short period.

We realize that overgrazing is contrary to range conservation, so we have put a large portion of our holdings under the jurisdiction of the ranger station at Dale, Oreg. The ranger treats our lands exactly as he does Forest Service lands. In view of the fact that much of the land is integrated with national forest lands, this system works very well. This range is leased directly to a range associattion and a few private individuals, but the number of cattle they may run on these lands is decided by the ranger in charge. The area just referred to is in the John Day River country and is inside the national forest boundaries served by the Dale ranger station. Approximately 30,000 acres are involved in our private forest lands in this area.

Outside the boundaries of the national forest this cannot be done. We have employed a range manager to handle the grazing on some 60,000 acres that lie outside the forest boundaries. His responsibility is to control size of herds that the various permittees wish to run on our lands. Also, it is up to him to decide range disputes. If a permittee persists on slipping in more cattle than the range will stand, then our range manager has the unpleasant job of canceling his permit.

All of our range leases are so written that if overgrazing is practiced, then the next year's lease will not be renewed. All leases with few exceptions are written for only 1 year with a promise of renewal at our company's option. We have no trouble getting takers on that basis.

In our business, we are using large numbers of forest weed trees for chips. These chips are converted to pulp and eventually fiberboard. Removal of these trees is of value in promoting better sawtimber growth. This also aids in securing better snow compaction and thus creates a better watershed while conducting a sound logging program. Better forest watersheds aid much in controlling streamflow and contribute toward stabilization of our great hydroelectric plants now being built on the great river systems of the Northwest.

I would like to point out here that we believe that it is the duty of all conservation-minded people to protect the watershed value of their lands. It is my firm belief that the future economy of this country can be maintained as it now is, only if we give serious consideration to getting maximum conservation and utilization of the water that falls from the skies on our great forests through rain and snow.

Our forests comprise much of the area in which we live. They are the source of the water supply of the Columbia River and its tributaries. Agriculture is basically fully developed. The lumbering business will have to decline to some extent as soon as all private forests are cut. There is not enough wood growing in the forest of the Northwest to maintain all mills now operating on their present annual cutting basis. Substitutes will have to be found to take the place of wooden boards. These substitutes will be made because of available power from the river. This country's population is mushrooming rapidly. The potential of the river is the only remaining frontier to be claimed by the present and future population of the area. The water from the forest can play and will play an important part in their future standard of living.

As I have tried to point out, the forests have multiple uses. There is one important use yet that I have not mentioned, but it most certainly should be.

The rightful heritage of all red-blooded Americans is the recreation incorporated within these forests. This can also be considered as an important factor in our present economy. Much of our present business is based on equipment and supply needed for recreation. It is the policy of our company to contribute toward this use of our private lands by allowing free use of our logging road system under fair and wise control. Written permits are granted upon request. Keys to our locked gates are also issued without charge. We know that the recreational use of our forests would be wasted if not used. We do not wish to see waste of any kind. Thus, we have cooperated with our neighbors in this respect and I know of no fair request for such use that has been denied. Better public relations are our reward.

About 5,000 acres of our lands in the lower John Day River country were found to be ideal for a winter refuge for wildlife. Upon

request by the Oregon State Game Commission, we made this land available for its best natural use, a big winter refuge since 1950. This was our major contribution toward wildlife protection and as I understand from recent reports, it is proving to be all the game commission expected. Thus, I have endeavored to point out that timber, cattle, watershed, wildlife, and recreation are all an integrated part of a private forest, and can be managed without one interfering with the other.

In closing, I wish to add that we at Pilot Rock are not alone in this sort of private forest management; many other substantial lumbering industries in this country are considering carefully all of those once hidden values that lay within their forests and have set up wise multiple-purpose use of their lands. There are no new forest frontiers left to capture in America. We can only settle down and make the most and best use of what we have.

Any owner of private natural resources has a grave responsibility to be worthy of that ownership. He cannot take it with him when he dies but must pass it on to someone else. He has no right to leave his lands in poorer productivity than when he found them. It was God given and he only has the right to use just so long as he lives. A hundred years from now this same earth will still be depended on for all life. To destroy productivity is to destroy human life.

Senator Walter George's Place in Mankind's History Is Assured

EXTENSION OF REMARKS
OF
HON. OLIN D. JOHNSTON
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Wednesday, May 16, 1956

Mr. JOHNSTON of South Carolina. Mr. President I have before me an editorial entitled "Senator WALTER GEORGE: His Place in Mankind's History Is Assured," which appeared in the issue of May 11, 1956, of the Anderson (S. C.) Independent. The editorial was written by one of the South's foremost newspaper editors and former United States Senator, Wilton E. Hall. He has expressed in this writing a sentiment which is true throughout South Carolina and the entire Nation. I ask unanimous consent that this editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SENATOR WALTER GEORGE: HIS PLACE IN MANKIND'S HISTORY IS ASSURED

Senator WALTER F. GEORGE'S decision to retire from the United States Senate at the end of his term was not entirely unexpected by those close to the Washington scene.

A few days ago it was reported that the venerable Georgian's closest friends, shocked by the sudden death of Senator Alben Barkley, were imploring the Senator to retire from the strain of political life in order that he might serve his State and Nation longer in other capacities.

It was known that he had been advised by his personal physician that a prolonged election campaign might take its toll, although the beloved Georgia statesman is more vigorous at the age of 78 than many younger men.

For 33 years Senator GEORGE has represented his State in the Senate. Most of those years were spent in positions of leadership. His sure hand more than once has guided the ship of state from threatening shoals.

As he approaches retirement, his influence in the highest council in the land was never stronger, both at home and abroad. As chairman of the Senate Foreign Relations Committee he is a world figure whose views are important in chancelleries around the globe.

Senator GEORGE'S deep-seated interest, preservation of peace, and opportunity to extend his efforts in this cause as President Eisenhower's personal representative of the North Atlantic Treaty Organization undoubtedly influence his decision to leave the Senate.

NATO has been tottering. Its dissolution would be a blow to the cause of free men and would pose a menace to peaceful solution of the world's pressing problems. President Eisenhower could not have chosen a more able exponent than this great Georgia statesman.

A man loved and respected on both sides of the aisle in the Senate and revered by his fellow Georgians as one of the State's greatest sons, Senator GEORGE will retire with his place in mankind's history already assured.

Proposed Appropriation for the National Heart Institute

EXTENSION OF REMARKS
OF
HON. DENNIS CHAVEZ
OF NEW MEXICO
IN THE SENATE OF THE UNITED STATES
Wednesday, May 16, 1956

Mr. CHAVEZ. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement by Dr. Paul D. White, of Boston, Mass., at a hearing before the Senate Subcommittee on Appropriations for Public Health, May 9, 1956.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

1. I am Dr. Paul Dudley White, of Boston, practicing physician, consultant in medicine at the Massachusetts General Hospital, teacher of graduate students in medicine at Harvard University and elsewhere, executive director of the National Advisory Heart Council, and president of the International Society of Cardiology.

I am presenting herewith a statement in support of the budget of 1957 for the National Heart Institute of the United States Public Health Service as recommended by the National Advisory Heart Council in conjunction with the Citizens' Committee, and the Budget itself.

There is no need of any extensive comment on the well known importance of heart and blood vessel diseases today as a most serious threat to the health of both young and old in this country and in many other lands. In the United States of America, it accounts for more than half of all the deaths and in this respect, as well as in toto, is an increasing problem every year.

2. The National Heart Institute as well as the private organizations dealing with heart disease, such as the major organization, namely the American Heart Association, have a very complicated function to fulfill inasmuch as they have to deal with a considerable variety of different diseases which involve the circulation including a study of the blood and of its abnormalities. It is a very important field of medicine. As to the blood, for example, solving the problem of thromboembolism (which means the formation of blood clots in the circulation and their movement from one place to another) stands high in the need for research. Why is there much less threat of this in Hong Kong than in Boston, as was told me a few weeks ago in Hong Kong by a very well trained and experienced young Chinese surgeon, a graduate of Harvard Medical School 10 years ago with several years of surgical residency at the Massachusetts General Hospital? I am sure that Dr. Wright would like to add a few words to this brief comment about the blood and its properties of clotting.

3. The next important comment that I would make is that blood-vessel disease actually comprise the major part of our field, a statement that sometimes surprises even those with some knowledge about the heart. Here again I would like Dr. Wright to amplify this observation with particular reference to the circulation in the legs and in the brain. I shall summarize the problem briefly. The simplest and most common change, a more or less natural development in aged persons, but abnormal in youth and middle age, is a loss of elasticity and hardening or stiffening of the larger arteries of the body, reducing considerably the efficiency of the circulation. This needs study with a view to its prevention in the young.

The next problem is that of serious disease of the inner coats of many arteries including the aorta itself and the large vessels supplying the circulation of the legs, a field of the greatest interest and importance which has in the past few years happily attracted the attention of able surgical pioneers who have boldly and brilliantly introduced new surgical techniques to save lives and to restore health. Even more important still, however, are the so-called atherosclerotic (softening-hardening) diseases of the cerebral (brain) and coronary (heart) arteries which by their blocking (thrombosis) or even rupture (in the brain with resulting apoplexy) account for the major part of heart and brain diseases today in this country. Thus the heart disease called coronary which leads all other forms of heart disease in the United States of America now and the cerebral involvement so distressing all over the world, as I have found it to be, are actually due to disease of the blood vessels and not to primary disease of either heart muscle or brain tissue.

Finally, one other very common cause of heart disease (ranking second after coronary atherosclerosis) and of brain and kidney diseases, namely high blood pressure of serious degree, is also vascular and due to some as yet unidentified cause of constriction of the smaller arteries of the body. Thus, it goes without saying, that a major, probably the major, part of our current research in the cardiovascular field should be directed toward the study and prevention of these various diseases of the arteries of the body. And I haven't even mentioned the veins which can also be diseased; perhaps Dr. Wright will say something about them.

4. In addition to the major problems of coronary and hypertensive heart disease, of local blood vessel diseases, and of abnormalities of the blood, there are diseases that directly affect the heart muscle and valves. The most common and important of these is rheumatic fever which, although on its way down and out, remains still a very serious threat to the children and young adults throughout the world, including the United States of America. Incidentally the actual mechanism of its production by the hemo-

lytic streptococcus remains a mystery and demands even more intensive investigation than yet accorded it.

Fourth in frequency and as a challenge so far as the heart is concerned, and remaining still at least a 95 percent mystery as to its causation is congenital heart and blood vessel disease, that is, abnormalities present at birth or found a few weeks or months thereafter. Very great advances have been made in the last decade in its diagnosis and spectacular surgical relief but almost nothing is known about its cause. Millions of dollars will undoubtedly eventually be needed to solve this problem, one of the difficulties of which is that it consists of a multitude of individual deformities and combinations thereof.

A less common but still very important disease of the heart almost always superimposed on either rheumatic valvular heart disease or congenital defects is what we call subacute bacterial or malignant endocarditis, 99 percent fatal before the introduction of the antibiotics a decade ago, but now happily some 80 percent curable. It is due to invasion of the blood stream by the streptococcus viridans.

Other less common causes of heart and blood vessel diseases still exist though rapidly on the decline. These include syphillis, diphtheria, thyrotoxicosis, beri-beri, and a few virus and parasitic diseases. We must constantly guard against any recrudescence of these threats.

5. Finally, a field that needs much cultivation and is on the borderline between circuatory, metabolic, nervous, and psychiatric disorders is that of the so-called functional problems. These include neurocirculatory asthenia, cardiac neurosis, disorders of rhythm, and even sudden death, at times without seemingly adequate structural cause. This is in part, at least, the field of psychosomatic medicine. Three days ago I took a minor part in the inauguration of a beautiful, finely equipped hospital at the little hill town of San Giovanni Rotondo in a barren part of southeastern Italy, some 450 kilometers from Rome. An excellent scientific staff is being assembled there. The unique character of this hospital is that it has been built in close proximity to a Franciscan Monastery visited annually by many thousands of pilgrims, most of whom are ill physically or with mental or spiritual problems which they are taking for solution to the world renowned saintly monk, Father Pio. Through the contributions of countless such pilgrims, rich and poor, this hospital has been built during the past 9 years and it is the hope of many of us that it can and will serve, with good control, during the decades to come as a center for the study of psychosomatic medicine which includes in considerable part circulatory disorders. Three days ago, Padre Pio at San Giovanni Rotondo and the day before yesterday the Pope in Rome in conversation with a number of us cardiologists from a dozen countries scattered over the world expressed a considerable interest in supporting such research. Following the example set by this remote town in the hills of Italy, other institutions might well be established or at least developed in research in this important field.

6. I have said enough about the problems and would now like to take up item by item the 1957 budget of the National Heart Institute.

A. Research projects: The 1957 budget of the National Advisory Heart Council has included a $6 million additional sum over the figure of the 1956 appropriation for research project and program grants. The Bureau of the Budget allowed an increase of $2,450,000 and the House added to this $1,450,000 which leaves an increase still to be requested of $2,100,000. At the hearing before the House it was stated that $1 million might be subtracted from this extra amount of $2,100,000 because of the allocation by the Bureau of the Budget of an extra $3 million for noncategorical basic research under the National Institutes of Health. Now, however, since in this category we are still well over $1 million in the red, so far as approved grants are concerned with many more applications coming up in June, which will add greatly to the deficit, we doubtless will need the total increase asked for originally of $2,100,000 in this item.

B. Research fellowships: In the same way, the increase which we requested for the 1957 budget over that for 1956 of $827,000 to bring the total to $1,700,000 still demands full support. Against this request for $827,000 additional, the Bureau of the Budget added $277,000 and the House $185,000 making a total of $462,000. This leaves a balance which we still need, according to our original request, of $365,000 for research fellowships. In our testimony before the House, we said that since $500,000 had been added to noncategorical research fellowships under the Institutes of Health, we might subtract $250,000 from our needed increase. We suggested then an increase of $115,000, but further consideration since that time of the vital need of increased duration and amounts for more experienced and long term research fellows and of the addition of foreign fellows, a source of very valuable research hitherto largely neglected, makes it quite clear that we can usefully employ the total increase requested of $827,000 which would be an addition now of $365,000 of research fellowships above the House figure.

C. Training grants: The same thing is true about training grants. The House happily added $858,000 to the budget of 1956. We had requested, after careful consideration, $958,000 which leaves still an increase to be requested of the Senate of $100,000. This should still further expand our old training programs and the development of new training in such subjects as genetics, biostatistics, biochemistry, physiology, public health, and epidemiology.

D. State control grants: We are asking, as we did originally, for an additional $1,125,000 for this important field. The reason for this is that the States are not yet able to underwrite their own full programs in the cardiovascular field even though they are at present greatly interested in the subject and are expanding their activities. The directors of the State public health programs in the cardiovascular field have already had a meeting and have shown surprising new interests and intelligent approaches which we should take advantage of this year. Eventually this doubtless should become a State activity but the time is not ripe at present for such a change.

E. Direct operations: Both the Bureau of the Budget and the House recognized the need of increase in allocation of support for intramural research and for the review and approval of grants, adding considerably to the figures of the National Advisory Heart Council 1957 budget. The National Advisory Heart Council, at the time of the preparation of the budget, was not adequately aware of these increased needs which are now well supplied, but for technical assistance there is still an item of $100,000 needed for direct operations.

F. New developments: Finally, we asked the House for $1 million for new developments for the reasons that will be stated shortly, in our 1957 budget we had requested an increase of $1,500,000, which was not recognized by the Bureau of the Budget or the House. Because of the addition of $450,000 to the research item under direct operations, we had informed the House that this item might be reduced to $1 million, but in view of the extent of new developments which has become more evident in the last few months since the House hearing we would return to the figure of $1,500,000.

We must enlist in order to expedite our researches as to the cause, diagnosis, and treatment of cardiovascular disease, such as expert workers in nonmedical fields—mechanical, hydraulic, and oil engineers, investigators in the field of pure physics, of research in fabrics, and of psychology and religion, social scientists, experts in education, and even athletic directors. In this category of new developments, we are also interested in the enlistment of promising young people of undergraduate level, in college and perhaps even in high school. Another item that needs exploration for which the Senate requested the Public Health Service to spend not less than $100,000 of new funds last year, but which was not available because of the inadequacy of last year's funds, is that of geographical research in epidemiological studies, that is, studies of the relationship of the ways of life and heart disease abroad and in this country. We have continued to carry on, with some difficulty in gaining financial support, by comparing this spring the Japanese living in Honolulu in the American way of life with the Japanese in the southern part of Japan living in the old country. The data are now being assembled from this research that took place in March and April and are bound to be of considerable interest and importance, but we need many more studies of this sort. Finally, another new development which needs more expansion is that of rehabilitation in which beginnings have been made, for example, studies under the wing of Dr. Howard Rusk and myself now in progress.

G. Fluid fund: It has been further suggested by Dr. Irving Wright and others that it would be extremely helpful to have an additional $3 million fluid fund for quick use in the followup of important new leads in any of the complicated fields with which we are involved, especially in the study of arteriosclerosis, coronary heart disease, and high blood pressure. Of this I myself would approve, as I am sure the other members of the National Advisory Heart Council would do also.

H. Construction: Inasmuch as the bill for the support of construction of medical research facilities is likely soon to be passed by both bodies of the Congress, it is timely to add herewith an item for construction in the 1957 budget. This figure, which is to be matched locally, amounts to $10 million per year for 3 years. It was estimated in the hearing before the House that this figure might be $6 million. Since then it has become evident that a more realistic figure would be $10 million for the extramural construction programs of the National Heart Institute.

I. Grand total: Thus, the total increase which we are asking of the Senate for the 1957 budget as requested by the National Advisory Heart Council above that allocated by the House amounts to $8,290,000. This includes the $3 million additional fluid fund but not the sum of $10 million for construction which we had not added to our request of the House because it was being considered then in a separate bill. With the passage of this bill, however, the $10 million should be added.

The grand total which we are requesting for the National Heart Institute for 1957 resulting from the addition of the 1957 House budget and the increase now requested amounts to $33,396,000, including the additional $3 million fluid fund but not the $10 million for construction. If that is added, as we hope it will be, the grand total comes to $43,396,000, of which $24,100,000 is for extramural support, including an item of $1,500,000 for new developments, $6,296,000

for direct operations, $3 million as a fluid grant, and $10 million for construction.

7. In closing, I would like to express my appreciation of the present opportunity, of past appearances allowed me, of the encouragement afforded us by this year's better recognition (though still inadequate) of our needs by the Bureau of the Budget, by the more realistic additional help (although also still inadequate) by the action of the House, and we hope by your own action in the Senate. My service with the National Heart Institute and National Advisory Heart Council ends this fall, after 8 years of a most stimulating and interesting experience, and it would indeed be gratifying if this year we might at last achieve the goal which has been painstakingly set by the National Advisory Heart Council, in cooperation with the citizens' committee. Finally, I want to pay tribute to the devoted and efficient service throughout the years by my colleagues, both physicians and laymen and laywomen, of the National Heart Institute itself and of the National Advisory Heart Council, and to your own outstanding interest, both in the House and in the Senate, in furthering research and education in behalf of the health, not only of the inhabitants of our own country but also of th peoples throughout the world.

The Civil-Rights Issue

EXTENSION OF REMARKS

OF

HON. JAMES H. DUFF

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Wednesday, May 16, 1956

Mr. DUFF. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the text of remarks by the Senator from New Jersey [Mr. CASE] at the banquet of the Pennsylvania Federation of Young Republican Clubs at the Bellevue-Stratford Hotel in Philadelphia on May 13, 1956.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

As young people interested in improving our great Government, I know you have given a good deal of thought to what I consider the No. 1 domestic problem of our Nation—how to accomplish the goal of equal treatment for all our people. In my opinion, this has become the most deeply divisive issue our Nation has faced in this century. Moreover, how we meet the problem is a matter of profound importance to millions outside the United States yearning and struggling for a better life.

There are those in this Nation who recognize the magnitude of the problem, but prefer to look away. There are those who can see it only in extremist terms, who would compel solutions, enforced, if need be, by punitive means. There are also those who would use it for narrow political ends. There may be some in our own party who take the short-range view that this is a matter splitting the Democrats and so let's stand back and let them fight each other.

But, in the long view, in the interests of our country, this is neither a sensible nor a morally just position to take. It is inconceivable to me that the Republican Party could adopt such a view. We cannot stand aside and watch this Nation be torn apart over an issue that can and must be resolved without resort to violence or compulsion.

The Negroes in our midst are Americans and have the same right to a vote, to a decent education, to a decent job, to a decent house, and to a decent life as the rest of us.

It seems to me high time to take the civil-rights issue out of the partisan arena. The hurling of wild predictions over what can happen if we give the Negro his long-postponed rights is harmful, as is the continuing exchange of charges over who's to blame for the situation. Meanwhile, the problem is aggravated as tempers flare among the extremists on both sides and the moderates are pushed ever farther and farther back from the conflict.

I can see no partisan advantage in watching American turn against American. This is a problem that cries out for calmness and moderation; for unity and understanding. This Nation has already discovered that in the sensitive area of foreign policy, a bipartisan approach is advisable, if not downright essential. It seems to me that the matter of racial relations and the broader one of civil rights should be moving in the same direction.

Our great need right now is to build a climate of opinion in which reasonable solutions are possible, to strengthen in all ways the position of those persons who could contribute to understanding and progress toward carrying out public school integration. This encouragement can take many forms—creation of opportunities for men and women of good will to meet and discuss ways of working out solutions to particular problems; sympathetic response to school districts that take steps toward fulfillment of the Supreme Court decisions and development of moderate legislation helpful to the same aim. At the same time, we need to refrain from words and actions which hinder rather than help progress and understanding. We must resist the temptation to take partisan advantage. Any smugness on our part; any ignoring of the fact that the North, where we Republicans live, is itself not without racial tension; any vain hope that we will profit while the other side fights—this approach is not going to help solve a problem which is too big for petty self-indulgence. The Supreme Court decisions call for great changes in long-standing habits of many of our States. This must be recognized by those who are truly interested in fulfilling our national conscience in a peaceful fashion.

President Eisenhower, in my opinion, is exerting the right kind of leadership. He has stood firmly for integration of our public

schools on a steadily progressive basis. This has been a real contribution and I know he will be leading the way toward other steps as we determine what others are necessary and advisable.

In addition to exercising the great influence of his office and his own reputation for high moral principles, the President has urged the adoption of a moderate legislative program to strengthen and expand our civil-rights statutes. These proposals are supported by many Democrats as well as Republicans already and if we can create a climate of moderation and reasonableness they can be enacted.

We, as individuals and as Republicans, have an opportunity as well as a duty to lend our strength to calm voices of North and South who would find ways of doing this job that needs so badly to be done. Neither extremism nor partisanship will win the political day, any more than they will carry us toward the goal of real equality, with justice, for our fellow Americans of whatever color.

The temper of the people is, I believe, moderate on this issue. As we demonstrate our good faith and deep interest in steady progress toward solution, public good will and support will inevitably follow.

A Midwestern Editor Analyzes the Political Situation in 1956

EXTENSION OF REMARKS
OF
HON. WILLIAM L. SPRINGER
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 16, 1956

Mr. SPRINGER. Mr. Speaker, a lot is being written in the national magazines with reference to the political situation and estimates for 1956.

Attached is an article by Edward Lindsay, editor of the Lindsay-Schaub newspapers, which is an interpretation of the electorate and the issues as of May of this year. Many of this editor's findings are based upon action by the Eisenhower administration and the countermeasures by the opposition.

It appears to me that this is a fair interpretation of midwestern feeling at this time on most of the major issues confronting the country. This article has overcome some of the mistakes made by nationally known syndicated writers who have tended to emphasize single major issues. Mr. Lindsay has tried to bring out the overall feeling of people, founded upon the impression which the Eisenhower administration has made at the broad base of public thinking. The article is attached herewith in full from the Decatur Herald and Review and other Lindsay-Schaub newspapers, of Sunday, May 13, 1956:

The overriding political fact of this 1956 election year seems to be majority satisfaction with the performance of the Eisenhower administration. The peace and prosperity theme is being accepted. Efforts at creating a rallying point for dissenters have shown vitality for a short time and then tended to dissipate.

Despite the congressional hearings staged by the Democratic majority in an effort to show that the United States is falling behind in military preparedness, the defense bill voted by the House without a dissenting vote provided only a little less money than the President asked for.

The great furor caused by the effort in both Houses to create a something-for-everybody farm bill has subsided with the President's veto and the inability of political observers to read anything that resembles a farm revolt into the results of primary elections held since the veto.

Democratic Members of Congress and Democratic candidates for the presidential nomination have found themselves in a dilemma in which they cannot get attention unless they make extreme proposals and extreme proposals invariably generate more opposition than support.

It seems to me that we are in one of those eras in which the public instinctively resents anything that can be read as monkeying with peace and prosperity. The Republicans at the moment are the beneficiaries of this in the way that the Democrats were the beneficiaries of a situation which some Republicans characterized with the crack: You don't shoot Santa Claus.

None of this is to say that all Republican Members of Congress will benefit from the national rosy glow in which President Eisenhower sits.

There are pockets of unemployment. There are industries and areas in which local maladjustments may be reflected in a protest vote against Republican Congressmen and possibly against a Republican President.

There is some indication in local areas of a swing away from long established ideas that were sure-fire vote getters for the Democrats. An example of this is in the Northwest where there is a strong indication that the voters are pulling away from their traditional enthusiasm for public power.

In the main, the Eisenhower administration has adopted the basic tenets of the New Deal in those areas that have wide public support. In the public power issue it is in a position to quote Franklin Roosevelt himself in considering public power as a yardstick against which to measure the effectiveness of private power activities. The only difference is that the Eisenhower administration has tried, and now finally with some success, to permit private power to demonstate its competency against the yardstick.

There is some indication that such strata of Democratic strength as the labor union vote and the Negro vote are now breaking up. It remains to be seen whether or not the South, which was not so solid in 1952, will remain fluid or tend to return to its historical single-party behavior.

The Eisenhower administration seems to have developed a considerable ability to withstand attack and to temper its policies to meet changing conditions, whether political or real.

The poise and self-confidence of the President have been demonstrated in recent weeks by his veto of the farm bill and the confusion he has created in Democratic ranks on the farm issue. Democratic Members of Congress seem to be genuinely uncertain as to whether or not they dare to refuse to pass the farm bill in substantially the form asked for by the President. So far the Democrats have been willing to stand on the soil bank plan without the President's prepayment provision. Whether or not they will have the courage to confront him for price supports for feed grains, and in this way invite a second veto, remains to be seen.

The President's change of pace in foreign policy is another indication of strength. He has known since before his election that it would be necessary for the United States to stand for liberalizing of trade policies for Japan and for our allies, if not for ourselves, in dealing with Red China. Now, in an election year, he has had the courage to say this.

Moreover, he has been willing to initiate an expansion of what the Democrats call the point 4 program of economic aid to backward countries. This program is being pushed as an extension in the activities in the North Atlantic Treaty Organization, with some indication that private capital will be invited to participate wth Government in the development of needy countries.

The Democrats are unable to attack these policies but only to snipe at them a little, and ineffectively.

International Labor Organization Conference at Geneva

EXTENSION OF REMARKS
OF
HON. AUGUSTINE B. KELLEY
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 16, 1956

Mr. KELLEY of Pennsylvania. Mr. Speaker, even though I will probably have to interrupt the trip to fly back to the United States for the House debate on my school construction bill, I am looking forward to attending sessions of the International Labor Organization conference in Geneva, Switzerland, next month.

As the ranking Democratic member of the Committee on Education and Labor of the House of Representatives, I have been designated by Speaker SAM RAYBURN to serve along with the senior Republican member of the committee, Congressman SAMUEL K. MCCONNELL, JR., of Wynnewood, Pa., as a congressional adviser to the American delegation at this international conference. The delegation we will advise consists officially of one employee representative, one employer representative, and a Government official. Other countries are similarly represented.

Of course when the Soviet Union sends a delegation to this conference the idea of anyone in the delegation being an "employer representative" or employee representative" is ridiculous on its face, because all delegates from the Soviet Union are, by the very nature of the Communist system, Soviet government officials. But that would hardly be a reason to refuse to allow American participation, although that has been the proposal of some of our big business organizations.

As a matter of fact, the ILO is one of the best forums we have—we in the free world—for showing up the tryranny and reaction of Soviet policies. The free nations completely dominate the policies of the ILO, and it is a wonder Russia even participates, since so much of the work of the ILO centers on the attempt of free nations to eliminate the type of regimentation of workers so typical of the Soviet system.

It is, therefore, hardly coincidental that just before its delegation goes off to an ILO conference at which the quesion of forced labor will be voted on, the Soviet Union has suddenly repealed or modified its long-standing decrees providing harsh penalties or jail terms for quitting a job or trying to change jobs. Russia is now said, also, to be opening

up some of its forced labor camps, and otherwise relaxing its barbarian policies against its own people.

And, in one of the most revealing episodes of all, the Soviets have suggested to Russian "unions" that they should engage more often in "a good wrangle" with the Soviet industrial management people—but not to the point of strikes, of course.

COLD WAR TACTICS

All of these developments sound a real warning to us in our efforts to counteract Communist propaganda drives in the so-called uncommitted parts of the world. While Russia takes steps like these to make the world think she is becoming more civilized, we in this country have been arguing over American participation in ILO. Some of our industrial leaders have even gone so far as to express dismay that the Communist delegates at these conferences could in some way subvert America or other free nations.

This does not make us look very strong or very confident about our own economic system. It sounds as if we are fearful of seeing free competition in the world of ideas as between our kind of industrial democracy and the Soviet system of economic repression and regimentation. The truth is that our brand of economics always shows up much better than the Communist variety if we place the two solidly in contrast in world gatherings like the ILO.

This Administration has been showing amazing timidity about the slave labor issue, even though this issue was originally raised in the ILO by the United States—under previous administrations. The Eisenhower administration is so afriad of providing ammunition to the Republican isolationists and Bricker amendment supporters in Congress that it has dodged and twisted and ducked in trying to avoid facing the issue in the ILO. Now, however, the decision is that the United States delegation will be free to support moves to bar from world trade goods produced by forced labor. But for a while, high-level State Department opposition almost made us look rather silly on this. That kind of timidity plays right into the hands of the Communists.

Fluoridation of Drinking Water

EXTENSION OF REMARKS
OF
HON. WILLIAM A. DAWSON
OF UTAH
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 16, 1956

Mr. DAWSON of Utah. Mr. Speaker, at the request of a resident of my district, I am inserting a letter I received recently for the information of other Members of Congress. The letter follows:

DEAR REPRESENTATIVE DAWSON: I understand that the United States Public Health Service is sponsoring a bill to spend upward of $2 million of tax money to promote fluoridation of American drinking water.

Are we to have our tax money used to brain wash us with such obvious untruths as the AMA Journal (December 10, 1955, p. 1475) comes out with? They recommend boiling to remove fluorine from water. Fluorine can be highly concentrated by boiling; it cannot be boiled out. Nor is it a neutrient as they say. It is inorganic and cannot be assimilated by humans or animals. During the period when teeth are forming, between the ages of 3 and 9, it can harden enamel, but 17 to 35 of every thousand have dark fluorine stains that disfigure them for life. After the teeth erupt the fluorine can only accumulate in the bones to rot or make brittle, and if fluorine is no more toxic than salt of vitamin A as they say, how come hog remedies containing it warn not to give it to farrowing pigs because it causes abortion? What about pregnant women?

This bill should be killed. If it is not, at least please see that any committee is made up of people who are not controlled by the AMA or fluorine interests.

Please read this to Congress and enter it in the CONGRESSIONAL RECORD.

Sincerely yours,

Associate Professor MABEL FRAZER.

SALT LAKE CITY, UTAH.

Providence Hospital, Portland, Oreg.

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Wednesday, May 16, 1956

Mr. NEUBERGER. Mr. President, typical of the courage and determination of the West is the important role played by the Catholic Sisters of Providence, who came to the Oregon Territory in December 1856, when Mother Joseph braved the frontier wilds to found Providence Academy, in nearby Vancouver, Wash., on the great Columbia River.

The Catholic Sisters, of Providence have played a significant and humanitarian role in the health and well-being of our people in Portland and the Pacific Northwest, operating three fine hospitals in the Portland area—Providence and St. Vincent's in Portland, and St. Joseph's in Vancouver, Wash. The Sisters of Providence have devoted themselves to helping the sick, the poor, the needy, the aged, and the orphans.

Mr. President, I ask unanimous consent to place in the Appendix of the RECORD an excellent article on Providence Hospital by Gerry Pratt, from the Northwest rotogravure magazine of the Sunday Oregonian for May 6, 1956.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THANKS BE TO PROVIDENCE

(By Gerry Pratt)

High in the attic of the big rambling schoolhouse that is Providence Academy, tucked away in a quite corner, rests a tired but brave-looking little red trunk. Inside, folded among the old wax, the three books and the well-worn tools, is a story of the West. For this was the trunk and these were the tools of Mother Joseph of the Sisters of Providence.

A strong, heavy-boned women with the courage of David and the faith of Daniel, she helped hew this civilization from the unsettled wilds of the Pacific Northwest. In the beginning she led a band of five, and between them they faced more dangers than many a sourdough.

When they stepped onto the banks of the Columbia in 1856, after steaming north from San Francisco, they faced the job of planting the seed of charity in the West—of establishing the order of Providence in the wilderness.

They did it well. Beginning December 8, 1856, when she founded Providence Academy in Vancouver, Mother Joseph launched a campaign of building that stretched from New Westminister in British Columbia to Oakland, Calif. St. Joseph's hospital in Vancouver, Wash., Providence and St. Vincent's in Portland are only three of the 34 institutions she left to those who came after her.

But the academy, serving as home for the aged, orphanage and now a parochial school for youngsters from nursery age through the 12th grade, was Mother Joseph's first love. It was her cornerstone, and she built it from nothing but the few tools packed away in her red trunk.

That was 100 years ago, and today that little trunk, which has been retired since Mother Joseph's death on January 18, 1902, is being dusted off and brought out from its hiding place in the red brick schoolhouse in Vancouver, Wash. With the trunk comes the story it has to tell.

It was a hot and dusty day in 1876 when the stagecoach carrying Mother Joseph through the bandit territory of Colorado came to a rattling stop in a rocky canyon. At her feet, in a small black overnight bag were 200 silver dollars.

The nun had been down in the mine shafts of Montana, across the range lands of Idaho and Colorado collecting the money to help pay the debts of the schools, orphanages, and hospital her Sisters were busy building in the Northwest.

It wasn't much money—but to Mother Joseph it was indeed precious. She was thinking of the money and the need of it and was praying when she stepped into the bright sunlight to face the cocked pistols of two robbers.

Her diary tells what happened. None of the passengers dared resist or to stay in the coach for fear of being shot by the desperate men. "Pray, pray, pray," said Mother Joseph as she dropped her heavy bag at the feet of the bandits.

With the outlaw pistols pointed at them, the passengers were ordered to return to the coach and leave their bags heaped in the roadway. Mother Joseph, of whom some said had the faith that could move mountains, was praying audibly to St. Joseph and reminding him of his duties in protecting her and hers. A sudden impulse seized her.

"You there—Mister, Mister," she said in a loud and commanding voice to the younger of the two armed men. The other passengers cowed and tried to hush her. But she persisted.

"My boy," she called again, and the young robber looked up. "My boy, please hand me my bag—no, not that one—the little black one. Yes, that's it. There is nothing in there for you."

Gingerly, his gun pointed straight at her midsection, the bandit raised the bag and handed it into the outstretched hand of the nun.

"Thank you—and God bless you, young man," she said, as she stepped into the coach still praying for all to hear. And as the thieves returned to their looting and the coach rolled off, she gave the young man a gracious nod and tucked the bag, complete with its $200, under her feet.

Such was the faith of Mother Joseph, and such was the faith of those who followed her.

At Providence Academy there is a Sister Stanislaus—known to the children as Sister "Santa Claus," as much for her kind nature

as for the awkward pronunciation of her name. She knew Mother Joseph and worked with her before the turn of the century.

"I can still see her—complete with saw and hammer at her girth—striding through the school and praying aloud while she worked," said the little old nun, in recalling some of the memories from the trunk.

"There was the year the Columbia burst its banks. It was a hard year, and there was not much to keep the orphans through the winter. The water kept rising until it reached the edge of the school's small vegetable garden upon which we relied for much of our winter stores.

"Suddenly Mother Joseph appeared from one of her work corners with a statue of St. Joseph—she had carved it from Douglas fir. She placed it at the water's edge and ordered: 'Go no farther.' There wasn't a doubt in her mind that the water would stop.

"She turned her back on it and walked away. The river never rose another inch."

When the city of Vancouver came to the big, stone academy Mother Joseph had built for the orphans, the old, the poor, and the needy, officials levied a water rate against the prosperous-looking school.

"Forty-six dollars a month," the water inspector said, in offering the city's water service to the school.

"Thank you," replied Mother Joseph. "I'll build my own well." And she did. It still stands ready and serviceable on the old schoolgrounds.

This then was the driving force—the guiding spirit of the early Sisters of Providence. Hers was the gift of organization—the talent of a builder. She designed the big school down to its smallest detail. She hand-carved the intricate altar of the chapel and the big ornate chapel doors. She made wax figures of the Christ child and spent hour upon hour at the fine needlework for the vestments of the priests who said mass there.

She is remembered, that brave, strong, inspired nun who came to this land 100 years ago, wherever there are sick in need of care, homeless in need of love and wherever you see the distinctive habit of the Sisters of Providence.

But only the mute tools and treasures of the tiny red trunk can tell the true story of Mother Joseph and those first sisters of the West. These bear the signs of grueling wear, show the marks of painful labor and tell the story of the hope that made the work of Providence possible.

This band will be remembered for its colorful exploits—riding in special habit through the wooded trails, plunging into mine shafts and tramping across the wheat plains in search of funds. Mother Joseph once stood undaunted before a band of scalp-hunting Indians and was spared because of her dignity and bravery.

It is so that the glitter of these works won't hide the gold of the heart behind them that the trunk is being brought from retirement.

A Fine Report About United States Mistakes in Asia

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 16, 1956

Mr. McCORMACK. Mr. Speaker, during the fall of last year a subcommittee of the Committee on Foreign Affairs, the chairman of which subcommittee being our distinguished friend and colleague from Wisconsin, Mr. ZABLOCKI, spent 2 months studying the Middle East, south and southeast Asia for the purpose of a report to the Congress. The subcommittee constituting the mission consisted of 6 members. They traveled nearly 31,000 miles and visited 25 countries, starting in Greece and ending up in Japan. This subcommittee performed an important mission.

I congratulate the chairman of the subcommittee, Mr. ZABLOCKI, and all the members of the subcommittee for the sacrifices they made in the performance of their trying task and for their constructive report.

The gentleman from Wisconsin [Mr. ZABLOCKI] is recognized as one of the ablest and hardest working Members of the House of Representatives. His knowledge of foreign affairs is profound. He is recognized as one of our outstanding Members in the field of foreign affairs. And this is particularly important to our country at this trying period of the world's history. The people of his district are justified in feeling proud of him and the fine character of service which he is rendering as their Representative in the Congress of the United States.

The subcommittee made a most interesting and constructive report of 213 pages. It is one of the finest reports which I have ever read made by any committee or subcommittee. Again, I congratulate the gentleman from Wisconsin [Mr. ZABLOCKI] and all the members of his subcommittee for the excellent contribution that they have made in their report.

In my extension of remarks, I include a deserving editorial about Mr. ZABLICKI and his subcommittee entitled "A Fine Report About United States Mistakes in Asia," appearing in the Milwaukee Journal of May 13, 1956:

Congressional committee reports are usually pretty dull fare, fit for filing. Occasionally, however, one comes along that is as interesting as it is informative. Such a report is that of the study mission of the House Committee on Foreign Affairs.

If you'd like a stimulating armchair trip through a most important part of the world, a real insight into the tangled affairs of the Middle East, sound explanations of why the West is having such headaches in Asia, this is your dish.

The mission, headed by Wisconsin's CLEMENT J. ZABLOCKI, Democrat, Milwaukee, spent 2 months last fall studying the Middle East, south and southeast Asia. The 6 members traveled more than 30,800 miles, visited 25 countries, started in Greece and ended up in Japan. When they got back to Washington they studiously worked out their comprehensive report.

Actually, there's nothing quite like it. Books are written about individual nations, or even geographical areas. But no one has offered a panoramic sweep of the vital areas fringing Communist Russia and China that form today's major battleground between freedom and tyranny. This the study mission, with aid from its staff members and assistance from the State and Defense Departments, has done.

Here is a quick education in the geography, history, economics, religion and politics of the 25 nations visited, plus a discussion of each nation's problems with its neighbors and with the United States.

There are significant conclusions, too, about American policies toward individual countries and, more important, toward the whole of free Asia.

The study mission found neutralism on the increase. It blamed this on changed Communist tactics and on American acceptance of "the Communists into respectable society at Geneva." It said the conviction is strengthening in Asia that the United States stands with the colonial powers of Europe rather than with Asian peoples. It complained that we are still not doing a good job on human relations in our various aid programs, and added:

"The key thing is not the amount of aid, it is the manner. It is not enough to analyze figures; we must do a better job of analyzing people. This is where the Communists have left us far behind."

The report is 213 pages long. It is interestingly written. It has many maps. It will tell you most of what you need to know to be considered informed about a part of the world that is going to be important to Americans for a long time.

Congressman ZABLOCKI will be glad to provide copies of the study mission report to those requesting them. Requests should be addressed to him at the House Office Building, Washington, D. C.

The Practising Law Institute

EXTENSION OF REMARKS
OF
HON. HERBERT ZELENKO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 16, 1956

Mr. ZELENKO. Mr. Speaker, the Practising Law Institute, a nonprofit educational institute, was founded 23 years ago in New York by Attorney Harold P. Seligson. Since that time it has achieved international recognition in the field of postlegal education. It is performing incomparable public service in keeping the profession informed of the development of the law and its related techniques. As a practicing lawyer and a lecturer for the institute, I have long felt the record of its achievements should be made part of the official archives of this Government.

In April 1956, the Reporter, official publication of Phi Alpha Delta, a national law fraternity, published a most interesting and instructive article on the history and work of the institute. I now have the pleasure of presenting it:

One of the most encouraging recent developments in our profession has been lawyers' increasing attendance at postadmission education programs. Many are conducted under the auspices of bar associations and law schools; particularly effective work is being done in California, Texas, Pennsylvania, New York, and Boston.

Still in the foreground of this brightened continuing education picture is the Practising Law Institute, which 23 years ago became the Nation's pioneer in professional instruction for practicing lawyers. During 1955, approximately 10,000 lawyers attended PLI Saturday forums, summer courses, evening lectures, and special programs, spending a total of 190,000 man-hours on practical professional education.

The institute's courses are largely held in New York City, where its programs are enthusiastically received. Over 2,000 lawyers attended PLI's evening courses last year. Its 1955 summer session was attended by some

1,500 attorneys from all parts of the Nation, while the year's Saturday forums drew attendances totaling over 5,000, of whom about one-third came from 20 States outside New York. PLI monographs distributed in the United States and Canada now total 1,500,000 copies.

SUMMER SESSION

The summer program, in which 5 full days are spent on each subject, covers the practitioner's problems in a variety of fields. In addition to courses in trial technique, medical proof, taxation, and estate planning, the summer session includes special annual programs for patent attorneys and members of corporation legal departments. The latter, for instance, began in 1952 with general lectures for corporation staff lawyers; in 1953 there were panel discussion on legal aspects of marketing; in 1954 the subject was legal aspects of corporate management, and in 1955 the program was built around the concept of preventive law in discussing effective functioning of the corporate law department.

The 1956 summer session will provide 15 courses over 4 weeks, beginning July 9. As in the past, lawyers from all parts of the country will come to New York for 1 or more weeks of stimulating training. A week-by-week schedule of the summer session follows:

Week of July 9: Public prosecutors, current problems in patent law, trial preparation.

Week of July 16: Corporate-law departments, Federal taxation, estate planning, trial technique.

Week of July 23: Secured transactions, closed corporations and taxes, advanced estate planning, medical aspects of litigation.

Week of July 30: Labor-law problems, real estate and taxes, representing estate fiduciaries, advanced medical proof.

A $50,000 grant made by the Carnegie Corp. in 1953 has enabled PLI to furnish scholarships for prosecuting attorneys who otherwise would be unable to attend its public-prosecutor's course. This week-long summer program, designed to help prosecutors improve their professional skills, has been praised by J. Edgar Hoover and endorsed by the National Association of County and Prosecuting Attorneys. Lecturers in the course are public prosecutors of specialized experience. Panel discussions provide opportunity for questions from enrollees, numbering about 150 each summer, who find that the exchange of ideas with prosecuting attorneys from different areas gives them fresh viewpoints and new approaches to their problems.

ADVANCED-LEVEL PROGRAMS FEATURE SATURDAY AND WEEKEND FORUMS

Development of programs on an advanced level for lawyers well up in their specialties has been perhaps the most significant of the institute's recent activities. Outstanding among these programs is the Saturday or weekend forum, where typical problems in a particular area of practice are presented to large audiences by discussion panels composed of experts including Government lawyers wherever appropriate.

In forums on aspects of commercial practice careful consideration is given to the business background, as well as the tax aspects and legal problems. PLI has long recognized the importance of tax matters; its courses on Federal taxation have been particularly successful, and more than 10 years ago were sponsored on a national basis by the section on taxation of the American Bar Association. In recent years it has sought to furnish lawyers with a better understanding of the financial, economic, and business aspects of their clients' problems.

FORUMS GIVE OPPORTUNITY FOR PUBLIC SERVICE

The Institute's Saturday forums have sometimes rendered important public service apart from their usefulness to members of the bar. A program on the 1954 Revenue Code was held while the bill was still pending in Congress, after having passed the House. Exchanges between government lawyers and private tax practitioners brought to light flaws in the House bill. Many revision in the law as finally passed, stemmed from suggestions made by PLI panel members and audience questioners.

Similarly, at the October 1955, forum on Negotiating Settlements in Personal Injury Actions, the 700 lawyers present were asked if they would like to have insurance company claim offices open evenings for settlement conferences. The enthusiastic response from attorneys too busy for daytime negotiations led the Maryland Casualty Co. to open its offices one night a week. Eight other casualty insurance companies shortly followed suit. A large number of claims have been settled at these evening sessions, thus helping to reduce the volume of negligence cases which clog the court calendars.

MONOGRAPHS ARE OFTEN REVISED AND EXPANDED

Mindful of the need to keep attorneys abreast of new developments in their specialties and related fields, PLI continually brings up to date its more than 70 monographs and adds news titles. The Institute's widely used series, Fundamentals of Federal Taxation, which analyzes Federal income, estate and gift tax law and practice, has been revised in the light of the 1954 Revenue Code. The board of editors for the revision is headed by Prof. Robert Anthoine of Columbia University Law School and includes Norris Darrell of Sullivan & Cromwell; Dean Erwin N. Griswold of Harvard Law School; Thomas N. Tarleau of Willkie, Owen, Farr, Gallagher & Walton; Weston Vernon, Jr., of Milbank, Tweed, Hope & Hadley; Dean William C. Warren of Columbia University Law School, and 21 other distinguished tax experts.

Other PLI monograph series deal with Trial Practice and General Practice. The price of the Institute's publications remains at its original modest level (usually $1.50 or $2 a copy), even though revision has doubled the number of pages in many of these handy, pocket-size books. Recent monographs include Income Taxation of Estates, and Trusts, Secured Transactions, Discovery Proceedings Under the Federal Rules, and Federal Pre-Trial and Jury Trial Procedure. Among the lately revised titles are Estate Planning, Preparation and Trial of Tax Cases, Corporate Practice, and Understanding the Antitrust Laws.

PLI PROGRAM FOR YOUNG LAWYER INCLUDES SCHOLARSHIPS, LOANS

The Practicing Law Institute still feels that one of its primary tasks is to help the young lawyer obtain practical knowledge during his first years at the bar. For instance, Harold P. Seligson's well-known monograph, Building a Practice (revised in October 1955), tells him how to organize an office and how to obtain and deal with clients. The General Practice evening course (20 two-hour sessions) provides training in the lawyer's approach, working methods and techniques in each of the major fields of practice. Courses in trial preparation and trial technique furnish a thorough grounding in the strategy and tactics of the courtroom.

PLI provides scholarships for worthy young lawyers wishing to enroll in appropriate courses. These, in the form of both outright gifts and long-term loans, are financed from the Robert P. Patterson fund, established by the Institute in 1952 in honor of the late Secretary of War, who was its president at the time of his death.

Harold P. Seligson, the founder of the Institute and originator of many of the methods used in post-admission education, is still its director and guiding spirit. PLI's trustees include judges, law professors, and outstanding lawyers, headed by President Nicholas Kelley of Kelley, Drye, Newhall & Maginnes; Board Chairman Arthur A. Ballantine of Dewey, Ballantine, Bushby, Palmer & Wood; Vice President James A. Fowler, Jr., of Cahill, Gordon, Reindel, & Ohl; Treasurer Alfred McCormack of Cravath, Swaine & Moore; and Secretary Ralph Montgomery Arkush. The offices of the Institute, which is chartered by the State of New York as a nonprofit educational institute, are at 20 Vesey Street, New York City.

The Practicing Law Institute, like other organizations whose purpose is to extend continuing legal education, has had great success in what is still an experimental field. PLI constantly seeks new and better methods for the fulfillment of this purpose, as do the hundreds of lawyers who share their skill and knowledge as authors, lecturers, and panel members. These men, whose efforts bring the bar ever closer to a high level of extensive postgraduate education comparable to that of the medical profession, find their greatest encouragement in the fact that each year more lawyers attend programs like those conducted by PLI. Attorneys and the public have increasingly come to recognize the value of continuing education in raising the bar's professional standards and insuring the better administration of justice. Public recognition and higher standards are both measures of the success of the Practicing Law Institute and its kindred organizations, but such measures can satisfy these institutions only in the process of being surpassed.

Investigation of Regulatory Agencies

EXTENSION OF REMARKS

OF

HON. JOE L. EVINS

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 16, 1956

Mr. EVINS. Mr. Speaker, in connection with the statement which I made earlier today concerning the operation of our regulatory agencies in their relation to small business and our free-enterprise economy, under unanimous consent, I ask to have reprinted in the Appendix of the RECORD statements which I made at the opening of these investigations.

The statements follow:

THE FEDERAL TRADE COMMISSION

This subcommittee of the House Small Business Committee is commencing hearings this morning on the organization and procedures of the Federal regulatory commissions and agencies. Our hearings today will deal with the Federal Trade Commission.

This Commission is charged with the duty of enforcing the antitrust laws and other statutes in the public interest. Other regulatory commissions and agencies enforce other statutes and issue regulations which vitally affect small business. These agencies and commissions were established to carry out policies laid down by Congress. These policies basically are for the regulation of commerce. Power to regulate commerce is given Congress by section 8 of article I of the Constitution of the United States.

In several instances Congress has delegated its power in this field under specific policy guides and with specific objectives to agencies of the Government. In no instance does any of these agencies have the power to regulate commerce except as specifically provided for by Congress. At no place in the

Constitution can it be found that any power to regulate commerce is delegated to the President.

In approving the legislation which established the regulatory agencies and commissions, Congress carefully and deliberately provided for such regulation to be independent of the executive branch of the Government. The constitutional and statutory concepts regarding the independence of these agencies and commissions have been affirmed by the Supreme Court of the United States in a number of cases, an important one of which was *Humphrey's Executor* v. *U. S.* (295 U. S. 602). That case arose after the President of the United States removed the late William H. Humphrey as a Commissioner of the Federal Trade Commission, on the ground, as the President said, that "the aims and purposes of the administration with respect to the work of the Commission can be carried out most effectively with personnel of my own selection." The Supreme Court held that the President of the United States was without authority to effect such removal of Commissioner Humphrey. In reaching this decision, the Court reviewed both the legislative history and the constitutional concepts underlying the FTC and said among other things the following:

"It is charged with the enforcement of no policy except the policy of the law. Its duties are neither political nor executive, but predominantly quasi-judicial and quasi-legislative.

"The Federal Trade Commission is an administrative body created by Congress to carry into effect legislative policies embodied in the statute in accordance with the legislative standard therein prescribed, and to perform other specified duties as a legislative or as a judicial aid. Such a body cannot in any proper sense be characterized as an arm or an eye of the executive. Its duties are performed without executive leave and, in the contemplation of the statute, must be free from executive control."

The Court further stated with reference to passage of the Federal Trade Commission Act:

"The debates in both Houses demonstrated that the prevailing view was that the Commission was not to be 'subject to anybody in the Government but * * * only to the people of the United States; free from 'political domination or control' or the 'probability or possibility of such a thing'; to be 'separate and apart from any existing department of the Government—not subject to the orders of the President'."

And here the Court spoke as it has many times before and since, on the separation of powers of our Government, as follows:

"The fundamental necessity of maintaining each of the three general departments of Government entirely free from the control or coercive influence, direct or indirect, of either of the others, has often been stressed and is hardly open to serious question. So much is implied in the very fact of the separation of the powers of these departments by the Constitution; and in the rule which recognizes their essential coequality. The sound application of a principle that makes one master in his own house precludes him from imposing his control in the house of another who is master there."

However, as I pointed out on February 23, 1955, when our subcommittee was organized in this session of Congress, this committee has received a number of disturbing reports, in the press and otherwise, about the regulatory agencies, the FTC and other commissions. According to these reports the Hoover Commission reorganization for these commissions has effected radical changes in their basic concepts. Specifically the Hoover Commission plans make the chairman of each commission responsible to the President, to serve at the pleasure of the President. They give the chairman complete control and direction over the administration of the commission. Some of these reports suggest secretive and mysterious connections between the White House and these commissions.

For example an Associated Press story appearing in the press on March 3 of this year was to the effect that counsel of the Securities and Exchange Commission had been cited for contempt of a district court of the United States for refusing to produce certain SEC records in a public court trial. It appears that SEC insisted that this Commission is responsible to the executive branch of the Government, and is privileged to keep its records secret from the judicial branch. Yet the records in question were involved in a quasi-judicial action of that Commission which was properly under review by the court.

On last Tuesday, July 12, the Chairman of the SEC refused to tell a subcommittee of the Judiciary Committee of the United States Senate whether or not he had talked with anyone in the White House about the issuance of an order that the SEC postpone hearings. It is significant that the Chairman of the SEC did not claim privilege of secrecy on the ground that this was in the public interest or necessary to the security of the country. He claimed it a privilege to keep secret whether or not the President of the United States or his aids had influenced actions of the Securities and Exchange Commission.

Recently there has been considerable discussion in the press and elsewhere concerning some alleged overlapping consideration and action by the White House respecting the recent quasi-judicial handling of the Civil Aeronautics Board of a matter involving one very large and another small airline. If these reports concerning that matter should prove to be true, it would seem that not only are there connecting wires between the White House and the CAB but in that instance they became crossed and short circuited.

Earlier, Business Week magazine carried a lead article on what it titled "Republicans Reshape the FTC." This article appeared in the issue of June 5, 1954, said that the Federal Trade Commisison was undergoing a change "in makeup, in philosophy, in organization." This article went on to say:

"Basically, of course, FTC remains an enforcement agency. * * * FTC's job has in no way changed, but the way it intends to carry it out has changed. As compared to the way the Democrats did things, the Republicans are making it easier for the businessman who is up on the FTC carpet, harder for the FTC lawyers handling the cases. * * * Some observers say that, as a practical matter, FTC is setting standards of proof that will make the lawyers' job almost impossible. * * * Finally, FTC has just adopted a complete reorganization program. The immediate significance of the reorganization, however, is that it gives (Chairman) Howrey the chance to name his own team. When the plan becomes effective July 1, the Republican majority will really have come into its own."

Clearly, one of the reasons the Congress had in mind for establishing the Federal Trade Commission as an agency independent of the President was to make certain that in the enforcement of antimonopoly laws it would remain free from political influence and not become involved in political considerations in the handling of antimonopoly matters.

The Congress realized that the Antitrust Division of the Department of Justice is subject to the direction of a political appointee, subject to removal at the pleasure of the President. Consequently, the Congress had every reason to believe that the Attorney General in his directing and prosecution of antimonopoly cases would do so in a manner in keeping with the views of the White House. Support is indicated for that belief in a recent press report to the effect that the Attorney General flew to Denver last summer to discuss with the President of the United States what should be done by the Antitrust Division of the United States Department of Justice about the proposed Bethlehem-Youngstown steel merger. It was to eliminate the problem of having all antimonopoly law enforcement in such hands that the Congress established the Commission independent of the Executive.

It is our purpose, therefore, to determine through these hearings whether it is true, as we frequently hear, that these supposedly independent commissions have become political puppets on telephone wires leading from the White House or from a political committee. Specifically, we expect to find out whether or not the reorganizations which have resulted from Hoover Commission proposals or otherwise have changed the effectiveness of these commissions in carrying out their responsibilities. This committee expects to inquire whether the conduct of these commissions and their officials make for effective enforcement of the laws assigned to them. We are interested in determining whether the Federal Trade Commission is effectively enforcing the statutes designed to protect small business against monopolistic practices and unfair methods of competition and whether the Commission is operating independently of Executive direction.

I am advised that at the FTC there have been at least two reorganizations within the Commission since the Hoover Commission submitted its recommendations on this Commission. We believe it is proper for us to inquire into the purposes of those reorganizations and the effects upon small business. At a later date the committee will make inquiry into specific legal cases undertaken by the Commission.

This subcommittee recognizes, as does the House Small Business Committee, the vital importance and the high purpose of the job which the FTC has to perform in the public interest. I am personally keenly aware of these things, as are several members of our committee staff—who were former employees of the Commission. It is intended that these investigations shall be constructive and, we trust, helpful in carrying out the mandate of Congress, and in assisting the Commission in being useful and more effective in reaching its declared goals and objectives, free from improper influences exercised upon its decisions in the public interest.

THE FEDERAL POWER COMMISSION

Our hearings today will concern themselves with the operations and functions of the Federal Power Commission. As provided for in the provisions of the rules of the House of Representatives—this statement is somewhat repetitious—the purposes of these hearings were stated in my public announcement. At the opening of these hearings it was to determine whether these agencies have ceased to be independent, as intended originally by Congress.

As we know, the Federal Power Commission was reorganized under Hoover Commission Proposal No. 9, I believe. That plan provides for the appointment of a Chairman by the President. The position is responsible to the President and the Chairman serves at the pleasure of the President. Under this plan the Chairman has complete control and direction of the Commission.

In addition, this committee has been informed that the Chairman of the Federal Power Comission and others directly connected with the executive branch of the Government instigated and brought about

a further reorganization of the Federal Power Commission.

Information before us concerns these latter shake-ups and shiftings of the organization of personnel resulting in the removal from key regulatory policy positions of public officials and public servants of long years of expcrience who have dedicated themselves and have spent a large part of their lives in the public policy specified in the laws enacted by Congress to be administered by the Federal Power Commission.

It is our information that control over the policies and functions and duties previously asserted by these men has fallen into the hands of a relatively few employees without experience in serving the public interest in the field of the Federal Power Commission. On the contrary, these employees have come to their positions with the thought in mind that the public policy expressed in the laws entrusted to the Federal Power Commission, they are not in sympathy with them, and they should not, therefore, be enforced.

It is our purpose to determine whether any of these facts are true as they have been brought to the attention of this committee.

We are mindful that the Federal Power Act, as amended, and with particular reference to title 16, United States Code Annotated, section 803 of the code, provides that combinations, agreements or arrangements or understandings, expressed or implied, to limit the output of electric energy, to restrain trade or to fix, maintain, or increase the prices of electrical energy or services are prohibited by this act.

The information before us does not indicate that the Federal Power Commission has given full force and effect to that expression of public policy. Failure in that regard is looked upon as dangerous to the maintenance of our free competitive enterprise system and detrimental to a small, vigorous element of our economy.

Now, that sounds like a big order, but we probably will be able to cover these matters without too much time of the members of the Commission. Also we are in the closing days of the Congress, as you know, also.

THE FEDERAL COMMUNICATIONS COMMISSION

This subcommittee of the House Small Business Committee is resuming hearings this morning on the organization and procedures of the Federal regulatory commissions and agencies. Our hearings today will deal with the Federal Communications Commission.

At the outset, I would like to repeat again the subcommittee's jurisdiction and purpose in holding these hearings.

House Resolution 114, approved by the House on January 27, 1955, directed this committee to study the problems of all types of small business existing, arising, or that may arise with particular reference to whether Government agencies adequately serve and give due consideration to the problems of small business. Subcommittee No. 1 was established by the full committee to carry out this congressional directive.

The Federal Communications Commission and the other regulatory agencies were created by the Congress for the purpose of carrying out legislative policies of the Congress. In no instance does any of these agencies have the power to regulate any phase of commerce except as specifically provided by the Congress.

In approving the legislation which established the regulatory agencies and commissions, Congress carefully and deliberately provided for such regulation to be independent of the executive branch of the Government and the industries to be regulated.

Moreover, the independence of these agencies and commissions from the executive branch has long been recognized by the Supreme Court as an important part of our constitutional doctrine of separation of powers. As stated by the Court in an important case:

The fundamental necessity of maintaining each of the three general departments of Government entirely free from the control or coercive influence, direct or indirect, of either of the others, has often been stressed and is hardly open to serious question. So much is implied in the very fact of the separation of the powers of these departments by the Constitution; and in the rule which recognizes their essential coequality. The sound application of a principle that makes one master in his own house precludes him from imposing his control in the house of another who is master there." (*Humphrey's Executor v. U. S.* (295 U. S. 602)).

With particular reference to the Communications Act, 1934, Congress attempted to strengthen the independence of the Federal Communications Commission from political control of the executive branch by providing that not more than 4 of the 7 Commissioners shall be from the same party. To keep the Commission free from industry control, Congress provided that no Commissioner could be financially interested in any corporation or firm subject to regulation by the Commission.

In this connection this committee has received a number of disturbing reports indicating that the Federal Communications Commission is not in fact an independent agency or acting independently. There have been brought to our attention reports from individuals, Government officials, and the press that the Commission has become responsive not to principles and policies set forth by Congress, but instead the Commission has become responsive to, or under the influence and control of the White House, and the industry which the Commission is empowered to regulate. Such reports, if true, would vitally affect small and independent business in the communications industry and would prevent adequate consideration by the Commission of their problems.

I would like to give a few specific examples to show the nature of the reports that have come to the attention of the subcommittee.

We have received reports of changes in personnel and procedures in the FCC. For instance, as early as January 19, 1953, one of the leading trade publications, Broadcasting and Telecasting magazine, reported:

"After a 20-year patronage drought, it isn't difficult to understand the desire of the Republicans to shake loose as many jobs as possible in official Washington. But in their zeal to run the opposition out of office and reward the loyal party workers, there are signs that they intend to use a meat-ax rather than a scalpel.

"The reports are somewhat disquieting, at this stage, as they pertain to the FCC. There is the expressed attitude, for example, that the new Chairman should be an outsider who will have no compunctions about terminating the tenures of staff-level people, to make way for the GOP newcomers."

Reports which this committee has received from the FCC have detailed the changes in the personnel that have taken place since 1953 and they are substantial. At the same time officials of the Commission have advised members of this committee that the major networks have the power to hire and fire those who do not speak or vote in the networks' interests. That there may be substance in such charges as indicated by the fact that the Commission in a great majority of cases has appeared to follow policies approved by the networks but detrimental to independent and small-business segments of the communications industry.

This committee also has received reports with respect to policy changes. For example, it has been stated that aside from patronage one of the motivations behind personnel changes was to get a reversal of the staff position that in granting communication licenses, preference should be given to those not already holding a dominant position in the communications industry.

The press reported in April 1953, that Commissioner Hyde would be appointed as chairman only on a probationary basis. Later it was further reported:

"President Eisenhower announced Mr. Hyde's appointment from Augusta, Ga., where he was vacationing, on Saturday, April 18. He said the appointment would be for a 1-year term—establishing another FCC precedent."

Broadcasting-Telecasting magazine, one of the leading industry journals in the communications field, stated with respect to Mr. Hyde's appointment as Chairman:

"To be watched with great interest will be Mr. Hyde's policy views on a number of important issues. These include educational television reservations * * *, color television, pay-as-you-go TV, large screen theater television and perhaps more important, questions of diversification of ownership of more than one class of station by newspapers or others identified with media for the dissemination of information."

In its editorial of April 27, 1953, Broadcasting-Telecasting said:

"With Mr. Hyde as Chairman, things won't happen automatically. Mr. Hyde knows that he has to act. He probably can count on at least three members to vote with him in making staff changes. By June 30 he will have his fourth Republican member as the replacement for Commissioner and Ex-Chairman Paul A. Walker. It is to be hoped that this man will be a practical broadcaster.

"Mr. Hyde's appointment is for 1 year—an innovation probably deemed expedient to assuage hungry party men who wanted a new face as Chairman. If he doesn't achieve the desired result, the President will be free to name his successor a year hence."

This committee will look into these and other similar reports to determine whether they are true, and if so, what effect they have had upon the policies and decisions of the FCC in relation to small business in the communications industry.

The committee has received reports that political favoritism and influence have played a part in granting TV licenses. This matter will also be a subject of this inquiry.

Another important matter brought to the attention of the subcommittee has been reports that the FCC has changed its position with respect to the need for diversification of ownership and control of the media of mass information. In 1953 dominant members of the communications industry began clamoring for a change in the FCC policy which had long prevailed that a person not already strongly established in the communications industry should be given preference in the granting of new licenses. Those strongly entrenched in the industry sought to become even more firmly established by reversing this policy. Their success is indicated by a case decided by the United States Court of Appeals for the District of Columbia on January 19 of this year. In this case the court said:

"In the case at bar there appears some suggestion that the Commission has changed, or is changing, its view as to the dominant importance of local ownership and as to the evil of a concentration of the media of mass information" (*Pinellas Broadcasting Company v. FCC*).

In this case the court pointed out that this change of policy on the part of the Commission could well be addressed to the attention of Congress.

This committee is interested in obtaining the facts behind these and other reports and in determining which segment of our business economy would benefit by the apparent changes in the philosophy and practices of

the FCC. Is it the small-business man who will not be given the chance to own radio and television facilities in his local community? Will the citizens of the United States be benefited if they get their news, or advertising from only one or a limited source—a source with no real interest in local problems but with regional or national power over what people will see and hear? Will not such policy changes on the part of the FCC present the ultimate danger of information and thought control?

In conducting this inquiry this committee is mindful of the fact that other congressional committees are making extensive investigations into certain aspects of the communications industry. The committee has been in contact with these committees and will not duplicate their work. Instead the facts developed by such committees will be considered by this subcommittee in preparing its report on its inquiry into the Federal Communications Commission's organization and operations.

Proposed Changes in Excise Tax Administrative Structure

EXTENSION OF REMARKS
OF
HON. JERE COOPER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 16, 1956

Mr. COOPER. Mr. Speaker, today the Committee on Ways and Means met further in executive session with respect to recommendations contained in the report of the Subcommittee on Excise Tax Technical and Administrative Problems.

For the information of the Members of Congress and the interested public, I would like to insert at this point in the RECORD a press release I have issued announcing the decisions made today by the committee in regard to the subcommittee recommendations.

The committee is scheduled to meet again at 10 a. m. in executive session on May 17, 1956, to resume consideration of the subcommittee report.

The press release follows:

CHAIRMAN JERE COOPER OF THE COMMITTEE ON WAYS AND MEANS ANNOUNCES TENTATIVE DECISIONS OF THE COMMITTEE ON THE RECOMMENDATIONS OF THE SUBCOMMITTEE ON EXCISE TAX TECHNICAL AND ADMINISTRATIVE PROBLEMS

The Honorable JERE COOPER, Democrat, of Tennessee, chairman of the Committee on Ways and Means, announces the tentative decisions reached today by the committee with respect to the recommendations contained in the report of the Subcommittee on Excise Tax Technical and Administrative Problems. Previous announcements with respect to earlier decisions of the committee were issued on May 10, 1956, and May 14, 1956. These announcements are printed in the CONGRESSIONAL RECORD for May 10, 1956, and May 15, 1956, and appear on pages A3818 and A3918, respectively.

Chairman COOPER stated that the committee would resume its consideration of the subcommittee's report in executive session at 10 a. m. on Thursday, May 17, 1956. A table of revenue estimates relating to the subcommittee's recommendations is printed in the subcommittee report beginning on page 13. A more detailed explanation of the recommendations appears in the subcommittee report beginning on page 16. The decisions reached by the Committee today are as follows:

"VI. DOCUMENTARY STAMP TAXES

"1 through 6 (b): Approved by the committee on May 14, 1956.

"6. (c) In the case of transfers which do not constitute sales or exchanges for value no transfer tax should be imposed.

"7. An exemption is presently provided from the stock issuance tax in the case of common trust funds maintained by a bank for the collective investment of moneys contributed by the bank in its capacity as a trustee, etc. This exemption should be extended to include a fund maintained by a bank exclusively for the collective investment and reinvestment of assets of qualified pension trusts of which it is a trustee or cotrustee.

"8. The stock issuance tax should not be applicable to the mere dedication of the earned surplus of a corporation to its capital account.

"9. In the case of statutory mergers and consolidations, at present, both a stock issuance and a stock transfer tax are imposed. Only the issuance tax should be applicable in these cases where the stock is issued directly by the acquiring corporation to the stockholders of the acquired, or consolidated, corporation.

"10. In the case of odd-lot transactions no tax should be imposed on the sale of an odd lot of stock (100 shares or the unit of trading on an exchange) by an odd-lot dealer..

"11. The committee deleted recommendation 11 which provided that no transfer tax should be imposed with respect to the transfer from one revocable trust to another where both trusts have the same grantor. This recommendation is included within the scope of recommendation 6 (c).

"VII. OCCUPATIONAL TAXES AND TAXES ON WAGERING AND COIN-OPERATED MACHINES

"1. The present tax on billiard and pool table of $20 per year per alley, or table, does not apply to billiard and pool tables in a hospital where no charge is made for the use of the tables, or to bowling alleys and billiard and pool tables maintained exclusively for the use of members of the Armed Forces if no charge is made for the use of the alleys or tables. These exemptions should be extended to include bowling alleys or billiard and pool tables maintained without charge by nonprofit organizations or by agencies of the United States Government.

"2. In the case of the wagering tax, the law should be changed so that an agent who refuses or is unable to name his principal shall be deemed prima facie to be the principal, for purposes of the 10 percent excise on wagering.

"3. The definition of a coin-operated amusement device should include devices which are actuated by remote control without the use of a coin.

"VIII. EXEMPTION AND REFUND PROCEDURES

"1. A more uniform system of exemptions and refunds or credits should be adopted for manufacturers' sales (or resales) for further manufacture, for export, to State and local governments, and for fuel supplies, etc., for certain vessels and aircraft. Such rules should also be followed where applicable, in the case of retailers taxes and the taxes on communications and transportation. This should be done by providing for the permanent registration of purchasers for any of the exempt purposes and tax-free sales should be made only to such purchasers. Tax-free sales would not require the use of exemption certificates but would be evidenced by a notation on the sales invoice of the registration number of the exempt purchaser. Where a sale is made by the initial manufacturer on a tax-paid basis and the purchaser subsequently uses or sells the article for one of the prescribed exempt purposes, a refund or credit should be allowed upon proof of such a sale. The refund or credit would be allowed whether or not there had been an indication at the time of the initial purchase that the article was intended for use for one of the specified exempt purposes. The refund or credit should be made through the initial manufacturer except in the case of purchases by another manufacturer directly from the initial manufacturer where used or sold for a taxable purpose. In this latter case the refund or credit should be made directly to the second manufacturer and based upon his purchase price of the article in question.

"2. The crediting devices with respect to tires (also inner tubes and auto radios and television sets) presently available for application against the excise tax on automobiles and trucks should be extended so that credits with respect to tires, etc., are available for crediting against any manufacturers' excise tax.

"3. With respect to tires, tubes, and auto radio and television sets mounted on, or incorporated in, other articles sold for export or to State or local governmental units, tax-free sales of the tires, etc. (or credits or refunds) should be allowed in the same manner as in the case of other articles sold for export or to State or local governmental units.

"4. Provision should be made in the statute that, where clocks are combined with other articles subject to a manufacturers' tax, the manufacturers' tax should apply to the entire combination in the manner now prescribed by ruling.

"5. It should be made clear that parts or components, which when incorporated in another article are free of tax as a result of Public Law 367, 84th Congress, 1st session, are, nevertheless, considered as taxable when sold as repair or replacement parts.

"6. It should be made clear that automobile parts and accessories, radio and television components, and camera lenses are subject to tax where they are used by the manufacturer as repair or replacement parts.

"7. In the case of documentary stamp taxes, the period of limitations should commence running in the case of an assessment from the time the stamp tax is paid, rather than from the time the tax became due. The redemption provisions in present law with respect to documentary stamp taxes should be revised by deleting from the redemption provision those cases where stamps have been improperly or unnecessarily used and where the rates and duties have wrongfully been collected. Also, the provision relating to the 3-year period of redemption (from the date of purchase) should be applicable only to unused stamps.

"8. The treatment presently provided by ruling exempting State and local governmental units from the tax on real-estate conveyances (but imposing the tax on the other party) should be added to the statute, but no distinction should be made between transfers or acquisitions for governmental, as distinct from proprietary, functions.

"9. In the case of the club dues tax, an indication of written consent from members, rather than the execution of a power of attorney, should be acceptable in the future as a basis on which to allow a refund or credit. The procedure followed should be substantially the same as that now followed in the cases of manufacturers' excises.

"10. It should be made clear that a refund on an initiation fee repaid to a member who is withdrawing from a club is payable irrespective of when the initial payment was made by the taxpayer.

"11. It should be made clear that a refund of the cabaret tax, or the tax on the

transportation of oil by pipeline, should be made where the amount of the tax has been repaid to the consumer of the service or where the consumer of a service gives permission to the performer of the service to the allowance of the credit or refund. Thus, the refund or credit in the case of these taxes is not intended to be limited to only those cases where the collector of the taxes has borne the burden of the taxes.

"IX. FLOOR STOCK REFUNDS

"1. A uniform procedure should be provided with respect to all floor stock refunds of manufacturers' excises permitted by the Internal Revenue Code. To this end the following changes in existing law should be made:

"(a) Dealers should be given a period of 2 months and 10 days after the rate reduction date for filing their refund claims with the manufacturer. Manufacturer should be given an additional period of at least 1 month, or possibly as much as 3 months, for compiling dealers' claims and filing a single claim with the Government.

"(b) Instead of paying dealers' claims prior to, or at, the time of filing their claims with the Government, manufacturers should be required to state that within 30 days after they receive a refund or credit they will pass it on to their dealers.

"(c) The filing of claims by manufacturers should be integrated with the filing of their quarterly excise tax returns.

"2. The requirement that gasoline prices be reduced to reflect the floor-stock refund should be repealed.

"3. The technical error in the 1954 code which provides for floor-stock refunds on automotive parts and accessories should be corrected by the deletion of provision for such refunds.

"4. A statutory time limit for the claiming of floor-stock refunds should be provided with respect to the tax reduction provided for in present law in the case of tax-paid imported sugar or imported products composed in chief value of manufactured sugar.

"5. Claimants for refunds in the case of alcoholic beverages and cigarettes should not be required to keep detailed records relating to the price reduction provision for these products, since no such price reduction provision is now contained in the law in the case of the taxes on alcoholic beverages and cigarettes."

At the 10 a. m. executive session on May 17, 1956, the committee will resume consideration of the subcommittee report with section X, page 9, relating to general recommendations.

Maligned Department

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 16, 1956

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which appeared in the Wilkes-Barre Times Leader-Evening News which discusses and comments on some misconceptions concerning the State Department of the United States:

After baseball, the most popular American sport has been belittling the State Department. It is manned, we are told, by "striped pants boys" who drink tea and talk with Oxford accents. When it comes to negotiating with other nations, so the story goes, we are invariably duped and defeated.

This listens well, but is far from the truth. Dr. Henry M. Wriston, president emeritus of Brown University, and now executive director of Columbia University's American Assembly, who has observed our foreign policy for many years, defends the Department. No longer is it, as it once was, a refuge for party hacks and contributors to campaign funds. Its 2,250 members, a number comparing favorably with Great Britain's 813, are almost entirely professional. It is filled with experts who are of great assistance to our transient Secretaries of State.

The Department is not perfect. It could use more money. The money it does have is efficiently handled, and produces a diplomatic corps that can hold its head up with that of any other nation.

Gov. Adlai Stevenson's Record

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 16, 1956

Mr. ROOSEVELT. Mr. Speaker, because of certain distortions of the true record of Gov. Adlai Stevenson, of Illinois, with respect to old-age assistance, my colleague and distinguished member of the Committee on Ways and Means, the Honorable CECIL R. KING, and myself have found it necessary to correct the record by issuing a public statement which is quoted below:

Congressman CECIL R. KING, Democrat, California, and Congressman JAMES ROOSEVELT, Democrat, California, both from southern California, today issued the following joint statement in answer to an attack on Gov. Adlai Stevenson's record on social security and old-age assistance:

"We have worked long and hard for the needed revision and expansion of our social security and public assistance laws. We feel that it is necessary to correct the erroneous and distorted statements now being circulated in California regarding the constructive record of Gov. Adlai Stevenson on old-age assistance.

"We wish also to emphasize the accomplishments of Governor Stevenson in Illinois. The facts are that no Governor in the history of Illinois—indeed few Governors in the Nation have done more for the older people than Adlai E. Stevenson.

"In his very first address—his Inaugural Address—Governor Stevenson called on the Illinois Legislature to raise old-age pensions, and within 3 months, old-age pensions were raised by 18 percent.

"Governor Stevenson's 4-year Public Aid program made available $128 million more for old-age pensions and other forms of assistance than was spent in the previous 4 years under a Republican governor.

"At Governor Stevenson's urging, the Illinois Legislature passed a modern Public Assistance Code which repealed the antiquated 'Pauper Law' and is now considered a model law throughout the Nation.

"On 134 occasions in 4 years under Governor Stevenson, the Republican legislature in Illinois tried to pass bills for roads, bridges, pensions and other purposes without appropriating 1 cent to finance them, and Governor Stevenson insisted that the funds be provided before he would approve the bills.

"Governor Stevenson at no time made the statement which the pamphlet quotes him as making about old-age pensions.

"The Illinois Public Aid Commission at no time during Governor Stevenson's administration cut old-age pensions by 10 percent. According to the current Executive Director of the Commission, Mr. Garrett W. Keaster, there was no such cut during Governor Stevenson's administration.

"It is our sincere belief that real progress in social security and public assistance can best be achieved with Governor Adlai Stevenson as President of the United States."

The 35th Division in World War II

EXTENSION OF REMARKS
OF
HON. ERRETT P. SCRIVNER
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 8, 1956

Mr. SCRIVNER. Mr. Speaker, more recent history of the 35th Division and especially the 137th Infantry in World War II was highlighted last week when in Kansas City, Kans., the citizens dedicated a million-dollar National Guard Armory, in which there were no Federal funds.

The following special feature article in the Kansas City Kansan of Friday, May 4, retells some of the experiences of our local guardsmen in World War II, where they hung up an enviable record of combat:

STRONG ROLE BY GUARD IN GREAT WAR—SIX HUNDRED FROM HERE IN 35TH WENT INTO FEDERAL SERVICE IN 1940, FOUGHT THROUGH TO VICTORY

About 600 Kansas City, Kans., men, all members of the National Guard units in the 35th Infantry Division, were ordered into Federal service on December 23, 1940, less than a year before Pearl Harbor.

Departing as integral units, they were to be transported, trained, drilled, and toughened for 3½ years in the United States before entering the final great conflict, the recapture of France and assault into Germany itself.

At the end of the war, the original units bore little resemblance to their original form, both in organization and personnel. Many men were dead. Others were wounded.

DOWN TO 20 PERCENT

Replacements, transfers, and the decimation of battle had reduced some units to as little as 20 percent of the original complement of men from the States of Kansas, Missouri and Nebraska, of which the 35th is composed in peacetime.

Seven units from Kansas City, Kans., departed for Camp Joseph T. Robinson, Little Rock, Ark., early in 1941, for the beginning of training. The units and their commanders at that time were:

Headquarters Battery, 3d Battalion, 127th Field Artillery, Capt. Leo A. Swoboda.

Headquarters Battery, 2d Battalion, 127th Field Artillery, Capt. Harry L. Lyon.

Medical Detachment, 161st Field Artillery, Maj. Louis B. Gloyne.

Thirty-fifth Signal Company, 1st Lt. Clyde V. Adams.

Headquarters Company, 2d Battalion, 137th Infantry, 1st Lt. Don A. Starry.

Company "G," 137th Infantry, commanded by 1st Lt. Merle C. Barlett, as Capt. Mahlon S. Weed, who had commanded the company for 15 years, was temporarily absent at the Infantry School at Ft. Benning, Ga.

Band, 127th Field Artillery, Warrant Officer Charles M. Nixon.

After basic training the division participated in maneuvers in Louisiana and on re-

turn to Camp Robinson furnished cadres for new organizations being formed. Thus many men trained in the division saw combat long before the division was committed in the invasion of Hitler's Europe.

Stateside duty for the division stretched from California to Alabama. Finally in January, 1944, they moved to Camp Butner, N. C., for final polish before going overseas.

ON THREE TRANSPORTS

The division departed from New York City on May 12, 1944, aboard three transports shortly before D-day June 6.

The first elements of the 35th arrived at newly-won Omaha Beach in the vicinity of Cooleville Sur-Mere at 3 p. m. on July 5.

The division received its baptism of fire in the campaign which led to the capture of St. Lo, fighting its way through the vast checkerboard of fields and meadows bordered by the never-to-be-forgotten hedgerows.

These hedgerows had been converted by the Germans into fortresses, impenetrable to the eye, which concealed foxholes, machinegun and mortar emplacements, and excellent screening for sniping parties. The Germans exploited these natural embankments to the utmost.

AFTER BITTER BATTLE

The Stars and Stripes floated over St. Lo after one of the most bitter battles on French soil.

From July 25, 1944 to September, the 35th was engaged in the campaign for northern France which culminated with the bitter, intense battle at Mortain.

After V–E day, members of the German general staff stated the war was lost when their counterattack at Mortain-Avranches failed.

Fighting across France continued, with the 35th participating in major battles and campaigns. On December 12, four men of the 137th Infantry Regiment became the first men in the division to cross into Germany.

During this action the division received the heaviest artillery concentrations it received during the entire war. Following this the 137th Indantry Regiment was transferred to the 20th Corps and was ordered to advance with all speed to assist in the attempt to relieve the 101st Airborne Division surrounded in Bastogne.

FANATICAL RESISTANCE

Maintaining an advance against fanatical resistance, after 22 days of extreme cold and heavy casualties, the 137th was pinched out of the line by the converging offensive. The regiment returned to the Metz area with frostbite and fresh wounds on January 18, 1945.

The division joined the offensive east to Hitler's fortress and the 137th joined in the final cleanup of the last enemy pocket held west of the Rhine, known as "88 alley."

Through the spring the 35th continued to fight, reaching the river Elbe on April 16, 1945, where with all other Allied units it was instructed to consolidate positions and to await contact by the advancing Russian units from the east.

In 10 months of almost continuous action on the western front, from Omaha Beach through France, Belgium, Luxembourg, Holland, and to within a few hours drive of Berlin, the 35th had traveled a twisting, fighting path of more than 1,600 combat miles.

BATTLEFIELD APPOINTMENTS

Over 150 enlisted men had received battlefield appointments as second lieutenants. Over 4,000 battle awards had been won by Santa Fe officers and men, including a congressional Medal of Honor to Staff Sgt. Junior J. Spurrier of company G, 134th infantry.

A highlight of occupation was on July 10, 1945, when the 137th Regiment moved to Grimberges, Belgium, to provide the guard of honor for President Truman en route to the Pottsdam Conference.

In August the 137th Infantry came back to the United States, followed in September by the rest of the division. Reassembling at Camp Breckenridge, Ky., the division was mustered out of Federal service by December 1, 1945.

The Pitiful Fact

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 16, 1956

Mr. PRICE. Mr. Speaker, many of us have become aware of the fact that the most effective opponent of abuses in the internal-security program is a former Republican Senator from the State of Washington, the Honorable Harry P. Cain. Mr. Cain, now Chairman of the Subversive Activities Control Board, has been shocked and scandalized by the injustices to individuals almost inevitable in the present system.

In equity, I should point out that former Senator Cain has not sought to aggrandize the publicity he has received in this dispute by running for political office again. I should point out that in the Senate itself he worked hard to uncover the true facts about the smear stories against Mrs. Anne Rosenberg, who was the victim of a brutal attack when she was nominated by former President Truman as Assistant Secretary of Defense but whom the Senate cleared and confirmed.

Senator Cain made a speech in New York the other night, and its charges disturb me. They should disturb all of us who are concerned about the American system of fair play and the nature of true security.

Under permission to revise and extend my remarks, I offer the following editorial from the St. Louis Post-Dispatch quoting from Senator Cain's speech and expressing some opinions about President Eisenhower's direct responsibility for the abuses of the internal security system:

THE PITIFUL FACT

Former Senator Harry P. Cain has had a lot to say about the blundering, damaging character of the Eisenhower administration's internal security program. But nothing the State of Washington Republican has said in the last year and a half goes as far as his address before the Jewish Labor Committee at the National Trade Union Conference on Civil Rights in New York.

Mr. Cain undoubtedly gave much thought to what he said and so we quote his words in substantial text rather than select phrases from them. Speaking as an Eisenhower appointee to the Subversive Activities Control Board, he said:

"In 3 years of effort, we have found no spies or traitors, saboteurs or Communists in positions of trust.

"But the pitiful fact is that hundreds and hundreds of faithful public servants have been suspended.

"There is no provision that the hearing board and the agency head must reach a decision within a stated period of time. They can take whatever time they want, and many of them take a painful and inexcusable amount of it.

"This is the 20th-century American tragedy. When people are charged, heard, and then restored after months of anguished waiting, they get their jobs back, but their usefulness as citizens is largely over.

"They are not likely ever again to have an original thought, and if they do, you may be certain they will not dare to express it."

This would be condemnation enough of the security program, but former Senator Cain went on to say something even more condemnatory. Actually the system, so he said, may even create security risks in that a Government employee, unjustly fired and unable to find other work, might eventually become a prey to enemy agents.

How can this situation continue after President Eisenhower has issued internal security directives which, so the President said, were designed to protect those unjustly accused?

Mr. Cain's answer is simplicity itself. Out of his extensive experience with this problem, Mr. Cain says that the President's directives "have often been ignored without his knowledge."

This criticism of the Eisenhower administration was so sharp and so direct that the President was asked about it at his press conference. His generalized comments lacked a lot of coming to grips with the issue. The President said that he had not read the Cain speech, that he knew about the suspended Sidney Hatkin (to which Mr. Cain had alluded) and that the case was in the hands of Air Force Secretary Quarles in whom he has "utmost confidence."

Continuing in this unspecific vein, President Eisenhower went on to say that the security program came under Attorney General Brownell to whom "White House doors were always open." As for his knowledge of the program, he said "they" brought him reports "of what was going on in terms of numbers rather than names."

In short, the numbers racket is still being worked on the President by his top advisers. Either Harry P. Cain is right or he is not. Either it is true or not true that not a single spy, traitor, saboteur or Communist has been found in a place of trust in 3 years.

Can it be possible that there is no way for the President to learn the facts so he can function as the responsible head of the Government in this vital matter? Can it be that his time for his duties is so limited he cannot meet at least briefly with one of his appointees and hear firsthand the information he so obviously lacks?

Granted that President Eisenhower is overwhelmed with responsibilities, surely he can find time to give attention to the welfare, fair treatment and morale of Government employees.

No Joint Commissions To Stop Competition

EXTENSION OF REMARKS
OF
HON. RALPH W. GWINN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 16, 1956

Mr. GWINN. Mr. Speaker, Victor Reuther, assistant to the president of the industrial union department of the AFL–CIO, addressed the Young Presidents' Organization in Hollywood, Fla., April 27.

Alexander R. Hammer, of the New York Times, reported Mr. Reuther's remarks to this meeting. He said:

The labor official reiterated the belief expressed before by organized labor that "automation and atomic power has put the world on the threshold of undreamed of opportunities."

"We do not approach these promises of technological advance with any sense of fear," he continued. "But we do insist that they be met with intelligent planning in order that we may be able to cushion the impact upon our social structure. Failure to plan, resistance to change, could result in serious dislocation. It is a community and national responsibility to see that no industrial worker be forced to pay the price of any technological advance."

Mr. Reuther suggested that each basic industry should establish joint commissions of inquiry to make certain that management and labor at every industry level is prepared to meet the shock of automation. "As yet," he added, "there have been no such meetings."

Mr. Speaker, the suggestion that each basic industry should establish joint commissions to deal with automation has very grave implications. Our system of private enterprise is regulated by the forces of competition. When an industry establishes a joint commission, such as Mr. Reuther suggests, there will be little competition between its members in the form of improved products and better productive methods to reduce costs to the consumer and thus expand markets to make more and better jobs possible for workers.

Since 1939 the establishment of joint industry and labor-management committees has been the solution advanced by Walter and Victor Reuther to meet every problem. When World War II required the conversion of the automobile industry for defense, the Reuthers proposed a joint labor-management program to accomplish this task. Fortunately, this program was never adopted. Conversion took place. The weapons of war were made and we got on with the job. When the war was over, the Reuthers again advanced the same formula to meet the problems of reconversion. Again their advice as rejected. We are now told that a new crisis is upon us, namely, the introduction of automation and atomic power, and the same solution is again advanced.

The joint industry-labor committees, suggested by the Reuthers, were tried by Mussolini in Italy in the 1920's. They were the keystone of fascism. I do not want to see our competitive system lost and a cartelized industrial structure substituted in its place. The American people would never be content with such a system.

If competition were to be superseded by joint commissions operating at industry levels, they would in turn have to be supervised by Government over which the people would have some control. This is the easy, sure road to socialism. This is the reason that every problem always meets with he same recommended solution. It is in keeping with the socialistic aspirations of the Reuthers which have animated all of their actions since they first became prominent in the labor movement.

Automation is a fancy word for an evolutionary process which has been taking place ever since the start of the industrial revolution. We have made constant shifts of employment from one industry to another, from one occupation to another, and they have been met without hardship when our economy was operating at a high level of output. By reducing the cost of Government and by creating an atmosphere conducive to the expansion of private enterprise, we can secure the advantages of automation and atomic power without having to sacrifice our basic economic freedoms and without unemployment.

In Defense of States Rights Against the Unwarranted Assumption of Powers by the Supreme Court of the United States

EXTENSION OF REMARKS
OF

HON. WILLIAM M. TUCK

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 16, 1956

Mr. TUCK. Mr. Speaker, under leave granted me to extend my remarks in the RECORD, I am inserting the text of an excellent address delivered by the distinguished attorney general of the Commonwealth of Virginia, the Honorable J. Lindsay Almond, Jr., before the Judicial Conference of Virginia in Richmond on May 4, 1956. Attorney General Almond is a former member of the House of Representatives, having served in the 79th and 80th Congresses from the Sixth District of Virginia.

The address is as follows:

Hon. J. LINDSAY ALMOND, JR. (attorney general of Virginia). Mr. President, honored and distinguished guests, ladies and gentlemen, I am deeply touched and grateful for that very generous introduction. I am indeed delighted that my wife could be present and hear it. [Laughter.] The distinguished Associate Justice who accords me that generous introduction carries with him, resting in his vest pocket, the power of injunction, therefore of necessity my remarks must be brief.

It is with a deep feeling of trepidation that I accepted this high assignment. When it suddenly and lately became apparent that Dean Sebring's illness would not permit his appearance, Mr. Chief Justice Hudgins had no time to think of a competent substitute. His most expeditious and effective—if not fortunate and judicious—remedy was mandamus. It was in personam and ex parte without recourse to higher authority. In fact, under the impact of the overwhelming and ever mounting weight of incontrovertible evidence, I have lately been driven to the conclusion that there no longer exists such higher authority in the American judicial system.

Since Mr. Justice Sebring had selected as his topic "The Public Responsibility of the Lawyer" I would like to obliquely adapt it to my dire and forelorn distress as Attorney General of Virginia and challenge the "public responsibility" of my brethren at the bar to assist me in devising effectual procedural means for the issuance of certiorari from the Supreme Court of Appeals of Virginia directed to the Supreme Court of the United States in that monumental exposition of sociological hallucination under the style of *Davis* v. *Prince Edward County*.

In thinking of the great and boundless arena of the public responsibility of the lawyer, I should like to focus your searching and penetrating attention and concern on, and to appeal to the profoundest depths of your loyalty on, what I believe to be the sensitivity of your sacred and inescapable obligation of duty to face, thwart, and defeat by whatever legal, honorable, and constitutional means available the deliberate, palpable, and brazen onslaught, raging with reckless abandon before your very eyes, to destroy our constitutional system of government.

Ready, willing, and eager to abide the consequences—whatever they may be—I hurl this challenge not only at the bar—I throw it out to the bench, the Congress, the law schools, the institutions of learning, and to the legislative and executive branches of the State governments. Too long and too deeply have we been submerged in the lethargy of indifference, stalked by the shadow of fear and clinging to the delusive phantom of hope that right and justice will prevail of its own accord—that truth crushed beneath the heel of tyranny will rise again from the ruins of a polluted and desecrated temple.

The flagrant disregard of the Constitution in the field of education is but one symptom of this judicial plague. The incendiary conflagration rages with ever widening and consuming scope. State lines, territory, jurisdiction and sovereignty are being crumbled and obliterated. Federal paramount rights, Federal preemption, implied supercession, national polity, economic equality, national uniformity, social equality ride head on in the chariot of judicial legislation, brushing Congress aside and trampling the 10th amendment into the dust of oblivion under the lash of an aggregation of charioteers who hurdle all barriers by amending the Constitution at will in violation of article V thereof and flaunt such as the supreme law of the land.

They tell us with pious gusto that they can't turn the clock back to *Plessy* v. *Ferguson* in 1896. They cannot look to the Constitution as a prop and comfort of their judicial peregrination. It is becoming even more apparent every day in Virginia and other States that we can't turn the clock back to May 17, 1954.

The triumph of judicial mediocrity has stilled the great juristic voices of the past—made mockery of their erudition—corroded their genius—desecrated their fame and abnegated their illustrious contribution to constitutional virtue and stability.

In the Erie Railroad case Mr. Justice Brandeis, a renowned liberal, has this to say: "* * * there stands, as a perpetual protest against its repetition, the Constitution of the United States, which recognizes and preserves the autonomy and independence of the State, independence in their legislative and independence in their judicial departments. Supervision over either the legislative or the judicial action of the States is in no case permissible except as to matters by the Constitution specifically authorized or delegated to the United States. Any interference with either, except as thus permitted, is an invasion of the authority of the State, and, to that extent, a denial of its independence."

There is a school of thought, in my judgment all too prevalent, which advances the argument that the Constitution is a living thing, susceptible to growth, and must be adaptable and flexible enough to meet changes in the social and economic life of the country. That argument loses its validity when applied in destruction of the very foundation and pillars of our constitutional Government. That argument then is in derogation of the very principles which underlie a written constitution. A constitution cannot be written by any branch of

our Government without ceasing to be a constitution. Conditions may require that the Constitution be changed, but let it be done by amendment in the manner provided therein. It is nothing but a sterile scrap of paper if it must yield to the insidious argument of flexibility induced by expediency or the pressures of the moment.

Judge Cooley, in his treatise on Constitutional Limitations, seventh edition, pages 88–89, made this very direct statement: "A constitution is not to be made to mean one thing at one time and another at some other time."

Mr. Justice Brewer, in his address before the Virginia Bar Association in 1906, said: "I know there are changed conditions and different social and business life from that which obtained when the Constitution was framed. It may be that new laws are necessary—possible amendments to the Constitution—but it must always be remembered that this is a Government of and by the people, and if additions and changes are necessary, let them be made in the appointed way. Never let the courts attempt to change laws or the Constitution to meet what they think present conditions require. When they do this they clearly usurp powers belonging to the legislature and the people."

As far back as ex parte Milligan, it is said in that case, "The Constitution never yields to treaty or enactment; it neither changes with time nor does it in theory bend to the force of circumstance; its principles cannot be set aside to meet supposed necessities."

The Constitution cannot be a "living document" except that it be an abiding document. It can neither abide nor endure unless we combine and marshall every force in the Nation dedicated to its preservation.

Authorities might be pyramided supportive of the devastative logic and soundness of our position. Dissenting in *Truax* v. *Corrigan*, 250 U. S. 312, and *Otis* v. *Parker*, 187 U. S. 606, we find the commanding stature of Justice Oliver Wendell Holmes, another great liberal, who observed: "There is nothing that I more deprecate than the use of the 14th amendment beyond the absolute compulsion of its words to prevent the making of social experiments that an important part of a community desires, in the insulated chambers afforded by the several States, even though the experiments may seem futile or even noxious to me and to those whose judgment I most respect. * * * Considerable latitude must be allowed for difference of view, as well as for possible peculiar conditions which this Court can know but imperfectly, if at all."

Again, in *Baldwin* v. *Missouri*, 281 U. S. 586, I quote Justice Holmes: "I have not yet adequately expressed the more than anxiety that I feel at the ever-increasing scope given to the 14th amendment in cutting down what I believe to be the constitutional rights of the States. * * * I cannot believe that the amendment was intended to give us carte blanche to embody our economic or moral beliefs in its prohibitions."

The truth of the matter is that we have been asleep at the switch while this judicial juggernaut has rolled on heedless of the constitutional limitations expressly imposed on Federal power. In the last 20 years the Supreme Court has reversed more established constitutional constructions than were changed by that Court in all the preceding years of its history. Most of these reversals have been at the expense of the constitutional rights of the States.

For the past 20 years appointments to the Supreme Bench have been made without regard to fitness or ability. The appointive power has been desecrated and degraded to the extent of political depravity for the purpose of paying political debts or for the purpose of buttressing dubious political programs and consolidating the political support of minority pressure groups. Democratic Presidents have packed and the Republican President has laid the capstone by stacking. [Laughter.]

Judicial experience, erudition, and high attainment in the profession of law have been liabilities to disqualify instead of attributes of qualification. These appointments have been confirmed by the Senate with hardly a passing glance, and thus our present constitutional crisis has fastened its tentacles upon a trusting and unsuspecting people.

Unless the States mobilize their power and hurl it against this tragic travesty upon our constitutional system, their inevitable fate is ultimate consignment to the role of dependent Federal satellites bereft of sovereignty, dignity, and integrity.

This is a matter not of isolated sectional or provincial concern. It is a dagger pointed at the heart of every State in the Union and at the heart of the Union itself.

As the impact of the exercise of arrogated powers lays its heavy hand of unconstitutional encroachment on the reserved prerogatives of other States, they, too, are beginning to realize that the effect of this judicial usurpation is national in the scope of its destructive effect. Under the determined prodding and leadership of a group of State's attorneys general, in which Virginia is playing a very humble role, they are rallying to that philosophy of government which springs from the historic concept of an "indestructible Union of indestructible States."

In the meantime, the charioteers who prescribe without appeal, even to the people, the limitless bounds of their own unchecked powers continue their unbridled assault upon the citadel of State's rights in defiance of that Constitution which they have taken an oath to uphold and defend.

On April 2, 1956, the Court in a 6 to 3 opinion delivered by the Chief Justice struck down the antisubversive statutes of 42 States and 2 Territories in the case of *Commonwealth of Pennsylvania* v. *Steve Nelson*, leaving these States utterly defenseless in their own courts against Communist assaults directed against their very existence. It was of little or no moment to the majority that in so doing they exonerated from a merited punishment of 20 years in the penitentiary and a $10,000 fine one of the most dangerous and notorious Communists on the American scene. In a well-recognized field of concurrent Federal-State jurisdiction they applied the so-called doctrine of Federal preemption, holding that Congress had "occupied the field to the exclusion of parallel State legislation." In their eager-beaver assault upon States rights they supplied pseudo congressional intent in total disregard of express congressional intent to the contrary. The Smith Act appears in title 18 of the United States Code. The majority deliberately swept aside section 3231 of that title, which provides: "Nothing in this title shall be held to take away or impair the jurisdiction of the courts of the several States under the laws thereof."

In true neophyte fashion they repudiated the sage counsel of John Marshall in *Cohens* v. *Virginia* (6 Wheat. 264, 433), when he said: "To interfere with the penal laws of a State, when they * * * have for their sole object internal government of the country, is a very serious measure, which Congress cannot be supposed to adopt lightly or inconsiderately * * *. It would be taken deliberately and the intention would be clearly and unequivocally expressed."

On April 9, in a 5-to-4 decision, *Slochower* v. *Board of Education of the City of New York*, in which the Chief Justice joined with the majority, the Court applied, with fantastic reasoning, the due process and privilege and immunities clauses of the 14th amendment in nullification of a provision in the charter of the city of New York "designed to eliminate from public employment individuals who refused to answer legally authorized inquiries as to the official conduct of any officer or employee of the city * * * on the grounds that his answer would tend to incriminate him."

Here, a sovereign State has been slapped down in the exercise of its right to set up standards of qualifications for those who would teach in its public-school system. Here, the Court has said that a State has no valid concern over the fitness of a teacher working in the sensitive area of a schoolroom where he "shapes the attitude of young minds toward the society in which they live" (*Adler* v. *Board of Education* (342 U. E. 485)). Professor Slochower had refused to answer questions concerning his membership in the Communist Party during the years 1940–41. Aside from being a deliberate and palpable invasion of States rights, this decision gives aid and comfort to the Communist Party in its avowed purpose to infiltrate governmental employment and to pollute the minds of youth with its despicable ideology. The very safeguards so carefully designed for the protection and perpetuation of our system and form of government are being distorted into weapons for the destruction of the Constitution and the institutions of this Republic. We are spending billions for defense against that dreaded assault from abroad which may be hurled against us at any moment through the satanic machinations of the Kremlin, while at home the highest Court in the land has decreed that a sovereign State may not eliminate from the public payroll a teacher of its youth who hid behind the fifth amendment in his refusal to say whether or not he was a member of the Communist Party at a given time. On April 23 the Court in a 5-to-4 decision (*Griffin and Crenshaw* v. *The People of the State of Illinois*) in which the Chief Justice joined with the majority, struck down the Illinois statute providing the procedure for appeals in noncapital and capital criminal offenses. Under the Illinois statute the terms of appeal were open to all. The majority opinion admitted that a State could deny an appeal altogether in a criminal case without violating Federal due process, but held that when a State does grant appellate review it must pay for the transcript of the record if the appellant is too poor to pay for it himself. The Court says that failure to do so was adjudged to be in violation of due process and equal protection. The effect of this decision is to make all defendants in criminal cases economically equal before the bar of justice. While delving into the area of economic equality the Court could just as logically go a step further and require a State to furnish a poor man counsel at the same price a rich man would pay for his out of his own pocket, or prevent a State from fixing bail at a reasonable sum on the ground that a rich man could raise it and a poor man could not. Since this decision applies to past as well as future convictions of crime in a State court, the country is confronted with the appalling danger of the release upon society of thousands of convicted felons now serving terms in the State penitentiaries. This sweeping abridgement of the rights of the States will have terrific impact on the laws of at least 19 States "and will create a host of problems affecting the States of an unknown multitude of indigent convicts."

These abominable decisions, we are told, constitute the supreme law of the land while the present court, like Lady MacBeth, can say, "What need we fear who knows it, where none can call our power to account?"

All of this and worse to follow, I fear, has been brought about because we, the people, have permitted a premium to be placed on judicial mediocrity.

A grave responsibility rests upon Congress. I advocate that Congress should by enact-

ment require that no nomination to the Supreme Court shall be confirmed unless the nominee shall have had at least a stipulated amount of service on a State Supreme Court or a Federal Circuit Court of Appeals; that the legislatures of 39 States—excluding those States with representatives then on the bench as well as any whose posts are vacant—shall have the privilege of submitting directly to the President its choice of one qualified citizen of such State, with confirmation by the Senate to be so restricted if the Senate finds such nominee otherwise qualified. If the State legislature be not in session, then the endorsement and recommendation shall be by petition of the members thereon attested and certified as the legislature may by statute prescribe. I know of no other way to assure that fitness and qualification necessary to restore the highest court in the land to that position of prestige and respect which it should at all times command. If an amendment to the Constitution be neecssary, it is right to start that process now.

The courts of Virginia do not sit in judgment for purposes of self-stultification. They do not accept that which is incredible or contrary to human experience. The doctrine of nonstultification has repeatedly been applied to alleged factual situations. Why should it stop there? Is there any organic law in the Nation commanding more respect and enjoining more allegience, the oath to uphold and defend which is more sacred and binding than the Constitution of the United States as ordained and ratified by the people?

When the Supreme Court of the United States transgresses the organic law with impunity, when it records for posterity its utter contempt for the rights of a sovereign State and invades the exclusive jurisdiction of a State court, when it substitutes itself for the people and arrogates unto itself a power which is the sole prerogative of a State, when it proceeds to amend the Constitution in flagrant violation of its plain terms, does such conduct become the supreme law of the land and fasten its shackles upon the courts of last resort of the several States? If such State courts permit themselves, through sheer lack of fortitude, to be so manacled, then they not only sit in self-stultification, they are accepting with sanction that which is incredible in law and fact, they are compounding a dangerous usurpation of power subversive to the Constitution which they are under obligation to uphold and defend.

It is no answer to say that refusal to accept that which is plainly and palpably wrong will meet the fate of reversal. Let the Supreme Court of the United States pyramid its own comedy of errors—a tragic drama in which it has no peers.

In the language of a great President: "We, even here, hold the power and bear the responsibility. We shall nobly save or meanly lose the last best hope of earth." [Applause.]

Soil Conservation

EXTENSION OF REMARKS
OF
HON. FRED SCHWENGEL
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 14, 1956

Mr. SCHWENGEL. Mr. Speaker, in all of the debate of the soil-bank program, I heard much on the subject of the payments and how much they should be, but I heard little on the conservation aspect of the program. Since conservation is the true essence of the program and since it means so much to generations of Americans yet unborn, I would like to call the attention of my colleagues to an editorial in the Burlington (Iowa) Hawkeye Gazette, which quotes some timely words of D. A. Williams, Administrator of the United States Conservation Service. I urge that particular note be taken of the tribute to the men who work in the Soil Conservation Service. The editorial follows:

SOIL CONSERVATION

There's a rich reward in soil-conservation work, and in the Burlington area as well as throughout this section of the country, men are giving liberally of their time and energy that the program be advanced.

Worth passing on is the comment of D. A. Williams, Administrator of the United States Conservation Service. He says:

"Something more than material benefit is impelling American landowners and operators to become conservation farmers or ranchers. Something more than the established fact that soil and water conservation increases farm buying power is motivating businessmen and countless others to support conservation work.

"A farmer or rancher finds pleasure in the beauty of his conservation-treated fields, pastures, woodlands, and wildlife areas. And I feel that all the rest of us share his pleasure as we drive by or fly over his acres; or, when we're extra fortunate, have a chance to feel healthy soil or vigorous sod beneath our feet, or join the owner in harvesting a wildlife crop more abundant now than a few years ago.

"But there is another important motivating force for conservation.

"I believe it is the fast-growing realization in every community I know about that wise use and treatment of soil is a moral responsibility—that soil is a gift of the Creator, and that we, all of us, have a steward's responsibility for it.

"Unless we pause to consider the spiritual man, we may be amazed by this spread of the soil stewardship concept in a time when we are troubled by temporary crop surpluses and when only 1 person in 25 actually tills the soil for a living.

"Unless we accept as a fact that men do recognize the spiritual values of soil and water conservation, we are unable to explain fully the personal sacrifices thousands of them make to serve as members of the governing boards of nearly 2,700 locally-organized and manager soil conservation districts. These men—and there are some women on these governing boards—already are conservation farmers or ranchers. They already are personally reaping the material benefits of greater net income, lower production costs, and greater efficiency in the use of labor and machinery that comes with conservation.

"But these local leaders cannot, and do not, expect material gain from their services as district supervisors, commissioners, or directors. They receive no salaries. In some States, they are not even reimbursed in part for their expenses.

"They surely must be motivated by the truth of the Psalmist's words: 'The earth is the Lord's and the fullness thereof * * *' They are heeding the Creator's command, when He placed man in the Garden of Eden, 'to dress it and to keep it.'

"I believe that the technicians of the Soil Conservation Service have this same conception. How else would we explain the countless extra hours, beyond the call of duty, which they devote to soil and water conservation?

"And, throughout the Nation, ministers are providing the spiritual leadership of soil stewardship. Thousands of them each year take soil stewardship as the text of sermons, and provide a continuing leadership among their congregations for recognition that the earth truly is the Lord's.

"To those of us who are soil conservationists by profession as well as by conviction, this expanding conception of soil stewardship is indeed heartening.

"For we know that man and soil remain inseparable, all technological and cultural advances notwithstanding.

"Man still obtains his food and most of his clothing and shelter from the dust of the earth. And this 'dust of the earth,' when kept in the balance in which it was created, is a wonderful composite of minerals and myriads of living, decaying plants and animals. It is a storehouse of abundance for past, present, and future generations—a tremendous reservoir to trap and store for use more of the water which at one time may come in raging floods and at another season become insufficient for the needs of thirsty crops, animals, cities, and industries, and man himself."

Limitations on Colorado River Water Supply

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 16, 1956

Mr. HOSMER. Mr. Speaker, on May 4, Mr. Raymond A. Hill, one of the most prominent consulting engineers in the West, presented a paper before the Los Angeles Chamber of Commerce entitled "Limitations on Supply of Water From Colorado River." This paper voices again the previous warnings by Mr. Hill, and the very real fears of many in the West regarding the availability of Colorado River water for fulfillment of the paper obligations of the Colorado River compact and other documents.

It also points another warning to the Secretary of the Interior in regard to the construction and operation schedules of the recently authorized upper Colorado River storage project.

Lastly, it points to the fact that no delays should be permitted in the consideration of H. R. 10105 and H. R. 10106. These bills would allocate funds and provide authority for the augmentation of Colorado River Basin water supplies by the use of cloud-seeding techniques.

Mr. Hill's paper is as follows:

The Metropolitan Water District of Southern California claims the right to divert 1,212,000 acre-feet annually from Colorado River under contracts entered into with the Secretary of the Interior of the United States. The validity of these contracts is being challenged by the State of Arizona in the present suit between Arizona and California now pending in the Supreme Court of the United States. Irrespective of the outcome of this litigation, there is little possibility that the flow of Colorado River will be large enough to satisfy this right of diversion by the Metropolitan Water District.

The Congress of the United States has just authorized the construction of the upper Colorado River storage project. The first unit of this project will be Glen Canyon Dam on Colorado River, located a short distance above Lees Ferry, the point of division of the waters between the upper basin and the

lower basin. It is the expressed intention of the Bureau of Reclamation of the Department of the Interior to proceed immediately with the construction of Glen Canyon Dam to provide a gross storage capacity of 26 million acre-feet and a net usable capacity of 20 million acre-feet. The effect of this reservoir upon the supply of water available for use in the lower basin is thus a matter that can no longer be ignored.

The Colorado River compact, to which California is a party, was entered into in 1922 at Santa Fe, N. Mex. The upper basin was then apportioned 7.5 million acre-feet per year to cover its consumptive uses of water, and the upper basin would eventually consume this quantity if it were not for the provision in article III (d) that reads:

"The States of the upper division will not cause the flow of the river at Lees Ferry to be depleted below an aggregate of 75, million acre-feet for any period of 10 consecutive years reckoned in continuing progressive series begining with the 1st day of October next succeeding the ratification of this compact."

This provision, which is the only limitation upon upper basin uses that is directly measurable, will become controlling because there is not enough water in the river to cover 7.5 million acre-feet per year depletion of the natural flow at Lees Ferry and the delivery of 75 million acre feet in each 10 consecutive years.

The compact also provides that the upper basin shall supply one-half of all water to be delivered to Mexico that cannot be met out of surplus. There will be no surplus unless the flow of Colorado River should be much greater in the future than it has been in the past 40 years; hence, the responsibility for deliveries to Mexico must be shared by the upper basin. The treaty between the United States and Mexico provides that 1.5 million acre-feet per year shall be delivered at the international boundary pursuant to an agreed schedule. It is recognized that it will not be possible to limit deliveries at all times to the scheduled amounts and it is estimated that 1,700,000 acre-feet of water will have to be passed into Mexico each year. If the upper basin States are made responsible for one-half of this, 850,000 acre-feet plus 7.5 million, making a total of 8.35 million acre-feet per year will have to be delivered at Lees Ferry.

The question of vital significance to southern California is: Can there be any reliance on the delivery at Lees Ferry of more than 8,350,000 acre-feet of water per year after Glen Canyon is built? The answer is "No," for at least 15 years, probably never again.

The historical flow of Colorado River during the past 32 years has averaged a little less than 12 million acre-feet per year. During this same time the natural flow has been depleted less than 1.9 million acre-feet per year by upstream uses. Hence, the natural undepleted runoff of Colorado River during the 32 years from March 1924 to March 1956 was only 13.8 million acre-feet per year. The delivery of 8.35 million acre-feet per year at Lees Ferry during this period would have left only 5.45 million acre-feet per year as the supply available to the upper basin. This is only 73 percent of the quantity apportioned to the upper basin. It should be evident from these figures alone that the flow at Lees Ferry cannot be expected to exceed 8,350,000 acre-feet per year after presently authorized works in the upper basin are completed.

It is also significant that, if Glen Canyon Dam had been built in 1929, it would have taken 8 years to fill the reservoir, even if there were no evaporation loss nor any increase in the depletion of the stream flow above Lees Ferry, but reservoir losses would automatically add about 1 million acre-feet per year to the depletion. Actually, if Glen Canyon Reservoir had been completed in the spring of 1929, it would not have filled until the flood of 1941, even if there had been no increase in water use within the basin or any diversions of water by Utah or Colorado out of the basin.

Enough projects are now under construction or authorized for construction in the upper basin to add another million acre-feet per year depletion of the flow of Colorado River. If these projects are brought to completion by the time Glen Canyon Reservoir is put in service, it could take at least 15 years to fill that reservoir. This is the minimum period of restricted flow at Lees Ferry that should be considered in any planning for the future of southern California.

If upstream depletions caused by reservoir evaporation, other consumptive uses within the basin, and transmountain diversions should amount to 3 million acre-feet per year in excess of historical depletions, making a total of less than 5 million acre-feet per year depletion in the upper basin, then, assuming runoff in the future similar to that in the past:

(a) Glen Canyon Reservoir starting empty in 1927 would not have filled until 1949:

(b) There would have been only 2 million acre-feet of spill in 1949 and 4 million acre-feet of spill in 1952; and

(c) At the end of March 1956 there would have been only 4 million acre-feet of usable water left in Glen Canyon Reservoir.

It should be obvious that when the gates at Glen Canyon Dam are closed and storage commences there will be a period of at least 15 years in which the flow at Lees Ferry will not be more than 8,350,000 acre-feet per year. It is also probable and almost certain that Lake Mead never will fill within the lifetime of anyone in this room unless it is full before the gates are closed at Glen Canyon Dam.

This will require cutting back releases of water from Lake Mead to the minimum needed to satisfy present uses in the United States and to comply with the treaty between the United States and Mexico.

Historical depletions of Colorado River between Lees Ferry and the International Boundary have increased during the past 15 years from about 4 million acre-feet per year to 6 million acre-feet per year. The flow across the International Boundary near Yuma has progressively diminished, approaching the practical minimum of 1,700,000 acre-feet per year. Hence, without any increased diversions or losses in the United States below Lees Ferry, a total of 7,700,000 acre-feet of water will be required at Lees Ferry to satisfy present uses. This leaves only 650,000 acre-feet per year as the margin of supply available to meet increased uses along Colorado River and increased diversions through the Colorado River aqueduct.

Even if every drop of this water were made available to the Metropolitan Water District in addition to its current diversions, the total would be far less than the 1,212,000 acre-feet per year for which the district has contracted. There is no likelihood that all of this 650,000 acre-feet will be available to the Metropolitan Water District. A substantial part can and will be used on the Parker Indian Reservation and additional water will be used in the Welton-Mohawk project, both of which are now only partially developed. Agricultural uses in California may also consume some of this difference between future deliveries at Lees Ferry and present uses below Lees Ferry.

In brief, no one should now claim that the Metropolitan Water District of Southern California will be able to divert 1,212,000 acre-feet of water per year from the Colorado River. There is just not enough water in that stream to make this possible. It follows that water from some other source must be made available for use in southern California by the time the gates are closed at Glen Canyon Dam.

Unionist Hits "Double Standard" in Political Party Contributions

EXTENSION OF REMARKS
OF
HON. RALPH W. GWINN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 16, 1956

Mr. GWINN. Mr. Speaker, the New York Times of Saturday, April 28, reported an address by Victor Reuther, assistant to the president of the industrial union department, AFL-CIO, before a meeting of the Young Presidents' Organization at Hollywood Beach, Fla. The New York Times report said:

Abolition of the double standard in political contributions was advocated today by Victor Reuther.

Assistant to the president of the industrial union department, AFL-CIO, Mr. Reuther said "there is a serious gap in our political structure, when management considers it unethical for 100,000 workers each to make $1 contributions in support of party candidates, while a few rich people at a single dinner can raise such an amount unchallenged."

The United States Department of Justice recently lost a case brought against the United Auto Workers Union in Michigan for raising funds among members to finance a television program in support of a political candidate. The Supreme Court has agreed to review the decision next fall.

Speaking to nearly 400 company executives at the sixth annual convention of the Young President's Organization at the Hollywood Beach Hotel here, Mr. Reuther urged that the range of political financial support be limited to $2 to $5 a person.

Mr. Speaker, the Department of Justice is not pressing a suit against the United Automobile Workers to prevent any worker of group of workers from making a voluntary contribution to any political cause. On the contrary, it has taken the United Automobile Workers to court as it believes the union has clearly violated the Corrupt Practices Act and the Taft-Hartley Act. Neither of these laws prevents the solicitation of dollar contributions, or in fact contributions for any nominal amount, from union members. The suit is not designed to interfere with the activities of the so-called political action committees of the unon if the funds are contributed voluntarily by individuals to a union political committee for such purpose. The reason that the Department of Justice pressed the suit against the UAW of Michigan is that television programs in support of political candidates were being financed with union dues money as a so-called educational program. It is important that the public understand the real issue in this case. Mr. Reuther's remarks as reported by the New York Times give a completely misleading story as to the purpose of the suit against the union.

It must be remembered that most of the contracts under which the members of the UAW operate provide for a union shop. In other words, the union member has no choice as to whether he wishes to finance a television program in support or in opposition to any par-

ticular candidate. He pays his dues, or he loses his job. It is for this reason that a very serious question has arisen with respect to political activities of unions.

No one questions the right of union members to make contributions outside of union dues for political purposes, provided these contributions are freely given without coercion. Certainly Mr. Reuther is not charging that those who attend political fund-raising dinners have been coerced to do so.

I favor reasonable limits on campaign contributions, but I am also concerned that all campaign contributions should be voluntary contributions in support of candidates and philosophies of one's choice.

Mr. Reuther also suggests that political financial support be limited to $2 or $5 a person. Any such limits would make it impossible for an unorganized group who wishes to advance a political candidate or a political program to present its story. It would entrench organized groups with permanent political power. This philosophy is completely at variance with that of our Founding Fathers.

[From the New York Times of April 28, 1956]

UNIONIST HITS DOUBLE STANDARD IN POLITICAL PARTY CONTRIBUTIONS

(By Alexander R. Hammer)

HOLLYWOOD BEACH, FLA., April 27.—Abolition of the double standard in political contributions was advocated today by Victor Reuther.

Assistant to the president of the Industrial Union Department, AFL–CIO, Mr. Reuther said there is a serious gap in our political structure, when management considers it unethical for 100,000 workers each to make $1 contributions in support of party candidates, while a few rich people at a single dinner can raise such an amount unchallenged.

The United States Department of Justice recently lost a case brought against the United Auto Workers Union in Michigan for raising funds among members to finance a television program in support of a political candidate. The Supreme Court has agreed to review the decision next fall.

Speaking to nearly 400 company executives at the sixth annual convention of the Young Presidents' Organization at the Hollywood Beach Hotel here, Mr. Reuther urged that the range of political financial support be limited to $2 or $5 a person.

Clarence B. Randall, special consultant to President Eisenhower on foreign economic policies, told the group that he was deeply concerned over the inroads being made by the Soviet Union's economic cold war.

"It is the ultimate test between their way of life and ours," Mr. Randall said. "What Russia can do today for an undeveloped country is much easier than what can be done by democracy under free enterprise. These undeveloped countries have no capital and no means of creating capital. This allows Russia to supply them with machines in exchange for the raw material that they want and we do not need."

Mr. Reuther strongly urged that crime and corruption be rooted out of labor, business and politics. As to labor, he said:

"Whenever a trade union official abuses the trust placed in him, he should be thrown out of the union and put into jail. In the cell next to him should be the insurance agent who slipped him a bribe or gave him a kickback. The same is true of the public official who goes wrong."

The labor official reiterated the belief expressed before by organized labor that "automation and atomic power has put the world on the threshold of undreamed-of opportunities."

"We do not approach these promises of technological advance with any sense of fear," he continued. "But we do insist that they be met with intelligent planning in order that we may be able to cushion the impact upon our social structure. Failure to plan, resistance to change, could result in serious dislocation. It is a community and national responsibility to see that no industrial worker be forced to pay the price of any technological advance."

Mr. Reuther suggested that each basic industry should establish joint commissions of inquiry to make certain that management and labor at every industry level is prepared to meet the shock of automation. "As yet," he added, "there have been no such meetings."

He also called for an increase in the minimum hourly wage scale from $1 to at least $1.25. "We cannot say we are living in a truly democratic economy while millions are being asked to live on the substandard wage of $40 a week."

Closing with a final look at the international field, Mr. Reuther said that "the contest between the free world and the slave world will be won by the nation that can contribute most by raising living standards and individual security throughout the world, rather than by the preponderance of military strength alone."

PROTECTIONISM DYING

Mr. Randall, who formerly was chairman of the Inland Steel Corp., emphasized that although "protectionism" is dying and will eventually be driven from our economy, we still have a group in this country that would close our markets to foreign products.

"There is no way that Government by tariff or any such means can benefit one section of an economy without damaging another," he added.

Mr. Randall said that most of the undeveloped foreign countries have a group of dedicated men at the top. However, he continued, they are not interested in free enterprise, but are turning to some form of statism.

Their reason for doing so, he added, is that after looking at America, they feel that "free enterprise" is a cult of selfishness, with no responsibility for the welfare of all the people.

"Our job is to combat this belief by showing them that the strength of free enterprise lies in the freedom maintained for the individual. The whip is no substitute for a desire to do the best. Free enterprise will be preserved only to the extent that executives of the future sense their social responsibility."

United States Shipping Boom

EXTENSION OF REMARKS

OF

HON. CRAIG HOSMER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 16, 1956

Mr. HOSMER. Mr. Speaker, an interesting article regarding the boom in United States shipping was carried by the May 11 issue of the Seafarers Log, the official organ of the Seafarers International Union, Atlantic and Gulf District, AFL–CIO. It is one kind of boom that we have had all too little of, and want to see continue. The article itself exemplifies why the Seafarers Log in 1955 was awarded first prize for general editorial excellence by the International Labor Press of America. It is as follows:

UNITED STATES ENJOYING SPRING BOOM IN SHIPPING

Seafarers will start manning three reserve fleet Victory ships shortly in the middle of a moderate shipping boom which has been a pleasant but unexpected surprise to the United States merchant marine. Were it not for the availability of reserve fleet ships indications are that both the Government and private industry would be extremely hard-pressed to find shipping space for cargoes.

The three Victorys broken out thus far are the *High Point Victory*, Bull Line; *Lynfield Victory*, Waterman, and the *MacAlester Victory*, Robin Line. These ships are being assigned to the Military Sea Transportation Service either to run in Operation Blue Jay to northern defense bases, or replace other MSTS ships diverted for the northern supply line. All told, 113 ships will be used on this run.

However, the Blue Jay run is only one factor in the spring shipping boom which finds all privately owned ships, both freighters and tankers, working, and prospects of considerable breakouts of reserve ships for normal commercial operations.

There are several other contributing factors. One of them is the heavy offseason demand for oil which has kept all tankers in service at a time they are normally laying up.

COAL SHIPMENTS HEAVY

Coal shipments are also far in excess of normal, prompted by an extremely bad winter in Europe and an economic boom, both of which depleted European coal supplies. Heavy grain shipments have been stimulated by unfavorable spring planting conditions in Russia and elsewhere.

To top it all off, the United States is energetically selling United States farm surplus to the tune of $1.5 billion this year, and the North Atlantic Treaty Organization (NATO) is studying a proposal to create a United States surplus food stockpile. Emergency food relief organizations are also getting further United States Government aid.

The present cargo picture of a scarcity of available ship space points up the need for a permanent tramp fleet of sufficient size, one capable of handling fluctuations in cargo demands. Such a fleet under the United States flag is obtainable only through a program of Government subsidy aid.

CARGO RATES UP

The lack of an adequate tramp fleet has sent cargo rates soaring. Ships that were transferred to runaway flags were supposed to be "available" for United States needs, but th world shipping market is such that these ex-United States ships can profitably do business anywhere. Between July 1, 1952, and December 31, 1955, 298 ships representing better than 2 million tons were transferred to the runaway flags with United States approval. Approximately 11,000 to 12,000 United States jobs went with the transfers.

RUSSIA ENTERS MARKET

For example, the Soviet Union's new economic aid policy and active purchases of grain abroad are putting a strain on world shipping. One United States official said that Russian participation in world trade has had the effect of raising grain-hauling prices $5 a ton in the last 3 months.

The official, Herbert K. Hyde of the General Services Administration, said that the Russians are bidding for ships at any rate and have succeeded in diverting 106 foreign-flag vessels to her trade. The result is that the United States is having difficulty in obtaining shipping to haul strategic materials for this country's defense needs.

The Los Angeles Temple of the Church of Jesus Christ of Latter-Day Saints

EXTENSION OF REMARKS
OF
HON. JOSEPH F. HOLT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 16, 1956

Mr. HOLT. Mr. Speaker, I should like to call the attention of my colleagues to a concurrent resolution passed by the California State Legislature in our community. We are proud to honor the new Los Angeles Temple of the Church of Jesus Christ of Latter-day Saints. A great many of these fine Americans live and work in the community I represent in Congress. I want to join with many others in paying tribute to their daily achievements and their contribution to our wonderful America.

ASSEMBLY CONCURRENT RESOLUTION RELATIVE TO THE LOS ANGELES TEMPLE OF THE CHURCH OF JESUS CHRIST OF LATTER-DAY SAINTS

(By Hon. Patrick D. McGee, 64th District; Hon. Frank Lanterman, 48th District; Hon. Bruce F. Allen, 29th District; (list is so extensive will just copy last names—lee) Backstrand, Beaver, Bee, Belotti, Bonelli, Bradley, Brady, Brown, Burke, Caldecott, Casey, Chapel, Coolidge, Collier, Conrad, Davis, Dickey, Dills, Dolwig, Donahoe, Doyle, Elliott, Erwin, Gaffney, Geddes, Grant, Hansen, Hawkins, Hegland, Henderson, Holmes, Johnson, Kelley, Kilpatrick, Klocksiem, Levering, Lincoln, Lindsay, Lowrey, Luckel, MacBride, Maloney, Marsh, Masterson, McCollister, McFall, McMillan, Meyers, Miller, Munnell, Nielsen, Nisbet, O'Connell, Pattee, Porter, Rees, Rumford, Sankary, Schrade, Sedgwick, Shell, Smith, Stanley, Stewart, Thomas, Unruh, Weinberger, Wilson)

Whereas the people of the State of California have recently witnessed the completion and dedication of a beautiful and majestic edifice of worship and service—the Los Angeles Temple of the Church of Jesus Christ of Latter-Day Saints; and

Whereas this notable achievement will be an impressive reminder of the part played by the heroic Mormon people toward the exploration and colonization of California in the midyears of the 19th century; and

Whereas the first contribution came when the good ship *Brooklyn*, under command of Samuel Brannan, arrived at San Francisco, July 31, 1846, bringing 230 people, many of whom figured notably in the early history of the bay region; and

Whereas the second contribution was the Mormon Battalion, a body of 500 men enlisted at Council Bluffs, Iowa, as United States Infantry, under orders to explore and chart a highway for transcontinental traffic between Santa Fe and San Diego. This body of men served as military patrol at San Diego and Cajon Pass. In Los Angeles they built Fort Moore and assisted in raising the United States Flag, July 4, 1847. This marked the beginning of California-United States history; and

Whereas the third contribution was the colonization of San Bernardino in 1851 by a group of 437 people who made their way from Utah in 150 wagons. They became the founders of that beautiful city; and

Whereas in the past 30 years approximately 150,000 of these intelligent and enterprising people have settled in California and have made notable contributions to the progress and prosperity of this State in business, finance, manufacture, agriculture and industry, as well as in the cultural fields of literature, music, entertainment and education; and

Whereas in this same period of time these devout and progressive people have erected more than 200 places of worship in the communities of California—chapels, recreation halls, auditoriums and welfare centers: Now, therefore, be it

Resolved by the Assembly of the State of California (the Senate thereof concurring), That the Legislature of the State of California convey to the officials and members of the Church of Jesus Christ of Latter-day Saints the congratulations of the State of California upon the completion and dedication of the great temple in Los Angeles, and commend the church and its people upon the contributions made to the progress of the Commonwealth of California; and be it further

Resolved, That the chief clerk of the assembly be hereby directed to transmit suitably prepared copies of this resolution to President Daniel O. McKay at the general headquarters of the Church of Jesus Christ of Latter-day Saints in Salt Lake City, Utah, to the Los Angeles Temple of the Church of Jesus Christ of the Latter-day Saints, and to the Honorable Hugh C. Smith, 1021 Zelzah Avenue, Granada Hills.

Appalling Record of Supreme Court Appointments

EXTENSION OF REMARKS
OF
HON. GEORGE W. ANDREWS
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 16, 1956

Mr. ANDREWS. Mr. Speaker, Judge Walter B. Jones, of Montgomery, Ala., is one of the ablest trial judges in America. He has been a profound student of the law for more than 40 years. He is the founder and president of Jones Law School, Montgomery, Ala. Judge Jones has served as president of the Alabama State Bar Association, and for years has been a member of the State bar commission and the board of examiners for the State bar association.

Judge Jones writes the column Off the Bench for the Montgomery Advertiser, Montgomery, Ala. Recently Judge Jones wrote an article on The Appalling Record of Supreme Court Appointments in which he expresses the low opinion that he has for the ability of the present members of the Supreme Court. Judge Jones' opinion of the Court is shared by millions of Americans, and especially by the good lawyers of America.

Under unanimous consent, I insert in the Appendix of the RECORD the article written by Judge Jones:

OFF THE BENCH

(By Judge Walter B. Jones)

APPALLING RECORD OF SUPREME COURT APPOINTMENTS

While there has always been some criticism of the decisions of the Supreme Court of the United States, its individual Chief Justices and Associate Justices, and the manner in which they conduct themselves, yet, I doubt if ever in the history of our country, has there been such widespread criticism of the Court and its rulings and such widespread dissatisfaction with those appointed to the Supreme Court. This has been particularly true since the so-called New Deal began on March 4, 1933; and today all over the country, among all classes of people, especially among the millions and millions of good American people who believe in maintaining the separation of powers, in keeping the three great departments of the Government, the executive, the legislative, and judicial, each confined to its own separate and constitutional sphere. Senator SMATHERS, of Florida, who recently introduced legislation to require that all those appointed to the United States Supreme Court, must have had at least 5 years' experience on the bench, either in the Federal or State courts, said:

"The Supreme Court should be the finest collection of trained and experienced jurists which can be assembled."

The Senators words have been quoted all over the country and the Wall Street Journal recently had this to say:

"That remark was made by Senator SMATHERS in introducing legislation to require all United States Supreme Court appointees to have had 5 years' experience on the bench, either in the Federal or State courts.

"Both the remark and the Florida Senator's bill express a philosophy with which most lawyers and laymen can agree. Unfortunately, it is an ideal which is rarely reached; appointments to the High Court, as to the rest of the Federal judiciary, some times are considered from the same viewpoint as postmasterships. A political debt must be paid, or a political obligation created. And politicians consider it a masterful plan when both the debt and the obligation can be effected at one stroke, as in the court-packing plan of the thirties.

"Although that proposal to nullify the approach to legal questions of the 'nine old men' failed, the idea that the Court is a place for patronage persists. Some Presidents, it is true, try to come closer to the ideal of experienced and trained jurists than do others under the system.

"And what happens under the system? Inexperienced jurists are inclined to interpret the law—or the Constitution—not as it is but as it should be in their view. Untrained jurists sometimes go beyond the responsibility of determining the legality of statutes and the effect is decisions which transgress the responsibility of Congress to legislate.

"The fact is that of the present time members of the Supreme Court there are but three with any former judicial experience at all. Two were Federal Court of Appeals jurists and one was a police court judge. Six of them, including the Chief Justice, never presided in any courtroom until they took their seat on the highest court in the land.

"The justices themselves are not to be blamed for the faults of the system. The greatest legal minds are not always found on the bench, of course. They may be in universities or in private practice. And it would be a pity, perhaps, to exclude these people as Mr. SMATHERS' bill does, though even great minds benefit from experience, and those who possess them are quickest to admit it.

"It is probably idle to point out that no law is really needed to change the system. The Senate need accept no Federal bench appointee of any Chief Executive if the Senate thinks the appointee unworthy. The Senate can, of course, set its own standards concerning experience and training and it can reject those men who do not meet the standards.

"It would be equally idle, though, politics being politics, to suppose that those standards will be very much higher than the possession of a law degree until the Senators themselves want the system changed."

If we look back and consider separately each of the appointments to the Supreme Court made since 1933, we find that not a single one of the judges was really appointed solely because of his judicial experience, his great ability as a lawyer or because he was outstanding in the profession. It is appalling to look back and consider the causes which moved the appointment during the last quarter of a century of the members of our highest Court. I find these reasons: Get a probable presidential candidate out of the way, where he cannot annoy the appointing power; kick some attorney general or Government functionary upstairs and make room in his office for another political appointee; appoint one because he is a great friend of Senator so-so. Appoint one because he can be depended upon to follow the political thinking of the President in power; appoint one because he will be acceptable to powerful minority groups which give thousands and thousands of dollars to the political party campaign chest; appoint one because his economic philosophy squares with that of the appointing power—these are some of the reasons given in recent years when appointments were made to the Supreme Court bench. These things should not be.

Public Housing—A Failure or Success After 15 Years

EXTENSION OF REMARKS

OF

HON. JOEL T. BROYHILL

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 23, 1956

Mr. BROYHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Home Builders Monthly of August 1955:

PUBLIC HOUSING—A FAILURE OR SUCCESS AFTER 15 YEARS

(By Joseph H. Deckman)

It has been 15 years since the first public housing authorized under the United States Housing Act of 1937 was built in Washington, D. C.

The construction of public housing on a large scale in Washington stirred up much controversy between the exponents of private housing versus the advocates of Government ownership of a large segment of the citizens homes.

It was claimed by the public housers that Government housing would clear the slums and provide low-rent housing for low-income groups.

After exhaustive investigation by those who believe in private enterprise it was found that public housing does not fulfill its promises except in a token manner for publicity purposes. What few slums that have been cleared and the small number of low-income people who have been housed has all taken place at great expense to the taxpayer. Aside from this there has been a dangerous weakening of the foundation of our American way of life which is based on private ownership of the tools of production and the home of the citizens.

Now that a 15-year time interval has elapsed since the construction and operation of a number of various types of public-housing projects, it is fitting that a review of claims and conjectures be made in the cold light of actual experience.

In Washington the total cost value of public housing of all types is approximately $50 million.

Not all of this housing is typical, so-called low-rent public housing as over two millions of dollars in cost is represented by permanent war housing. Another project, Langston Terrace, is a holdover from the admitted socialized housing era of Tugwell and Company. There is also less than a million dollars represented in the old Alley Dwelling Authority experiment.

Because of the lack of detailed information on the public housing built under the Housing Act of 1949, the investigation herein set forth will consist of an analysis of the 5 projects constructed under the United States Housing Act of 1937.

These 5 projects, completed in 1940–41, totaled approximately $7 million in cost and are comprised of Carrollsburg dwellings, Ellen Wilson dwellings, Fort Dupont dwellings, Frederick Douglass dwellings, and Kelly Miller dwellings. Three of these projects were erected in former slum areas and two were constructed on vacant land. All of these projects were constructed with 2½ percent interest bearing loans and 60-year repayment terms in amortization.

The type of construction varies from brick and block to a completely frame project. As a whole, these projects can be considered of typical construction for low-rent housing which is in direct contrast to the current proposal of National Capital Housing Authority, to erect eight-story, elevator, public-housing apartments.

Almost all of the laymen who support public housing do so because they believe that it will clear slums and house the needy.

Nothing could be further from the truth as only a token amount of the slums of Washington have been cleared at enormous expense. While 3 out of 5 of the projects constructed under the United States Housing Act of 1937, only 1 out of 8 projects under the United States Housing Act of 1949 were built in former slum areas. Two other projects in slum areas are in the negotiation stage.

From the pattern of slum sites versus vacant or sparsely settled land it can be readily seen that public housers plan to build about three times as much housing on vacant land as they do in slum locations. Slum clearance then becomes the tail which wags the dog to obtain more and more money to squander on socialized housing.

On the subject of housing the needy in public housing this is the tear jerker which is used to obtain appropriations, but there has never been any intention to house more than a fraction of the needy in public housing.

Proof of this statement is found in the testimony of John Ihlder, one of the country's leading public housers when testifying before the Burton committee in 1944. At that time he stated that the United States Housing Auhority officials in the early days had set a policy of not housing anyone who could not pay the economic rents set by the public housers. These rents were supposed to cover all costs of operation, maintenance and debt service except the profit taken by private owners of rental property.

It was after much discussion Mr. Ihlder stated that a policy was worked out to house not more than 25 percent of relief tenants or those who could not pay economic rents in NCHA properties. (This statement can be found on p. 165, pt. 1, of the Burton committee hearings on S. Res. 184.)

Since 1944 the percentage of needy tenants in the NCHA projects under study has dwindled from 25 percent to 13.3 percent at the time of the annual report for 1954.

The 13.3 percent figure was found by analyzing the financial statement from the NCHA 1954 report for the properties in question. On page 41 of the report it states that $681,099 was collected in rents. After obtaining the so-called economic rents for each project from NCHA it was found they would total approximately $785,299 if collected.

This makes a difference of $104,200 between rents collected and the stated economic rent. Reduced to a percentage basis it shows that only 13.3 percent of the tenants did not pay the economic rent.

Carrying this policy to its final conclusion for housing the needy in public housing it would necessitate that over seven times as much public housing would have to be built as there are families in need of rent relief.

The cost of this procedure, the same as the policy for slum clearance as earlier outlined, would break the country or throw it into state socialism before the slums are cleared or the needy housed.

To further prove that public housing does not house the needy, a check was made on the current relief rolls in Washington. It was found that out of 2,400 family rent relief cases only 480 or 20 percent are living in public housing. Of the 6,000 single persons receiving rent relief only 230 or 4 percent are housed in public housing. Furthermore, if the policy of 1944 is still in effect the District of Columbia Public Welfare Department will have to pay the full economic rents for their relief families. (Statement by John Ihlder, Burton committee hearings, p. 175, book 1.)

Even the most rabid supporters of public housing must admit in the light of these facts that public housing does not house the needy.

The irony of the situation is the fact that the Federal Government pays an annual subsidy to the local housing authorities in an amount equal to the interest and amortization charges on each project for the purpose of writing down the rents for needy tenants. This subsidy is pledged to be paid from the Public Treasury for the entire period for which the project is financed and this is not less than 45 years and in the case under study is 60 years.

On the subject of taxes it is not mandatory by law that the local housing authorities pay real estate taxes.

However, in Washington NCHA produces much grist for its propaganda mill by making payments in lieu of taxes. The uninformed are led to believe that these payments are about equal to the real estate taxes paid by private owners of apartments.

Actually, the payments are less than 50 percent of the taxes paid by the private owners. By checking the projects under study at the District of Columbia Tax Assessors office it was found that if the projects were privately owned they would pay $112,843.78 per year in taxes. The payment in lieu of taxes as found on page 41 of the NCHA Annual Report is $51,642. This then is better than a 50-percent tax subsidy enjoyed by public housing over private ownership.

On the subject of rents it is also significant to note that since the projects were constructed in 1940–41 with much publicity about their low economic rents, these rents have been raised approximately 50 percent across the board in all projects. During rent control the public housing rents were raised whereas private rents were frozen.

A further study into public rents discloses the important fact that the so-called economic rents set by NCHA do not actually cover all costs except a builder's profit as claimed at the time of the Burton hearings in 1944.

The fact is that the economic rents set by NCHA do not actually cover all costs except a builder's profit as claimed at the time of the Burton hearings in 1944.

The following financial table illustrates graphically the fact that the economic rents as now set by NCHA do not cover full costs including interest and amortization charges. In the financial statement on page 41 of the NCHA 1954 annual report there is no pro-

vision for any amortization payment. The charge for interest on bonds and notes is $137,064, while the annual interest payment is only $87,588. Other than this interest figure, full taxes and the addition of an annual amount for amortization based on 60 years, all the other expense items are taken from the NCHA report.

The $984,212.78 is the amount which should be collected to arrive at a true economic rent. The difference between this amount and the so-called economic rent of $785,299 is approximately $200,000. This should be pro rated to each apartment rent for a true comparison to private rents. Reducing this $200,000 to a rental-room basis per month based on the projects 5,608 rental rooms, it is found an additional rent of $2.95 per month per room is needed.

Analysis of project expenses to determine a true economic rent

Cost of land and improvement	$7,000,700.00
Rents collected (actual)	681,000.00
So-called economic rent if collected	785,299.00
Operating expenses:	
Management	89,802.00
Services	39,921.00
Utilities	166,871.00
Repairs, etc	232,933.00
Taxes if privately owned	112,843.78
General expense	19,989.00
Depreciation	117,482.00
Interest (annual average) 2½ percent	87,588.00
Total revised expenses	867,429.78
Curtail—annual $7,007,000 divided by 60 years	116,783.00
Total annual expenses and curtail	984,212.78

To reduce the rent question to simple language, it can best be shown by using a typical example.

In 1940 the economic rent for a two-bedroom apartment in Fort Dupont Dwellings was set at $33 per month. At the present time this rent is now listed at $50.50 per month. If the true economic rent were to be charged and additional sum amounting to 4 rental rooms times $2.95 per room, or $11.80 per month, should be added for a 2-bedroom apartment. This produces an economic rent of $62.30 per month for a 2-bedroom apartment and not $50.50 per month, as stated by NCHA.

This true rent just about equals the rent charged by private owners of rental housing which was built 15 years ago of comparable minimum standard construction and equipment to that of the public housing.

The big differences in comparing the rents is the fact that private enterprise rents will come down after the 20 to 25 year life of the mortgages on the property whereas the public housing rents will remain at the same level or higher for another 45 years. Also the private rents are based on payment of full taxes and annual interest rate of from 4½ to 5 percent and the life of the mortgage is not over 25 years.

If 2½-percent money and 60 years financing were available, the rents of private enterprise for comparable housing would be lower and still include taxes and a profit. The reason that private enterprise can do the job better is due to the fact that private builders can build for approximately 25 percent less than the public housers and the private management costs are from 3½ percent to 5 percent while the projects under study show a management cost of over 12 percent.

In summing up the public versus private housing controversy it is clearly shown that after 15 years of operating typical housing developments, that public housing is a failure on all counts. The question is then raised as to the answer to slum clearance and housing the needy.

This answer is found within the framework of the free-enterprise system which must do the job if we are to preserve our American way of life.

Slums, if they are to be cleared must be done by a public agency. After they are cleared and a master plan for land use is drawn up, the land should be offered to the highest private bidder who will have to pay full taxes for its use.

If low-rent housing is planned then private enterprise should be given the tools of low-interest rates and long-terms amortization to keep the rents down. However, rent ceilings should be imposed on the owners for the privilege of receiving these special considerations. Then if anyone cannot pay these low taxpaying private rents, that segment of society will have to be cared for by public welfare the same as they are being cared for now.

Coupled with the low-rent housing rebuilt in slums or other designated areas should be strict enforcement of a housing and sanitation code which would prohibit blight and slums from poor living habits and the owners neglect of property.

From what has been set forth in this study it should be crystal clear to every one that no more public housing should be built until private enterprise has a chance to do the job with the proper legal and financial tools. Furthermore, this case study points up the need for a nationwide investigation of all local public housing authorities to find out how much slum clearance and housing of the needy has taken place for the billions of dollars that have already been spent on the great socialized housing experiment.

NOTE.—As we go to press we have learned of the Senate-House conference committee's decision concerning public housing.

Joe Deckman's public housing committee can take a major share of credit for paring down the Senate request of 135,000 units to 45,000 units.

This came about because Joe's committee spent much midnight oil. The last minute letters sent to all Members of the House of Representatives by this association's committee was successful in achieving this 11th hour compromise.—J. W. P.

Reed Versus Andrews

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 16, 1956

Mr. CURTIS of Missouri. Mr. Speaker, the following editorial appearing in this morning's Washington Post and Times Herald states the case of our Federal revenue system quite well. The Washington Post will not enter in this field often if it continues to pay attention to the views of Congressman DAN REED:

REED VERSUS ANDREWS

"This proposal," said Representative DANIEL A. REED the other day of the plan of former Commissioner of Internal Revenue T. Coleman Andrews for abolishing the income tax, "is like trying to cure the patient by killing him. It is totally unrealistic. So long as our Government requires billions for our security and other essential operations, the income tax is the only practical and fair method of raising most of this revenue."

As the senior Republican member and former chairman of the House Ways and Means Committee, Mr. REED is the ideal person to answer Mr. Andrews. The income tax not only is essential to the operation of the Government but it is supported by the American people as the least objectionable and most equitable form of taxation. Mr. Andrews' crusade to abolish the income tax has about as much chance as a proposal to abolish the Federal Government. It is appropriate that a man of Mr. REED's impeccable conservatism should reply to Mr. Andrews' radical and nonsensical scheme.

Symbols on the Dollar Bill

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 16, 1956

Mr. ANFUSO. Mr. Speaker, there is a lesson of democracy on every dollar bill in the symbols depicted there. Unfortunately, few of our citizens know the meaning or origin of these symbols, although they see them every day in the year.

An article has just come to my attention which explains these symbols. This is a vitally informative article which deals with an important aspect of the heritage and tradition of the American people, and as such it deserves wide circulation. I am certain everyone will appreciate and profit by this information.

Mr. Speaker, under leave to extend my remarks, I wish to insert into the RECORD an article entitled "On Every Dollar Bill," which is published in the May 1956 issue of the Christopher News Notes. It is as follows:

ON EVERY DOLLAR BILL

There's a powerful lesson on every dollar bill. Take a look at the back of one—the green side—i. e., the greenback. The two circles represent both sides of the great seal of the United States.

Do you know what the circular symbol on the left of the back of a dollar bill means? Ask a few friends if they understand the significance of the pyramid shown there, and the eye above it.

We made many tests an found that not one person in a hundred could explain the meaning behind these symbols, even though they are on every one of the billion and a half one-dollar bills now in circulation.

RAY BOLGER HELPS

So we decided to dig up the facts for one of our weekly Christopher television films. Hollywood star Ray Bolger appeared in the program and explained in a fascinating way both the spiritual and historical lesson symbolized on the back of every dollar bill. We have already received so many requests from all over the country for a detailed explanation that we thought it well to summarize it here in the News Notes.

ORIGIN OF SYMBOLS

The founders of our country thought it so important to express the basic truths of our Nation in the great seal that the matter was brought before Congress on the very afternoon of the signing of the Declaration of Independence, July 4, 1776.

Three great leaders, Thomas Jefferson, Benjamin Franklin, and John Adams were appointed as a committee of three to prepare the seal. Six years later, on June 20, 1782,

after exhaustive study and largely through the efforts of William Barton and Charles Thomson, Congress passed a resolution approving the final design of the great seal.

DETAILS WITH A MEANING

Here are some of the significant details we found through our research:

1. Pyramid: First of all, note the pyramid in the left hand circle. It represents the material strength of our country. In the words of William Barton, who played such an important part in designing it, it stands for "strength and duration."

2. Eye: Directly above the pyramid is the "Eye of God" which, though separate, completes the pyramid. It emphasizes the importance of putting the spiritual welfare of our country above its material prosperity. Our Founding Fathers[1] firmly believed that our strength was rooted in God and that our progress must always be under the watchful eye of Providence.

3. Under God: The words "Annuit Coeptis" circling the top of the Seal are once again a significant proof of the faith of the Founding Fathers and this Nation's dependence on God. These words mean: "He (God) has favored our undertakings."

4. New order: Now look at the three Latin words directly under the pyramid, "Novus Ordo Seclorum" which mean "A new order of ages." They signify that this new republic, which had just been founded, introduced a new age in the life and freedom of the people of the world, that it ushered in a new era in which the people themselves would be able to exercise their God-given rights to self-government.

5. Started in 1776: The Roman numerals—MDCCLXXVI—at the base of the pyramid add up to 1776, the beginning of the United States as an independent Nation.

THE CIRCLE AT THE RIGHT

Now take a look at the right-hand circle on the back of the dollar bill.

1. Eagle: It first became our national emblem in 1782 when it was chosen for the Great Seal as a symbol of strength and victory.

2. States' rights: The shield on the eagle's breast signifies self-reliance. It contains 13 stripes as a reminder that each individual State, with its basic rights and responsibilities, was expected to help protect the freedom of all the States.

3. The role of Congress: The bar across the top of the shield stands for Congress—as the unifying and binding force between the States. The colors of the bar and stripes are red, white, and blue in the Seal itself. Red, signifies hardiness and valor; white, purity and innocence; and blue, vigilance, perseverance, and justice.

4. Peace comes first: In the right talon or claw of the eagle, you will note an olive branch and if you examine it closely, you will see that it has 13 olive leaves. * * * In the eagle's left talon is a bundle of 13 arrows. Symbolizing the power of peace and war, the olive branch and the arrows are a reminder to the 13 states of their obligation first to work for peace and against war.

5. Ring of light: Finally, above the eagle's head is a ring of light in gold, surrounding 13 stars of silver on a blue field. The stars denoted "a new State taking its place and rank among other sovereign powers."

So you can see how important the Great Seal of the United States really is. In its design our Founding Fathers drew a lesson that was meant to be handed down for generations to come.

It may interest you to know that the Great Seal is used on official documents, medals, currency, official stationery and publications, and in several other ways under the supervision of the Secretary of State, who is custodian of the Seal.

WHAT YOU CAN DO

If you take a few minutes to familiarize yourself with these facts about the Great Seal, you'll be in a position to do a little missionary work in passing them on to others. Here are a few suggestions:

1. Take a dollar bill and explain the meaningful details to members of your own family, your friends and fellow workers.

2. Tell teachers to explain these symbols in every classroom.

3. Remind your local newspapers, radio and television stations that they can perform a public service by bringing these facts to the attention of the public as part of the great American heritage that each and all have a right to know.

IF YOU WON'T, WHO WILL?

In these days when there is widespread criticism of how little is known about the high ideals on which our Nation is founded, it is up to those who believe in God to use every opportunity to keep all Americans ever conscious of the fact that our whole concept of liberty is rooted in divine truth.

If you won't who will?

By doing nothing, you may be aiding those who slowly but surely are striving to despiritualize every phase of public and private life. Their chief strength is the failure of the average good citizen to make his voice heard.

Here is an opportunity for you to spread far and wide a few simple facts. Doing something positive and constructive like this is far more effective than merely complaining about what's wrong with your country—and your world.

Don't forget for one moment what you, personally and individually can do. If you are tempted to do nothing, recall the solemn warning of Jesus Christ: "He that is not with me, is against me" (Matthew 12: 30).

[1] In the book, The History of the Seal of the United States, by Gaillard Hunt, published by the State Department in 1909, it states on page 12 that Jefferson, Franklin, and Adams explicitly approved the inclusion of the Eye of Providence in the Seal. Then on page 42, Mr. Hunt quotes: "The pyramid signifies strength and duration. The Eye over it and the motto allude to the many signal interpositions of Providence in favor of the American cause." In the Encyclopedia Britannica under the topic, Seal of the United States, it states that Benjamin Franklin first suggested the "eye of Providence in a radiant triangle."

Success Story

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 16, 1956

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wilkes-Barre (Pa.) Times Leader of May 15, 1956:

SUCCESS STORY

Wilkes-Barre received some favorable publicity in the Nation's Capital when the Washington Post and Times Herald carried a three-column story in its Sunday issue about Corneal John Mack, vice president and general manager of the Mayflower Hotel, one of the most famous in the world. Mr. Mack is a native of this city, a fact which was included in the article.

Mr. Mack joined the staff of the Mayflower in 1924, 3 months before it was officially opened. In 1 year, he was chief accountant and in 1931 he was executive assistant. Ten years later, he was general manager.

Mr. Mack now directs a staff of 800. Since the days of Calvin Coolidge, he has been host to every President and Vice President of the United States as well as Cabinet members and assorted other officials. Many members of the Senate and House of Representatives reside in the hotel which is the scene of scores of big social events annually. Last year the Mayflower served 325,000 person in its dining rooms. Wilkes-Barreans make it their headquarters when they visit the Capital.

In the three decades he has lived there, Mr. Mack has become one of Washington's leading citizens. He has been honored with the presidency of the Cosmopolitan Club and the Merrick Boys' Club. He is a director of the Washington Board of Trade. He also is on the boards of the Washington Hotel Association and the American Hotel Association.

His hometown is very proud of the Neal Mack success story. It makes interesting reading.

Bandung—One Year After

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 16, 1956

Mr. McCORMACK. Mr. Speaker, I include, in my extension, remarks made in a forum in which I participated on the program The Georgetown University Forum of April 15, 1956, Bandung—One Year After, with my valued friend, Gen. Carlos P. Romulo, Ambassador from the Philippines and one of the world's great statesmen, and a fine representative of his country; His Excellency Aga Shahi, Counselor, Embassy of Pakistan, Washington, D. C., and Secretary General and member of the Pakistan delegation to the Asian-African Conference in Bandung. The moderator was Matthew Warren.

Mr. WARREN. "Bandung—One Year After," is the topic for the 491st consecutive broadcast of the Georgetown University Radio Forum, another in a series of educational and informative programs from Washington. The Georgetown Forum was founded in 1946.

This is Matthew Warren speaking by transcription from the Raymond Reiss Studio, on the campus of Georgetown University, historic Jesuit seat of learning in the Nation's Capital.

Today's discussion will be, "Bandung—One Year After." The participants are His Excellency General Carlos P. Romulo, Ambassador from the Philippines; His Excellency Mohammed Ali is ill, and in his absence we welcome the Honorable Aga Shahi, consular of the Embassy of Pakistan, Washington, D. C., secretary-general and member of the Pakistan delegation to the Asian-African conference in Bandung; the Honorable John W. McCormack, Congressman from Massachusetts, majority leader of the United States House of Representatives.

Transcripts of today's broadcast are available. Send 10 cents to cover the cost of printing and mailing, with your name and address to Georgetown University Forum,

Washington 7, D. C. Please mention also the subject matter of the transcript desired.

April 18 marks the first anniversary of the famous Bandung Conference in which representatives from Asian and African nations met to deliberate some of the foremost issues facing the world today. Colonialism and imperialism, peace and national security were widely discussed. The impression created by this conference throughout the world was that a new and powerful third force, a moral force was in the making, a force for peace and justice based on the experiences of these former colonial nations.

This period of Bandung's first anniversary is a most appropriate occasion for a sober evaluation of the conference on the basis of developments in the past year.

General, to open our discussion, I would like to ask you to review the objectives of the conference.

General ROMULO. As I remember it, the conference had four objectives: First, to promote goodwill and cooperation among the nations of Asia and Africa, to explore our vast and mutual as well as common interests, to establish and further friendliness and neighborly relations; second, to consider social, economic, and cultural problems and relations of the countries represented; third, to consider problems of special interest to Asian and African peoples, for example, problems affecting national sovereignty and of racialism and colonialism; and last, to view the position of Asia and Africa and their peoples in the world today, and the contribution they can make to the promotion of world peace and cooperation.

Those are the four objectives that made us go to Bandung, Indonesia, to attend that Bandung conference.

Mr. WARREN. Thank you, General. Mr. Shahi.

Mr. SHAHI. This conference was a unique assemblage of nations from the continents of Asia and Africa. As the President of Indonesia stated in his opening address, "It was the first intercontinental conference of the so-called colored nations of the world in its history." The number of states represented were 29. As many as 13 of them had achieved their independence in the decade since the Second World War. In population they comprised over half of mankind.

Mr. WARREN. Congressman MCCORMACK, What were the results of this conference now, to begin our evaluation, in the eyes of Congress?

Mr. MCCORMACK. The people of America and the Members of Congress, in particular, followed the Bandung Conference very closely. It was the first meeting of its kind of Asian and African nations, all seeking independence and liberty and freedom, and many of them participating in the conference recently emerging from an era of colonialism. Throughout our history colonial peoples of the world have looked to the United States as the champion of liberty and independence. The names of George Washington, Thomas Jefferson, and many other Americans are just as well known in lands and among peoples of Asia and Africa as they are in the United States. Our emergence from colonialism to independence stood as an inspiration to those people, and to many others throughout the world, seeking the right of free determination.

For a long while I had been thinking about what contribution I could make in my own little way as a Member of Congress toward, and in an affirmative way, obtaining those objectives that all people who want to be free under the law seek, and at the same time, combating the viciousness of communism.

The Bandung Conference attracted my attention. The bravery of the men who participated there in their utterances against international communism, and to the face of leaders, powerful leaders of Communist nations, commanded my respect as well as the respect of other Members of Congress. It was really the Bandung resolution and the speeches, the utterances and the actions that took place there that was the culminating influence in my drafting the resolution that I did against colonialism and Communist imperialism, and which passed both the House of Representatives and the United States Senate by a unanimous vote of Members of both bodies.

The Bandung Conference was, I repeat, the contributing influence which crystalized my thoughts and my action.

Mr. WARREN. Thank you. Mr. Shahi, I would like to ask you if you feel we can now speak of the spirit of Bandung as being forcefully alive today?

Mr. SHAHI. Well, I would say that in some directions the spirit of Bandung is forcefully alive today. By these directions I mean the strong moral support extended by the conference to all peoples who are waging a national struggle for freedom from colonial rule. If you will just consider what has happened in the past year: Morocco and Tunisia have emerged as full sovereign independent states. The Sudan has achieved its independence. The Gold Coast and Malaya are at the very threshold of their independence. Therefore, in this direction, the spirit of Bandung waxes strong. But, on the other hand, one cannot but note with great concern certain recent events which have assailed the spirit. There have been attacks from both within the region and from outside on the spirit of Bandung. I refer in particular to the sustained attacks which certain statesmen of Asia have made against those countries which have thought it in the interest of their security to enter into collective defense arrangements with the West. And, also, there have been attacks by the Soviet Union on such arrangements, which have been misrepresented as aggressive alliances, when in fact they are purely for self-defense.

Mr. WARREN. General, would you please give us your reaction to the results of this conference?

General ROMULO. Yes; I will be glad to do that. First of all, I would consider Bandung more as an influence than as a spirit, that the influence of Bandung has been all pervasive and this was felt in the United Nations and in other elements of the world community. In the United Nations, for example, we decided to have a better representation of Asia in the Security Council. The Bandung Declaration made it emphatic that the Asian nations wanted better representation in the Security Council.

The last session of the General Assembly approved the representation of Asia in the Security Council through the election for 1 year of Yugoslavia, first, and then the Philippines after Yugoslavia. Well, the election of the Philippines is a spearheading movement started in Bandung for better representation of Asia in the Security Council.

Then, again, when you consider this new shift in tactics of Soviet Russia, where they are emphasizing the economic offensive, I think this is something that they learned through the discussions in the Political Committee and Economic Committee of Bundung. Because there they saw how all the Asian nations were grateful to the United States for the economic aid given to these countries by the United States, and so made it clear in their statements in that committee. So much so that one of the declarations in the Bandung statement specifies economic aid. This did not escape the so-called collective leadership in the Kremlin. They followed that conference very closely. They saw the effect of economic aid on those delegates, and now they are trying to imitate this economic-aid offensive that the United States started 5 years ago, and they are trying to encroach on that same economic aid that heretofore has been a United States monopoly.

Mr. MCCORMACK. I think the spirit of Bandung is something that might undergo strain but cannot be destroyed. It is based upon truths. it is based upon soundness. However, there are strains directed, which the distinguished representative of Pakistan, Mr. Shahi, referred to, and my good friend General Romulo referred to. Within those countries they must differentiate between real friends and the voices of false prophets. They must realize that promises from certain directions would mean domination and ultimate enslavement. They must be able to differentiate between those who represent the forces of good and the forces of evil in the world. I think I can safely say that the United States of America represents the forces of goodness. The great majority of our people are against colonialism. The great majority of our people are sympathetic to the aspirations of the people of countries that participated in the Bandung Conference, and other countries seeking their emancipation and freedom.

We are only too willing to do what we can to assist. On the other hand, as I said, the voices of the false prophets represented by Communist Russia, must not be heeded in the best interest of their own country.

I think the Bandung Conference, successful as it was, must be implemented in a practical way. The leaders of those countries who want to improve the lot of their people, and that is real statesmanship, are entitled to the support of our country. I think it is in the best interest of the United States, as the nation having a rendevous with destiny, whether we like it or not, as if selected by God to be the leader of the forces of goodness in the world today, should affirmatively and effectively do those things which will cooperate with the leaders of those nations in building a stabilized government and a stabilized economy, and bringing to the people of those countries hope and confidence. I think that our country could do more, for example, in the direction of what is termed point 4 programs and projects.

I am hopeful that the leaders of those countries that participated in the Bandung Conference, in conference with the leaders of my country, will emphasize the economic uplift of their people as an important means toward bringing about stability and perseverance and strengthening of their nations.

Mr. WARREN. Mr. Shahi, do you feel the result of this conference was to establish a better bulwark against further aggression of Communist imperialism and colonialism?

Mr. SHAHI. It is very difficult to answer this question. Communist influence has tended to expand, firstly, in the Stalinist epoch, by means of outside force and encouragement of subversive movements. It would appear with the 20th Congress of the Communist Party of the Soviet Union that there has been a change in strategy and tactics. Now, the Soviet Union has proclaimed to the world that it has made fundamental revisions in Marxist theory, that it no longer regards war as inevitable, and that there could be more than one road to socialism, in an attempt to convince the uncommitted nations of the world that they have nothing to fear from communism.

Side by side with this there is a determined attempt to effect a political and economic penetration of these regions by the offer of aid, economic aid, and also by the declaration of unreserved support to the national liberation movement in the Asian-African region.

But the Asian-African countries which were represented in Bandung do not have a unity of outlook in regard to the best means to cope with the Communist forces directed from the outside. Some of these countries believe that their salvation lies in collective security arrangements, and there-

fore they have allied themselves to the West. But a number of important countries consider that their safety is best assured by a neutral policy, in other words, remaining outside these alliances. Of course, it is true that internally they are trying to raise the standards of living of their countries. But how far they can succeed can only be answered in time. In that sense, therefore, I do not think that it represents a bulwark against aggression.

Mr. WARREN. General, you were present at this conference, and so, of course, was Chou En-lai, the leader of the Communist Chinese. What was your impression of him?

General ROMULO. My impression of Chou En-lai is that he went there with Dale Carnegie's book, How To Make Friends and Influence People, in his hip pocket. The contrast in his attitude in Geneva, when he was there, and his attitude in Bandung, was quite marked, in the sense that in Geneva he was aloof, irascible, arrogant; in Bandung he was affable, cordial, friendly, humble, he was a good actor. But we must also admit that he is a very clever operator. When he saw me for the first time and met me for the first time in the home of the Prime Minister of Indonesia, he greeted me with one word, "Neighbor." And I answered him, "Yes, geographically."

Then, of course, he operated as if he were under the protecting wing of Prime Minister Nehru. Prime Minister Nehru was really the mother hen. He took him under his wing, gave parties in his honor, and invited the other delegates. In fact, the first dinner I attended was a dinner given by Prime Minister Nehru in honor of Chou En-lai. He had in that dinner only two of us, the Foreign Minister of Thailand and myself. So, Prime Minister Nehru was really the mother hen who was protecting or guiding Chou En-lai in that conference. However, I felt that the spirit of Bandung, or the influence of Bandung in our stand against aggression influenced Chou En-lai to such an extent that he had to make that proposal to negotiate Formosa on the very eve of the adjournment of the conference. He saw the strong feeling against aggression, and I am quite sure that the strong feeling against aggression in Bandung was transmitted by Chou En-lai to Soviet Russia.

So, while Bandung might not be a bastion against aggression, it served to pinpoint or to underscore to Soviet Russia and to Peiping the strong feeling against aggression by the representativees of 29 Asian and African nations assembled in Bandung.

Now, I agree with Mr. Shahi that since Bandung there has ben quite a lot of strain from the region against those of us who have decided to enter into security alliances. Mr. Shahi will remember the argument that I had with Prime Minister Nehru, when in the Political Committee Mr. Nehru for almost two hours attacked the security alliances, and after his speech I answered him and called his attention to the fact that it was important for us, nations like the Philippines, Pakistan and Thailand, to enter into a security alliance like the SEATO, because, unlike, I said, Prime Minister Nehru, we cannot face the world and challenge the world as he did when he made the statement in his speech that morning and said, "The whole world can go to blazes, but India will remain alone." So, I told him that most of the countries represented around the table were small countries like the Philippines, and none of us could boast of the power and the size of India, and so therefore none of us could say that the whole world can go to blazes and like India we would stand alone.

Then I told him that while it is true that the empires of yesterday on which the sun was said never to set were disappearing one by one from Asia, what we fear today is the shadowy empire of communism on which the sun never rises.

Mr. WARREN. Mr. Shahi, we don't all understand here in America India's position of neutralism. Perhaps you could address yourself to that point.

Mr. SHAHI. Well, sir, you have asked me a very difficult question. This is the policy of Prime Minister Nehru of India, and certainly my country, which is a neighbor of his, has not been quite able to understand this policy. As far as we can see, it may suit India, and it may be possible for India to steer a neutral course, particularly when there is a kind of balance or near balance between the two great super powers of the world, and therefore there might be an advantage purely from the national point of view for a country like India not to commit itself and take a stand, but by throwing its weight sometimes on one scale, sometimes on the other, to enhance its own importance and its role in international relations and therefore build up national influence.

On the other hand, countries like mine do not think that this is a policy which would be right and proper, and they feel that but for the great strength of the United States of America, it would not have been possible for any country to play a neutral role because there would be only one super power which would dominate the world.

Mr. WARREN. Congressman, what is the American public opinion? Is it responsive now to the real significance of this conference? What should we know about it that we don't?

Mr. MCCORMACK. I think the Congress is thoroughly appreciative of what took place at Bandung, its significance. I think also in Congress there is some doubt about the position of Mr. Nehru. I know that my feeling is that the fact that he finds nothing good in any country but the Soviet Union bloc, tends to overextend my patience. I also know that at some time or other in my life I have to choose one side or the other, and so must nations at some time or other choose one side or the other.

I have been very much disturbed with the fact that he has never indicated even remotely anything favorable to not necessarily the United States but to those countries that are associated with us. He overlooks the fact that there is not one foot of territory that any other country has that we want. There is nothing that the United States wants but to make its contribution toward a stabilized world, in other words, world peace. I think the best evidence of the state of mind of the American people is shown by what we did some 10 years ago in fulfilling our promises to the Philippines. It is my opinion that we have to remain strong, but at the same time remaining strong militarily isn't the sole answer. We have to do those dynamic things, such as represented by point 4, that enables the leaders of other countries who want to be free under the law to strengthen themselves with their people, and to bring hope and confidence into the minds of their people.

Mr. WARREN. Thank you very much, Congressman. I am sorry, but our time is up for further discussion of today's topic, "Bandung—One Year After." You have attended the weekly discussion program, the Georgetown University Radio Forum, broadcast of which was transcribed in the Raymond Reiss Studio on the campus of historic Georgetown University in Washington, D. C.

Next week you will hear discussed, "Medical Education: Whose Responsibility?" Our panel at that time will consist of Congressman ANTONI SADLAK, Republican Member of Congress from Connecticut; Mr. E. J. Ade, director of public relations, the National Fund for Medical Education; Dr. Francis M. Forster, dean of the Georgetown University Medical Center.

This program has been presented in the interest of public education by Georgetown University. Your moderator: Matthew Warren.

Clark Sings New Tune in Dixie

EXTENSION OF REMARKS
OF
HON. ADAM C. POWELL, JR.
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 16, 1956

Mr. POWELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the May 12 edition of the Norfolk Journal and Guide:

CLARK SINGS NEW TUNE IN DIXIE—COLORED GI'S NOT WORST IN FRONTLINE—RETIRED COMMANDER NOW INSULTS MEN HE PRAISED IN ITALY

(EDITOR'S NOTE.—John "Rover" Jordan, as a war correspondent for the Journal and Guide, spent 9 months covering the 92d Infantry Division in Italy during World War II. Working mostly with frontline troops, Jordan sent more than 500 news releases and many pictures from the fighting front.)

(By John "Rover" Jordan)

Gen. Mark W. Clark has been brainwashed in South Carolina. Either that, or he was sadly misunderstood in Italy back in 1944.

The general's recent statement that he opposes integration in the armed services because of his experiences with the 92d Infantry Division during World War II, is not only considered insulting to the men who fought and died under his command—but it is also an illogical appraisal of the whole nonsegregation policy.

Stating that he opposed integration in 1950 just as he does today, General Clark, now retired, said that colored troops of the 92d Division "bolted from the enemy" and that it was "the worst" division he ever commanded.

The general, now president of The Citadel, a military college in South Carolina, was speaking before the Southern Regional Conference of State Governments meeting in Charleston—where such a statement would be quite popular.

To begin with General Clark's opposition to intergrated troops based upon alleged shortcomings of the thoroughly segregated 92d Division is not logical because there just isn't any comparison between a strictly Jim Crow outfit and an integrated one.

Seventy-five percent of the ills that beset the embattled 92d Division were traceable directly to the ancient and cruel policy of racial segregation. This was pointed out time and time again by Journal and Guide war correspondents who were on the front lines with the 92d Division throughout its campaign on the Italian front in 1944–45. In many instances the Guide correspondent was with soldiers in frontline positions during fierce fighting—a spot where General Clark was never seen.

The 92d Division was frequently referred to as an all-Negro division. That is far from true. About three-fourths of the division's officers were white. In fact, white officers held just about all of the important positions—from commanding general down to company commander.

Most of the colored officers were lieutenants. Somehow, in this segregated setup, the colored officers gained promotions very slowly.

A majority of the white officers were from the South and had racial attitudes to prove it. This brings into focus one of the chief ills of the division:

White southern officers with their inherent prejudices from the start had little confidence in the colored soldiers. And, consequently, the troops had little confidence or respect for the officers.

This unfortunate situation was particularly prevalent in two of the division's regiments. The most efficient unit of the 92d Division was generally conceded to be the 370th Regiment, which entered frontline positions as a combat team in August 1944 under command of Col. Raymond G. Sherman.

Colonel Sherman's men fought heroically for two months before the division's other two regiments were brought up. The 370th struck hard across the Arno River north of Pisa on August 30, 1944, advancing up into the Serchio River Valley sector of the Germans' Gothic line.

Men of the 370th went on to capture the city of Lucca and before the end of September 1944 pressed into Pietasantra, a battle-scarred town in the Apennine Mountains.

While the hard-hitting units of "Three-Seven-Oh" (the 370th combat team) were keeping the Germans busy in the extreme eastern section of the line, General Clark's Allied Army troops further to the west were blasting through Futa Pass on the road to Balogna, gateway to the Po Valley.

General Clark wanted to capture Balogna very badly and he decided to go all out to do it. During early September the general threw elements of three American divisions into the drive through the Futa Pass area, the objective being a quick advance to Balogna.

With 3 other correspondents, I talked with General Clark and General Sir Harold Alexander, commander of British forces in Italy, when the 2 commanders visited the Futa Pass forward area in September 1944.

With men and tanks moving in a steady stream to forward positions, General Clark, spreading a map before us, confidently predicted:

"We will capture Balogna by tomorrow afternoon * * *"

At that moment, rugged infantry fighters of the 88th Division (white) were making an impressive show as they moved up along a nearby road.

Right on schedule, General Clark hurled his Allied units—including the white American divisions—into the drive for Balogna.

But something went wrong. Balogna did not fall the next day. Nor the next week; nor the next month.

In fact, the Germans continued to hold Balogna until the big allied push some 9 months later, in the spring of 1945.

I don't recall that General Clark has ever said that the American troops who failed at Futa Pass had "bolted from the enemy."

On that memorable day at Futa Pass—I made it a point to ask General Clark what he thought of the colored troops of the 370th combat team.

"They're doing a good job," General Clark assured me.

And they were. Colonel Sherman's men had spirit and pride. After a couple of weeks in the line they were fighting like veterans. In about 60 days, the two other regiments of the 92d Division were committed to combat, taking positions in the line adjacent to the 370's sector. The 92d Task Force held an Allied sector of the line beginning at the Ligurian Sea and extending inland through mountains for about 14 kilometers.

On several occasions I was assured by officers of Allied forces that the sole mission of the 92d Division was to hold the line; to probe and jab and keep the Germans busy with limited attacks and spirited patrol action. Because of the rugged, mountainous terrain for miles and miles to the north, it simply was not practical to attempt a major advance on the eastern sector. The big breakthrough had to come in the central section of the line, the nearest route through the mountains to the Po Valley.

So, from the outset, the 92d Division wasn't supposed to go anywhere. Their job was to hold the line, keep the Krauts busy, provide diversionary thrusts.

We knew that. Gen. Edward M. Almond, commander of the 92d Task Force, knew it. And, of course, General Clark knew it.

Sometimes that can be the cruelest kind of war, a company attack on a hill; a patrol thrust to capture prisoners; constant jabbing and patroling; fire fights at company strength. And then, of course, the enemy wasn't exactly dormant either. They fought back fanatically.

During the first 3 months of combat, 92d Division units did their job, performing as we thought just as well as other divisions on the Italian front. It was obvious that world spotlight was focused on the 92d, since it was the only division with all colored enlisted personnel.

They were on the spot and we knew it. That is why I was constantly trying to evaluate this unique task force. I frequently discussed this with General Almond.

"I wouldn't say that the 92d is the best division in Italy," General Almond told me confidentially, "neither would I say it was the worst. I think we are doing our job."

In November of 1945, scores of 92d Division heroes were given awards and commendations in a formal ceremony at Viareggio, a resort town on the Italian Riviera which served as headquarters for the division.

General Clark, himself, was on hand to make a speech and pin medals on the honored men. The Allied forces commander on that occasion had words of praise for the 92d Division.

In that hectic year of war, when the Germans had his Allied army bogged down at the Gothic Line, General Clark lauded the work of the grimy dogfaces of the 92d Division. And he pinned medals on their chests.

But this is another year, 1956, and there are no more Germans to capture. And General Clark, always a man of firm ambitions, now finds himself in another role, in another land—South Carolina.

By speaking out against integration and discrediting men who fought and died under his command, General Clark may be happy to know that he is now a hero of the white citizens councils and other hate groups.

Perhaps they will give him a medal.

Battle for Truth

EXTENSION OF REMARKS
OF
HON. GEORGE M. GRANT
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 16, 1956

Mr. GRANT. Mr. Speaker, the May 7 issue of the Alabama Farm Bureau News contained an editorial entitled "Battle for Truth" written by its fine editor, W. T. Maynor. This editorial pays tribute to the brilliant editor of the Montgomery Advertiser, Grover Cleveland Hall, Jr., who has gained nationwide recognition by his Askelon series of editorials. The article is as follows:

BATTLE FOR TRUTH—IT'S A NEWSPAPER FIGHT—BUT IT MEANS MORE THAN JUST THE PEOPLE'S RIGHT TO KNOW

(By W. T. Maynor)

An impressive new chapter in the history of American journalism is being written by a young Southern newspaperman. Grover Cleveland Hall, Jr., editor of the 125-year-old Montgomery Advertiser, is the author, or perhaps the prime mover, since it began with his relentless battle for fair and honest presentation of one particular type of news story and the developments are still being recorded.

The ideal is as old as journalism itself, but Mr. Hall's approach was unique in that it trained a pitiless spotlight upon the output of fellow editors throughout the Nation and showed them up before the people they are dedicated to serve. There are many indications that his campaign is having a wholesome effect.

Using as his basic thesis the oft-quoted but not always observed axiom that the business of a newspaper is to tell the truth regardless of the consequences, he is having a lot of serious fun peeling the hide of hypocrisy from a lot of people and probing the vitals of the institutions they head. It started not by design but by spontaneous reaction to an obvious need.

During the many weeks when Alabama was besieged by swarms of northern and foreign reporters sent to cover the Montgomery bus boycott and the incidents resulting from the efforts of an element of the Negro population and some extremists to shatter our traditional segregated educational system, many of the newsmen came to Mr. Hall's office for background discussions.

The youthful editor, who succeeded his Pulitzer prize-winning father as chief of one of the South's oldest and most distinguished newspapers, obliged them with such friendly candor that some of them apparently changed their preconceived ideas about race relationships in the South and wrote objective stories home. Others continued to turn out tripe. Meanwhile, Hall was getting in some licks of his own—chiding the reporters for coming all the way to Montgomery to get a story that existed, often in even more striking form, in their own backyards.

The climax came when the southern editor challenged the editor of the New York Post to do something about it. He proposed to go to New York and investigate racial segregation and discrimination if the Post editor would collaborate and assign to work with him the same able reporter who had been sent to Montgomery. Both would publish the stories. The New Yorker, however, insisted that Hall do the story in collaboration with a Negro reporter, described as an expert on the subject. Hall declined this as an "inadequate arrangement," and there the matter rested.

But not for long.

Other newspapers and national magazines, notably the U. S. News & World Report, gave wide publicity to the challenge. Many agreed with Hall that race incidents in the North and Midwest had been "played down" or ignored while newspapers, abetted by politicians, pointed the finger of scorn at the South.

Figuratively using his editorial pen as a cudgel, the Montgomery editor started beating the heads of editors "up Nawth." His text was taken from David's lament over Saul and Jonathan (11 Samuel 1: 20) in which the Biblical poet voiced the wish that the misfortunes of his friends be not made known to their heathen enemies:

"The beauty of Israel is slain upon thy high places; how are the mighty fallen.

"Tell it not in Gath, publish it not in the streets of Askelon; lest the daughters of the Philistines rejoice, lest the daughters of the uncircumcised triumph * * *."

His theme was that "it is a sorrowful fact that wherever the Negro migrates in significant numbers, he encounters rejection," but that this fact was not admitted, nor incidents proving it published, in areas in the North whence came loudest criticism of the South.

Since then, day after day, he has pounded out editorials and put reporters on long distance telephones with tape recorders to in-

terview editors and public officials in other sections. The "Askelon" series has laid bare the attitude of the northern press.

For example: that a race riot must happen under a Confederate magnolia blossom to be news that's fit to print; that what the northern press would refer to as a mob in Alabama is discreetly called a crowd in Detroit, its lawless actions buried on far inside pages while Alabama's troubles are blazoned on page 1 in large type; that few if any newspapers of repute publish portraits of Negro brides on their society pages; that in Dearborn, Mich., population 130,000, not a single Negro is permitted to live, and the same is true of other all-white incorporated municipalities around the Detroit area; that the racial issue has been raised even in the Milwaukee mayoralty race, where the Negro population is only 5½ percent; that segregation and discrimination are practiced in St. Louis, Washington, New York, Chicago, Toledo and other cities, where violence frequently erupts—but the hometown newspapers "publish it not in Askelon."

The Advertiser editor proclaims, as most southerners have insisted all along if they gave it any thought at all, that the question of race relationships is an American, not a southern, dilemma. Citing flagrant examples of newspapers whose editorial pages "bleed like a Hapsburg in admonishing the South to cease race discrimination immediately if not sooner," he asks:

"How in the world did they think this arrant hypocrisy could be overlooked permanently? You might say that, in this respect, the genius of the northern press is its stupidity. Certainly it is practicing patent medicine vis-a-vis the South."

Nor does he spare his southern newspaper brethren. If editors in Birmingham, Dallas, and other southern cities would take up the battle for unbiased reporting there's no estimating the good it would do, he insists. An editor and one competent reporter could blast the editorial walls of "Askelon" until the inhabitants thereof would demand that their newspapers give them all the news, truthfully.

He has been given at least one assist by a neighbor, Editor Ed Field of the Selma Times-Journal. While in Washington recently accompanying a group of Alabama Farm Bureau leaders, Mr. Field sent back a two-column editorial titled "Uneasy Quiet Along the Potomac." He wrote that the Nation's Capital "is not as complacent about integration as propagandists would have you believe. Instead, the white citizens are seriously disturbed over a gradual process of subservience to Federal fiat which is turning the Capital City into a Negro community * * * Some say that as many as 13,000 white families moved out of Washington last year alone."

Mr. Hall recognizes that pressures brought to bear for school integration, and elimination of color lines elsewhere, since the United States Supreme Court's 1954 edict has set back amicable race relationships in the South immeasurably. He deplores that many sober-minded citizens who used to pride themselves on being "moderates" have become anti-Negro, or anti-white, as the case may be. While describing himself as a moderate, he concedes that he has revised his own viewpoint to some extent in recent months.

Once he was castigated on the floor of the State senate for his seeming editorial acceptance of the "inevitability" of racial integration; but the Senator who attacked him later mare public apology and praised Hall for his more recent observations and the "Askelon" series.

Now he's convinced that such a change in our educational customs can come only in the dim and distant future, if at all. Why? Not for moral reasons, as he sees it, but due to the resistance of a whole people to changes in their way of life by force. The same folks who think nothing of crowding into an elevator with Negroes (vertical transoprtation) resist legal efforts to force them to comingle on a bus (horizontal transportation).

They certainly are resisting integration in the schools, and will continue to do so.

This view is shared by some of the most thoughtful observers of the national scene. Discussing the Supreme Court's order in his syndicated column, noted columnist David Lawrence, editor of U. S. News & World Report, recalled the Nation's experience with what he referred to as another "social experiment," the 18th (prohibition) amendment. Public sentiment was gradually built up against it; Federal prohibition laws were so universally disregarded and resisted that adoption of the repeal amendment came with amazing rapidity. The States now have sole power in this respect; it was returned to the status of a local rather than a national issue.

Mr. Lawrence concludes that due to resistance on the part of the people, integration of the races in all schools throughout the United States is a long way off, "years and years, and maybe never."

So, where does the "Askelon" campaign leave the situation?

It certainly does not solve all the problems, and is not intended to. As a correspondent for the Kansas City Star wrote, Hall "has set out to prove that repression of Negro minorities is not strictly a Southern blight. He has succeeded beyond his hopes * * *." What does Hall think?

"This is a newspaper fight," the Advertiser editor said in an interview. "The possibilities are unlimited. Any editor with one reporter could keep it going 365 days a year. These exposés are not going to solve any of our problems. But if we can get the country thinking in terms of 'an American dilemma' rather than a 'Southern problem,' the people of the North will be more tolerant in their demands on us down here. A newspaper's business is to report the truth, regardless of the consequences. And to whatever extent that can be accomplished, to that extent will be the relief of the colored man in the North.

"We are trying to fill the journalistic gap by pointing out that where the Negro presents problems in numbers, he is rejected—candidly in the South, pharisaically in the North."

But while his battle is a journalistic one as he sees it, there is no doubt that it is having other and far-reaching effects. Some northern papers, including the New York Post, already are taking a closer look at their racial situations. The Associated Press and many of its members, prodded by Hall, are finding that there is news in racial strife everywhere, if anywhere.

The implications are not confined to newspaper ethics nor to the specific problems now beginning to be published in at least some parts of Askelon. People everywhere, whether Hall intended so or not, are looking toward Washington to question what's happening to the old-fashioned principle of States rights and individual liberties; people who believe in equal opportunities and protection for all under our system of government but who insist that age-old customs cannot be changed by Federal fiat, are reacquainting themselves with the current trend. Because the whole thing was triggered by that fateful integration decree of May 7, 1954, and the people wonder to what unlimited extent the reasoning which the Court employed in arriving at it may be used in future attempts to regulate other aspects of our daily life.

The Moral Is Crystal Clear

EXTENSION OF REMARKS
OF
HON. JOHN BELL WILLIAMS
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 16, 1956

Mr. WILLIAMS of Mississippi. Mr. Speaker, the President has expressed publicly his opposition to the so-called antisegregation amendment to the pending school-construction legislation. The President's position on this matter is quite obviously one of expediency, as he knows that no such legislation can be forced through Congress that expressly denies funds to a great portion of this country.

In view of recent actions along these lines taken by the Civil Aeronautics Administration in its administration of the Federal Airport Act, it would be well for Congress to analyze the President's real intentions respecting the school legislation.

By an overwhelming vote, the Committee on Interstate and Foreign Commerce defeated an attempt to amend the Federal Airport Act so as to deny funds to airports for construction of separate facilities where racial separation is practiced. The Federal Airport Act makes no requirement that integrated facilities shall be a condition precedent to an airport's receiving Federal assistance.

In abject defiance of the expressed intent of Congress, the Department of Commerce, through the CAA, has written this policy into its regulations, and is denying assistance to airports for construction of terminal facilities where plans call for separate facilities in accordance with State laws. Quite obviously, this policy was dictated from the White House.

Are we so naive as to believe that the President, particularly in an election year when he is a candidate, is not going to extend this same policy to the administration of the school-construction legislation, if enacted?

We need not be fooled by the President's pronouncements regarding the antisegregation amendment or the school-construction legislation. This fact is pointed out clearly in the following editorial, taken from the Jackson (Miss.) Clarion Ledger, under date of May 9, 1956:

THE MORAL IS CRYSTAL CLEAR

We hope advocates of Federal aid to education in Mississippi and the South have derived some lesson from recent action by the Civil Aeronautics Administration, denying Federal funds for construction at airports where segregation is practiced. Our own Jackson Airport has been adversely (but negligibly) affected by this arbitrary decree.

Actually, Federal allocations for local airport improvements and additions have been reduced only from $40,000 to $35,000 by the CAA ruling, a comparative drop in the bucket in relation to the overall $85,000 program in which local funds are matched with Government money. This is entirely beside the point. The matter involves principle rather than principal.

The fact remains that a Federal agency, in this case the CAA, apparently can of its own authority prescribe conditions under which Federal funds may be granted or withheld to State or local authorities. If Washington agencies can deny funds for construction of segregated airport facilities, another agency can exercise the same authority in the case of segregated schools.

Conceding again that the CAA ruling in this particular instance is relatively unimportant, it unmistakably represents a dangerous and highly undesirable precedent for others in Washington to follow in prescribing rules and policies related to Federal aid. We invite the attention of all Mississippians to this phraseology in the CAA decree—"where duplicate facilities are provided that are intended for segregated use, the areas involved will be excluded from Federal aid."

Unlike other recent blows at the South's traditional practice of racial separation, the CAA ruling has prompted but little comment among southern leaders. City and State officials are expressing a cheerful willingness to pay all costs for segregated airport facilities which may be objectionable to Federal officials. This is especially true in the case of Jackson's municipal airport which, of course, will maintain the status quo.

The same attitude must and will continue to prevail with regard to education. Let those among us who cry loudly for Federal dollars in aid to schools pay heed to what has happened in the case of Jackson's airport and those of other southern cities denied Federal funds because of segregation. If Washington can prescribe terms and conditions for local airport construction, it can do so with regard to local schools receiving Federal moneys for their support. The moral is painfully clear and inescapable.

A School of War in Time of Peace

EXTENSION OF REMARKS
OF
HON. THOMAS J. DODD
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 16, 1956

Mr. DODD. Mr. Speaker, I desire to call to the attention of our colleagues the following excellent editorial which appeared in the May 8, 1956, issue of the Hartford Courant:

A SCHOOL OF WAR IN TIME OF PEACE

This has been a year in which a number of diverse and venerable institutions have celebrated their 75th birthday. The University of Connecticut was established in 1881; so was the Boston Symphony Orchestra; and so was one of the United States Army's senior schools, the Command and General Staff College at Fort Leavenworth, Kans. It must have been quite a year, 1881.

Perhaps none of these septuagenarian institutions has contributed as much to the country as a whole as the Army school. It is one of some 58 separate Army-operated or sponsored schools, which offer about 300 courses for officers and an equal number for enlisted men. But it is the only one that teaches the use of the combined arms and services in combat. It is there that officers selected to take high command and staff positions learn how the Army fights with major units. General Eisenhower is a graduate, class of 1926. In World War II some 18,000 officers went through the course. In World War I General Pershing felt that, without the staff training afforded by the school, the tremendous problems of combat, supply and transportation could not have been solved.

Yet, strangely enough, Leavenworth has always been a stepchild of the Nation's educational system. Only this year are plans taking shape for an academic building designed to meet the instructional needs. Most of the present school buildings are converted gymnasiums or riding halls. In peacetime, when the school is serving its most useful purpose of training officers for combat, it can't command the interest of Congress. Its anniversary today should serve to remind the Nation at large that a dedicated institution, constantly reviewing and improving doctrine and programs, is constantly at work against the time of need.

Chicago, Ill., as a Site for National Library of Medicine

EXTENSION OF REMARKS
OF
HON. JAMES C. MURRAY
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 16, 1956

Mr. MURRAY of Illinois. Mr. Speaker, there is presently pending before the House legislation to promote the progress of medicine and to advance the national health and welfare by creating a National Library of Medicine.

Under unanimous consent, I insert in the Appendix of the RECORD a resolution adopted by the City Council of the City of Chicago at a meeting held on May 9, 1956. This resolution requests the United States Congress to designate the city of Chicago as the site for the proposed National Library of Medicine, and sets forth very sound and positive reasons why the city of Chicago should be selected:

RESOLUTION ADOPTED BY CITY COUNCIL OF CITY OF CHICAGO REQUESTING UNITED STATES CONGRESS TO DESIGNATE CITY OF CHICAGO AS SITE FOR PROPOSED NATIONAL LIBRARY OF MEDICINE

"Whereas there is pending before the Congress of the United States a bill providing for the removal to a more accessible location, the world's largest medical library; an invaluable instrument for medical and scientific research, with its more than 650,000 volumes accumulated since its foundation by the United States Army in Washington, D. C., over 75 years ago; and

"Whereas the library is now crowded into a Civil War building; its services handicapped for lack of space and its safety and protection jeopardized by the danger of fire or other natural hazards; and

"Whereas the bill provides for the renaming of the library as the National Library of Medicine and most aptly transferred from the jurisdiction of the Department of Defense to that of the Department of Health, Education and Welfare; and further provides that the new library may and should be moved to a location more readily available to centers of medical research than is its present inadequate site; and

"Whereas Chicago is already the Nation's No. 1 Medical Center, offering unsurpassed facilities for medical treatment, teaching and research in the fields of medicine and surgery; is also the transportation hub of the United States for air, bus, rail, and automobile travel; and

"Whereas, if moved to Chicago and housed in a modern fireproof structure, the new library would be a storehouse of knowledge, enhancing the city's fame as a world medical center, and establishing it as the most acceptable and desirable location for the benefit of all interested parties from all parts of the Nation desiring access to the historic volumes; and

"Whereas His Honor, Mayor Daley, is leading the drive to present Chicago's claim for congressional recognition of its preeminent position in the medical field by locating the new library within the confines of the city; and will soon appoint a civic committee to take charge of the campaign: Therefore be it

"*Resolved*, That the City Council of Chicago in regular session does hereby unanimously endorse the campaign for placing Chicago's unmatchable qualifications as a site for the medical library, and respectfully memorializes the Congress to give prompt attention to Chicago's plea; and be it further

"*Resolved*, That a copy of this resolution be sent to the United States Senators from Illinois and the Representatives in the Congress from the Chicago area and all other districts of the State, with the request that they give their official and personal support to the nonpartisan civic movement to bring to Chicago the largest and most authentic medical library in the world, in keeping with Chicago's great reputation for education and scientific achievement."

STATE OF ILLINOIS,
County of Cook ss:

I, John C. Marcin, city clerk of the city of Chicago, do hereby certify that the above and foregoing is a true and correct copy of that certain resolution adopted by the City Council of the City of Chicago at a regular meeting held on Wednesday, the 9th day of May A. D. 1956.

Witness my hand and the corporate seal of the said city of Chicago this 14th day of May A. D. 1956.

[SEAL] JOHN C. MARCIN,
City Clerk.

Now Hear This—Don't Let Flag Wavers Get You Down

EXTENSION OF REMARKS
OF
HON. GORDON CANFIELD
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 16, 1956

Mr. CANFIELD. Mr. Speaker, under leave to extend my remarks, I wish to call attention to the following challenging article written by Arthur F. Lenehan, able staff writer and columnist of the Passaic (N. J.) Herald-News. His proposal for a return of some unabashed flag waving is one in which all real American can heartily concur:

NOW HEAR THIS—DON'T LET FLAG WAVERS GET YOU DOWN

(By Arthur F. Lenehan)

It seems like a long time ago that American men were fighting the losing battle for a rock in the Philippines called Corregidor.

One of the most dramatic facets of the story that came out of that tragic place was the willingness of many of those men to risk death so that the American flag could keep flying.

Few remember that, time after time, shell fragments cut the lines that held the flag aloft and sent it fluttering earthward. Each time, until the last, someone rushed from cover to catch the flag before it touched the tortured ground. Each time, until the end, the lines were knotted and raised once more.

It seems like more years than it really is that men fought to the top of Mount Surabachi on Iwo Jima to plant the colors.

It was only last year that Austrian prisoners came out from behind the Iron Curtain to report that American flags made from scraps of colored paper were appearing in Soviet slave camps. This in spite of the fact that the men responsible—imprisoned Americans—realized they faced beating and solitary confinement for their acts.

Not many people seem to remember that, either.

Forgotten, too, in all too many cases, is that old-fashioned custom, flying the flag.

Why?

Maybe it's because flag waving has become a term of contempt.

Some prominent flag wavers are the cause of this. They operate on the assumption that the flag is a cloak to be worn only by them.

These particular flag wavers once were dubbed self-appointed Emily Posts of patriotism by someone. If you didn't do things according to their prejudices and beliefs, they put you down in their little black book as unpatriotic. They convinced some people that criticism of them was an affront to flag and country.

People who weren't unpatriotic naturally got a little mad about such goings on. Trouble was, they got mad at flag waving as well as the flag wavers.

As things stand now, a good segment of the American people belittle flag waving. They think it mawkish to hang one in front of the house on appropriate occasions.

Perhaps, in time, that attitude will change.

Right now seems as a good a time as any.

Coming up on the calendar are days like Armed Forces Day, Memorial Day, and Flag Day.

It would be nice to see some unabashed flag waving once more—something that showed, if only minutely, some of the respect for the flag held by the men at Corregidor, Iwo Jima, and in Soviet prison camps.

The flag, after all, is an outward sign of the inner principles of people. It is what we make it. A man named Franklin K. Lane once put that thought very well. He said this of our flag:

"I am what you make me, nothing more. I am your belief in yourself, the dream of what a people may become. I am all that you hope to be, and have courage to try for. I swing before your eyes a bright gleam of color, the pictured suggestion of that big thing which makes this great Nation great. My stars and my stripes are your dreams and your labors. They are bright with cheer, brilliant with courage, firm with faith, because you have made them so out of your hearts. For you are the makers of the flag and it is well that you glory in the making."

Statement of Hon. Thomas B. Curtis of Missouri

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 16, 1956

Mr. CURTIS of Missouri. Mr. Speaker, under leave to extend my remarks in the RECORD, I desire to set forth a statement which I presented to the Senate Committee on Post Office and Civil Service with regard to S. 3593—companion bill, H. R. 10237—a bill to give recognition of Government employee union representatives in presenting points of view on personnel policies including grievances to the heads of the various Federal governmental departments.

The statement follows:

STATEMENT OF HON. THOMAS B. CURTIS OF MISSOURI

I am glad the the Senate Post Office and Civil Service Committee is holding hearings on S. 3593 (companion bill, H. R. 10237), a bill to give recognition of Government employee union representatives in presenting points of view on personnel policies including grievances to the heads of the various Federal governmental departments.

For many years I have advocated a more formal recognition of our various Federal employee unions in matters affecting our Federal personnel practices. I have never put my ideas in bill form and I am not certain just how legislation should be worded in accomplishing the objectives I have felt were proper and worthwhile. Certainly on the face, S. 3593 and H. R. 10237, seem to accomplish these objectives and I trust that the committee, after it has studied the matter, will reach this conclusion, and above all, that the committee will report out favorably a bill that will accomplish the objectives we have in mind.

It seems to me axiomatic that to have good employee relations, and to have the most efficient results from employees, we must have good employee relations, the employees must have a basic voice in the decisions affecting the physical surroundings where they work, the social relations which go to make up the atmosphere in which they work, and the general personnel system which regulates the manner in which they work, when they work, how they are to be promoted, have a chahge of duty, etc.

If there were no such things as unions representing the views of the employees on their working conditions, etc., good management would require that it establish some democratic process whereby the views of the employees could be determined. How much healthier it is, however, to have the employees set up their own machinery and organization for accomplishing this desirable end. Dictatorship whether deciding living conditions in a society or working conditions in an office or plant, however benevolent, is not the way to get the best employee relations. I believe most modern businessmen have found this to be true.

The Federal Government has the identical problem that any private business has in this area. The only difference lies in the area of employee compensation and the right in private enterprise of the employees to use their basic economic weapon of strike. In the matter of employee compensation and certain basic areas of employment practices the Federal employee's weapon is the right he has collectively or singly like any other citizen to petition the Congress. In settling any manner of difference between the Federal Government and the Federal employee the right to strike, of course must not be employed and in its stead the right to petition the Congress must be substituted.

Incidentally, I want to state that though I disagreed with a great deal of the thinking of the postal employees in the last session of the Congress on some of the matters in their petition to the Congress, not for 1 minute did I question or object to the strong manner in which they came down to petition the Congress. I might have taken exception to some of the tactics they employed when their petitioning zeal seemed to get the best of them, but at all times I publicly stated they were entirely within their rights and that Congress must anticipate strong petitioning, knowing that these employees and the unions representing them, took, and take, no exception to the idea that the right to strike cannot ever be theirs.

I would say one final thing, and I hope it is not taken by labor leaders unkindly. I know it will not be taken by the farsighted labor leaders unkindly. Union leaders themselves sometimes forget that they are merely representatives of others and that their purpose is to help those they represent, not to perpetuate themselves in power. Because unions have attained the point where they are both legally and socially recognized in our society, they must now face up to certain restrictions necessary to keep labor dictators off the backs of the working men.

The day, I believe, is now past when the plea for labor leader responsibility can be passed off as merely an underhanded method of trying to prevent union organization. It is perfectly true that in the past this underhanded method was used and used effectively. There is no question that attempts are still being made to utilize it. However, as I have said, unionism is now strong enough to drive back these underhanded attacks. Unionism's greatest present danger is the labor dictator who is using the labor movement to further his own personal ends. Accordingly, I am hopeful that whatever bill is passed out by the Senate committee will have a due regard for the basic rights of the employee in relation to his labor representative.

I appreciate having the opportunity of presenting my views on this important matter to the committee. I intend to insert this statement in the CONGRESSIONAL RECORD so that it may be available to others.

Compulsory Inspection of Poultry and Poultry Products

EXTENSION OF REMARKS
OF
HON. THOMAS J. DODD
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 16, 1956

Mr. DODD. Mr. Speaker, I have today introduced a bill calling for the compulsory inspection of poultry and poultry products.

This is a companion bill to H. R. 10527 and H. R. 10514.

Connecticut, with a poultry industry annually valued at some $70 million, not including baby chicks, is vitally interested in the adoption of Senate bill S. 3588. It is one of those rare industry proposals that serve both producers and consumers and, at the same time, promise greater agricultural stability.

The State of Connecticut has long recognized the need of slaughterhouse supervision. Licensing and inspections became statutory requirements at least as early as 1930. Steps are now being taken by our Department of Agriculture to amend previous regulations and adopt a new code comparable to the sanitary requirements of Senate bill 3588.

Income from poultry ranks first in Connecticut's cash farm income. Our broiler producers form one of the last bastions where their farms are owned and operated by the farmers themselves. As a result, the quality of the poultry produced on our Connecticut broiler farms can not be surpassed by any other area in the United States.

Broiler production now in excess of 25 million annually, increased 177 percent in Connecticut between 1940 and 1950. From 1950 to 1954 it was up an-

other 80 percent and still growing in importance.

Connecticut action is influenced to a large extent by the price and sanitary code of the New York City market. This code requires, among other things, rigid inspection of eviscerated poultry coming into the city.

Many Connecticut plants are voluntarily conforming with the New York requirements. Others would like to under the compulsory requirements of Senate bill 3588.

There are 166 licensed poultry slaughterhouses in Connecticut. Five of these alone are processing more than 1,500,000 pounds of poultry weekly.

Over 20 percent of the poultry produced in the United States today is under a voluntary poultry inspection program administered by the Poultry Branch of the United States Department of Agriculture. This Department has had 27 years of experience in administering the voluntary poultry inspection program. It would seem to be only logical that those people with the experience and know-how would be the proper ones to be assigned the task of administering a mandatory program. The expense of this voluntary program has been borne by the industry. Under the mandatory inspection program for red meat, the expense is borne by the Federal Government. It appears to me that to continue requiring poultry meat to bear the cost of inspection and at the same time subsidizing red meat inspection is most unfair.

The mere fact that the poultrymen in Connecticut have requested this legislation, along with other poultry areas, indicates their interests in providing high quality poultry for the consumer's table.

I hope we can get some prompt action on this necessary legislation.

Military Supplies Go Forward to Saudi Arabia

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 3, 1956

Mr. CELLER. Mr. Speaker, the latest disclosure that the United States continues to supply arms to Saudi Arabia, as evidenced by the loading of reported bomb casings, rockets, and 76-millimeter shells on the *Monterrey* at South Port, N. C., highlights the dangerous, impossible, and contradictory position in which the administration has placed itself by supplying arms and ammunition to the Arab nations and at the same time denying arms and ammunition to Israel.

If it is a shipment of military supplies to Saudi Arabia, it is labeled a routine operation, but the shipment of such equipment to Israel, we are told, would be an arms race. We have supplied Iraq with arms and Saudi Arabia with arms and offered arms to Egypt. And yet, in questioning before the Congress, Mr. Dulles has said, "America is not the traditional supplier of arms to the Middle East."

It seems that if the Arab nations need further encouragement to truculence, we have given it to them. We can only incite Arab belligerence by our willingness to be wooed and won. We know full well that appeasement is not the road to peace. We know as well that an imbalance of power in any region of the world is a threat to the peace. It is that very premise upon which our own defense strategy is based.

This latest shipment of ammunition to Saudi Arabia emphasizes our failure to cope directly and intelligently with the Middle East situation. We are inviting disaster and bankrupting our moral leadership.

If the United States continues to sell arms to the Arab nations, it cannot at the same time deny Israel the defensive weapons which could restore the balance of power and more surely insure the peace.

Cleveland Pioneers Again in Housing

EXTENSION OF REMARKS
OF
HON. FRANCES P. BOLTON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 16, 1956

Mrs. FRANCES P. BOLTON. Mr. Speaker, on the many occasions that I have addressed this House about various housing programs, I have emphasized the awareness of all the citizens of Cleveland for more and better housing. Our people feel that they have established a unique partnership between the private citizen, business enterprises and Government at all levels toward making Cleveland a better place to live. This partnership has been so successful that Albert M. Cole, Administrator of the Housing and Home Finance Agency, cited Cleveland as an example when he addressed the United States Conference of Mayors recently. But throughout our programs, the backbone has been private enterprise.

The Christian Science Monitor of May 9, 1956, has published an interesting article about our "Operation Demonstrate," which the writer describes as "a major and effective movement against potential slums." Since this article discusses both its successes and setbacks, other Members might find it a helpful guide for projects in their own communities.

Under leave granted by unanimous consent, the article is appended herewith:

CLEVELAND: HOW TO BEAT SLUMS
(By Robert C. Bergenheim)

CLEVELAND.—Imagination, good business sense, and local pride can turn the tide against slums and preserve healthy neighborhoods. Cleveland is proving just that.

A group of private citizens here pitched in to prove to homeowners through demonstration that well kept properties are worth more than dilapidated, gloomy structures.

The national interest which has developed in Cleveland's experiment is proof of the true proportions of this program of arresting blight. National statistics show that more than 24 million dwelling units in the United States are in need of repair.

In Cleveland alone one-third of the 300,000 dwelling units were found in need of repair or renovation. An additional 36,000 are beyond saving and must be demolished. There are many cities—particularly the older ones—which are far worse off than Cleveland.

Cleveland citizens and public officials fully recognize the urgency of the problem. Many cities are well under way with Federal urban-renewal projects. So is Cleveland. But, in addition, private enterprises have joined together in Cleveland as a major and effective movement against potential slums.

Six months ago a nonprofit organization—Cleveland Modernization, Inc.—was established, with an 18-member advisory committee representing every segment of community interest. This group supports "Operation Demonstrate." It is being studied by communities with similar problems from coast to coast.

Operation Demonstrate—or OD, as it is being called—is an all-out effort by private enterprise to keep sound residential housing from sliding downhill into slums. It wants to save neighborhoods while they still have their local charm and value. Working with OD has been the American Council To Improve Our Neighborhoods, a national, nonprofit organization which hopes to use Cleveland as an example of what can be done to save neighborhoods.

DRAMATIC STEPS NEEDED

Local and family pride are factors just as important as comfort and protection of the real-estate owner's pocketbook. Blight is such a slow, creeping process that it takes dramatic action as supplied by OD in Cleveland to open the public's eyes to the danger.

Instead of telling homeowners what a remodeling job can mean to them, OD has shown them. The slogan "Paint up, fix up, and clean up" doesn't inspire many homeowners to action. But concrete examples of the wonders of the paintbrush, hammer, and saw can stir the imagination, especially if it is a neighbor doing the sprucing up.

Most dramatic part of the Cleveland project has been the remodeling of two houses that were slated for demolition in a Federal urban-redevelopment area.

With the permission of Mayor Anthony Celebrezze and other city officials, these houses were moved to the mall. Architects decorators, and home suppliers were turned loose on them. One was turned into a home of traditional design, the other to contemporary.

These were the first two demonstration houses. Others have been tackled in various sections of the city. Public interest has gone beyond initial expectations. More than 40,000 persons visited the 2 model homes on the mall in the first 4 months they were open.

National magazines, local newspapers, radio and television stations have joined with bankers, real estate firms, contractors, painters, department stores, and many other groups to sell the idea of Operation Demonstrate.

The unprecedented enthusiasm of some of the outside interests has caused some local criticism, however. For example, one local observer claims that the houses moved to the mall were more than redecorated. "They were rebuilt. Only a few pieces of the original lumber survived," he said.

Such a job, he continued, proves only one thing—that with unlimited financial resources any house can be made modern and beautiful.

In defense, some supporters of OD say that visitors to these model homes are not expected to make all the changes shown but

might come away with one small idea which they wish to adopt for their own home.

Expensive decorations supplied by downtown department stores and local merchants also made the model houses good ammunition for the "before and after" photographs for national magazines.

While serving this purpose, some viewers were discouraged, realizing that their modest incomes in no way equipped them to duplicate these show places.

Sponsors of Operation Demonstrate, however, say they are more than satisfied with the success of their project. They say that during the first 2 months of the program remodeling permits issued in the city increased 22 percent in number and 49 percent in value compared with corresponding months of the previous year.

Last year $34 million was spent in Cleveland for additions and alterations. In the same period new construction totaled $44 million, according to permits issued.

Some observers, however, do not concede that these percentages are significant nor are necessarily due to Operation Demonstrate.

Realizing that money spent on remodeling must be considered as a wise investment, Operation Demonstrate set out to prove that remodeling protects a homeowner's financial position.

One 75-year-old house bought by the Cleveland Real Estate Board for $5,300, for example, brought an offer of $10,800 after $2,500 was spent on it, OD officials report.

Such figures have not gone entirely unchallenged by some local observers.

For example, they point to an elaborate remodeling job of a big Victorian-style house in a Negro area where most large houses have been converted into multifamily houses. Local merchants reportedly put between $35,000 and $40,000 into this house that may now sell for approximately $20,000, critics say.

STUMBLING BLOCKS

This sort of situation highlights one of the major dangers to any program aimed at dramatizing the preservation of properties. If a group of community goes overboard on remodeling, the total effect for that particular project is lost. As previously stated, it only proves that with enough money any house can be made as good as new.

A modest remodeling job is more likely to win public approval and get owners to follow suit. It would be practical.

Supporters of Operation Demonstrate constantly warn other civic-minded groups around the country of such dangers. "Biting off more than you can chew is the worst mistake of all," warns Harold Eckes, cochairman of OD.

Other stumbling blocks can be too ambitious programs by outside interests who leave the scene as soon as their needs for the project are satisfied.

Before doing anything, Cleveland OD officials warn other groups to get all their plans on paper, as well as commitments from those who are going to support, work on, and take an interest in the project. Deciding what the operating budget must be and raising it are fundamental steps.

Financial aid for individual property owners expected to go along with the neighborhood conservation program also must be considered. To the owner of a $5,300 house the initial investment of $2,500 for remodeling is often out of the question. On the other hand, a family looking for an $8,000 home might be persuaded to buy a $5,300 house and remodel it, as OD claims often can be done. A rundown house often hides its true value under a shabby exterior or a peeling coat of paint.

When OD started in Cleveland 6 months ago open end mortgages were difficult to get. FHA home-modernization loans require full payment within 3 years, which makes monthly payments too high for many persons.

Operation Demonstrate recognized this bottleneck immediately.

LIBERAL TERMS OFFERED

Five local banks—the Cleveland Trust Co., National City Bank, Society for Savings, Central National Bank, and the Union Bank of Commerce—developed a liberalized remodeling loan, repayable over a period of 8 or more years. Increased monthly payments, therefore, were kept within the reach of the homeowner.

Another stumbling block currently is being removed. The local building code specifies that remodeling must conform with a new construction code. A special home rehabilitation code is currently being tested in the Garden Valley area of Cleveland. After it has been tested and if it proves adequate, supporters of OD will push for its adoption for the entire city.

While recognizing the importance of remodeling, Cleveland Modernization, Inc., has done much to advance urban renewal plans for the city. Formed by 100 of the city's largest corporations, this foundation set up a $2 million revolving fund. At present the city is concentrating on two redevelopment projects, Longwood and Garden Valley.

Longwood, no more than 1 mile from downtown Cleveland, has turned from a dreary slum area into a revitalized, progressive community.

Garden Valley is 2 miles southeast of Longwood. Instead of waiting for approval of Federal funds, the foundation and the five commercial banks formed a $2 million mortgage pool to pick up all the mortgages on Garden Valley's private housing if necessary and to underwrite the entire central residential area rebuilding if necessary. Months were saved by this move by private enterprise.

Albert M. Cole, Administrator of the Housing and Home Finance Agency, used Cleveland as an example of what can be done by integration of Federal, State, city, and private business interests in an address before the United States Conference of Mayors this year.

"One advantage Cleveland has enjoyed in late years," he said, "was the habit early established of viewing itself with critical eyes. * * * Cleveland has looked again and again with the vision of what can be built. As a result, in its central areas, this city has cleared or is now clearing more than 26 square miles of land—or about 17,000 acres—for transformation into decent, commodious, and financially sound living space. And Cleveland continues to look forward. It's motto might be, "What's past is prolog,'" Mr. Cole suggested.

Federal Aid Trap Becomes Apparent

EXTENSION OF REMARKS
OF
HON. W. J. BRYAN DORN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 16, 1956

Mr. DORN of South Carolina. Mr. Speaker, the proposal for Federal aid to education comes at a time when the power of our States and local communities is in the greatest danger. The following editorial from the Greenville (S. C.) News ably points out the fallacy of Federal aid in this field:

FEDERAL AID TRAP BECOMES APPARENT

We are pleased to note that the Saturday Evening Post has taken a stand in opposition to Federal aid to education in an editorial in a recent issue.

It is evidence that the fallacies of the plans proposed in Congress by the administration and, before that, by the Democratic Party, are being seen by more and more people the country over.

Likewise, more people are being altered to the dangers inherent in any program which invites the Federal Government to step into what has been and should be purely a State or local matter.

The Post doubts that the administration program calling for the spending of $2,020 million for buildings over the next 5 years meets a genuine need.

The White House Conference on Education, for instance, came to the conclusion that "no State represented has a demonstrated incapacity to build the schools it will need." The resources, the Post says, are there. Schoolroom shortages do not arise in ghost towns and depressed areas with falling population.

The fact is that the States which need the most new schools, those which have experienced rapid population growth, are among the wealthiest States of the 48 and, therefore, best able to meet their own needs.

The Post continues in this vein:

"Since the last war there has been a heavy migration of footloose Americans from the country into certain industrial centers, from the cities into suburban developments, and from the South to the West and North. These people's children are often described as if they were 17-year locusts, a plague to be countered only by an appeal to the disaster squads of the Federal bureaucracy. But they are, in fact, future citizens, future taxpayers, evidence of thriving growth and an increase in property values.

"Breaking down the list of 48 States and the District of Columbia, and comparing school enrollments for 1935 and 1955, it appears that 1 group of 12 shows a combined loss over the 20-year period of 712,729. This includes Arkansas, Kentucky, Massachusetts, Mississippi, Nebraska, North Dakota, Oklahoma, Pennsylvania, Rhode Island, South Dakota, Vermont, and West Virginia.

"Another group reports a combined gain of 797,610 pupils. This includes a large number of States and the District of Columbia. New Jersey and New York have increases of less than 5 percent, while the rise in eight others—Alabama, Iowa, Kansas, Maine, Minnesota, Montana, Wisconsin and the District—ranged from 6 to 10 percent. hardly an unmanageable amount for local resources. Eleven States in this group—Colorado, Connecticut, Delaware, Idaho, Nevada, New Hampshire, New Mexico, South Carolina, Tennessee, Utah and Wyoming—accounted for an increase of 463,000 in the grand total. That can hardly be described as a crisis.

"The really big upswing in enrollments is confined to 15 States: Arizona, California, Florida, Georgia, Illinois, Indiana, Louisiana, Maryland, Michigan, North Carolina, Ohio, Oregon, Texas, Virginia and Washington. Of their total increase, amounting to 4,122,846, more than half or 2,118,719, was reported by three States—California (1,306,573), Michigan (421,473) and Texas (390,673).

"Not one of the States showing large increases in school enrollment can properly be described as "poor." Most of them, for the record, deny that they want Federal aid.

"Federal money always brings—sooner or later—Federal controls. To commit the schools to the supervision of an absentee bureaucracy would be to abdicate home rule in perhaps the most important single area of our public activities."

In a speech in Charleston Governor Timmerman made much the same point with reference to South Carolina.

Federal aid to education, he said, would be "sugar-coated taxation" (the Federal Gov-

ernment would have to tax the people of the States to raise the funds) and the entering wedge of Federal control. He cited what South Carolina had done for its schools in recent years and asserted that the States could take care of its own without Federal interference.

What South Carolina is doing, the other States can do. We must do all in our power to avoid being dragged into the Federal aid net by those States whose politicians seem to welcome Federal control along with Federal money.

Federal Aid for Rural Library Service

EXTENSION OF REMARKS
OF
HON. LAURENCE CURTIS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 16, 1956

Mr. CURTIS of Massachusetts. Mr. Speaker, in my extension of remarks I include an editorial from the Boston Herald of Tuesday, May 15, 1956, entitled "The Little Federal Baby." It comments wisely on the importance of local responsibility in matters of government.

The National House has just passed a bill to provide $7,500,000 a year for 5 years for Federal aid to the States for rural library service. We are reminded of the young lady who pleaded in extenuation for a child born out of wedlock that it was such a wee baby.

Federal aid totaling $37,500,000 is a little enough child, born with a life expectancy of 5 years. But Federal aid babies have been known to thrive and to far outlive their expected span.

The argument for this new aid is that about 27 million people in the United States, 90 percent of them in rural areas, are without access to local public library services. The presumption is that if the Federal Government baited the States by a Federal aid arrangement with matching funds, these rural areas would get some bookmobiles or other library facilities, and thereafter public opinion would force the States to maintain and even improve such service.

And we must concede that sometimes this demonstration device works, as note the experience in this State described in the article at the end of this editorial.

But the Federal dollar prod never stops there. At the end of 5 years there will still be room for improvement in library service, and the Federal Government will feel called upon to press ever forward. By then Federal aid to libraries will be too firmly established to be upset.

Now, this means a waning of the sense of local responsibility. Communities will cease to care particularly about their libraries if the Federal Government has shouldered even part of the burden. There will be less concern about efficiency, since some of the money comes from that ill-defined source of limitless funds, the Federal Government.

Even without Federal aid the States aren't doing too bad a job. The numbers of counties without adequate library service has been reduced by 38.8 percent in 8 years. In 5 years the number of persons without library service has been reduced by 23 percent.

With the customary American urge to get things done overnight or next week at the most, the proponents of Federal aid would speed this up. But the speeding up will be at the cost of the additional Federal administrative costs, the inevitable Federal supervision of State library expenditures, and a further weakening of local enterprise. Somehow the baby, no matter how wee, would be better not born at all.

LIBRARIES IN MASSACHUSETTS

Massachusetts is 1 of 3 States (with Delaware and Rhode Island) where no person is without local library service, though 4 towns are served only by the State's bookmobile. Through the State's interlibrary service any person can borrow virtually any book in any library in Massachusetts, though with possible delay.

The State serves rural areas through three regional districts. The Fall River and Pittsfield districts each operate a bookmobile, with 1 librarian, 1 clerk-chauffeur, and 1 clerk on a budget of $12,000 a year.

The Greenfield district, however, has twice the budget and staff, and much more equipment. The reason: in 1950–52 Marshall Field supplied $36,500 for a demonstration of rural library service, and thereafter the citizens, working through the Franklin-Hampshire Rural Library Association in 12 communities from 200 to 3,000 population, insisted that this standard be maintained, and the legislature has complied. This is what proponents hope Federal aid will do.

The present State library budget is just over $100,000 a year. To get Federal aid of $110,000 the State would have to supply $128,000, making a total available of $233,000, well over twice present expenditures.

Battle for Air Route Is No Child's Play

EXTENSION OF REMARKS
OF
HON. CLIFFORD G. McINTIRE
OF MAINE
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 16, 1956

Mr. McINTIRE. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I insert the following article that appeared on the editorial page of the May 14 issue of the Portland Press Herald, one of Maine's daily newspapers:

BATTLE FOR AIR ROUTE IS NO CHILD'S PLAY

To keep matters in perspective on this business of Northeast Airlines' application to become the third carrier between New York and Miami it is instructive to contemplate the entire cast of characters, big and little, all of whom are playing the game for keeps.

Specifically we had in mind that no one around here ought to conclude that too much loud shouting was coming from this quarter. Loud shouting may not carry the day but failure to shout might lose it.

For exhibit A we offer the report of the Civil Aeronautics Board examiner who gave the nod to Delta Airlines. An inch-thick compendium of infinite complexity, it encompassed the arguments not only of Delta and Northeast but of Capital, Colonial, Riddle, Pan American, North American, and Resort Airlines, all of which also sought to compete on the Nation's heaviest air route.

Needless to say all hands rolled every ball they could find down the alley on the theory that some of them were bound to hit. And make no mistake, those rolled by big boys like Delta and Pan American rumbled appreciably louder than the others. There was a lot of noise too from Eastern and National Airlines which now share the route and which saw all manner of dire consequences to their own fortunes if the CAB lets a third company into the act.

Exhibit B is an item in the New York Times reporting a parade of delegates from all airlines concerned which has been steadily filing through the office of Mayor Wagner of New York City who is plumping not for Delta or for Northeast but for Pan American. It is clear that the view of New York City carries much weight and equally evident that it is bearing as much against the New England interest as any favoring Delta.

Our purpose here is to suggest the size and nature of the opposition and to emphasize the lengths to which it is going to gain its ends. Patently the game is no child's play which is why Maine interests must exploit to the utmost every legitimate tactic and all proper channels of influence prior to the final decision of the full membership of the CAB.

Detroit Labor Leaders Organized Milk Strike

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Monday, May 14, 1956

Mr. SMITH of Wisconsin. Mr. Speaker, ambitious and aggressive labor leaders in Detroit were responsible for the milk strike which occurred in the Detroit area last March. So that the people of this country and specially the farmers may fully understand the situation, I am including as part of my remarks an advertisement which appeared in a Michigan newspaper by the Michigan Milk Producers Association.

It points out, Mr. Speaker, that these ambitious leaders organized the milk strike for the purpose of taking over the dairy farmers who supply milk to the Detroit market. It is obvious that labor union practices in this instance and the business of hardworking independent dairy farmers do not mix. The advertisement follows:

HERE ARE THE FACTS ABOUT THE MILK STRIKE

The ill-advised milk strike, in which organized labor endeavored to "take over" the dairy farmers of the Detroit milk shed, proved one thing: That labor union practices and the business of independent farmers don't mix.

It became evident from the start that the instigators were not striking the dairies for a higher price. They had, in fact, agreed with dairies they would take the prevailing market price for farmers' milk.

Instead, they directed their attack against the dairy farmers' own organization, the Michigan Milk Producers Association, which they aimed to control or destroy. In this attempt, forces within organized labor sought to capitalize on the economic plight of the farmer and exploited a minority group of farmers to their own ends.

There should be no misunderstanding the fact that MMPA is a dairy farmers' cooperative, operated by the farmers, for the farmers, to cooperatively market their milk and protect their economic interests. It was the propaganda line of the strike leaders to mislead the farmers and the public in this respect.

The obviously false claim of strike leaders that they won a price increase was a part of this propaganda technique. Actually, nothing good for the dairy farmer resulted from the strike. Rather, only harm was accomplished, the seeds of dissension were sown, and the real issues and facts were wilfully misrepresented.

WHAT CAUSED THE STRIKE?

The strike stemmed from the ambition of a few within organized labor to control the Detroit milk market and to collect union dues from dairy farmers who ship milk to that market. To accomplish this, the strike organizers turned farmer against farmer in their drive to destroy his cooperative organization.

WHO WERE THE STRIKE LEADERS?

Major leadership and direction came from organized labor. Joined with these professionals were a former union organizer and a small group of dairy farmers who have consistently opposed the methods and policies of MMPA and sought this means of imposing their will on the MMPA membership.

WHAT WERE THE REAL ISSUES?

This was not a strike for a higher price for milk nor did it accomplish any economic advantage for farmers. The real issue was recognition of the so-called fair-share group, organized labor's front, for the purpose of dues collecting and check-off. By this action, the strike directors sought to gain control of the assets and functions of MMPA.

WHO WON THE PRICE INCREASE?

The bargaining power of MMPA, carried out in an ultimatum voted at the March 28 delegates' meeting, was alone responsible for the price increase gained on April 1. The class I price of $5 would have been achieved sooner and without ultimatum if obstructionist tactics of strike leaders and others had not blocked price negotiations carried on by the MMPA Detroit sales committee.

WHAT ARE THE ECONOMIC FACTS?

The increased price of $5 per hundredweight applies only to that portion of the milk used for bottling and fluid purposes. It is not a net price to the farmer, who must pay marketing and shipping costs. Only part of the milk can be sold at this price, the rest must be used for manufactured products at the prevailing market price.

OUTSIDE MILK A PROBLEM

Another factor not to be overlooked is the deluge of milk which results in any market where a higher than average price prevails. Competition from outside the milkshed can cause havoc for regular producers, even to the extent of losing their market.

No one realizes more fully the serious problems of the dairy farmer than does the MMPA, whose affairs are directed by these self-same farmers. The present farmer price squeeze is the Nation's No. 1 problem. It cannot be solved by mob action nor by looking for help from agitators outside the ranks of agriculture. They have their own ax to grind.

From Behind the Iron Curtain

EXTENSION OF REMARKS

OF

HON. JAMES ROOSEVELT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 16, 1956

Mr. ROOSEVELT. Mr. Speaker, my attention has recently been drawn to an article in a British magazine entitled "Time and Tide" in the April 14, 1956, issue. This article dealing with the points of view of Communists and others behind the Iron Curtain which are of great interest to those of us in the free world are, I believe, sufficiently unusual to justify the study of my colleagues. I therefore include it in the CONGRESSIONAL RECORD with the understanding that, of course, I am not in any position to certify as to its accuracy.

The article follows:

THE NEW PROGRAM

(From a correspondent)

(EDITOR'S NOTE: This article is based on information received from countries behind the Iron Curtain. It presents the point of view of circles close to the leading Communists and gives their interpretation of events in the U. S. S. R. which are puzzling western public opinion.)

The task that confronted the Soviet leaders after Stalin's death were of such magnitude that a long period of time was necesary in order to reassess the situation and to prepare a new political and economic program.

This delicate period of transition was entrusted to Mr. Malenkov, whose task was to reassure and mollify the population after the shock of Stalin's death. This he did by promises of individual legal and civil rights and by increasing the production of consumer goods.

Meanwhile the real team was feverishly at work preparing the new program. During this transitional period the satellite and foreign Communist Parties were for months without guidance from Moscow. Moscow was too busy and was not ready with its long range policy.

The major task was to formulate the new Five Year Plan in conjunction with an economic policy for the whole Communist bloc. Each satellite was to become an integral part of the Soviet master plan.

When it became clear that the internal situation in the U. S. S. R. was consolidating, the only danger that remained was the instability of the Far Eastern situation. China's claim to Formosa might well provide a major conflagration and throw Moscow's long term program out of gear.

The object of the visit of Messrs. Khrushchev, Bulganin and Mikoyan to Peking in the autumn of 1954 was to inform Mr. Mao Tse-tung of the long range objectives and to induce him to abandon any plan for drastic action regarding Formosa. He was offered all-out help to build up China within the next 10 years as a military power on a par with Russia and the United States of America and eventually he acquiesced.

The new program being ready and the transitional period successfully weathered without internal troubles, Mr. Malenkov was directed to pass the Government over to the new team. The usual face-saving admission of errors was made and they then began the implementation of the new Party line.

Western speculations at this time regarding Mr. Malenkov's demotion evoked much gaiety in leading Communist circles in Moscow.

The convocation of the 20th party congress was timed to correspond with the beginning of the new 5-year plan. Open criticism of Stalin was postponed until then, in order to back it with the authority of this supreme party organ. Although the attack was expected, the impact of Mr. Khrushchev's speech on the delegates was tremendous; one of them, Mr. Bierut, secretary of the Polish United Workers Party (Communist), died soon afterward in Moscow. Satellite delegates returned home with mixed feelings. They had been told that, as a result of the success of Soviet foreign policy, at least 5 years of peace could now be guaranteed.

This period was to be used for development in two directions; for the consolidation and development of the economic potential of the Soviet orbit on the one side and for the weakening of the unity and potential strength of the capitalist world on the other.

Competitive coexistence must be worked for boldly and with self-confidence, without losing sight of the unchanging basic principles of Communist dogma. The emphasis was laid on competition, not on coexistence; it was made clear that this was a change only in tactics, not in ultimate aim.

The delegates were told that the Soviet goal was to achieve a new balance of world power by increasing the strength and influence of the Communist bloc and by correspondingly weakening the capitalist world. When this new balance of world power was achieved, war would automatically become unnecessary for the final world victory of communism.

The second major success of Soviet foreign policy was to be seen in the worldwide spread of anticolonialism and of the rise of liberation movements in dependent countries. The scope of all such activities was to be considerably enlarged.

The control of the southern sea route between Europe and Asia, via Suez, would be wrenched from the hands of the colonialist powers. Since Asia was already dominated by the triangle U. S. S. R.-China-India and the Arab-Moslem fringe was being successfully wooed, it was now Africa's turn to awake.

Under the combined pressure of coexistence disarmament and anticolonialist liberation movements, the western alliances and bases would gradually disappear.

The role of each satellite state in this general plan had been carefully drafted, and they were to receive instructions for common action. One of the most important aspects of the Soviet plan for the satellites is the policy regarding their emigres. The existence of these emigres in western countries is seen as a major stumbling block for the Communists in their attempt to deceive the West.

The satellite program for handling this situation was launched some time ago. It was divided into two phases. During the first the unity and organization of the emigres had to be destroyed. They were to be offered complete rehabilitation if they returned to their own countries. Some would return, and this would spread suspicion and would help to disrupt and demoralize the organizations. The majority, however, should remain abroad.

During the second phase those who remained in the West would be organized and their potential political possibilities exploited on patriotic grounds, as was done with the Auslandsdeutsche by the Germans. More emigres would be allowed to leave the satellite countries for the West, in order to strengthen their bonds with the mother country.

The tone of the discussions in Moscow was one of boundless optimism and of uncritical faith in the success of all the projected plans.

The satellite delegates, having an intimate knowledge of the realities of the situation in the USSR and in their own countries, were much less optimistic than their Soviet partners and felt that the promise of the future was too dazzling to be true.

They have been convinced by the Russians that the danger of nuclear warfare has disappeared for at least 5 years. They agree with the Soviet assessment that the economic plans for both the USSR and for their own countries are promising, but they are convinced that, in order to realize them, further sacrifice and privation will be necessary, and improvement in living conditions will have to be postponed until after the plan is fulfilled.

They foresee many difficulties ahead. The inner political situation in the Soviet orbit will be increasingly difficult, as the Russian leadership will be faced by an opposition on two fronts—one of anti-Stalinism and the other of pro-Stalinist elements within both the party and the population.

The ideological readaptation of Marx-Leninism to the new conditions will be no

easy task, owing to the lack of ideological and philosophical cadres within the Party. Those already in existence are practically useless, because of the fact that under Stalin they were trained to repeat and interpret ideas ordered from above. They have therefore lost all the creative ability which is so badly needed under present conditions.

The wavy line of Soviet foreign policy has not impressed the delegates from the other socialist states. They remember the switch from the militant revolutionary policy in the early twenties to a courting of the West by Chicherin. This is turn was replaced by the cold hostile technique of Litvinov's period. Then came the sudden abandonment of isolation by the U. S. S. R. in 1934, when she joined the Leauge of Nations and flirted with France.

Coexistence, visits, banquets and smiles were the order of the day, until they were brutally interrupted by the Soviet-Hitler alliance. Only Hitler's treachery brought the Soviet Union into the western alliance. This period of coexistence was also abandoned when the German menace disappeared.

Despite Russian statements about the unlimited possibilities of the present coexistence tactics, the satellite delegates were convinced that, after so many painful lessons over the years, the West would not again be fooled and mistake a tactical wave for a flood of genuine goodwill.

Our Youth and America's Future

EXTENSION OF REMARKS
OF

HON. JOHN J. SPARKMAN

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Wednesday, May 16, 1956

Mr. SPARKMAN. Mr. President, recently, Mr. Orville F. Rush made a speech entitled "Our Youth and America's Future," before the Rotary Club of Albuquerque, N. Mex. I ask unanimous consent that his speech be printed in the Appendix of the RECORD.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

OUR YOUTH AND AMERICA'S FUTURE

(Speech by Orville F. Rush before the Rotary Club of Albuquerque, N. Mex., May 10, 1956)

Mr. President, distinguished guests, and members of the Albuquerque Rotary Club, it is a distinct honor and a real pleasure to speak to you for a few moments today on a subject which demands the immediate attention of every community in America today—the subject of juvenile crime.

As the father of seven children, as a citizen of the greatest Nation on earth, as an exhorter of the Methodist Church, and as a Rotarian and a Shriner, I am interested in the youth of our country.

Naturally it is disturbing to me, as it is to every citizen whose thoughts are on the future of our Nation, to read newspaper accounts day after day, from Maine to California, of youthful murderers, robbers, auto thieves, and almost unbelievable vandalism.

On any given day in any big city in America today the chances are better than even that a person will find articles concerning juvenile crimes similar to those I found in Washington newspapers at the time I was preparing this speech. Let me read a few excerpts from my hometown papers to prove my point.

Headline No. 1: "Twin, 14, Found Guilty in Cub Scout Murder." This was the story of a 14-year-old boy in an eastern State who beat a 9-year-old boy to death to get $15 he thought the child was carrying. (Washington Post, April 6, 1956.)

Headline No. 2: "Neighbor Boy, 14, Beats Woman in Robbery Try." This story dealt with a 14-year-old boy who bludgeoned a housewife with a baseball bat because he needed money. (Washington Post, April 5, 1956.)

Headline No. 3: "Boys, 11, Accused of $50,000 Ruin in Widow's Home." This article related that two little boys, 11 years old, admitted destroying $50,000 worth of furnishings in the home of a wealthy widow. Expensive antique furniture and china were reported smashed, valuable paintings and Persian rugs were shredded with knives and brown dye was sprinkled over floors and walls. (Washington Post, April 4, 1956.)

Then there was a headline in a recent issue of the St. Louis Democrat: "16-Year-Old Killer Says Probation Led to Murder." This was the story of a sallow-faced 16-year-old youth who said he "got panicky" during the course of attempting to rob a merchant so he shot and killed the victim. He was trying to get money to repair his convertible automobile. The irony of this particular case is the youthful killer's statement to a newspaper reporter. I quote: "They should have locked me up when I stole the first car. I was 13 or 14 then. They let me off too light. They gave me probation." On two different occasions this little boy received probation. Once for car theft, once for breaking and entering. The third time he must have felt he could get away with murder—so he murdered. Whether he will get away with that remains to be seen. (St. Louis, Mo., Democrat, January 30, 1956.)

Juvenile delinquency is nothing new. I feel sure that every generation, from Adam and Eve to our own, has had to cope with this problem. But today, with our ever expanding population, crowded conditions in the big cities, negligent parents, and a lack of chores for boys to perform, it is becoming an increasing menace to America's future.

America's enviable position in the world of today has been attained through the efforts of God-fearing generations of men and women who were taugh as children to love God, but fear transgression; to love their parents, but respect them; to behave in school or take the results; to respect authority and the rights of others or be disciplined accordingly.

From the newspaper accounts of youthful depredations, magazine and news stories on the immorality and negligent attitude of parents, and my personal knowledge of the lack of religious training and lack of discipline of our youngsters, I feel it is time for the adults of America to pull up short and say to ourselves: "What am I doing to insure America's future greatness for my son, for my daughter, for my neighbor's children?"

America's future in the world of tomorrow, regardless of all the new inventions scientists might effect, depends a great deal upon what you and I, as citizens, parents and Rotarians, do for our children of today. It depends upon what we teach them in the home, the school and the church. It depends upon the examples we set in the home, in our everyday contact with our neighbors, in our church activities, and in our business dealings. It depends upon the playgrounds we provide for the youngsters in our future housing developments to give them a place to play in crowded surroundings. It depends upon the interest parents take in their children's activities in school and in organizations such as Boy Scouts, Girl Scouts, Cub Scouts, and Camp Fire Girls.

Yes, America's position in the world of tomorrow depends upon a lot of factors, but the parents hold the balance of power if they care to use it to insure America's future.

That children need a field to play in, whether it be football, baseball, basketball, or games of any kind, is aptly demonstrated by a story I heard once concerning the spirit of a convict playing football:

"Alabama Pitts was big, rough and tough, but he played a clean game of football. One day Sing Sing Prison was playing some Catholic University in New York. Pitts was playing tackle. The player opposite him slapped Pitts twice, called him yellow, and tried to make him mad. Pitts glared at him but took no further notice.

"A priest standing near the play saw it. The prisoners won the game. After the game the priest asked Pitts why he did not slap back.

"Pitts replied, 'Father, that boy was broken-hearted because his team was losing. They couldn't get a play through my spot. If I had hit him back there might have been a free-for-all fight and then we would have been barred from future outside games. This game means a lot to every man in Sing Sing. I couldn't take a chance on ruining it. And you know, Father, if I had a chance as a boy to play football, I wouldn't be in Sing Sing now.'"

The end result of an unhappy home life, with no parental love and no recreational facilities, is aptly illustrated in the following case: A few weeks ago a 17-year-old boy in an eastern State stole a car. The 19-year-old brother of the car owner saw the youth drive off and gave chase with a friend. They cornered the thief a few blocks away and the thief stabbed the 19-year-old boy to death. He was later arrested, admitted the stabbing and said: "I did it. So what? Hang me."

But the story does not end there. In the January 6, 1956, issue of a local newspaper the accused killer is alleged to have said to a reporter: "I just can't fit. I began to get into fights in the fourth grade. It's a wonder I didn't kill before this." A newspaper reporter found that this boy had a burning hatred for everything from the time he was 10 years of age. He had a bitter home life. He had nothing to do at home, nothing to play with, and no recreational facilities at home or in the neighborhood.

This boy asserted that on one occasion 400 boys and girls signed a petition to the businessmen of his home town to build them a recreational center, but he said: "All they built were additions to their stores."

So this boy indirectly lays the blame for his plight on nothing to do at home and the failure of a group of businessmen to heed the pleas of 400 boys and girls for a recreation center. This, of course, might not be the real reason at all, but it's possible, and it's something for any civic-minded group of people like you to think about.

A good question at this point would be: "Are the recreation facilities in Albuquerque adequate?"

TEENAGERS

When our teenagers decide to take things into their own hands, they can do a better job with each other than you and I can do. The impact of being ostracized by boys and girls of their own age group is terrific. It's all right to talk about what juveniles do, but it does not accomplish anything until we, as adults, formulate some plan to help prevent youthful crimes.

Recently, a group of teenagers met at a church near my house for a panel discussion on teenage problems. Their main gripes were these:

1. Our parents don't trust us.

2. Our parents set poor examples for us to follow.

3. They say "Don't take a drink and drive." But then, they go out, get tight, weave all over the street, and think it's all right.

4. They won't let us use the family car.

The use of the family automobile has become a big factor in arguments between teenagers and their parents. A 15-year-old boy in a western State used the family car on Friday, Saturday, and Sunday nights. When he asked for the use of it on Monday his mother said, "No." The boy lost all sense of reason. He killed his mother and grandmother, then waited for his father. When his dad came home they talked and joked together, then his dad started toward the kitchen and the boy killed him.

In a midwestern State a 16-year-old boy asked his mother for the car. She refused. He got his dad's shotgun, killed his mother, sister, and little brother, and then he took the car.

A 14-year-old boy is serving a life sentence in an eastern State today as a result of killing his mother, father, and little sister merely because his dad refused him the use of the car one night for a date.

A timid-looking 16-year-old lad in a northern State said bad marks in school and the use of the car led to an argument with his family, so that night he shot and killed his parents, took their hoarded money and car, and left the State. He was apprehended a thousand miles away.

DISCIPLINE

The word discipline seems to shock a lot of our present-day parents, particularly mothers. By discipline I do not mean you have to beat your child with a strap. There is nothing worse for a child. There is a vast difference between discipline and beating on a child.

Discipline should start at age 1, as soon as a child learns to comprehend things; religious training at age 2. Master the child or the child will master you. Send them to their rooms. Cut their allowance. Deny them TV, comic books, etc. They'll come around. Children need discipline as much as they need love. Those parents who feel they are wise in not spanking their children when they need spanking are overlooking God's inspired words in the Bible.

Let's prove the truth of these verses by contemporary cases. An 18-year-old boy got mad at his Dad because his Dad told him he should not marry a 15-year-old girl. He stole his Dad's car, got his 15-year-old girl and went on a 5-day crime spree. He robbed and killed 5 people in 5 States during that time.

When asked why, he said: "I've been spoiled, badly spoiled."

Proverbs 13, verse 24, reads: "He that spareth his rod hateth his son."

Proverbs 3, verse 12, reads: "For whom the Lord loveth he correcteth: Even as a Father the son in whom he delighteth."

Love is just as important to children as discipline. Not long ago, I read where a little boy, 12 years old, put a .22 rifle to his stomach, then said, "Nobody loves me" and pulled the trigger.

Children from broken homes so often feel they are not wanted and not loved. Their affection is divided. To use the modern vernacular, they feel "all shook up inside." They lack a feeling of security and security is essential to a child's well-being.

Some time ago I was reading Father Keller's book, Three Minutes a Day. It contained a story on love versus hate which I would like to pass on to you. The story runs thusly:

"High up in the Rockies there lived a small boy and his mother. One day after he had been punished severely, the lad ran to the edge of a precipice and shouted back at his mother, 'I hate you! I hate you!'

"In a deep stentorian voice the lad heard the echo say, 'I hate you!' Thoroughly frightened, the boy ran back to his mother, and sobbed: 'Who is that bad man over there who shouted, "I hate you"?'

"Taking the boy's hand, the mother led him back to the edge of the precipice. 'Now, Sonny,' she said, 'Call out, "I love you. I love you."'

"The little boy did as she told him. Clearly and sweetly the echo came repeating the words.

"'My child,' said the mother, taking the youngster into her arms, 'That is the law of life—what you give, you get'."

For nearly 20 years now I have had my office in Washington, D. C. During that time, I have seen many new faces come and go in political circles and governmental agencies. But one man, for whom I have the highest veneration and most profound respect, was head of a very fine Government Bureau in Washington when I got there and he is still there, standing like a stone wall against crime, corruption in high office, communism, and anything indecent or alien to our American way of life. Today he stands as one of the great Americans of our time and his accomplishments in his chosen field are too numerous to mention. I speak of Mr. J. Edgar Hoover, Director of the Federal Bureau of Investigation. When Mr. Hoover speaks on the subject of juvenile crime, or parole violators, or the value of Sunday School training—America listens—and rightly so. He made a speech on April 10, 1956, before the National Parole Conference in Washington, D. C. He said a lot of things in that speech that were shocking and should put America on notice. One thing Mr. Hoover said was particularly shocking to me as a taxpayer and it was this, I quote:

"We complain about high taxes, but last year crime cost every man, woman, and child in these United States $122, or a staggering estimated total of $20 billion. Perhaps this figure could become more meaningful if we realized that for every $1 spent on education, crime costs $1.46; and for every $1 which went to the churches of the Nation $13 went to crime."

In the November 1952 issue of the Rotarian Mr. Hoover had an article titled "You Versus Crime" in which he said:

"We begin to grasp an idea of the cost of crime in terms of money when we note that in one group of 381 of America's larger cities the estimated value of automobiles stolen during the year of 1951 amounted to $95,312,596 and at the present rate of increase it will be even higher for the year 1952. * * *

"Persons under 21 represented more than 30 percent of the 95,600 persons arrested for crimes against property. Of the 2,060 15-year-old boys and girls arrested during the pertinent 6-month period of 1952, 401 (19.5 percent) had prior fingerprint records. Forty-four and nine-tenths percent of the 12,955 young people in the age 20 bracket who were arrested during the same period had prior fingerprint records."

When you hear cold, bare facts such as those, it makes you stop and think.

I quoted those statistics from the 1952 issue of the Rotarian because I wanted to prove to you that our crime situation is getting progressively worse instead of better. And here is my proof: FBI Director J. Edgar Hoover stated in a press release, dated September 26, 1955, "An estimated 1,128,350 major crimes were reported for the period from January to June 1955, only 7,790 less than the 1,136,140 total for the similar period in 1954. If the trend continues for the remainder of the year, 1955 will be the fourth consecutive year in which more than 2 million major crimes will have been committed. * * * During the first 6 months of 1955 a major crime was committed every 13.9 seconds. * * * There was 1 major crime committed for each 144 persons in the general population of the United States during the first 6 months of 1955. This figure is based on the January 1, 1955, estimate which set the population at 162,865,000. * * * Victims of killers in the United States totaled 6,240, while 55,410 people were assaulted by rapists or potential killers. Robbers jeopardized more than 30,000 individuals. * * * 109,830 automobiles were reported stolen during the first half of 1955."

I am not going to give you any more statistics, but these I felt were necessary in order to give you a well-rounded picture of the problem America is facing today. Statistics serve a wonderful purpose as they reflect in summary form what might take pages on end to reflect otherwise.

Former United States Senator Josh Lee, of Oklahoma, a great public speaker and storyteller, used to quote statistics, then tell a story as to why he made his statistics brief. This was his story:

"A coed, standing near the edge of a college swimming pool, dropped her camera in the deep end of the pool. She was talking to a group of boys at the time, but ignored them entirely and asked a 65-year-old professor to retrieve her camera for her.

"He said he would be glad to, but why would she ask an old man like him to retrieve her camera with all the young, handsome boys around. She replied: 'Professor, I'm sure you don't remember me, but I was in your statistics class last year, and I am convinced that you can go down deeper, stay longer, and come up drier than any man I ever knew.'"

Another important contribution of enlightenment on the subject of juvenile crime was contained in the January 14, 1955, issue of U. S. News & World Report. It was a very interesting article titled "Why Law Fails To Stop Teen-Age Crime." This magazine sent inquiries to prominent men throughout the Nation who were considered authorities on the subject. The answers given by these authorities to the questions propounded by the magazine make sense to me.

After all the answers were in, the editors summarized what the judges and law enforcement officials told U. S. News & World Report about teen-age delinquency, and here it is. I will read first the causes and secondly the cures recommended:

"THE CAUSES

"A general and growing disregard for constituted authority.

"Weak discipline in home and schools.

"Juvenile courts too lenient.

"Too many repeaters turned loose on probation.

"Lack of good institutions for reforming young delinquents.

"Shortage of trained probation officers to handle youngsters turned loose.

"Too many vicious comic books.

"Shortage of policemen trained in handling youngsters."

"THE CURES

"Parents should show respect for law and teach it to their youngsters.

"Firmer control—spankings when needed.

"Quit coddling young hoodlums.

"Crack down on repeaters, put them in institutions.

"Provide reformatories that reform, staff them with psychiatrists.

"Train more probation officers, let them concentrate on youths who can be saved.

"Control comics, encourage other reading.

"Train more police, put them out walking neighborhood beats."

As the subject of religion is so controversial it was not listed as a cure in the summary above. Maybe it's not a cure, but certainly religion is a preventive measure. If we, as parents, teach our children to love and respect God, follow His commandments and fear violation of His commandments, a youngster will be started out on the right track. If we, as parents, set an example for our children to follow by attending Sunday school and church regularly, our children feel there must be something to it or we would not be so anxious to go every Sun-

day. The only trouble my wife and I have about taking all our children to church at one time, is we have to get there early or we can't find enough space for all nine of us to sit together. It will be even more involved in the future as I have acquired a daughter-in-law and a grandchild in the past couple of years. We marry early down in my native State of Alabama.

Not long ago I read a newspaper article which related the story of a boy 17, who turned to God too late. For some reason, he decided to ransack a home one night in which there resided a 17-year-old girl. She woke up, saw him, screamed and he stabbed her to death in his panic of being recognized. He was apprehended, tried, convicted and sentenced to be hung. He died a thousand deaths waiting for the execution. He spent his final hours sobbing and praying. Two hours before midnight he was dressed in gallows garb. He was on the verge of collapse. Sixty-six minutes before the hour of execution, the Governor commuted his sentence to 99 years. The boy said, "My God, my God, my God," and collapsed.

If he had learned more about God between the years of 2 and 6, it might not have happened. He had turned to God too late. Let's you and I be sure that our children do not turn to God too late. Let us follow some commonsense principles.

Niagara Falls is a beautiful sight, but its utilitarian value is lost until the falls are harnessed with generators and dynamos and other equipment necessary to convert the uncontrolled power of falling water to useful electricity.

Every child is born with a certain amount of uncontrolled power. Some have more than others. That power must be harnessed if society is to realize any utilitarian value from the child as a good citizen. But we do not use generators, dams, and dynamos to convert the energy of a child to useful channels. We use love, reason, family ties, discipline, church, school, playgrounds, Boy Scouts boys' clubs, girls' clubs to correctly harness and channel our children's power.

If we fail to use all of the facets at our command, we are being negligent in our duties as parents and as citizens. The power of Rotary International is great. Many of America's finest and most influential citizens are in our ranks. But if we fail to use our power for good in any community we are falling down on the job.

One of the greatest truths ever uttered by Albert Pike, founder of Scottish Rite Masonry, was his expression: "What a man does for himself dies with him—but what he does for his community lives forever."

I do not know what your local juvenile problem is here in Albuquerque, nor do I know what the Albuquerque Rotary Club is doing for the youth of this community. But I do know the need for adult assistance to youth is great throughout the country and many localities are endowed with wide-awake citizens, civic clubs, corporations, and organizations which are sparking movements to help our youth.

Here is just one example of what can be done. Some time aga the Firestone Tire & Rubber Co. sponsored an oratorical contest for teenagers. It created a great deal of interest throughout the United States. Over 10,000 youngsters entered their individual entries and I was fortunate enough to hear a 16-year-old girl by the name of Elizabeth Ellen Evans deliver her winning oration. It was magnificent. It proves one great point, that regardless of the shocking criminal acts today of many of our youths, there are still millions of young adults in their teens, who have been taught love of God, love of Nation, love of parents, and respect for authority and the rights of others. In the hands of such fine, patriotic youths as Elizabeth Ellen Evans, America's future will be safe. With such outstanding and public spirited groups as Rotary to help guide our youths, America's future will be safe.

CAB Investigation

EXTENSION OF REMARKS
OF
HON. JAMES M. QUIGLEY
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 8, 1956

Mr. QUIGLEY. Mr. Speaker, under leave to revise and extend my remarks, I include a column written by Marquis Childs, published by the Washington Post and Times Herald and other newspapers on May 16. Mr. Childs devoted this column to a discussion of some of the matters which concern subcommittee No. 5 of the Judiciary Committee, of which I am a member. The article follows:

TRAVEL BOOM AND LOWER FARES
(By Marquis Childs)

The rush of American tourists going abroad is already on in a volume, both for the number of individuals and for the dollars they spend, that will set a new record this year. Steamships are booked solid into the late summer and it is becoming difficult to get an airplane reservation.

What is happening is that a sector of the public that would never have dreamed of going to Europe or South America today is being persuaded by lower fares, the seductive travel ads, and the quick crossing by plane to venture for the first time out of the country.

In 1929, the peak travel year before World War II, 517,000 Americans went overseas and spent $693 million.

In 1954, the latest full year for which there are estimates, the number was 912,000, spending $1,358,000,000. But on the basis of the half-year estimate available for 1955—514,000 tourists spending $705 million—the number of individuals was well over a million and the money spent $1.4 billion. Thus the total has doubled since 1929, while the population was increasing by roughly one-third.

But there are indications that the surface has hardly been scratched and that, with lower fares and more facilities, the overseas tourist trade will double and perhaps even double again within a decade.

The other day North American Airlines, which pioneered domestic air-coach service and has been struggling to get a foot in the door for scheduled as against nonscheduled service, applied to the Civil Aeronautics Board for a permit to fly from Boston, Philadelphia, Baltimore, and New York to Luxembourg for a one-way tourist fare of $145 to $158.

The start this caused the air industry can be imagined in view of the fact that the one-way tourist fare to Paris is now $310. Not long afterward, both Trans World Airlines and Pan American World Airways announced they would ask the International Air Transport Association to sanction lowered fares for certain types of service.

Luxembourg, which has not had direct service from America, is delighted at the prospect and the Government has now proposed that a bilateral agreement be negotiated which would permit a Luxembourg airline to come to the United States. Picturesque Luxembourg, central to most capitals, has one of the best airports in Europe.

The key to overseas fares is held by the International Air Transport Association, to which the airlines of every country belong. Director general of IATA is Sir William Percival Hildreth. A witness recently before a House subcommittee looking into the cartel-monopoly aspects of air rate-making, Sir William was charming, affable, but somewhat evasive.

He was asked why it is possible to fly air coach from New York to Los Angeles, roughly 2,500 miles, for $80 while the New York-Paris flight, about 3,200 miles, costs $310. The following exchange occurred with Representative JAMES M. QUIGLEY, Democrat, of Pennsylvania.

"Sir WILLIAM. The answer is that the terrific developments here, the expertise, has produced a wonderful thing. I hope we can match it, but give us a chance.

"Mr. QUIGLEY. Do they suddenly lose their expertness when they get out over the Atlantic? Is the TWA initiative and expertise still available when we get headed toward Paris—is that not still available?

"Sir WILLIAM. No, sir. I think that is not quite a fair question, you see. In the States, one country, no currency problems, one control and an enlightened one at that—the nation with its high standard of living demands this great development.

"On the Atlantic, you are not dealing just with the Americans. It is conceivable that if the whole Atlantic traffic were in the hands of 4 or 5 Americans, you might—God forgive me for saying this but I am trying to be honest—you might get a more efficient thing, because after all if you get little airlines flying because their government wants the prestige of a flag line, and you get a lot of them, little ones, you do not get quite the same degree of overall efficiency."

The pressure to reduce fares both on routes at home and overseas will become irresistible in view of fairly conclusive evidence that it is not the cost factor which keeps them where they are today.

Despite the growth of the past decade, something like a revolution in travel is in sight. A new type of steamship is being designed that will provide minimum service for a 5- or 6-day crossing to Europe at a one-way cost that may be as low as $125 to $140. The grand tour to Europe is no longer for the privileged few of wealth. It is in sight for millions of Americans.

Report Jap Textile Competition Felt in Kendall Firm Payroll

EXTENSION OF REMARKS
OF
HON. W. J. BRYAN DORN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 16, 1956

Mr. DORN of South Carolina. Mr. Speaker, the importation of Japanese textile goods is already having an adverse effect on our American industry. The following news story points out what is taking place at a plant in my district. This will happen everywhere unless cheap Japanese goods are restricted in their flow to American shores:

IN PELZER: REPORT JAP TEXTILE COMPETITION FELT IN KENDALL FIRM PAYROLL

PELZER, May 10.—Japanese competition in textiles is now being felt in the payrolls of the Kendall Co.'s Pelzer plants, according to a recent statement by J. B. Baker, manager. Drastic changes in the cloth styles have been in process since the fourth quarter of last year at the Pelzer upper plant.

CHANGES FORCED

This plant, one of the Nation's leading producers of broadcloths and poplins, has been forced to make extensive loom schedule changes and to reduce operating hours on all of the plant's 40-inch cam looms from 6 to 5 days, Mr. Baker said.

He estimated this has reduced the plant's payroll by more than $5,000 per week.

Mr. Baker said that market reports show the demand for American-made cotton broadcloth and poplin has been steadily dropping during the past 6 months while Japanese imports of grey cloth and finished garments continue in substantial volume.

AFFECTS TWO WAYS

This has affected the Pelzer payroll in two ways, Mr. Baker stated. First, it has been necessary to change most of the broadcloth looms to print cloth—a type of cloth requiring much less weave room labor; and, secondly, in order to hold down rising inventories, the operating schedule on the 40-inch cam looms at the upper plant has been reduced from 6 to 5 days.

Address by Col. José Luis Cruz Salazar, Ambassador of Guatemala, at Dallas Council of World Affairs, Dallas, Tex.

EXTENSION OF REMARKS
OF
HON. PATRICK J. HILLINGS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 16, 1956

Mr. HILLINGS. Mr. Speaker, I wish to place in the RECORD an address by Col. José Luis Cruz Salazar, Ambassador of Guatemala, at Dallas Council of World Affairs, Dallas, Tex., on May 15, 1956.

Mr. Chairman, honored guests, and Texans, it is always a privilegé and a pleasure for a Latin American to be invited to speak in Texas, to any group of Texans. That is true not only because of the immense economic, political, and social importance of your great State, and of the kind hospitality of your people, but it is especially so because the people of Texas, bordering as you do on Latin America, are more acutely aware of our problems than are the people of many other sections of the United States.

However, Mr. Chairman, I must say that I feel a very special pleasure in being asked to address this particular group of Texans, the Dallas Council on World Affairs. Since I have been the Guatemalan Ambassador to the United States the one thing that has impressed me so much is the keen interest of your citizens in world problems, and of the splendid educational job that is being done in so many of your communities through such forums as this.

In the course of my talk, I shall have much to say regarding my belief in the urgent need for a vast educational program throughout our hemisphere to combat the subversive propaganda of Communist imperialism. Permit me to say at the outset that one of the most effective roles in such a program can be played by groups such as this. I look forward to the day that we will be holding discussion forums like yours in every country in Latin America—not only in our large cities but even in our towns and villages. Of course, in our smaller communities it would not be possible to hold meetings on such an elaborate scale as your most impressive program here in Dallas. Nor would it be necessary. But they could be patterned along similar lines and designed to achieve identical objectives.

Mr. Chairman, ladies, and gentlemen, I propose today to discuss the new Communist economic offensive in the underdeveloped areas, which is causing so much consternation in the West. I propose to submit for your thoughtful and critical consideration, my personal views as to why the underdeveloped areas are so vulnerable to such an offensive, and also, some suggestions as to how it can be not only countered, but even turned to our advantage.

Since my personal experience is confined the underdeveloped areas of Latin America, I shall keep my discussion on a hemispheric basis. However, I am sure that the basic factors existing in Latin America are equally present in the underdeveloped countries of Asia, Africa, and the Middle East.

Insofar as Latin America is concerned, the new Red offensive is just getting under way. Nevertheless, we Guatemalans already see ample evidence that a tremendous new Communist drive is being prepared for Latin America, while the tactics may differ somewhat from those being used in other areas, I am sure that the overall strategy will be the same. Let me cite some recent developments, which we in Guatemala cannot help but regard as ominous.

1. Recent press dispatches reported that Vicente Lombardo Toledano, who organized and for more than 20 years directed, the Communist labor movement in Latin America, has been quietly purged by the Communist high command. Succeeding him is a three-man board, one of the members of which is none other than Juan José Arévalo, the former president of Guatemala, and the man who betrayed my country to the international Communist conspiracy.

2. Jacobo Arbenz, who succeeded Arévalo to the presidency, and who was deposed in the liberation movement led by Carlos Castillo Armas, has for several months been living behind the Iron Curtain, in Prague, Czechoslovakia. At least twice he is known to have visited Moscow.

3. Several of the leading Guatemalan Communists, who are now living in exile in neighboring republics, are known to have slipped across the border recently for brief, clandestine conferences with the Red underground, which we know still exists in our country.

4. Our friends throughout all of Latin America advise us that there is a noticeable increase in Communist activity in their countries, and that for the most part, this new activity seems to be mostly in the form of high-level conferences.

Please, my friends, do not underestimate the significance of these devolpments. Juan José Arévalo engineered the greatest success that the Communists have thus far achieved in this hemisphere, even though it proved to be only temporary, the principal tool that he used, in the betrayal of Guatemala, was a labor movement that was completely in control of the Communists.

Moreover, throughout its 20-odd years of existence, the Communist labor movement in Latin America, which is called the CTAL (Confederación de Trabajadores de América Latina) has been the principal courier service of the Communist apparatus in Latin America. It has been used to transfer communist instructions to the various Latin American countries, and as the chief instrument to disseminate propaganda. Arévalo's elevation to the top command of this organization is not only a reward for his past services, it also presages a new program, so important that the Communist masters felt it essential to cast aside one of its most loyal adherents in the Americas, Lombardo, and replace him with newer, tougher leaders.

The prolonged residence of Arbenz in Czechoslovakia is equally significant. We have good reason to believe that Arbenz is being prepared for an important new role in the imperialistic designs of international communism in Latin America. Let us not forget that it was under Arbenz that the Communists felt sufficiently confident to throw off the disguise they had maintained throughout Arévalo's regime, and publicly reveal that they were completely in control of our government.

Also, the clandestine visits to Guatemala by Communist leaders who have been formally charged with murder, is a significant thing. These men risked their lives to hold those conferences with their underground colleagues in my country. Why? Certainly they must have had a most important reason.

And so, adding these developments together with the reports we get from other Latin American countries, we are most certain that a new aggressive campaign is being prepared, aimed at our subversion. And Guatemala, which was once their greatest success in the Western Hemisphere, and which 2 years ago became their greatest setback anywhere, should be obviously regarded as a key objective in this new campaign.

Ladies and gentlemen, I must inform you, with deep regret, that vast areas in Latin America today are vulnerable to the kind of an economic offensive that the Communists are beginning to launch. I will say to you that as long as any part of our hemisphere is vulnerable, our entire hemisphere is threatened. You Texans, who are so familiar with our interhemispheric trade—not only the things that the United States sells to Latin America, but even more important, the materials you receive from us—I am sure that you will agree with that statement.

Allow me to point out why I feel that we are so vulnerable.

1. There exists in every country in Latin America, among nearly all classes of our people, the passionate desire to develop our resources and improve the living standards of our people.

2. However, the great masses of our people, even among our educated classes, have only the slightest concept of the true meaning of democracy; of the vast benefits the individual receives in a dynamic democratic society. Most important, there is even less understanding of the grave responsibilities that all individuals living in a democracy must assume, if those benefits are to be attained.

3. Also among our masses, and even among our intellectuals, there is a tragic lack of understanding of the real nature of communism, particularly of the menace it represents to our freedom and security, and to the peace of this hemisphere.

The desire to develop economies and raise living standards is not, in itself, an evil or a dangerous thing. Quite the contrary. Under proper direction, it can be a most tremendous good, not only for our own Latin American people, but for the entire world.

The danger stems from the fact that this almost uncontrollable desire is coupled with such a serious lack of understanding of the two great ideologies that are contesting everywhere for the minds of men. It stems from the great opportunity that is presented to the cynical demagogues of communism who have displayed such great ingenuity in seizing upon the just aspirations of people and perverting them to their imperialistis aims.

My own country, Guatemala, offers a graphic example. In 1944, whne we overthrew the last of the old-school dictators who had ruled our country for nearly a century, we had little understanding of democracy, and even less of the nature of communism and the tactics of its exponents. Had we realized what was happening when Arevalo began betraying our Nation to communism, the conspiracy would certainly have been crushed in a matter of days.

But at that time Arevalo was successfully masquerading as a liberal. His Communist followers were assoicating themselves with every one of our legitimate national political, social, and economic aspirations. Indeed, the most ardent Communist and fellow travelers had somehow succeeded in join-

ing ranks with our most extreme nationalistic elements.

So, by the time enough of us awakened to the true nature of Arevalo's program, the Communists had secured such a firm grip on our country that it took us nearly a decade to throw it off.

It seems to me a bitter thing that the lesson we learned at such great cost, in Guatemala, has been forgotten so quickly, by so many, in the Western World. Less than 2 short years ago Guatemala was in the headlines of the newspapers throughout the hemisphere.

Today the case of Guatemala is still well remembered behind the Iron Curtain. Indeed the presence of Arbenz and other leading Guatemalan Communists in the Iron Curtain countries, indicates that the Guatemalan case is being subjected to the closest study by the Red Political strategists, and the lessons it contains are being used as a guide in shaping the new program for Latin America.

In the Western Hemisphere, except in a few instances, the Guatemalan case has faded to a vague memory, its lessons all but lost.

As a result Arevalo and Arbenz are regarded even today, by many befuddled Latin American intellectuals, as "genuine liberals." And throughout Latin America, proven Communists are still locking arms with extreme nationalists. Could you imagine such a mesalliance, if our Latin nationalists had the slightest concept of the true nature of communism? For surely the two are the most absolute of contradictions.

As the new economic offensive gathers momentum in Latin America, we can expect the voices of many misguided liberals and nationalists to be raised in a clamor for increased trade with the Iron Curtain countries, and the use of Communist technicians in the development of our economies. Moreover, unless we move promptly to counterattack, the things they say will make much sense, to the poorly informed masses.

So, we come to the all-important question. What must we do about it? How can we conter the Communist economic offensive in the Western Hemisphere?

Without professing to know all of the answer, I submit for your consideration, a program which I believe contains a good portion of the answer. It is a program of education, and demonstration. And in both phases I believe Guatemala can make valuable contributions.

We of Guatemala are convinced that there is a need for an intensive educational program, throughout the hemisphere, along the following lines:

1. To bring to all classes of people an understanding of the true significance of democracy as a political philosophy, with special emphasis on the obligations and the rights of each citizen.

2. To inform the governments and the people of the hemisphere of the day-to-day and week-to-week activities of the Communists and of the tactics they employ.

3. To convince all social classes of the true nature of communism, and in particular, of its imperialistic objectives.

It is in this program that I feel groups such as this can play such an important part. But we must go even further than you attempt here. We must find ways of reaching all of our people, lest democracy become only the political doctrine of a small, intellectual minority. We must find ways of convincing the semiliterate and even the illiterate as well as the educated people.

Such a program must employ every known media of mass information, and undoubtedly, even new media will have to be devised. It must be conducted in the classrooms, the churches and the homes; in the press, on the radio, and through television and motion pictures; from the political platform and from forums such as this.

While private groups and individuals must carry the great burden of such a program, I believe that governments, too, must do their share. And since the offensive against us is planned and executed on a hemispheric scale, I think that our defenses, also, must be on a hemispheric basis, perhaps centered in some special agency.

It has been frequently, and I believe wisely said, that the fight against communism cannot be won by bullets and bombs alone. I will go further. I say that it cannot be won by words alone.

Surely it is necessary for us to maintain our military strength. Surely we must undertake a vast educational program. But I believe at least one additional factor is essential. We must demonstrate to the people of the underdeveloped countries, that their economies can progress more rapidly, and their living standards rise more quickly, under democracy and free enterprise, than they could under Communist dictatorship.

We in Guatemala can help substantially in the educational phase of the program, by making available to political students throughout the hemisphere, our considerable knowledge of Communist tactics, which we acquired at so much cost.

But in this second, the demonstration phase of the program, we feel that we can make a contribution that no other country on earth can offer, at this time. We are confident that we will be able to demonstrate beyond any reasonable challenge, the fact that greater progress can be achieved under democracy than under communism. For we are the only democratic country in the world today, that has had the actual experience of communism.

The new, democratic government of Guatemala is commencing a long-range development program, in which we expect to invest more than $250 million during a 5-year period. While this may seem a modest amount by your Texas standards, it is a very substantial sum for a small Central American republic.

Moreover, the governemnt's investment is only a fraction of that which we are confident will be undertaken by private enterprise, which is counted on to play the key role in our economic development. The government's job is to build highways, schools, dams, and harbors and the like; to undertake public health programs, agrarian reforms, and other essential programs that are not attractive to private investment. But as new roads and disease control open up great new areas for development, we count on the private investor to dig the mines, till the lands, build the factories and mills, and supply essential services.

Already we have hundreds of miles of new highways under construction, and our program is commencing to produce results.

It is true that we suffered a brief setback when the coffee boom abruptly collapsed, throwing us into a short depression. As you know 79 percent of our export earnings result from the sale of coffee, and the price of coffee, which had reached a high of $95 a quintal in New York at the close of the Arbenz regime, dropped to as low as $50 a quintal shortly after the new government took office.

However, this brief setback will serve to make our eventual success even more dramatic, because it will have been achieved in the face of serious adversity.

Our program in which the economical cooperation of the United States has played an important part, is now making enough headway, that we are convinced that within another year we will be able to point to a substantial rise in living standards, particularly among our poor people.

And then we intend to suggest to our sister republics in Latin America, and to the underdeveloped nations everywhere, that they send to Guatemala their most qualified observers, to see and to evaluate the things we are doing under a democratic government.

We shall say to these observers: "Look well at these things we are doing, and at the gains we have already achieved for our people under a few short years of democracy. Compare them with the utter lack of progress under our 10 years of Communist domination. Then go back to your homelands, and tell your people to stop listening to empty promises, that you have seen with your own eyes the things that are actually being done."

Ladies and gentlemen, I cannot conceive of a more effective way than that, to counter the Communist economic offensive in the underdeveloped countries.

Mr. Chairman, ladies, and gentlemen, in conclusion let me thank you for the attention you have given my remarks, and in all humility, let me express the hope that you may find some value, in the suggestions I have made in regards to the complex problems that are facing us all.

Chotiner-Nixon-White House: Too Many Loose Ends

EXTENSION OF REMARKS

OF

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 16, 1956

Mr. PRICE. Mr. Speaker, under permission to revise and extend my remarks, I offer the following editorial from the St. Louis Post-Dispatch:

TOO MANY LOOSE ENDS

Everybody back up a week—back up 8 days to be exact. Back up 8 days because that is the only way to get proper perspective on the political aspects of those White House telephone calls in behalf of Murray M. Chotiner.

Mr. Chotiner is the breezy California lawyer who is not only a friend of RICHARD M. NIXON, but also was campaign manager for the Vice President. He was to have testified before the Senate Permanent Investigating Subcommittee a week ago Thursday, April 26, concerning the alleged graft in Army clothing contracts.

Somehow or other Mr. Chotiner did not keep to his schedule. When he finally appeared just a week later to the day, he denied that he intentionally broke an agreement to testify earlier. The chairman, Senator MCCLELLAN, of Arkansas, observed cryptically: "There may have been and there may not have been a misunderstanding."

Misunderstanding or not, the delay in Mr. Chotiner's testimony gave Vice President NIXON an opportunity and the Vice President has never been one to pass up opportunities. The Vice President hied himself that very day to the White House and proceeded to chart his own course to the President.

At the end of the charting session, Richard NIXON told reporters he had informed the President that in the event Mr. Eisenhower and the GOP convention "desired" him to serve again, he "would be honored to accept the nomination." Press Secretary Hagerty added that the President had asked him to say "that he was delighted."

A week later Mr. Chotiner finds it more convenient, if still not comfortable, to meet with the Senate subcommittee. He discloses that his clients include Herman Kravitz, convicted as an embezzler on a Govern-

ment contract in 1954, and Marco Reginelli, described by subcommittee counsel as "the top hoodlum of the New Jersey-Philadelphia area."

But Mr. Chotiner's really important disclosure is that Maxwell M. Rabb and Charles F. Willis, Jr., two White House staff advisers to President Eisenhower, made telephone calls concerning Chotiner clients. Did he attempt to use the name or influence of the Vice President? Oh, no. Or to use Mr. Chotiner's words: "Unequivocally no!" Just the same, word got around that somebody at the White House was making inquiries on behalf of clients of Murray M. Chotiner.

And so the sequence is this:

First. Mr. Chotiner is scheduled to appear before a Senate subcommittee where he will give testimony embarrassing to both President Eisenhower and Vice President NIXON.

Second. Mr. Chotiner does not appear on schedule, but waits a week.

Third. Vice President NIXON meantime obtains clearance for his announcement that he would like to run again in 1956.

Fourth. After all this gets into the record and Mr. NIXON's candidacy is widely accepted then Mr. Chotiner makes the kind of disclosure that would have been a shocking scandal back in the Truman administration when William M. Boyle, Jr., Howard McGrath, and Matthew J. Connelly were denounced by the press for their influence calls to Government agencies.

Yes, back up 8 days and then back up 5 years. It is October 5, 1951. A Senator is speaking—a member of the Permanent Investigating Subcommittee. He is California's promising young RICHARD M. NIXON and he is on the trail of Democratic influence in the affairs of the Reconstruction Finance Corporation. Says the future Vice President:

"This inquiry has too many loose ends to call it closed, and I think we'll have to resume hearings."

And that, we suspect, is just what a lot of people are going to think about this whole Chotiner-Nixon-White House influence business, now beginning slowly to unfold.

Dr. Gordon Keith Chalmers

EXTENSION OF REMARKS
OF
HON. FRANCES P. BOLTON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 16, 1956

Mrs. FRANCES P. BOLTON. Mr. Speaker, Kenyon College and all of Ohio has sustained a great loss in the sudden and unexpected death of Dr. Gordon Keith Chalmers. Champion of higher standards for American colleges and universities, his leadership will be missed from coast to coast. As a part of my remarks I include the following article from the Cleveland Plain Dealer:

[From the Cleveland Plain Dealer of May 9, 1956]

DR. CHALMERS, KENYON COLLEGE PRESIDENT, DIES

Dr. Gordon Keith Chalmers, president of Kenyon College, died last night in Cape Cod Hospital, Hyannis, Mass., it was reported by officials at the Gambier, Ohio, college.

He died of a cerebral hemorrhage. Dr. Chalmers was stricken while visiting his retired secretary, Gladys Parker.

Dr. Chalmers became the 16th president of the college in 1937. He had been president of Rockford College, Rockford, Ill., from 1934 until moving to Kenyon.

Dr. Chalmers had long been known as an opponent of Government aid to liberal arts colleges. He claimed the shaping of young minds should remain free of Government regulation.

Plans had just been completed by Dr. Chalmers for the fifth in a series of conferences on "The Essentials of Freedom" to be held at Kenyon April 4–7, 1957.

This series, close to Dr. Chalmers' heart, is supported by a $25,000 grant from the Fund for the Republic. The series was begun by Dr. Chalmers in 1946 and brought him special pride.

Always forthright in his opinions, Dr. Chalmers was known as a particular champion of higher standards for American colleges and universities.

In a Cleveland speech, he asserted universities would make a serious mistake if they used the coming increase in student population merely to expand rather than to lift their standards.

Last year he told his college's Cleveland alumni that, as a result of higher standards, "thousands of young people of normal abilities would surprise themselves by using their own minds in a way and to an extent they do not now think of."

Dr. Chalmers was born in Waukesha, Wis., February 7, 1904, the son of William Everett Chalmers, a Baptist minister.

He took his bachelor's degree from Brown University in 1928 and then went to Oxford as a Rhodes scholar. Oxford gave him both a bachelor's and a master's degree. He also received a master's degree from Harvard University later, and then won his doctor of philosophy degree from Harvard.

He began his career as an instructor in English at Mount Holyoke College in 1929 and became assistant professor there in 1933, the year before he became president of Rockford College.

He was married on September 3, 1929, to Roberta Teale Swartz, of Brooklyn, N. Y., who survives him with their four children: Ann, a student at Radcliffe College; Jeoffrey, a student at Harvard, and twin sons, Stephen and John.

Among the organizations in which Dr. Chalmers was active were the Modern Language Association, the American Association of University Professors, American Association of Rhodes Scholars, and Phi Beta Kappa.

A Kenyon College spokesman said the funeral would be at Harvard on Thursday or Friday. Burial will be at Mount Auburn, Cambridge, Mass.

Actions Speak Louder Than Words

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 15, 1956

Mr. MULTER. Mr. Speaker, the way to live in peace with one's neighbors is to act neighborly toward one another. Burma's relations with the State of Israel are a good example of how to do it. I am pleased to direct the attention of our colleagues to the following editorial which appeared in the New York World-Telegram of May 12, 1956:

BURMA'S GOOD DEED

A generous and friendly Burma, without fanfare or noticeable self-esteem, has agreed to put a million acres of land into cultivation of wheat for Israel.

For this practical good deed, Burma is deserving of the free world's plaudits as well as the gratitude of the beneficiary country.

Burma prides herself on her neutrality and in taking this step probably risks the ire of some of her Moslem neighbors who are solidly against Israel. But evidently Burma's neutralism does not supersede humanitarianism, and in this respect the boastful neutralism of India will suffer by comparison. Premier Nehru apparently has no ear for friendly overtures from Israel.

Patman Bills Call for Wide Public Support

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 16, 1956

Mr. ROOSEVELT. Mr. Speaker, I am sure that the Members will be greatly interested in Ed Wimmer's newspaper column of May 14 dealing with two extremely important bills of our distinguished colleague from Texas [Mr. PATMAN]. Mr. Wimmer has quite correctly stated that for 30 years "Congressman WRIGHT PATMAN, of Texas, has been in the forefront of every major legislative battle to insure freedom of opportunity in the American marketplace."

While I entirely agree with that statement, it would only be fair to add, however, that it understates the stature and the record of the gentleman from Texas [Mr. PATMAN], in that he has also been a leader and in the forefront of major legislative battles for the public interest and for the common people, on all kinds of issues.

Mr. Wimmer's column is as follows:

[From the Cincinnati Enquirer of May 14, 1956]

PATMAN BILLS CALL FOR WIDE PUBLIC SUPPORT; SEEK CHANGES IN INCOME TAX RATES

(By Ed Wimmer)

For 30 years or more, Congressman WRIGHT PATMAN, of Texas, has been in the forefront of every major legislative battle to insure freedom of opportunity in the American marketplace. He was our speaker in Cincinnati 20 years ago, when the fight to win passage of the Robinson-Patman Act was launched, and despite periodic tides of bitter criticism, his convictions have never wavered.

As chairman of the House Small Business Committee, his present sponsorship of two extremely important bills, is receiving widespread attention and support. One is his bill, H. R. 9067, which he terms "A Prescription for Mergeritis"—a bill designed to graduate corporate income taxes with a view to encourage small and medium size business to stay in business, and discourage the uneconomic growth of giant business.

Mr. Patman points out that combined personal and corporate income taxes now amount to about one-fourth of the national income, resulting in fundamental changes in our economy—none of which are good. He fully supports the position taken in this column, that our tax structure is—channeling all available income for investment into a few super-giant corporations—thus squeezing out smaller competitors and taking possession of the Nation's wealth.

Under present tax rates, a taxable (company) income of $25,000 is hit for a combined normal and surtax amounting to $7,500.

Under Patman's proposal (9067) the tax would drop to $5,500, or a minus change of 26 percent. Taxable business earnings of $100,000 would down-drop from $56,500 to $22,000. Proposed reductions ending at the $10 million earnings level.

Increased rates on earnings under H. R. 9067 would amount to only 1 percent on $50 million, but would jump to a 28 percent increased tax on earnings of $1 billion and up. There is no doubt but what such changes would strengthen the smaller companies and leave them with more money to plough back into their operations, and the merger-fever could go down a little. The latter is certainly a deadly disease that does to the economic body what cancer does to the human body.

All the experts are now agreed, that reducing the pressure of rising costs on one hand and diminishing returns on the other, is a must if the older small- and medium-sized businesses are to survive, and if venture capital is to take up the slack on the beginner front.

Sylvia Porter, columnist, brought the danger home in figures showing that "82 percent of the companies in the $5,000 to $25,000 class," in a survey of 33 industries, "had lost their bank credit." The same survey revealed that half the companies in the $25,000 to $100,000 class are also out of the bank credit picture.

This is at a time when employment is breaking all records, and in a nation dependent upon credit for its prosperity.

On another Patman battlefront, the fight to win passage of H. R. 11, a bill to close the loophole in the Robinson-Patman Act, is nearing a showdown. The loophole was opened last year when Standard Oil won a court decision that made price discrimination lawful if a supplier believed he was meeting competition, even when his price favoritism tended to create monopoly.

Stated differently, so long as H. R. 11 hangs in the balance (S. 11 in the Senate), a manufacturer can charge a chain or other big buyer lower prices than he charges his other customers and the Government must prove that he did not think he was doing something wrong because he thought he was meeting competition lawfully.

H. R. 11 would remove this silly defense that allows the giants to receive enormous price advantages and other concessions, thus freezing out of the market place the established small business, and the hopeful beginner. In the early thirties, PATMAN headed an investigation that turned up secret discounts of $42 million going to one chain. Two highly reputable corporations were kicking back $30,000 a month each to one buyer, and the biggest manufacturers testified they were powerless to resist the pressure put upon them.

H. R. 11 has been tied up in the Judiciary Committee, but a petition, signed by some 200 of a needed 218 signatures of House Members, is expected to bring the bill to a vote before Congress adjourns. Certainly, every last American has a vital stake in both H. R. 11 and H. R. 9067, for both are measures to further insure freedom of opportunity to all.

When Is a Shortage Not a Shortage?

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 15, 1956

Mr. MULTER. Mr. Speaker, the following is an address I made before the National Federation of Independent Scrap Yard Dealers, Inc., at the Hotel Roosevelt, New York City, on May 12, 1956:

Mr. Chairman, distinguished guests, ladies, and gentlemen, although I am very happy to have the opportunity to speak to you tonight, I am not quite so certain that all of you will be very happy with some of the things I have to say, but if all of you like some of the things I say and some of you like all of them, I will be content. If nothing else, I will get you to thinking about the important controversial matters that should concern citizens and taxpayers all of the time, but to which too frequently they pay too little attention except in election year.

It has been my happy privilege to serve for many years on two very important committees of the House of Representatives. One of them is the House Small Business Committee which, as you probably know, is a special committee authorized merely to investigate, study, and report to the Congress on problems affecting small business. The other committee is the Banking and Currency Committee which, despite its name, deals with many important matters other than banking and currency. Some of your members know from experience that we have jurisdiction over all control legislation, and more particularly the Export Control Act, which can and does touch your business rather closely. That is a standing committee which has jurisdiction not only to investigate and study, but also to report bills to the House for enactment into law.

The House Small Business Committee is one of the few committees of Congress which has been truly nonpartisan. I cannot recall a single recommendation from that committee which did not have bipartisan support. The welfare and progress of small business is of the foremost concern to the Nation's economy. Small business has a recognized place in the ecenomic fabric of the United States and is the backbone of the American free enterprise system. However, small business cannot continue to exist nor can it compete with big business in this great age of economic advancement unless small business is given a fair chance and at least an equal opportunity to compete with big business.

The criticisms which have come from the House Select Committee on Small Business were always made constructively, never destructively, and always made without regard to the political affiliations of the appointee against whom directed. Therefore you should bear in mind that if I say something critical it is deliberately intended to be critical but is just as deliberately intended not to be political.

I sincerely believe that my Republican colleagues on the Small Business Committee will endorse what I say. My Republican colleagues on the Banking and Currency Committee may differ with my conclusions or opinions, but none of them can challenge any of the facts that I will present to you.

As the year rolls on you will hear more and more that small business is the backbone of the free enterprise system in our economy and that big business, aided by big business in Government, is more and more throttling small business.

While none of you are "small" in the colloquial sense, all of you are small business in accordance with our legal definition. Each of you represents a business which is independently-owned and not dominant in your industry. The Defense Department had an arbitrary legal definition that any firm with 500 employees or more was not small business, and any firm with less than 500 employees was small. The reason for the change of the definition is important. The Congress found that small business must be protected against the depredations of big business and of big Government, and accordingly enacted into law many aids, safeguards, and even preferences to and for small business. These laws were enacted because the facts as developed in many of our hearings sustained by volumes of testimony and documentary evidence demanded them.

Almost a year ago we enacted a law repealing this arbitrary Defense Department definition and making it mandatory that the definition as cited in the Small Business Act, which I have enunciated before, be uniformly applied in all Government agencies.

Now I do not care whether that policy has not been implemented and enforced by the Defense Department because the Secretary of the Department of Defense, Charlie Wilson, is big business or favors big business or because his subordinates unbeknown to him have failed to do so for fear of antagonizing the boss. You and I are not concerned with the motives, good or bad. We are concerned however that the Congressional committees that urged that policy upon him before enacting the law were told that the policy was a good one and should be the rule. We are more concerned with the simple incontrovertible fact that a concededly good doctrine was not voluntarily effectuated and the Congress was compelled to and did mandate it. The same agency (the Department of Defense) continues to ignore and flout the law. That is typical of how small business is being mistreated by the executive branch of the Government.

We get fine speeches from the top echelon about broadening the base, integrating small business into Government procurement, both military and civilian, and about requiring the big prime contractors to subcontract a fair portion of their contracts to small business.

I was amazed, literally astounded, to find that these high-sounding, well-worded directives of the top echelon of the Department of Defense took 6 to 9 months to reach the personnel in the field and then too frequently they were promptly ignored by the people charged with enforcing them.

I am amused and at the same time terrified by the Government economists who prate about our prosperity and stability. Our national gross income is stable, they tell us. Of course it is when you add big-business incomes to farmers' income to small-business income. The total of this gross is about the same for 1955 as for 1954. But they do not tell us that the gross income of big business is up over $1,200,000,000 and the gross income of the rest of our economy is down by a billion dollars. They tell us that bankruptcies for the whole country are no more than in the previous year. Of course. But big-business failures have practically disappeared and those of the rest of our economy have nearly doubled.

They tell us that the number of business firms has remained stable in the last few years. That is, there has been no change. They do not tell you that in the prior 3 years our economy grew to the extent of 50,000 new firms a year.

The distressed condition of the small-business community is ample proof of the ineffectiveness of the present administration in dealing with small-business problems.

In the first 6 months of 1952 firms with $250,000 in assets netted profits, after taxes, of close to $175 million. Last year for the same period they netted only $60,000,000. From 1952 to 1955 these small-business firms had 40 percent less funds available for reinvestment and expansion. Nineteen hundred and fifty-five saw an increase of $4 billion in profits after taxes for big business.

A recent survey has shown that 10,000 small companies will need $100 million this year to fulfill their contracts.

Big business can borrow long-term money at low rates from the insurance companies; they can sell bonds to the banks and invest-

ment houses or sell stock to underwriters and the public. Small business does not have these opportunities.

If your bankers have not told you yet, they will. They will say: "The Secretary of the Treasury and the Federal Reserve Board are afraid of inflation. They are tightening up on credit. They are raising reserve requirements so we will have less to lend. They are making us buy more Government bonds for the same reasons. They are raising the discount rates so we must charge you more interest so you cannot afford to borrow."

When new buildings are being constructed there is an increased demand for steel. When there is an increased demand for steel there is an increased demand for your product. Stop the new building and you reverse the trend. That is precisely what this administration has done. Without mortgage money there can be no building. Therefore less steel and less scrap is needed. Last year it was anticipated that there would be new building starts in 1956 of anywhere from 1,200,000 to 1,300,000. At the beginning of this year the estimate was revised downwards to 1 million starts. The April statistics indicate there will be a drop of 50 percent in many high-production areas. The reason—no mortgage money. The reason for no mortgage money can be laid directly at the door of this administration.

Congress set up a Small Business Administration, which should be able to help you, but don't be too optimistic about that. The Secretary of the Treasury and the Secretary of Commerce, both big-business men, control the Loan Policy Board of that Administration. Believe me, the Congress wants the Small Business Administration to succeed in serving you.

If it does not serve you, it is not for want of a good law. The authority is there, and the money is there. We cannot compel the administration to do a good job. Under our system of government the Congress enacts the laws, the President and his appointees execute and administer them.

It is safe to say that in the field of industry there are certain jobs which are so tough that only the small-business man can be persuaded to take them over. Your business is a typical illustration. The scrap dealers of America perform a vital, but I am afraid at times, a thankless job for the American economy. Scrap, whether it is steel, copper, aluminum, or the other metals, must be gathered and put back into our productive economy, if our economy is to survive.

This is especially true today when we are undergoing a period of great demand and great expansion for primary metals, which, in turn, has resulted in an acute shortage of these metals. We became aware of the importance of scrap during the war; we are now learning that it is just as important to our civilian economy, as it was to our wartime economy.

I regret to say that there appear to be many in responsible positions in the present administration who regard the small-business men who are engaged in the scrap industry as country cousins of the large integrated producers. They are to be tolerated but not actively supported or helped.

In the main, stockpile policy, export policy, and Government aids to production appear all to be weighted in the favor of large integrated producers; but if the American economy and our ability to successfully defend ourselves in times of war requires policies designed to encourage and protect large integrated producers, it also requires the same policies to encourage and protect the other equally important segments of the industry—small-business men who reclaim scrap and the small-business men who are dependent upon such scrap for their sources of supply.

Unfortunately, the Government not only fails to take positive steps to aid such small-business people but also does not even try to understand their problems. It has not gathered adequate facts or information upon which to make any determination about action to aid them. An example well known by all of you is the fact that there has not yet been completed by any Government agency an adequate survey of steel scrap available in the United States and the statistical position of steep-scrap dealers in our economy.

The House Small Business Committee has received numerous complaints from both the small-business men in the steel industry who are the nonintegrated producer and the small-business men who are the scrap dealers. The interest of these two groups would appear to be in conflict; but no real answer can be given because Government agencies have not bothered to gather the facts.

It is impossible to get any factual basis for departmental decisions. I am safe in charging that at least as to scrap metals, they appear to be operating in a vacuum.

Of course there is another problem of scrap dealers which I am afraid does not get too much sympathetic understanding—especially from the producers. That is the fact that you are an intensely competitive industry, and very sensitive to the laws of supply and demand. Nobody, of course, complains when the laws of supply and demand force your prices down to low and almost ruinous levels. However, if the same laws force the price of scrap up, the hue and cry is raised that prices are too high. If you must bear the risk of a low price, you are certainly entitled to the benefits of a high price where it is the result of competitive adjustment to the laws of supply and demand.

There is here involved, however, another extremely important point which your members of this industry know full well, but which the executive departments of our Government completely ignore. They certainly give no evidence of paying any attention to it. I now am talking about our national security.

If you think I am playing politics with anything so vital, let me assure you that I place our Nation's interest first. That party politics is always placed in a secondary position by me under such circumstances is best evidenced by the record I made as an active member of my committees, when I tore into Democrats and Democratic appointees under similar circumstances.

I will content myself now with placing before you the simple facts as they are documented before the Congress and you draw the conclusions.

Four times in a comparatively short time scrap was in such short supply as to require embargoes against its export.

Now, don't misunderstand. I am not now urging an embargo. The responsibility of that decision is not mine. But if it were, I could not make it, because of lack of information.

What is worse is that the executive departments charged with getting the information and making the decision do not have the facts and have not sought to obtain them.

Please send for the hearings before the House and Senate Banking and Currency Committees of this year and read them.

We have on the statute books of our country two laws which are about to expire and which are about to be extended by the Congress. Both deal with scrap metals. Neither law should be extended unless there is a shortage or a potential shortage. The fact gathering for the basis of congressional action as well as Presidential executive departmental action is vested in the Department of Commerce, headed by big businessman Secretary Weeks.

Now let's observe how he performs his function.

When our Small Business Committee was flooded with complaints about scrap metals we went to the Government sources for our answers. We got a lot of gobbledegook by way of reply.

Secretary Weeks last December said, and I quote: "The steel scrap export situation has been under close surveillance and virtually continuous review for more than a year and a half."

Excellent. Certainly here come the facts. Listen to the next sentence from the same letter. Again I quote:

"Within the last 2 weeks, I have instructed the Business and Defense Service Administration in conjunction with the representatives of large and small members of the iron and steel industry to make an immediate and exhaustive review of all the current aspects of the domestic scrap situation, including supply, consumption, and future requirements."

Fine. After all, let us be fair. I concede that a year and a half of close surveillance is not immediate. But tell me, What was it if it wasn't an exhaustive review?

Surely, it was not boondoggling.

But didn't the Secretary also say it has been under virtually continuous review? Then why another review?

You would go broke, if you operated that way. But you are only small business and this is the way big business operates your Government.

I am going to be charitable. Christmas was only 2 weeks away when he ordered the survey. Christmas came and went and so did Easter, and still no answer.

In the meantime, the first of the laws I mentioned before is called up before the House Banking and Currency Committee for extension. Secretary Weeks sends up his Assistant Secretary to tell us the law should be extended for 3 years, that is the law under which you get your scrap export licenses and under which the Secretary can say how much, if any, scrap may be exported.

He tells us it is a good law, a workable law, it gives him all the authority he needs, just extend it for 3 years. You need not be a legislator to know that a man really must be a prophet to look ahead that far and say he needs an emergency measure for that many years.

Not pretending to have any prophetic powers, I say to the Department representative: Please give us the facts for this record. If they are classified or secret, say so, and we will take them in executive session. Oh, no, they say, they are not in that category, you can have them.

Fine. Come on. Give out. We are all ears.

Oh, wait a minute. Mr. Congressman, we don't have the facts.

I quote from Secretary McClellan speaking for his boss, Secretary Weeks:

"Secretary MCCLELLAN. * * * What that major inventory is nobody knows. It has never been taken in this country, and to my knowledge in any other. I think it would be helpful if we could get it, but that is the inventory which we do not have.

"Mr. MULTER. Isn't your Department in a position to get that information?

"Secretary MCCLELLAN. No, sir; not yet.

"Mr. MULTER. Why not?

"Secretary MCCLELLAN. We don't have the information. (Appropriation.)

"Mr. MULTER. Has your Department asked for the appropriation to get it?

"Secretary MCCLELLAN. I don't believe so specifically.

"Mr. MULTER. Then I don't think it is fair for you to tell us you can't get it, because you don't have the money and your Department has not asked for the money for that. This is an item of information you should

get and you can't get it unless you get money. I think you should go before the Appropriations Committee to get the money.

"Secretary McCLELLAN. That may be forthcoming.

"Mr. MULTER. Have you any idea when?

"Secretary McCLELLAN. No, sir. I am not even certain that it will, but I think that it is one of the elements in this particular thing which has to be taken into account. It is the one unknown factor, which up to this time has only been estimated and never really evaluated specifically.

"Mr. MULTER. Can you tell us for how long your Department has felt that that was information you should have?

"Secretary McCLELLAN. I know ever since we have been concerned with the steel-scrap situation, we have tried to evaluate what that market is, but without inventory.

"Mr. MULTER. How long is that period of time?

"Secretary McCLELLAN. To the best of my knowledge, it has gone back for at least a year or year and a half that we have been worrying about that. We have sought the cooperation of the people in the industry, to help us evaluate that inventory."

But let us not overlook that he nevertheless insisted throughout his testimony that there was no shortage of steel scrap. I begged, I pleaded, I hammered. He stuck to his guns.

That was his testimony on February 23, 1956. He had the last word as follows, and I quote again: "That is an unknown factor, but one we are convinced in the light of the record is adequate at this time." Remember he was talking about steel scrap.

That is certainly a positive enough statement even though the factual vacuum is still present.

In April 1956, we move over to the House Ways and Means Committee. It is considering the second of the two bills I mentioned.

This bill (H. R. 8636) is to extend for 1 year—note how much more realistic the Executive has become—not 3 years, but 1 year, the lifting or exempting of payment of custom duties and import taxes on scrap metals being brought into this country. The only reason for that being done is because there is a shortage.

Accordingly, Secretary Weeks writes to the Ways and Means Committee. On April 17, 1956, he answers the committee's inquiry of January 26, 1956, and says, quote:

"The Department of Commerce favors enactment of H. R. 8636 because the types of metal scrap (e. g., iron, steel, aluminum, magnesium, molybdenum, and nickel) covered by the bill are in short supply. The continued suspension of the duties and taxes should encourage imports and increase the amounts of these raw materials to domestic industries. * * *"

He also tells us that the Bureau of the Budget (that means the President) approves his report just quoted from.

You may indulge the assumption that it took 3 months to answer an inquiry about what has been continuously examined, reviewed, and surveyed while the Department made an inspection. I use that word for lack of a better one to give the Department credit for doing something additional about the matter.

They are on the ball now. So I walk across the Capitol to the Senate Banking and Currency Committee which, on April 19, 1956, is hearing witnesses on H. R. 9052. Remember that is the one in which the House Banking and Currency Committee was told by Secretary Weeks' Commerce Department there is no shortage of steel scrap.

Finally and at last. Now we will get the facts. Listen. Secretary Weeks' Commerce Department speaking, quote:

"As regards the depletion of our national inventory, we find ourselves in a position of not having sufficient information either in Government or in industry to arrive at a sound judgment."

Twice during our lifetime, scrap has gone abroad only to be converted into bullets, bombs, and armaments with which to kill and maim our boys.

I know of no group of men and women that is more patriotic than you, or who would not sacrifice their business when the safety and security of our country require it. You have done that before and you are ready to do it again, if necessary. But for God's sake, for the sake of our great country, let us at least get at the facts.

I am sure you are as terrified and as horrified as I am at this disclosure.

Congress can only make the laws. It cannot enforce or administer them. At the risk of being accused of partisanship, I say the only remedy available to us is to elect to the presidency of our great country a man who will make appointments to high Government positions of only such men who understand the needs of our country and of all of its people, big and small alike, and who will devote themselvse to executing our laws in the spirit in which they were intended to operate, doing the greatest good for the greatest number.

I apologize for having introduced such a somber note into what was intended to be a festive evening. Thank you for listening to me.

Address on Interposition by R. L. Woodward, Jr.

EXTENSION OF REMARKS
OF

HON. WATKINS M. ABBITT

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 16, 1956

Mr. ABBITT. Mr. Speaker, these are trying times. The people of the Commonwealth of Virginia are facing a crisis brought about by the decision enunciated by the Supreme Court of the United States of America on May 17, 1954. Contrary to all precedent, they enunciated the principle that has caused and will cause a deterioration in race relations throughout the width and breadth of the Commonwealth of Virginia.

We are fortunate indeed in having leaders who are willing to express themselves and to stand up for the principles enunciated by our Founding Fathers. One of these leaders is the Honorable R. L. Woodward, Jr., of Suffolk, Va. Mr. Woodward is an outstanding Virginian, a man who is intensively interested in the welfare of the people of the Commonwealth of Virginia. He has rendered valuable services to his State as well as his community.

Under leave to extend my remarks in the Appendix of the RECORD, I desire to include an address made by Mr. Woodward which forcefully presents the problem and enunciates principles that were the bedrock of this country when it was founded and when our Constitution was adopted. I commend the address to every Member of this body as well as the citizens of America in the hope that people in other sections of this country will realize the problem that we in the South face today, and in the further hope that they will understand what is happening to them as a result of a grasping Federal judiciary that is steadily and stealthily, like a thief in the night, taking from the people of this great country their rights and privileges as well as depriving the States of their sovereignty. We cannot sit idly by and let this happen to us if we expect to retain our freedoms that were wrought out for us by the Founding Fathers of this great country.

The address follows:

ADDRESS ON INTERPOSITION BY R. L. WOODWARD, JR.

I have no special competence on the subject assigned me which is said to be a legal matter and, by some people, to be indefinable. However, I have always believed that law is not law simply because it is written. Law rests upon two simple factors: The first being commonsense and the other the will of the people. Otherwise, there can be no law that can be effective.

The problem that confronts us is probably the most serious problem that has confronted us in our life and, potentially, can be the most serious problem to confront us during the rest of our existence. The problem transcends the matter of "segregation or integration" which impelled the problem. The problem is national, and its solution is as vital to any or all of the States as it is to us because it involves the structure of the kind of government under which we shall live.

Now, who precipitated the matter that brought on the problem? It has been a peaceful matter for some eighty-odd years, and evolving events would have kept it peaceful had it not been for politicians whose greed for votes allowed them to debase their character by advocating a cause in which they had no heart or belief, and from which, in social practice, they had, and still do, hold themselves aloof. For misdirected preachers pleading the fallacious ministerial doctrine of the equality and brotherhood of man, for professional educators seeking Federal aid to education through their parent organization—the National Education Association, for crackpot liberals and do-gooders and Communists contributing to and prodding the NAACP—all aided by a type of journalism distorting events out of proportion to their importance, misleading the people and violating the ethics of the profession, until the President of the United States called for the end of segregation, forthwith, in the District of Columbia, bringing in the blacks and running out the whites; and a Kremlinlike Supreme Court, with their ears and minds attuned to the election returns, emasculated the historic interpretation of the 14th amendment by former, more learned courts, and made an erroneous political decision that sanctioned a more erroneous social decree gathered from the books of psychologists and psychiatrists, everyone of whom were under suspicion by the Department of Justice and the Attorney General's Office as being fellow travelers in Russian philosophy. Both decision and decree were subversive of the right, interests, and liberties of the people, and invasive of the rights reserved to the States in the Constitution.

And there, gentlemen, is where, through the medium of our accredited representatives legally assembled in the historic legislative halls of the mother of States—the State that initiated the Constitutional Convention, whose sons wrote the Declaration of Independence, the Bill of Rights, the statute of religious liberty, and were most influential in writing the Constitution itself—we, in all of the dignity traditional with this great Commonwealth, stop to inquire. Interpose, to determine the background of man's approach to government, historically, in the western tradition, its in-

fluence, and more specifically, the intent in the establishment of our own Government—all to the end that the invocation of interposition will provide time sufficient to prove, beyond doubt, that the Supreme Court did illegally invade the rights reserved to the States and that such invasion is against the will of the people who, in the pride and jealousy of their sovereignty in the several States of the Union, will demand, through appropriate means, that the Congress plainly set out limitations upon the Court and preserve our form and concept of government from further illegal and unwarranted attempts of the Court to amend the Constitution. Otherwise, we may have created a Frankenstein, destroying the very freedom we, in the perfection of our governmental processes, thought we had achieved.

Now, what is the historical approach to government in the western tradition? The searching approach upon which our Government is founded? It is the search for individual freedom and personal security. It has been a difficult task, and the history of the Western World shows that most of its upheavals have been in the search of the maximum amount of freedom along with the minimum amount of security consistent with order.

Man realized that complete freedom would result in anarchy and complete security would restrain and direct his every act and movement. He, therefore, had to erect a government or State that would achieve his goal. In its simplest form, the State is an institution for individual, collective, and national security. It also provides protection from external aggression and internal disorder. So man deliberately yielded a part of his freedom in the interest of his personal security and the protection of his property by fashioning a State or government to achieve that purpose. In so doing, he placed ultimate sovereignty in himself, and placed limits and restraints within which the State must work. It was a confederation with his neighbors, so to speak, a compact for mutual interests.

But let no one ever persuade you that man did, or intended to, yield his sovereignty to the State or, after fashioning a State peculiar to his environment, intend to yield any State's sovereignty or any State's rights except those he specifically allocated to the Union.

Throughout the history of our country, from the *Mayflower* compact of 1620 and the great State papers I have referred to, man has always been sovereign and the State has been servant, and every key document which went into the building of this Nation acknowledged that philosophy and pledged fidelity to it.

Are we of this generation less resolute, less determined and courageous, than our forefathers? Are we to abandon this priceless heritage that has carried us to our present position of achievement? Are we so unmindful and careless of our future that we will stand aside while our conscientious convictions tell us that a dictatorial Supreme Court has subverted our rights and liberties and invaded the prerogatives left to the States? Are we to be misled by a press that tells us that the means to thwart this invasion—the same political philosophy used by the founders of the Constitution—is fantasy? That this philosophy cannot obtain when the history of this Nation shows that it can? In short, is there no recourse to the people beyond a Supreme Tribunal that is judge, jury, and counsel in respect to its own acts?

I do not believe we will be pushed aside, and I shall attempt to provide you with the background of interposition with the hope that you and all others to whom I shall address these remarks, shall be loyal to a historic philosophy almost as old as our Government itself. It will not fail if you are loyal and resolute. If it does fail, we may as well abandon our State borders and our State constitutions, and become so many wards of a dictatorial, autocratic, and centralized authority.

Now what is interposition, that the Virginia-Pilot and Mr. Robert Whitehead, the delegate from Nelson County, call nullification and fantasy? It is just what the word implies. It is a position in between the decision of the Supreme Court and our idea of the sovereignty of the States and rights reserved to them and to the people, under article 10 of the Bill of Rights, being the 10th amendment of the Constitution. It is a waiting period, through orderly processes, to establish the legality or illegality of the Court's decision. Don't forget that the rights are not only reserved to the States, but to the people, also.

What is nullification? It is the refusal of a State to enforce a Federal law within its borders. If the decision of the court is illegal, it is void and, therefore, cannot be nullified.

What is fantasy? It is a hallucination with no foundation. But interposition cannot be fantasy because it has definite effective precedents that establish its foundation.

What are these precedents? Let me seek to establish them.

In 1765 the British Government wrote rules for the governance of the Colonies, such as the Stamp Act, the Sugar Act, etc. The rules were considered onerous and burdensome by the Colonies, and there was a great deal of agitation, tension, and rebellion on account of these rules, and many speeches about taxation without representation. At this time, Patrick Henry made his famous speech, "Give me liberty or give me death." With conditions steadily deteriorating, the Colonies, on July 4, 1776, said, "We are, and of right ought to be, free and independent States, specifying all rights that would naturally accrue to a sovereign nation as reserved to each State, such as the right to levy war, etc. The Revolutionary War ensued. In 1782 the British Government, having been defeated, acknowledged the independence of the Colonies, not collectively, but individually, as independent States, and named and denominated each one separately, relinquishing all rights, claims, interests, and proprieties therein.

In 1787 the State of Virginia initiated a Constitutional Convention with the hope of overcoming some of the imperfections of the Articles of Confederation existing between the various States. The first one, held at Annapolis, Md., had an insufficient number of delegates present to accomplish the objective. So Virginia called another convention which met in Philadelphia with George Washington presiding. Seventy-four delegates were appointed to this Convention. Sixteen did not attend; 9 refused to go, 1 of whom was James Madison who later expressed his regret for not attending; Patrick Henry refused, because he thought it to be a trap. The Convention met secretly on May 14, 1787, and the draft of the Constitution was not completed and sent to the various States for ratification until September 1787. It was extremely difficult of ratification, just barely passing some States, and it was not ratified by North Carolina until May 1789, and by Rhode Island until November 1790. During all of this time, both States operated as separate and sovereign nations, not affiliated with the Union. The people were skeptical about it and dissatisfied, but the Bill of Rights was finally written to clarify the instrument, and was adopted as the first 10 amendments to the Constitution in December 1791.

In 1792 South Carolina entered a claim against the State of Georgia. Georgia refused the claim and interposed against the decision of the Supreme Court, and in 1795 the 11th amendment was added to the Constitution spelling out the fact that no State could have an action against another.

In 1798 Congress enacted three laws known as the Alien and Sedition Acts. The first gave authority to deport all aliens dangerous to the peace, etc. of the Nation. The second authorized the confinement of all aliens 14 years old and over. The third made it a crime punishable by fine and imprisonment for anyone, by the spoken or written word, to reflect discredit upon the Congress or the President of the United States. This third act stirred Mr. Jefferson, Vice President of the United States. The Assembly of Kentucky was in session, and they sent representatives to Mr. Jefferson who wrote, anonymously, the first Kentucky resolution of "interposition" on November 16, 1798. On December 21, 1798, James Madison wrote the Virginia Resolution of Interposition. On November 4, 1799, the second Kentucky resolution was written which was a reply to the Federalists who were seeking to centralize authority. In 1801, the acts expired and nothing was done to enforce them. The Kentucky Resolution of Interposition was directly responsible for Mr. Jefferson's election to the Presidency.

In 1812 the Conscription Act was passed. Some of the New England States resisted, and Maine interposed, did not conscript men, and nothing transpired.

In 1832 South Carolina passed an "Ordinance of Nullification" resisting duties on articles such as wool, etc., which they felt reacted unfavorably in world trade against their product, which was cotton. In 1833, through the intercessions of Henry Clay, Congress repealed the act.

This ordinance was plainly unconstitutional because it was about import duties, the levying of which was specified as a right of the Union in the Constitution.

Some of you gentlemen may have seen and read an article I wrote in the Suffolk-News Herald on February 17, 1956, setting up the foundation of interposition as not being fantasy. It was reprinted in the Virginia Beach Sun-News and in the Richmond News Leader, whose editor revived interposition. Shortly after that article appeared, which was in the editorial rooms of the Virginian-Pilot on the regular exchange basis existing between newspapers, such as those mentioned, there appeared 2 editorials in the Virginian-Pilot, captioned "The Foundation of Interposition," Nos. 1 and 2. Both editorials said, in effect, that interposition was fantasy, without foundation. They did not refer to my article which, I believe, prompted the editorial. Instead, they took from the Washington Post an extract from the biography of James Madison, by Robert Brant, and set it up in a box next to one of the editorials in what appeared to be an effort to use what Mr. Madison said to indicate their view. But Mr. Madison was speaking about a matter which is in no sense analogous with the problem now confronting us. To this extent, the Virginian-Pilot was trying to reinforce its statement that interposition is fantasy, which it cannot sustain by reason, but continues to champion to mislead the people. Before the referendum on February 9, 1956, to amend article 141 of the Virginia constitution, they used 3 people on their TV station to speak against the referendum, and only 1 for it. It has offered no solution nor alternatives for the States' efforts to formulate a plan and has offered no stand for itself on the matter of segregation. So don't be misled by this paper's editorials.

In 1859 a slave by the name of Glover escaped into the State of Wisconsin. Under the law, he should have been returned to his owner, but he was freed by radical abolitionists, and although the Court ruled that

he should be returned, Wisconsin interposed and nothing was done about it.

Now, who is more competent to speak on the rights of the States than Mr. Madison and Mr. Jefferson. Said Mr. Madison in his plea for the ratification of the Constitution: "The powers delegated to the Federal Government are few and defined. Those which are to remain to the States are numerous and indefined. Federal powers will be principally on external objects, such as war, peace, negotiation and foreign commerce. The powers reserved to the States will extend to all objects which, in the ordinary cause of affairs, concern the lives, liberties, and properties of the people, and the internal order, improvement, and prosperity of the States. The operations of the Federal Government will be extensive in time of war, those of the States in times of peace and prosperity."

Said Mr. Jefferson in his inaugural address: "I believe in honest friendship with all nations, entangling alliances with none, the support of the State governments in all their rights, as the most competent administrations for our domestic concerns and the surest bulwark against antirepublican tendencies." Those remarks are plain about States' rights.

I have thus tried to provide you with some information regarding the background of "Interposition." Perhaps I have kept you too long. I thank you for your kind and courteous attention to my remarks, which I hope have been of some help.

In closing, let me ask each one in this room to join with me in the hope and prayer that the flag of Virginia shall be secured to the top of the mast of resolution, always to wave resplendent and unruffled in the breeze of courage, and that its motto, known throughout the free world, shall be notice to all men, whether they be 9 or 900 million men, that Virginians will never yield to tyranny and unwittingly create an obligarchy for our eventual enslavement. It has been a pleasure to be with you.

Winning Essays by Students of Pius X High School, Paramount, Calif., 23d Congressional District

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 18, 1956

Mr. DOYLE. Mr. Speaker, by reason of unanimous consent heretofore granted me so to do, I am pleased to present the three winning essays of the students of Pius X High School in the great 23d District in a nationally sponsored essay contest on America, Beacon of Hope, sponsored by the Veterans of Foreign Wars Auxiliary. The three were chosen to receive awards presented by Private Earl W. Odell Auxiliary to South Gate, Calif., VFW, Post 1732.

The judges of this intersting contest were: Vesta Bruner, South Gate city librarian; Raymond F. Reardon, principal of South Gate Junior High School; and Peter Stevens, attorney and president of South Gate Lions Club.

The first-place essay will be entered into district competition for possible further honors. It was written by Bonnie Williams, 8215 Alhambra Avenue, Paramount, Calif.

Mr. Speaker, I know you and all my colleagues join with me in congratulating these young American citizens in these spendidly considered essays.

Following is the first-place essay by Miss Williams:

AMERICA, THE BEACON OF HOPE

Liberty, yes, there stands the Lady of Liberty with a torch of fire burning in her hand. A smile of welcome she beams forth as English, Spanish, Dutch, and Russian come to her shores. Here they seek the future and that is bright with the hope of freedom, happiness, and equality. Yes, hope, the true beacon and symbol of America.

The Statute of Liberty wasn't standing in New York Harbor when the first pilgrims made that long and treacherous journey across the Atlantic, but her torch was burning deeply in the hearts of each one of them. It was a quiet, steady light that sang with a song of hope. Each of our forefathers, great men like Washington, Jefferson, and Franklin, knew that song, for wasn't their cry of independence a song of hope for a great and free nation?

Then there was an interval when the Nation just grew. She welcomed every nationality from many shores. It was a peaceful time with no great disputes or arguments to upset the country. But then came a time for decision. Was the light of hope, the beacon of freedom to be snuffed out? Yes, this was a great conflict, a decision not to tarry with. Many men's lives depended on it and our great President rose to the occasion and made it, "The Union, it must be preserved." The Civil War was a gruesome chapter in our Nation's history, but it was no doubt a necessary one. The great words of Lincoln once written en route to the scene of bloodshed on Gettysburg will forever burn in the hearts of free men, "Four score and seven years ago our forefathers brought forth upon this continent a new nation conceived in liberty and dedicated to the proposition that all men are created equal." The years have come and gone since Lincoln made his famous address, but it has not been forgotten.

It was a hard job building the Nation after civil strife but with hope in the hearts of our fathers their dream came true and their children could once again live in peace.

Then the great day came for the lady, herself. She was brought to our shores, a gift from a grateful people who had sent many of their own to our country. Being the symbol of hope the lady was given the place of honor in our country. She was enshrined alone on her island where she bids goodbye to Americans and a welcome to immigrants through the years. As time passes she has seen the Nation grow, New York has become a city of skyscrapers, thousands of immigrants have found a haven of hope within her spreading arms. She has seen sweethearts, mothers, and children watch their loved ones go to war and she had stood on sentinel duty until the brave soldier has returned to the peace for which he fought.

Yes, the Statue of Liberty is a true symbol of hope for our country. She stands with burning love and eager arms to welcome any stranger who has lost his faith and hope in life. Refugees from all over the world flock to her shores, their eyes shine brightly with the prospect of a free and happy life. They stand before her and although they cannot read the words upon her base they feel deep in their hearts their meaning: "Give me your poor, your tired, your huddled masses, and I will give you freedom." To them this great statue represents America the beacon of hope.

Following is the winning essay of Miss Danielle Vracin, 9723 Downey Avenue, Downey, Calif.:

AMERICA, BEACON OF HOPE

The stinging wind of a leaden December day swirled in short piercing drafts around a little group of men and women huddled together on the desolate shores of the New World. One by one they sank to their knees, bowed their heads, and prayed. Their prayer was one of thanksgiving. For, after all the long endured hardships, freedom was now theirs. It was also a plea for protection and strength against an unseen foe who lurked in the shadows of the unknown, in that darkness which excludes the light of truth, and obscures freedom.

These few were but the first of many to come. They were the pilgrims who blazed the trail through a wilderness so that others might follow. These brave pioneers lit the beacon of hope and held it high so that all might see it and walk without fear of stumbling.

Soon tales of the wonderous modern Promised Land across the sea were told. More people came. Some searched for adventure. Some for a better life. But deep within the hearts of all, there burned a desire for something greater. That desire was freedom, and America gave them the hope of finding it again.

The Declaration of Independence and the Constitution of the United States have played the most important part, for they were the two main attractions that brought people sreaming ino the newly discovered, free country. It can be proven in many ways that the United States is truly a great country for men dedicated their entire lives to keep it free to all men. George Washington, who was our first president, Patrick Henry, an ordinary man, unknown, until he said the famous words "give me liberty or give me death," and Abraham Lincoln, who abolished slavery, are just three examples.

The past history of our country is something of which we can be proud. It is a heritage that can be examined under the strongest light. Our relationships with other countries of the world have been truthful and honest. It is rightfully so because the fundamental principles of our Founding Fathers were based on truth, honesty, and integrity.

Our love and respect for this great country is a duty that we owe not only to our fellow men, but also to God. It is also our duty to see that it forever remains a harbor of safety to all those who seek peace and happiness.

Today in New York harbor stands the towering Statue of Liberty. It faces Europe with its torch of light forever burning brightly. It bids all men to follow its Beacon of Hope to a Land where freedom truly rings from sea to shining sea.

The winning essay of Miss Carol Goodrich, 1707 North Willow Street, Compton, Calif., follows:

AMERICA, BEACON OF HOPE

For generation after generation America has worked toward an end. As a beacon of hope and light for people and nations all over the world, she has stood tall and strong for that which is highest, noblest, and best.

The Pilgrims came to this raw, new country to escape religious persecution, and in doing so they led the way for other people who sought freedom of religion and a new way of life. They settled in colonies and in time wrote the Declaration of Independence which made a America a Republic. Then came the Bill of Rights which gave everyone freedom of speech, religion, press, and so forth. These documents for freedom became the backbone of the America of today, and the dream of hundreds of thousands of people; starving, ambitious, courageous, desperate people from other countries.

Down through the years America has built her economical and governmental systems to make her stand out as a democratic and

prosperous country. Many other nations look to us for financial and industrial aid, and advisory services. These aids are very important and are their lifelines; however, they do not always ask for material aid. They need spiritual assistance as well to keep that fire of faith burning within their hearts. Behind the Iron Curtain faith is especially needed to permit the people who are imprisoned and impoverished live on from day to day with a hope of the future. From across the ocean we Americans give that hope in the form of leaflets dropped from airplanes, and the Voice of Freedom heard where it is needed most.

The family also plays a big part in building courage and confidence to conquer the friendship of foreign lands, and trust that eventually the world will be at peace. It is true that the family of today isn't as closely knit as of past years. This is partly due to the greater number of diversions outside the home and family. The family of yesteryear, as a whole, was larger than today. The older children had to help the younger ones, and in doing so taught and guided them. The mothers stayed home and managed their home and family instead of working as so many do now. Even with this difference, the families of yesterday and today all work for the same thing. To uphold the principles of freedom, faith, and trust. It is their duty to teach their children from their cradle days that America, as a Christian Nation, is the most promising in the world.

The security of this Nation and its people has been threatened many times in the past and will continue to be threatened in the future. But the common bond of democracy and faith in all of our ideals has proven too formidable for our assailants in the past, and with the help of God, will prove the same for any assailants in the future.

America has been called "the new country," and by being new she has not had traditions and proprieties to follow. She has molded her Government, from the Constitution, into the just rule for her people that it is today. By being just and merciful, she is the beacon of hope that shines and beckons for all who need her.

The Yeast of Liberty Must Be Encouraged

EXTENSION OF REMARKS
OF
HON. FRANK THOMPSON, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 8, 1956

Mr. THOMPSON of New Jersey. Mr. Speaker, American political prestige in Eastern Europe is being sapped by skillful Soviet diplomacy and propaganda. One way to meet the situation is to cease treating the satellite countries as an unimportant, uniform bloc, a mere adjunct of Soviet empire, C. L. Sulzberger suggests in the New York Times.

Beneath the gray uniformity of communism, the interests of these countries remain disparate.

He concludes:

Let us remind the East of the mere existence of life's simpler pleasures. Now that there is talk of greater freedom, let us again intrude our Western culture. The yeast of liberty must be encouraged while we wait to measure the sincerity, depth, and durability of the Soviet new look.

Mr. Sulzberger makes an important contribution to our understanding of the situation we are faced with and I include his article here for this reason:

FOREIGN AFFAIRS: SOME DIFFERENCES AMONG THE SATELLITES

PARIS, May 15.—American political prestige in Eastern Europe is being sapped by skillful Soviet diplomacy and propaganda. Our attitude is made to appear static and unreasonable. Communist leaders in the satellites argue: "You kept insisting that Moscow's policy must change. You set out a bill of particulars to be met: An Austrian peace treaty, concrete moves toward disarmament. You denounced Stalinism as a threat to the world and proclaimed fears of military force.

"But now the Kremlin has dropped Stalin and outlawed the inevitability of war. Yet you announce the U. S. S. R. is more dangerous than it ever was before. The Russians agreed on Austria. They are demobilizing hundreds of thousands of soldiers. What have you people done to meet them halfway?"

The answer to this question is not simple. To respond that we mistrust Moscow on the basis of its record is inadequate if true. To imply that we fear the outcome of competitive coexistence with a monolithic ideology merely weakens our psychological position.

We should do some rethinking. The Russians have changed their line. We must therefore offer something new. We cannot afford indefinitely to pursue a Fabian policy if we are to retain any influence in Eastern Europe.

THE INDIVIDUAL APPROACH

One way to face the situation is to cease treating the satellite countries as an unimportant, uniform bloc, a mere adjunct of Soviet empire, and to discuss with them their separate problems. These interests, beneath the gray uniformity of communism, remain disparate. Can we not explore diversities more skillfully?

Czechoslovakia and Bulgaria retain strong pan-Slavic feeling of kinship for Russia, but the Poles, despite blood ties, harbor a traditional dislike. Bulgaria and Rumania are religiously Orthodox. But Hungary, Czechoslovakia, and Poland are strongly Roman Catholic. Czechoslovakia and Hungary border on the west—the German Federal Republic, and Austria. Bulgaria touches Turkey, Greece, and Yugoslavia. Even Rumania has contact with the independent communistic Yugoslavs. Only Poland is completely sandwiched between segments of the Soviet empire.

The Poles and Czechs have deep concern in East German rearmament. The stronger this German satellite becomes the more, automatically, Poland and Czechoslovakia look to Moscow for protection. Both countries fear that some day Teuton refugees will return to Silesia and Sudetenland.

The Hungarians and Rumanians have historical and racial mistrust of their Slavic neighbors. The Bulgarians are deeply interested in Macedonia but care nothing about Germany's future. To them foreign policy revolves about closer relations with Yugoslavia and possible federation with that country.

There are different levels of freedom, of initiative, and even of Communist organization among the satellies. The Poles by nature insist upon more liberty of action. "Our party is in better shape than others," say their Communists, "because we fought the Germans. Poland was never tainted with collaboration as in Hungary. Make no mistake, even we Communists prize our liberty. Throughout our history Poles have joined many liberation movements—in Italy, France, and even America. Ours will inevitably and must inevitably be a different form of communism from Russia's. It is not our destiny to be satellites."

Now that Stalin is outmoded the Russians try to blame all past mistakes upon his dictatorship. The day may come when he is held responsible for the Katyn massacre of Polish officers and the delay in military advances that permitted Warsaw's destruction.

THE CRY FOR LIBERTY

A new cry for liberty is rising. Said a Communist intellectual recently in Warsaw: "Now we should publish Koestler's Darkness at Noon. After all, what it condemns is Stalinism. And Hemingway's For Whom the Bell Tolls? We ban it only because it attacked the brutality of André Marty's butchers in Spain. Now we agree on what Marty did."

Let us take advantage of this ferment and press for publication of such provocative books. There is a deep-seated craving within the satellites to travel to the West and test comparative freedoms. Do we fear to let them satisfy this appetite?

Hankering for happiness is one of mankind's most contagious diseases. Russian youngsters visiting the Polish ski resort of Zakopane were astonished by the relative freedom from inhibition and the sophistication of the Poles. "Why can't our girls be attractive?" asked young Russian men. Meanwhile their girls locked themselves in rooms to smoke European cigarettes and arranged sly deals with friends to send them lipstick and powder.

Let us remind the East of the mere existence of life's simpler pleasures. Now that there is talk of greater freedom, let us again intrude our western culture. The yeast of liberty must be encouraged while we wait to measure the sincerity, depth, and durability of the Soviet new look.

Macedonia—An Integral Part of Greece

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 16, 1956

Mr. PHILBIN. Mr. Speaker, the Pan-Macedonian Association of the United States and Canada met recently in Boston, Mass., for the 20th District Pan-Macedonian Convention. Among the papers presented at this meeting was a scholarly presentation by a prominent Greek-American citizen of New England, Mr. Elias Gagalis, of Lawrence, Mass., on the so-called Macedonian problem.

Mr. Gagalis is president of the Pan-Macedonian Association and on the basis of the historical data he presented to the convention, the membership adopted the following declaration of principles by unanimous vote:

First. Macedonia is not a nation but a geographic term.

Second. Ethnologically and historically, Macedonia has always been, as is now, an integral part of Greece.

Third. The clamor raised for "Autonomy" is in reality a camouflaged demand of the Bulgarian Communists whose ulterior motive is annexation of Macedonia to Bulgaria.

Fourth. In the United States and Canada the autonomy of Macedonia is sponsored by certain Bulgarian organizations, namely, the Macedonian American People's League, which is included in the list of subversive organizations in the

United States as published by Attorney General Clark, and the Macedonian political organization.

Fifth. These organizations are Bulgarian to the core disguising themselves as Macedonian and preaching unceasingly about the Macedonian question and Macedonian autonomy when they really seek the attachment of this Greek province to Bulgaria under the guise of autonomy.

Sixth. A Macedonian problem does not exist today. Those who try to create or resurrect one are only perpetuating enmities and feelings, which, in the past, have prevented the rapproachment of the Balkan people.

Seventh. It is important that the American people realize the true nature of these Bulgarian organizations and not permit themselves to be fooled by their deceptive writings and claims. The continued existence and the unhindered activities of these supposedly Macedonian political organizations, constitute an ugly discord in the traditional basic policy of the United States in southeast Europe: The maintenance of the integrity and independence of Greece.

Under unanimous consent, I insert in the CONGRESSIONAL RECORD the text of the address of Mr. Gagalis to the convention.

The material follows:

Many and varied are the ways and tactics of the predatory Communist imperialism. But the insidiousness of the Communist tactics aiming at snatching the Greek province of Macedonia and bringing it behind the Iron Curtain remains unmatched in the annals of Communist expansionism.

In this, as in many other instances, Communist imperialism has been following the same traditional line of the old Slav imperialism. Russia has never concealed her interest in the Slavs of the Balkans or her sympathy with their drive toward the Aegean. It was the Congress of Berlin in the last century which defeated her drive toward the Aegean. She has never given up her idea.

When the traditional tactics of imperialist expansionism failed, the Slav Communists formented civil strife in Greece, aiding and abetting the Communist guerrillas whose avowed objective was the dismemberment of Greece and the imposition of a Communist dictatorship in that stricken country.

The American public will find it difficult to believe that even in our midst—in Indianapolis, Ind., and elsewhere in the United States—tools of Communist satellite Bulgaria, such as the Macedonian Political Organization, have been clamoring and agitating for the detachment of the Greek province of Macedonia from the Greek motherland; and they do this in full cognizance of the fact that the population of that province is purely Greek. Mr. Mark Ethridge, the distinguished publisher of the Louisville Courier-Journal and the Louisville Times, who was the American member of the United Nations Balkan Inquiry Commission in 1947, writes that "the ruthless cynicism of Russia's satellite politicos in urging that Greece surrender the province of Macedonia is best realized if one takes into consideration the fact that in all Greek Macedonia there are only at the best estimate about 85,000 Slavic-speaking peoples, some of whom consider themselves Greek, as against 1,500,000 Greeks."

The acquisition of Macedonia by the Slavs was only the first step in the plan of Russia and her satellites. Greece herself was and still is the objective of the new Communist colonialism. And, as Mr. Ethridge readily recognized, "if Macedonia and Thrace were detached from Greece, that country could not survive. It would perhaps quickly sue for admission into the Soviet orbit. * * * And the implications of the fall of Greece should be sobering to all of us."

The following pages aim at presenting a brief historical background to the so-called Macedonian problem.

I. THE SO-CALLED MACEDONIAN PROBLEM

1. From the breakup of the Roman Empire to the Bulgarian schism (circa A. D. 500 to 1872)

During the Dark Ages which followed the breakup of the Roman Empire, the Slav tribes—Serbs, Bulgars and others—invaded the Balkans. After occupying what is today Serbia and Bulgaria, they spread farther south over Macedonia, almost to the gates of Thessaloniki.

The indigenous Greek or Hellenized population continued to occupy most of the towns (inland towns such as Monastir, Kastoria, Kozani, Lapsista, Verria, Naoussa, Serres, Melenikon, Nevrokop, etc., always remained strongholds of Hellenism), the coastal districts (including the whole of the Chalkidike Peninsula) and numerous inland pockets. The extent to which, during the ensuing centuries, the Greeks hellenized the Slavs, or the Slavs absorbed the Greeks, is a matter of controversy, and it would be unnecessary to dwell upon it now.

At the end of the 14th century, the Turks invaded the Balkans, and after the decisive battle of Kossovo, in 1389, Macedonia fell under the Ottoman sway. The conqueror Sultan Murat first introduced large numbers of Turkish settlers from Anatolia who colonized the place and became thereafter the dominant element in the country, outnumbering both Greeks and Slavs.

During the following 5 centuries of Ottoman rule, the "rayahs," as the Christian subjects of the Sultan Ports were called, retained their religious and ecclesiastical organization. At the time of the Turkish conquest, three ecclesiastic authorities exercised jurisdiction over parts of Macedonia: the Patriarchs of Constantinople (Greek) and Ipek (Serb) and the Archbishop of Ochrida (Bulgar). By the end of the 18th century, the Patriarchate of Ipek and the Archbishopric of Ochrida had disappeared owing to various political and financial vissicitudes, and the Patriarch of Constantinople exercised sole jurisdiction over the Orthodox Christians throughout Macedonia.

With the revival of Slav national sentiment in the Balkans in the 19th century, a revival which was encouraged by the Russian Panslavist Society in Moscow, the Bulgarians began to agitate for their own national church, independent of the Greek Patriarchate of Constantinople. Although the Oecumenical Patriarchate was prepared to make concessions by appointing Bulgarian Archbishops to all Archdioceses in Bulgaria proper, it refused to accept the creation of Bulgarian Archbishoprics in Macedonia proper where the population was mixed (Greek and Slav), the coexistence of two Archbishops in one and the same archdiocese being contrary to Canon Law.

This dispute finally led to the Bulgarian schism in 1872. The Ottoman Government, under Russian pressure, had already (1870) officially recognized the Bulgarians as a separate "millet" (nation) and authorized the setting up of an independent Bulgarian church called the Bulgarian Exarchate, under an Exarch, residing at Constantinople. This was followed some time later by the issue of "berats" (letters patent) to a number of Bulgarian Archbishops in various parts of Macedonia.

From that time onward, there was increasing tension between Greeks and Bulgars in all the regions affected where there happened to be Slavophone (i e. Slav speaking) elements among the population.

2. From the Bulgarian schism to the outbreak of the Balkan Wars (1872–1912)

In 1878, Russia, after a victorious campaign, compelled Turkey to recognize the independence of Bulgaria. By the Treaty of San Stefano the new Bulgarian State was given the whole of Macedonia to the East, North and West of Thessaloniki (not included), as far as the borders of Albania. Great Britain vetoed this Treaty as being unfair to the Greeks of Macedonia who would thus have been placed under an alien yoke. The Treaty of Berlin (1878), to which all the Great Powers were parties, created a semi-independent Bulgarian Prinicpality under the suzerainty of the Sultan in Northern Bulgaria, and an Autonomous Province of Eastern Rumelia, under a governor appointed by the Sultan, in Southern Bulgaria. Seven years later, in 1885, Eastern Rumelia proclaimed its union with Bulgaria by a coup d'etat. Macedonia remained a Turkish province.

In the years that followed, the Bulgarian state and church devoted their whole efforts to awakening among the Slavophone population of Macedonia a Bulgarian national consciousness. Bulgarian (Exarchist) churches and schools were opened in the villages and towns. These efforts were on the whole not successful. In many parts of Macedonia, the Slavophone population remained loyal to the Oecumenical Patriarchate and continued to attend Greek churches and Greek schools. Some villages went over en masse to the exarchate; in others, parts of the population became Exarchist, while the others remained Patriarchist. There were villages in which there were 2 churches and 2 schools, one Patriarchist (Greek) and the other Exarchist (Bulgarian).

In 1895–96 two Macedonian revolutionary committees were set up in Sofia for the purpose of working for the liberation of Macedonia from the Turks and its union with Bulgaria. Later armed bands were sent by the committees into Macedonia to coerce the Slavophone population into declaring themselves Bulgarian and going over to the Exarchate. This militant action was directed not only against the Greeks but also against the Serbs who were not disposed to look on while Bulgaria extended its influence over the Slavophones in the Skoplje and other regions immediately adjacent to the frontiers of Serbia.

Committees were formed both in Greece and Serbia which in their turn dispatched bands into Macedonia to protect the Slavophone villages against the terrorism of the Bulgarian bands. A protracted and bitter struggle ensued on Turkish soil for the possession of the bodies and souls of the Slavophone Macedonians, a struggle which lasted until 1908, the year of the proclamation of the Turkish constitution by the young Turks. The masters of the country, the Turks, looked on complacently at this internecine strife between the various Christian elements and only intervened with a heavy hand whenever a Turkish official or landowner was killed by the bands.

By this time, the "Macedonian question" had assumed an international aspect and active propaganda was carried on by the Macedonian revolutionary committee strongly supported by the Bulgarian Government in order to interest foreign public opinion in their cause.

The Bulgarian claim was based on language. The Bulgarians argued that the Slavophones of Macedonia spoke a dialect akin to Bulgarian and must therefore all be regarded as Bulgars. The Serbs countered this argument by saying that the Slavophones could not be genuine Bulgars, as they had retained the "slava," an exclusively Serb custom. The Greek point of view was that, whatever the racial origins or linguistic affinities of these people, many of

them had never ceased to regard themselves as Greek, and that "national conscience," i. e., the willingness of an individual to identify himself with this or that nation, should be the determining test of national allegiance. There was no more moral justification for bullying a Slavophone Macedonian, who wished to be considered Greek, into declaring himself a Bulgar than, for instance, for forcing an Alsatian who considered himself French despite his German origin and speech, to admit himself a German, or an English-speaking Irish nationalist to call himself a loyal Irishman.

The Bulgarian movement eventually became a split by internal dissensions due to a difference of opinion between the leaders on the question of tactics. One section, called the Exterior Macedonia Revolutionary Organization, whose leader was Boris Sarafov and which represented the out-and-out Bulgarian Nationalists, were for the immediate annexation of Macedonia to Bulgaria. The other section, called the Interior M. R. O. (IMRO), founded by Sandanski in 1895, wanted to proceed by stages. They preferred to work for an autonomous Macedonia, a slogan which was more likely to win support among Western liberals than Sarafov's annexationist program. Ultimate union with Bulgaria, they felt sure, would only be a question of time and could always be attained by a coup d'etat similar to the coup d'etat of 1885 which had brought about the union of eastern Rumelia with Bulgaria once the administration of that province had passed into Bulgarian hands. These divisions later penetrated IMRO itself in which there was a nationalist and an autonomist wing. Incidentally, the American branch of the Interior Macedonia Revolutionary Organization was organized in 1928 under the name of Macedonia Political Organization with its headquarters in Indianapolis, Ind. They have also adopted the slogan "Macedonia for the Macedonians" and for 28 years now they have been preaching unceasingly about the "Macedonian question" and Macedonian autonomy. In 1924 Todar Alexandrov, leader of the autonomists, signed a common declaration of policy at Vienna with Dimitar Vlahov, leader of the Macedonian Communist group "Obedinena," on the basis of an autonomous Macedonia within a Socialist Balkan federation. There was acute antagonism between the two opposing Bulgarian factions, with frequent assassinations of leading members by members of the rival faction.

In 1904 the Ottoman Government, yielding to pressure on the part of the Great Powers, consented to introduce extensive administrative and fiscal reforms in Macedonia.

The territory to which the Macedonian Reforms applied included the three vilayets of Selanik (Thessaloniki), Monastir (Bitolj) and Uskub (Skoplje) which were united into a single administrative unit governed from Thessaloniki by an Inspector General, Hilmi Pasha. This territory covered an area of approximately 68,000 sq. km. (26,000 sq. miles) with a population (according to the census) carried out by Hilmi Pasha in all three vilayets in 1905) of 3,171,690. Hilmi Pasha's census have the following figures of population:

Moslems (Islam)	1,720,007
Greeks (Run Milleti)	648,962
Bulgars (Bulgar-Milleti)	557,734
Serbs (Sirp-Milleti)	167,601
Various (Jews and others)	77,386
Total	3,171,690

After the proclamation of the Turkish Constitution in 1908, the internal conflict between the various bands came temporarily to a standstill, and the nationalist policy pursued by the Young Turks, now in power at Constantinople, brought about a gradual rapproachement between the governments of Greece, Serbia, and Bulgaria. This rapprochement in 1912 was converted into a military alliance, and in October of that year the Balkan Allies, accusing the Ottoman Government of not fulfilling its promises of reform, attacked Turkey.

3. From the outbreak of the Balkan Wars to the end of the First World War (1912 to 1918)

No previous agreement had been arrived at between all the Balkan states as to the ultimate distribution of territory to be taken from Turkey. The lack of agreement between the Balkan allies on the distribution of the spoils led to the inevitable rupture. After the defeat of the Turks, the Bulgarian Army in June 1913 suddenly turned on their allies. Defeated by both Serbs and Greeks, Bulgaria was compelled to sue for peace and thus the Second Balkan War was brought to an end, through Rumanian mediation, by the signature of the Treaty of Bucharest (August 10, 1913).

By the Treaty of Bucharest, Macedonia was divided up between the three Balkan states—Grece, Serbia, and Bulgaria.

A further territorial adjustment took place after the First World War when Bulgaria was compelled by the Treaty of Neuilly (November 27, 1919) to cede the district of Strumitza to Yugoslavia.

Thus the areas of Macedonia respectively in the possession of Greece, Yugoslavia and Bulgaria, after the First World War, were the following:

	Square kilometer	*Square miles*
Greek (Aegean) Macedonia	34,602	13,360
Yugoslav (Vardar) Macedonia	26,776	10,338
Bulgarian (Pirin) Macedonia	6,794	2,623
Total area	67,172	26,321

There have been no further territorial adjustments since that date.

During the period between the outbreak of the First Balkan War and the end of the First World War, certain movements of population took place between the various parts of Macedonia assigned to the three countries. Many of the Exarchist Slavophones in Central Macedonia fled at the time of the defeat of the Bulgarian Army in Bulgaria. After the signature of the Treaty of Bucharest, the Greek inhabitants of the regions ceded to Bulgaria (Strumitza-Melenikon) emigated to Greek Macedonia. It is noteworthy that among these were the Slavophones of Strumitza who have always been stanch Patriarchists. Most of the Greek population of Monastir, ceded to Serbia, also withdrew to Greece.

At the same time, the Bulgarian exarchate ceased to exercise jurisdiction in the parts of Macedonia ceded to Greece and Serbia. In Greek Macedonia, the patriarchate of Constantinople resumed its authority over all the Orthodox inhabitants, while in Serbian Macedonia jurisdiction passed to the Serb patriarchate. The Bulgarian churches and schools previously maintained by the exarchate became Greek or Serb, except in the small part of Macedonia ceded to Bulgaria where all patriarchist churches and schools became Bulgarian.

4. Following the First World War

The years which immediately followed the end of the First World War and of the Greco-Turkish War which was its continuation, saw profound changes come about in the structure of the population of Greek Macedonia.

Bulgaria in 1915 had thrown in her lot with Germany in the hope of annexing both Greek and Serbian Macedonia in the event of a German victory. The penalty of her defeat and her crimes during the occupation was the restoration of western Thrace to Greece, and of the Strumitza, Bossilegrad, and Tsaribrod districts to Yugoslavia. The Bulgarian wartime occupation of eastern Macedonia, during which nearly the whole of the Greek population of that province had been deported to forced labor in Bulgaria, had left behind a legacy of great bitterness between the two peoples. It was felt by the peacemakers that the position both of the Greek minority in Bulgaria, still fairly numerous in southern Bulgaria (eastern Rumelia), and of the Bulgarian minority in Greece would be rendered extremely difficult in the midst of a hostile environment.

Accordingly, the Treaty of Neuilly, which put an end to the state of hostilities between Bulgaria and the Entente Powers, was accompanied by a Greco-Bulgarian Convention which provided for the voluntary migration of the respective minorities in the two countries. The emigrants were to be compensated for their property in full on the basis of a valuation to be carried out by an international commission. In order to heal all the wounds of the past, the convention's provisions were made retroactive so that the many Greek refugees who had been forced to leave eastern Rumelia in 1906 and the equally numerous Bulgarian refugees who had left Macedonia during or before the Balkan Wars might also benefit from the compensation clauses.

Under this agreement, some 25,000 Greeks quit Bulgaria and some 50,000 Slavophones of Bulgarian sympathies left Greece. Most of the Slavophone population east of the Vardar emigrated, so that today, there are hardly any Slavophones left in the eastern half of Greek Macedonia.

On the other hand, the Slavophones in the western half, that is, west of the Vardar, did not avail themselves to any extent of the provisions of the convention. They preferred to remain where they were.

The above partial Greco-Bulgarian exchange of populations was followed by a more sweeping exchange between Greece and Turkey. Following on the disastrous termination of the Anatolian War, Greece found herself forced, by the Lausanne Convention of January 1923, to consent to a compulsory emigration of Anatolian and Thracian Greeks to Greece against a corresponding compulsory emigration of Turks from Macedonia and other Greek territories to Turkey. Under this arrangement, 348,00 Turks left Greek Macedonia and 638,000 Greek refugees from Turkey and Russia were installed in their place.

The effects of these migrations on the population of Greek Macedonia is reflected in the figures of the 1928 census as below:

		Percent
Greeks	1,237,000	88.1
Slavophones	82,000	5.8
Various	93,000	6.1
	1,412,000	100.0

The American president of the League of Nations Greek Refguees Settlement Commission, Mr. Charles O. Howland, was able to report to the Council of the League that "the result of the settlement in Macedonia of about 500,000 rural and 300,000 urban refugees, followed by the emigration in 1923–24 of 348,000 Moslems, has been radically to change the ethnical composition of the poulation of Greek Macedonia and definitely to hellenize that province."[1]

It is important to note these facts because Bulgaria and, more recently, Yugoslavia have often chosen to ignore the profound changes which, since the First World War, have so thoroughly completed the hellenization of

[1] League of Nations-Greek Refugee Settlement, Geneva 1926 (p. 207). The number of refugees definitely settled in Macedonia was 638,000, as there was a certain amount of redistribution made after Mr. Howland's statement.

southern Macedonia. They talk of Aegean Macedonia as if it were a country entirely inhabited by Slavophones. At the last Greek census—that of 1940—Greek Macedonia had a population of 1,759,130, of whom only some 85,000 were Slavophones. Taking the population of Vardar (Yugoslav) Macedonia today at about 1 million[2] and that of Pirin (Bulgarian) Macedonia at 240,000,[3] one sees that the purely Greek population of Greek Macedonia alone exceeds that of Vardar and Pirin Macedonia combined.

The above figures show how absurd and unnatural it would be to include the Greeks of Macedonia in a State which would be under the complete domination of one or other of the Slav States. As Hugh Seton-Watson, an authority on the Balkans, well puts it in his recent book, Eastern Europe Between the Wars 1918–1941 (p. 317): "The creation of an independent Macedonian State can hardly be considered a serious political proposal. The natural commercial outlet and capital of Macedonia is Salonica, an essentially Greek city, which no Greek patriot could consider abandoning. Moreover, that portion of Macedonia which from 1918 has belonged to Greece is inhabited, predominantly, by Greeks. To unite a solidly Greek province with a solidly Slav province, cutting both off from their kinsmen in the north and in the south is absurd. The Greeks and Slavs are capable of living peacefully side by side, but not as citizens of an artificially created new state."

When the Germans invaded Greece and Yugoslavia on April 6, 1941, Bulgarian armies moved immediately into Greek Thrace and Greek Macedonia and, after committing again terrible atrocities against the Greek population, began to settle Bulgarians in that area, aiming at permanent annexation after the final victory of their Axis allies. Moreover, at a conference held at Semmering (Austria), late in April 1941, the Bulgarian delegation expressed the desire to occupy Thessaloniki. However, this city remained under German military administration throughout the war.

---

[2] The Yugoslav census of 1921 gave the population as 818,377.

[3] Dimitar Vlahov gave this figure in an article in Borea (Oct. 20, 1948), accusing Bulgaria of suppressing the national rights of 240,000 Pirin Macedonians. The Bulgarian census of 1925 gives the population as 186,167.

The Case for a Friend in Need

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 9, 1956

Mr. MULTER. Mr. Speaker, the following article with reference to our very friendly ally, Turkey, appeared in the May 7 issue of Life magazine. I commend it to the attention of our colleagues:

THE CASE FOR A FRIEND IN NEED—A TOP UNITED STATES INDUSTRIALIST FORESEES BRIGHT FUTURE BEYOND TURKEY'S TRIALS

(By Clarence B. Randall)

Far out to the east, guarding the right flank of the free nations, stands the gallant Republic of Turkey. Along 1,500 miles of border her strong army faces the source of danger, keeping watch to the north and east round the clock.

For the Turks this is not a new posture of defense. Throughout 3 centuries of history and 13 wars with Russia, the Turks have manned the same mountain passes and guarded the same dark waters of the Black Sea. They were thus on guard before Washington crossed the Delaware, and the posture they now maintain is taken not because of American aid but out of deep conviction. It is more effective because of modern arms we have made available, but if the Turkish soldiers were barefoot and armed only with stones and clubs they would still be manning those passes and patrolling those coasts—and thus contributing to our security. So when Americans grumble to me about American aid to Turkey, I ask if they have ever reflected upon Turkish aid to America.

Seldom in history has any nation, not excluding the United States, gone so far so fast as has modern Turkey since May 19, 1919. That was the day when Mustafa Kemal Pasha, who was renamed Ataturk (father of the Turks) by a people grateful for his leadership, landed at Samsun on the Black Sea and plunged into the task of transforming a series of medieval communities into a new country.

Now America's 19th century is reproducing itself in Turkey. Her leaders in government and business dream the same great dreams that our leaders dreamed. Eventually many of theirs will probably come true, as did ours. Her population, like ours, is fused from many racial strains. Above all she has chosen democracy, as we did.

We opened up our country by driving transcontinental railroads from coast to coast. The Turks cut new highways into remote areas to reach villages that the old regime had deliberately kept inaccessible. Trucks now carry the farmer's produce from the villages to the sea. The traffic goes the other way, too; the roads bring the villages new ideas, new principles of government and education. And with easier communication comes the possibility of direct and cohesive national leadership for the whole country.

But just as it was not all success for us in the roaring 19th century, so the new Turkey suffers some severe growing pains of its own. We Americans are apt to remember those things that we did well and to forget our failures, but actually we too made many mistakes. For each great achievement in railroad building we built one that was badly conceived and inadequately financed.

The Turks too have occasionally been carried away by the heady excitement of rapid growth and have committed precious resources to projects that were either premature or improvident or both.

Take for example their steep plant at Karabuk. One can wonder whether the large capital required for a modern diversified steel plant might not have been better allocated to some other more urgent project in a nation whose funds are desperately short. I can understand and sympathize with Turkey's motives in spending for steel. Steel is a symbol of modernization and a steel plant offers protection against the ruthless pricing policies of European steel cartels. But priorities are needed in spending scarce capital, and the Turks perhaps should have put steel further down the list.

For security reasons the steel plant was built well inland from the Black Sea. So Karabuk stands 70 miles from a port and from its coal supply at Zonguldak, 100 from its nearest market and 600 from the ore source at Divrigi. The Turkish economy may have to pay heavily for this strategic but uneconomic location.

Unlike Karabuk, most of Turkey's great new industrial projects have been wisely conceived and boldly undertaken. All but completed is the Seyhan Dam, dedicated last month, which will produce 280 million kilowatt-hours of electric power annually and irrigate nearly 600,000 acres. Seyhan power will supply the cities of Adana, Mersin, and Tarsus, growing industrial centers. Five other combined irrigation and power plants will be finished in the next 2 years, as well as several sizable coal-fired generating plants. A dozen new cement plants are under construction and at least that many sugar factories. Sugar will probably be available for export before the current year is ended. A new nitrogen plant is expected to supply a third of the country's requirements in nitrogenous fertilizers and a sulfuric acid plant has been started. Modern loading, unloading, and storage facilities have been contracted for at most of the principal harbors. New steel silos will greatly increase grain storage capacity, and refrigeration has been provided for fish and meat products. Five combination passenger and freight ships and 11 cargo ships have been bought. Everywhere there are signs of the prodigious national effort.

No one can fail to admire the courage with which this country of 24 million people has tackled this huge task, but their boldness has created new problems. The cost has been staggering and, because no reservoir of private capital has been available, the financing has had to be provided through public funds. Substantial debt has been incurred abroad and the spending of such large amounts within the country has brought inflation. Turkey's export trade is growing, but inevitably it falls short of providing enough foreign exchange for raw materials and spare parts, plus the completion at the same time of these vast new public enterprises. Priorities for the allocation of scarce dollars, pounds, and other currencies have to be clearly determined and firmly kept.

All of this is now recognized by the Turkish Cabinet and the Grand National Assembly. They know that the tremendous advances which their people have made since the war could be halted if inflation should rob them of their improved standard of living and discourage foreign investment. They know that their exports must pay for their imports.

As stanch members of NATO, the Turks also know that their military expenditures cannot be reduced in the foreseeable future. So they have recently asked the Turkish people to make the same effort to establish financial stability that they have given to building industry and military might.

FACING UP TO THE PROBLEM

The Government has drawn up a balanced budget which has been approved by the Assembly. This was followed at once by a series of decrees that struck at inflation and faced up to the financial problems created by Turkey's effort to do so much so fast. The Central Bank is to control credit rigidly. The various state enterprises are to be required to operate within the limit of their own revenues and denied help from the governmental budget. New public investments will be restricted to projects that can rapidly improve Turkey's credit situation abroad. Bank credits to private undertakings will be limited to those that will be immediately productive. Speculative enterprises will not be permitted. No increases in agricultural subsidies are to be allowed. A new import policy calls for enforcement of rigid priorities.

Officials of the Turkish Government believe that the country's financial problems, admittedly acute, are relatively short term. They believe that within 2 or 3 years the postwar building program should begin to pay off in new productivity and Turkey will need to buy less abroad. A good crop year in 1956 would help tremendously, and nature cooperated last winter by supplying the

most extensive blanket of snow in recorded history.

Turkey's long-term prospects are excellent. Once she passes the current squeeze she will be on her way, and it lies within her power in another generation to become a truly great nation.

She has impressive resources. Take minerals, for example. Her production of chrome plays an important part in supplying the needs of the United States and the rest of the free world. Her iron ore is first class in quality and sufficient in quantity to support her own steel industry for a long period. She has enormous reserves of lignite and at Zonguldak on the Black Sea she has bituminous coal estimated to be sufficient for 100 years.

American and European companies have now started intensive exploration for oil and the prospects are thought to be encouraging. A projected new refinery to be built by private capital at Istanbul should effect great savings in foreign exchange. Some crude production and refining are already being carried on.

Salt and sulfur are being produced for domestic consumption. Awaiting large-scale exploitation are: copper, manganese, mercury, antimony, asbestos, magnesite, boracite, emery, and meerschaum.

Great progress has been made in agriculture, especially in the semiarid regions of the Anatolian plateau. Some varieties of Turkish wheat are already establishing an enviable position in the highly competititve world market. Turkish tobacco is of course known everywhere and if the terms of trade were better it would be in even stronger demand. Figs and nuts are important export items. Turkey grows excellent fruits in great profusion. I have never eaten better melons than Turkish melons and, heresy though it may be, I say that Turkish orange juice is the best in the world. Let Florida, Arizona, and California do their worst; I stand on that statement.

Among luxury foods Turkey has a completely undeveloped asset in her fish. In Chicago I can buy Dover sole flown from England. It is far superior to the various substitutes sold as sole in American hotels, but if I were free to choose I would take Turkish sole every time. The only reason I do not buy it is because no Turk has yet set out to market it in Europe and the United States. When he does that he will add Turkish swordfish, Turkish turbot, lobster from the Sea of Marmara, and a wide variety of other exotic and delicious seafoods and thereby provide his country with an important new weapon in its campaign to balance its trade. Perhaps he will add a sideline of frozen orange juice.

HEN FIRST, EGG SECOND

And speaking both of and for Americans, I assure my Turkish friends that a big dollar-earning tourist trade is ready to come their way if they will only make a little more determined effort to seek it and take care of it. The new hotels at Istanbul are a fine beginning, and the new highways beckon invitingly. But here the hen must definitely precede the egg; more hotels must be there before the travelers come.

The district of Antalya along the Mediterranean might well become a Riviera of the future. There the sea in midwinter is warmer than the waters of the Bosporus in July, and the long beaches of soft golden sand are among the finest in the world. Landward from the coast rise the towering Taurus Mountains. A half hour hour's automobile ride will take you to a picnic in a forest by a rushing stream ,and if you go still higher, you will find yourself knee-deep in snow.

This fabulous Antalya district is rich in archaeological treasure. Here are ruins from the Greek and Roman civilizations, such as the theater of Aspendus which could seat 15,000 persons, and which is still used. Here was the winter seat of the great Seljuk Empire which in the Middle Ages ruled from the Caspian Sea to the Indian Ocean.

But the greatest of all the resources of modern Turkey is the spirit of her people. They are determined that nothing shall stop them from getting ahead. The courage and optimism with which they are attacking their new tasks are infectious. Much that they are undertaking is new to them, and though they learn modern techniques quickly, they urgently need more people trained in the essential skills of an industrial society.

Most of all, it seems to me, they need men and women who understand what we call management. The organizing and disciplining of the staff of their great new enterprises requires supervisory skill of a high order, and few Turks have had an opportunity to acquire that sort of experience. It is all very well for them to send their able young men to our colleges to study agriculture, electrical engineering, transportation and so on, but I should like to see them send equally capable trainees to our business schools to study economics, accounting and the principles of management.

The impact of American education is already great. Everywhere in Turkish Government or business offices one encounters men trained at century-old Robert College of Istanbul or some of the other schools established by American philanthropy. Americans could have done nothing more enlightened or better calculated to serve the cause of ultimate peace than the establishment of those schools.

In one respect Turkey's new and vigorous democracy differs from ours, and I mention this only because I am so extremely fond of the Turks. They are inordinately sensitive to criticism. As a nation and as individuals they are apt to be hurt by frank statements about themselves that Americans would take in stride. They have not yet reached that robust state where men may have strong differences on political and economic questions and still live together in harmony.

But Turkish loyalties are true and intense. Above all the Turks believe in the future of their country and not in a narrow nationalistic sense, for the Turkey of the future will serve the welfare of the entire world through her strength and the wisdom of her leaders.

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the daily RECORD at $1.50 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Frank Brodie is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

Appendix

Relationship Between the United States and Spain

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Thursday, May 17, 1956

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address by Dr. Don Alberto Martin Artajo, Foreign Minister of Spain, delivered at Fordham University, April 16, 1956, at a special convocation in "Tribute to Spain." Dr. Artajo's discussion of the historical and present relationship between the United States and Spain is extremely informative. I believe it warrants the attention of all Members of Congress, as well as the general public.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

President, professors, and students at Fordham University, ladies and gentlemen, in my life, not short indeed, as a man of laws and servant of that system of law that the state is and should be, I have had the honor of graduating as a lawyer from the University of Madrid, heiress of the Complutense of Alcala, founded by Cardinal Cisneros, and to become later a professor of its faculty of political and economical sciences. But neither my legal work nor my service to the Government of my country would have ever led me to think of the academic honors received later on, when I became part of the Spanish Government during a difficult period of our history. In the last few years I have been honored with the title of doctor honoris causa, by the Angelic Institute of Rome and the University of St. Thomas of Manila. And now, on this occasion that I shall never forget, I am honored in the same manner by the famous Fordham University.

The Spanish university student who came for the first time to North America in 1939 to participate in a Pax Romana Congress and who has continued to work always, to the extent of his ability, for the cause of Christian peace in the world, is deeply moved today by the honor bestowed upon him by this famous university, founded by the church over a century ago and entrusted to the Jesuit order, the worthy work of a Spanish saint, Saint Ignatius of Loyola. I myself was educated in a Jesuit school as are my children today.

Adding to my satisfaction is the fact that this is an American university, a splendid product of the vigorous cultural life of this great country with which Spain maintains such close and cordial relations. I cannot forget that in the discovery, colonization and evangelizing of vast territories of the United States, the Spanish names of Ponce de Leon, Soto, Cabeza de Vaca and other distinguished captains often appear, as well as those of viceroys and explorers like Revillagigedo, Bucarelli, and Malaespona; and above all, the exemplary figure of Fray Junipero Serra, the humble friar of Majorca to whom California owes its first development. I do not forget either, that when the moment came for the United States to fight for its independence, Spain contributed appreciably to it, with the power her dominion in both worlds gave her. If there were some disagreements later between our two countries, providence has determined that at the end of the Second World War, Spain and the United States be tied together again by bonds of rich friendship of which I foresee the greatest profit for our mutual benefit and that of international peace.

I have always felt a great esteem for the American people. I remember that when I was called upon by my chief of state to direct for him the foreign policy of Spain, in August of 1945, I made a statement to the press in which I said that the government of our country, inspired by the concepts of freedom and authority, would ultimately arrive at a full understanding with the English speaking countries. That idea, which might have seemed bold at the time, became a reality in the fall of 1953, when Spain and the United States signed agreements of military and economic assistance which are, undoubtedly, among the most important international documents of our times.

My present trip to the United States, during which I have been so warmly welcomed by the authorities and the people of this noble Nation, is a direct result of the good understanding between the United States and Spain. From 1953 on, our two countries have entered a new era in their relationship, which I hope will be to their utmost advantage as well as that of world peace. Standing before an audience so well qualified in every respect, in which my words will find an echo of intelligence and understanding, I wish to dedicate some minutes to talk to you about the relations of our two countries, in the past as well as in the present and the future.

A CENTURY OF RELATIONS BETWEEN SPAIN AND THE UNITED STATES

The relations between Spain and the United States were born under the sign of friendship. When the founders of the United States of America wanted their independence, Spain was governing many of the territories that are today a part of this great federation. Our Government was sympathetic from the very first to the movement of emancipation of the early English Colonies and it collaborated with them in the diplomatic field and with the delivery of arms, munitions, and money, as well as with the movements of its troops and fleets in Europe and America. Msgr. Fulton Sheen, auxiliary bishop of New York, mentioned not long ago the extent of our military assistance to the United States on that occasion: 219 cannons and 30,000 rifles with the necessary ammunition, 4,000 field tents, 30,000 uniforms, 12,000 bombs, and 200 artillery carriages, all of it free. Spain donated also to the American cause, the sum—significant in those times—of $5 million, and it offered Gen. Charles Lee a blank check which he could use to cover the expenses of the war. That very friendly cooperation was sealed by the Treaty of Friendship, Limits, and Navigation, signed in 1795 between the United States and Spain in San Lorenzo del Excorial, by which Spain granted free navigation in the Mississippi and both countries established their boundaries. The territorial differences that arose later were settled with a diplomatic instrument, the Treaty of Friendship, Settlement of Differences, and Limits, signed in Washington in 1819 and by which—the text said—as a pledge of "a solid and unshakable peace between the two powers," Spain ceded to the United States, with a generosity hard to conceive today, the two Floridas, with their adjacent islands and the boundary was set to the west of the Mississippi River.

After this first period of harmony and understanding, the emancipation of the sister countries of Spanish America completely changed the geopolitical picture of the New World. It was the era of the Monroe message, that established a new international doctrine, and of repeated friction over the island of Cuba, the last pearl of the Spanish crown in America. Our differences with the United States, complicated by an episode of sad remembrance whose historical injustice has been recognized by researchers in this country, inevitably led to the war that ended with the peace treaty signed in Paris the 10th of December of 1898, and by which Spain lost the remainder of her overseas empire, the beloved islands of Cuba, Puerto Rico, and the Philippines.

After the war and all its consequences, which completely changed Spain's way of living and her role in the world, our relations with the United States went back to normal with the signing of the Treaty of Friendship and Commerce in 1902. We entered an era of friendly relations then which lasted until the international confusion caused by the Second World War and the biased predominance attained by the Soviet Union began to distort the impression that the American statesmen had of things in Spain.

THE UNITED STATES RECTIFIES EARLIER ERRORS

In 1946 Spain was sacrificed to the policy of appeasement of Soviet Russia and because of the hate of international communism which had clearly been defeated on the battlefield of our Civil War. All of the heroic will of the Spanish people, the spirit of national independence, the Spartan decision of General Franco, and above all, the help of God, were needed for Spain to resist victoriously that overwhelming aggression directed by international communism.

It was evident, nevertheless, and so stated General Franco on several occasions, that the United States felt neither hate nor ill-will toward Spain. Accordingly, when the threats of Soviet Russia forced the United States to develop its European policy on a new basis, voices with a fair sense of justice were heard in America, who demanded an end to the wrongful sanctions against Spain and the establishment of better political, military, and economic relations between the country which had assumed the role of champion of freedom in the world against Communist slavery and the country which, after overthrowing communism on its own soil, formed the stanchest military and—above all—spiritual bulwark against the advance of communism in Europe.

I still remember with deep feeling the visit of Admiral Sherman to the Spanish Chief of State in July 1951, carrying the message from President Truman and the Department of Defense of the United States. In that frank and cordial meeting between military men the basis was built for a mutual understanding which has been since developed by Ambassadors Griffis, McVeagh, Dunn, and

Lodge for the United States and Ambassadors Lequerica and Areilza for Spain. Thanks to these men and to the missions of Generals Spry and Kissner and their agreements with our General Vigon, negotiations between our two countries reached their peak on September 26, 1953, when three agreements were signed, which have since then happily governed our relations.

CHARACTER OF OUR ALLIANCE WITH THE UNITED STATES

It will soon be 3 years since the signing of the Spanish-American pacts, which have functioned fully and satisfactorily, and on this occasion it seems opportune to recall and analyze the principal characteristics and especially the ideological basis upon which they were founded.

Our American allies have conducted themselves in Spain with consummate correctness in all respects. Our internal life has followed the course, exacted by our history, our temperament, and our interest, along the path of a natural evolution which, with the help of God, has restored order, justice, and prosperity. It is possible that a few men, of good intentions but scant historical experience, consider that in our country one does not find all the ideal conditions of a democratic regime. I would repeat here what I said in 1951 before the Chamber of Commerce of the United States in Madrid: the Spanish people love liberty above all else, but they have had to suffer too much from licentiousness of opinion, in a country where there can be found by the hundreds of thousands the victims of Communist tyranny, to permit liberty to be exploited by enemies of freedom. We administer our victory and guide our policies to conform to Christian, national, and social ideals that are the fruit of our own secular culture and of our recent historic experience.

But if we wish to be honest with ourselves, we must not hide the fact that our agreements with the United States, signed 3 years ago, begin to look old and are not sufficiently adequate to the new European realities. The atomic arms and the guided missiles appear also in the offensive arsenal of the Soviet Union and have increased the risks of Spain in her participation in the European defense. We cannot limit ourselves to the construction of air bases, which, by their proximity to our great cities increase our dangers in case of conflict. We consider it ineluctable that the military collaboration between the United States and Spain must fully extend to strengthen the Spanish Army, equipping it with modern weapons and bringing up to date all installations and armament of our soldiers. That is why we request a complete collaboration to equip our national army adequately, without submitting our economy to the tremendous burden of meeting the needs of the armed forces perfectly adapted to the role that would correspond to them in a possible war.

This is, in our opinion, an urgent need of the times we are living, if we want to guard against future threats, in our strategic position as the extreme bulwark in Europe, between two seas and on the Strait of Gibraltar.

THE ECONOMIC AID TO SPAIN

Let us continue with the analysis of the Spanish-American pacts, especially that of economic aid. Here also, if we are to be sincere, we must express our desire for a careful revision of the foundations on which rest the aid of the United States to our economy. We cannot forget that Spain was not included in the Marshall plan for European recovery, a plan which has distributed generously among various countries the very large amount of $55 billion. That service to meet the needs of free Europe has permitted the reconstruction of the means of production and transport, and has restored the industries and the economies of the countries thus favored with this generous assistance, so much so, that it can be said that it has saved Europe from destruction and has restored its prosperity, in spite of the immense destruction of war, in a vast and more efficient manner than after the war of 1914–1918. Our country was left outside of this assistance and it is natural that there has been a regrettable delay in the development of our programs of production and industrialization, as compared with the other countries of Europe, which were more fortunate although not more deserving of United States aid. Was not our national war of liberation the first and the most bloody chapter in the defense of Europe against communism? The great damages done during that war could not be repaired completely during the Second World War. The gold of the Bank of Spain, valued at 1,734 million gold pesetas, equivalent to more than $334 million, in 1936, as well as individual savings were looted by the Red government of Madrid and are still in the vaults of the banks of Russia. Certainly, if you will excuse this easy irony, no country in Europe deserved and needed more the generous aid of the Marshall plan, given precisely to stimulate the defense against communist. The present aid to Spain, as it was agreed upon in 1953 is also insufficient. It would be convenient to fill in some manner the delay in the reestablishment of the Spanish economy, giving Spain the same opportunities accorded other countries in Europe through a more generous and better understood assistance. We cannot feel satisfied with the distribution of the assistance granted to us, although we are truly grateful for the sales of agricultural reserves and the assistance extended by the United States Caritas. We shall be much more grateful, naturally, for the investments made in capital goods and in industrial equipment that would permit an increase in our output and would raise the standard of living of our people.

With no other help save that of God, and the hard work of all Spaniards, we have accomplished wonders in our country, restoring our agriculture, increasing industrialization, discovering new sources of energy, and developing the possibilities of our production and our foreign trade to the utmost. The American tourists who now visit Spain constantly to admire her beauties and art treasures, usually realize what our national reconstruction efforts mean, performed exclusively by us without any external aid. What great heights could we not attain for the welfare of our people if the American aid were more generous and liberal, not only in official allotments, but also in other free credits which would reinforce our economy in the manifold fields of national production?

SPANISH-AMERICAN CULTURAL EXCHANGE

I would like to refer to another very interesting aspect of the relations between Spain and the United States; to the cultural relations. We cannot conceive the free association between our peoples if we do not try to establish among them spiritual ties of mutual understanding and common ideals in the development of the other activities, assuring the continued and intimate understanding to which we aspire.

The Embassy of the United States in Madrid, as well as ours in Washington, through their cultural sections, render an efficient service to our mutual relations. We see with satisfaction the work performed in Spain by the United States Information Service of your Embassy in seven of the principal cities, and with vast activities in conferences, publications, libraries, motion pictures, etc. On our part we intend to intensify as far as our means will permit, the Spanish cultural activities in the United States, creating if possible one or several Spanish cultural agencies properly endowed. An essential part of this work is that of scholarships granted mutually for teachers and students. I am most happy to acknowledge the recent extension to Spain of the Fulbright program, wherein $600,000 will be invested, for a period of 3 years, in this fruitful exchange of Spanish and American students. Besides this scholarship program, sponsored by your State Department, and the technical exchange which has been going on for some time, we are also grateful that some of your private foundations, like the old and worthy Del Amo Foundation, are participating in this scientific exchange. I hope that the day is not far off when the Rockefeller, Ford, and other important foundations that afford so many benefits and stimulation to most countries, will dedicate also part of their activities to Spain.

That is why we desire close cultural ties with the United States, in which process I deem it essential to encourage further the study of the Spanish language and of our culture, which has been done in the United States for some time. Before our Civil War and the Second World War, a fruitful exchange between the universities of the United States and Spain was established, fostered by philanthropic students of Spanish culture, to whom today I wish to pay my heartfelt homage. First of all, to the memory of the late Mr. Archer F. Huntington, founder of the Spanish Society of America and the Spanish Library of Congress. I extend my cordial greetings to his widow, Mrs. Anna Huntington.

THE LOYALTY OF SPAIN

With this I finish this rather long speech. I have spoken from my heart trusting in your kind and intelligent indulgence. I wish to express my deepest appreciation for the academic honor bestowed upon me by this splendid university, and for the opportunity that has been granted to me to express with all loyalty my ideas in this new era in the relations between Spain and the United States in which Spain enters with full historic understanding and without fear in the future.

There is, among the artistic treasures of the Museo del Prado, a painting of El Greco, the famous Gentleman With the Hand on His Chest, which portrays the symbol of the highest quality of Spanish chivalry. The face of this man expresses admirably his mystic and humanitarian spirit. The hand on his chest, grasping the hilt of a sword proclaims his unwavering determination to act in the defense of his ideals. Thus, Spain, like that gentleman of Toledo, is always inspired in the highest ideals of humanity, loyalty to her friends, and willing to make all kinds of sacrifices in the defense of freedom and civilization.

Poll of Political Preferences of High School Students Throughout the Nation

EXTENSION OF REMARKS

OF

HON. JOHN M. ROBSION, JR.

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 17, 1956

Mr. ROBSION of Kentucky. Mr. Speaker, Kentucky recently extended the right to vote to persons between the ages 18 to 21. We were, therefore, particularly interested in the poll conducted by Wesleyan University to determine the political preferences of high school students throughout the Nation. The total vote in that poll was 433,253 from 12,140 classrooms and it was divided as follows:

Eisenhower (59.76 percent)	258,927
Knowland (1.63 percent)	7,072
Stevenson (19.19 percent)	83,130
Kefauver (17.29 percent)	74,900
Miscellaneous writeins (2.13 percent)	9,224
Total (100 percent)	433,253
Republican candidates (61.94 percent)	268,372
Democratic candidates (37.83 percent)	163,915
Unidentifiable by party (0.23 percent)	966
Total (100 percent)	433,253

President Eisenhower received a clear majority in every State except 5 (Georgia, 44 percent; Louisiana, 47 percent; Minnesota, 43 percent; Mississippi, 46 percent; and South Carolina, 41 percent), and he was the leading candidate in all States. Vice President NIXON received the largest writein vote.

In the Farm Belt, constituting the States of Illinois, Indiana, Iowa, Kansas, Michigan, Minnesota, Missouri, Nebraska, North Dakota, Ohio, South Dakota, and Wisconsin, Republicans received 103,093 votes; Democrats received 57,631 votes; others 227.

In the so-called solid South, consisting of Alabama, Arkansas, Florida, Georgia, Louisiana, Mississippi, North Carolina, Oklahoma, South Carolina, Tennessee, Texas, and Virginia, Republicans received 69,074; Democrats received 56,917; others 584.

The vote for each candidate whose name was on the ballot State by State was as follows:

State	Eisenhower	Knowland	Stevenson	Kefauver
Alabama	7,597	248	4,696	2,090
Arizona	938	37	289	168
Arkansas	2,269	86	1,039	903
California	7,951	276	2,731	1,607
Colorado	2,743	47	1,043	549
Connecticut	3,643	69	974	355
Delaware	169	5	71	46
Florida	8,532	181	2,294	1,930
Georgia	3,967	242	3,021	1,205
Idaho	1,363	42	330	326
Illinois	17,612	351	4,941	3,435
Indiana	8,603	203	2,044	2,116
Iowa	6,667	184	1,139	2,541
Kansas	4,687	134	1,099	940
Kentucky	6,665	118	2,110	2,069
Louisiana	3,944	130	3,226	817
Maine	3,064	43	542	391
Maryland	2,402	63	527	556
Massachusetts	6,956	129	1,810	1,159
Michigan	9,223	141	1,796	1,786
Minnesota	5,135	119	1,811	4,860
Mississippi	2,261	116	1,576	597
Missouri	10,399	355	3,482	4,240
Montana	3,280	154	1,001	1,317
Nebraska	3,346	120	465	912
Nevada	455	9	78	72
New Hampshire	1,487	32	159	449
New Jersey	3,959	86	895	677
New Mexico	2,104	70	749	533
New York	5,532	100	971	615
North Carolina	6,914	188	3,654	2,590
North Dakota	3,384	111	479	1,945
Ohio	18,509	420	4,621	4,031
Oklahoma	2,072	73	1,236	939
Oregon	2,064	39	589	512
Pennsylvania	25,960	624	8,134	6,227
Rhode Island	1,290	30	304	227
South Carolina	2,689	189	2,025	852
South Dakota	1,464	66	212	618
Tennessee	7,037	155	1,583	4,828
Texas	10,543	440	4,598	3,245
Utah	826	33	210	100
Vermont	930	30	113	131
Virginia	7,551	221	3,383	1,639
Washington	1,804	55	819	526
West Virginia	4,972	114	2,164	1,643
Wisconsin	10,581	324	1,388	4,859
Wyoming	1,174	36	39	376
Alaska	17	0	0	1
District of Columbia	131	1	52	28
Other	1,002	33	418	322

President Eisenhower was asked at his May 4 press conference to comment on the poll and whether his landslide vote among the high school seniors and juniors resulted from his appealing repeatedly to the youth of the country to take an active interest in their Government and get ready for their responsibilities of citizenship. He replied:

Well, someone brought in that survey, showed it to me, and I would be less than human if I said I didn't get a lift out of it. Of course I did, because I like youngsters—as a matter of fact, I probably trust them more than lots of people do. [Laughter.] But I think the main thing to be commented upon in that survey is this: The youngsters are taking such an interest in their Government, the policies that are being applied, and the people that are trying to run them.

Now, maybe their judgments are based upon less exact information than you people have. But the fact is that they are taking the interest. Interest in our Government is the one thing that is necessary if this type of Government is to be successful over the years.

The young people must do it, and they must continue through their lives; so I applaud them for taking the interest and going to the trouble of doing all this. I thank every one of them that think I am doing O. K.

Thomas O'Neill, a well-known political analyst, interprets the poll as evidence of a change in the political preference of the young people to the Republican Party. In his April 30, 1956, column in the Baltimore Sun he stated:

Hints that the Democrats may be in for a long siege of dark days appear in a novel presidential preference poll just completed by Wesleyan University. The university consulted the political preferences of nearly half a million students in junior and senior high schools across the Nation in a poll of presidential favorites for November. Like their seniors in other straw votes, the school boys and girls plumped heavily for Mr. Eisenhower, a result which even the Democratic Committee could have anticipated. The chill for the Democrats lay in evidence that the upcoming generation of new voters is shifting to a Republican orientation after a long period in which a stout Democratic asset was that party's appeal to a preponderance of first-voters at each succeeding election. Even Democrats who are ready to concede the reelection of Mr. Eisenhower have looked forward to a comeback in 1960 when he would be ineligible to run. Now they must consider the prospect of more extensive defeats unless a new attraction for young voters can be discovered and developed. * * * Across the Nation, an astonishing 62 percent of the students preferred a Republican over a Democratic President, including the Southern States. This proportion is a sharp reversal of the findings that most persons of voting age consider themselves Democrats and suggest that the new generation of voters will extend Republican rule at Washington incalculably beyond the present administration. President Eisenhower's personal popularity was only in part responsible for the strong Republican showing. His share of the total vote was slightly less than 59 percent.

Israel Independence

EXTENSION OF REMARKS

OF

HON. JOHN MARSHALL BUTLER

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Thursday, May 17, 1956

Mr. BUTLER. Mr. President, May 4 was the eighth anniversary of the independence of the State of Israel. It hardly seems possible, in view of the many accomplishments of this young Nation, that so short a period has elapsed since the date it first achieved independence.

I ask unanimous consent to have printed in the Appendix of the RECORD a statement I have prepared commemorating this occasion.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

ISRAEL INDEPENDENCE

It is with particular pleasure that I extend my congratulations to the State of Israel on the eighth anniversary of its independence. One cannot think of this State, so new to the family of nations, without marveling at its remarkable achievements during the short span of its existence.

In spite of the almost continual border difficulties which have consumed so much of her time, which have sapped so much of her energy, and which have resulted in such a tragic drain on her manpower, Israel has made impressive progress in shaping a modern, thriving country.

Since that momentous May 14 in 1948 when the Jewish provisional government under David Ben Gurion proclaimed the State of Israel, with Chaim Weizmann as President, the Jewish Government, in addition to its eternal struggle for survival in the conflict-riddled Middle East, has dealt with many other challenging problems. These have included the absorbing of many survivors of Nazi tyranny, of providing food, housing and education facilities for its mushrooming population, and, finally, of directing the Israeli economy toward a firmer and more independent base through long-range agricultural and industrial programs.

Evidence of Israel's success in meeting these challenges are everywhere to be found. Though the housing problem is still far from solved, the thousands of tents which were thrown up in such haste to accommodate the staggering influx of refugees have already been replaced with less primitive housing. And construction of permanent housing is constantly in process. To meet the overwhelming food shortage, barren desert wastes have been converted into fertile fields by the use of improved technological skills, and increased irrigation. Moreover, industrial output has more than doubled since the establishment of Israel's independence. Largely through the use of outside funds, billions of dollars have been wisely invested in such industrial enterprises as those relating to steel construction, and heavy manufacturing, and in chemical and textile plants—to name a few.

But in meeting the problems of an infant country trying to acquire the basic essentials of life, the Israelis have not neglected the development of their magnificent and ancient traditions of learning and culture. When Israel was but 6 months old, the Knesset passed the Compulsory Education Law which established universal, free and compulsory education for all children from 5 to 14. Since then, the Israelis have been constantly facing the formidable problems of school and teacher shortages, which are complicated by language differences among the pupils.

Quite clearly, in the light of these striking accomplishments, the Israelis have given proof of a vigor and resourcefulness in the molding of their splendid new nation which will not only continue to contribute toward the development of a stable, prosperous state, but which will ultimately have a beneficial influence throughout the whole Middle East. Let us hope that soon the swords of that area may be beaten into plowshares, and that Israel may devote herself fully, in peace, to the development and enrichment of her great and ancient heritage.

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Thursday, May 17, 1956

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the GTA Daily Radio Roundup of May 11, 1956, relating to the farm problem.

There being no objection, the matter was ordered to be printed in the RECORD, as follows:

FRIDAY, MAY 11, 1956.

A farm editor went to Washington recently, and his comments on what he found in the way of attitudes towards the farm situation are worthy of note. The editor, Art Thompson of Wallace's Farmer magazine, does his research and writing out in the corn and hog country of the great farm State of Iowa. His day-to-day work is with farm people and farm problems, and his writings indicate he understands them. In fact, he's long been a real farmer and was operating his own farm until he took his present job a few months back. So, he's got a first-hand knowledge of the farm situation.

But, in Washington he got a shock. He found a vacuum, as far as appreciation of the economic illness of agriculture in these times of prosperity for other segments of the country is concerned. "The people," he says, "don't quite believe you, even in parts of the Department of Agriculture, when you tell them what is happening to farm income. They listen, but they do not really hear." Yet, he adds, perhaps some of them shouldn't be blamed too severely. After all, about the only time they probably think hard about farm prices is when they go to the grocery store for the family shopping.

And, of course, it's a fact that they won't find price cuts there that serve to fully reflect some of the cuts that have taken place in farm prices. And, also, as Thompson points out, these are people who hear the Secretary of Agriculture "carry on about the record level of land values and the terrible evil of price supports." Another reason he finds it hard to blame the city people for lack of understanding is the obvious one that few city newspapers and magazines treat the farm problem with sympathy. When statistics come out on farm income, he says, they're just likely to wind up somewhere on the inside page of that big-city newspaper.

So, there are good reasons for the failure of the city resident to grasp what has been happening out in the farm country, while business has been booming along with record earnings. There is one thing, though, that will finally jolt people in the city, says farm editor Thompson. That will develop, he says, as the slump in farm buying hurts business more and more. To illustrate what can, and is, happening, he cited the fact that a number of farm machinery companies around the country have been forced to slash production, lay off men, and announce cuts in company earnings to their stockholders.

Yes, that can serve to bring the farm problem close to home for many city people. A lot of them fail to realize that agriculture, despite the decline in farm population, is still a mighty big customer for the products of the steel mills, the rubber plants, the oil industry, the chemical plants, and the producer of consumer goods. A slump in farm buying can be the dynamite that jars the rest of the country into a realization that the farm economy needs real, far-reaching help to boost farm income.

Northwest farmers can help make their bushels work for better farm living by marketing them through their own cooperative organization—that's GTA, the co-op way.

Interdependence of American Labor and Agriculture

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Thursday, May 17, 1956

Mr. HUMPHREY. Mr. President, various attempts have been made in recent months by high administration officials to divide the American people by setting workers against farmers, and vice versa. Some of us have tried to emphasize in our replies that American labor and American agriculture have more interests in common than in conflict.

In the May issue of Textile Labor, the official publication of the Textile Workers of America, AFL-CIO, Governor Orville L. Freeman of Minnesota has contributed an article entitled "Linking Workers and Farmers."

I ask unanimous consent that this constructive and clearheaded account of the interdependence of American labor and agriculture be inserted in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

LINKING WORKERS AND FARMERS
(By Orville L. Freeman, Governor of Minnesota)

This is an age of constantly and rapidly increasing interdependence. It is more certain than ever that the continued well-being of any large segment of our economy is dependent upon the prosperity of other groups. This is particularly true of farmers and workers. For it is obvious that the greatest market for food and fiber produced in the United States lies with the American wage earners; and agriculture is a $13 million customer of industry and labor. Ten million people are employed in the marketing and processing of farm products, and 6 million more are employed in plants producing specific farm needs. The interests that farmers and laborers have in common are far greater and more important than any which might seem to conflict. It is therefore not only logical but essential for these groups to work together to achieve their common goals.

Effective farmer-labor cooperation, however logical and important it may be, has been difficult to achieve. The chief reason is lack of understanding. Organizations of each group begin, as they should, by working for limited economic goals. These goals are very important to the group itself, but the indirect benefits that inure to others are not so obvious. When a labor union secures higher wages for its members, the general public, including farmers, may be led to believe that such labor gains have merely resulted in increased prices. There should be a far more general recognition of the fact that the great progress of our American economic system is based on mass production, which could not have attained its present success without the mass purchasing power that results from good wages.

Likewise, when farmers organize to secure higher prices, the general public, including laborers, may be led to believe that such gains have merely resulted in higher food costs. The fact is that the price the farmer gets for his product is the only wage he receives for his labor. When wage-earners recognize this, it is easy for them to understand the interests that farmers and workers have in common.

The general welfare of all of the people would be advanced by a more thorough and widespread understanding of these relationships. This is especially important because special interests, opposed to the goals shared by farm and labor groups, sometimes follow "divide and conquer" tactics. The best way to counteract them is, of course, conscious and effective effort, on the part of both farm and labor groups, to publicize the facts.

Education, publicity and experience can bring about an understanding of the interests and goals which workers and farmers have in common—an understanding that is essential if these goals are to be reached. In Minnesota, organized labor has recognized the importance of such understanding and has carried out efforts directed toward explaining its position to farmers. Some farm organizations and their leaders have done likewise. But results require more than better understanding alone.

The most conspicuous illustration of farmer-labor cooperation in Minnesota is the Democratic-Farmer-Labor Party. Attempts at such cooperation through political action began a generation ago. Neither farm organizations nor labor unions as such became a part of the political party. But their leaders and their members joined and actively participated, first in the Farmer-Labor Party and then in its successor, the Democratic-Farmer-Labor Party of today.

The DFL party of Minnesota is not composed exclusively of farmers and workers. It faithfully and democratically represents the interests of all the people—encluding small business and the professions. But since farmers and workers constitute so large a portion of "all of the people" their interests are very well represented.

When the labor section of our party platform is written, it is not done by a committee of writers merely trying to coin phrases that will win the labor vote. It is done by members who have been active in the labor movement, seeking to express what is needed in the interest of labor. And when the draft is written it must be explained in such a way that the nonlabor members of the party will understand and support it.

This in itself is an excellent educational process. For when the farmer delegates who share in the formulation and adoption of the platform go back to their own rural communities, they can explain to their neighbors the reasons for the platform provisions.

This kind of cooperative effort through a political party is particularly important today. For the greater part of our Nation's history, farm and labor groups gave comparatively little attention to political action, but rather sought to attain their ends through economic means. Two recent developments have altered this situation.

First, Government action is becoming increasingly important to both groups. Laws which assist—or in other cases, seriously restrict—union organization and collective bargaining are matters for Government. And in the area of farming, a national program to promote a sound agricultural economy is currently of critical importance. Labor and agriculture are being forced by circumstances into some kind of political activity. They can and do act through political pressure for or against specific legis-

lation. They can also act through the broader mechanism of a political party, thus sharing and participating to a greater extent in choosing candidates and making policy.

In the second place, there is a noticeable trend in both labor and agriculture to widen their interests and expand the scope of their goals. Labor is interested, for example, in far more than wages, working conditions and rules for collective bargaining. It is interested in education, health, social security, human rights and international relations. Government action is decisive in all these fields.

There are many advantages in following the pattern we are working out in Minnesota, a pattern which—instead of following the practice in some countries of organizing a political party for each separate economic group—encourages the working together of many such groups, in a party with a liberal program dedicated to the common interests of all the people. I believe this to be more in line with our American tradition, and more likely to be effective. And I am sure that the interaction, within a party, of several different points of view results in an understanding and a spirit of cooperation that is essential to the operation of democratic government.

In Minnesota countless rank-and-file union members as well as union officers participate in the Democratic-Farmer-Labor Party ar regular party members, rather than as official representatives of their organizations. The same is true of farmers and others. Their ability and vision has contributed immeasurably to our success. Democratic ideals and methods must today stand the test and prove their worth, not only in the United States but throughout the world. And democratic principles and practices within the political party are in themselves a part of this process. I can think of no better area in which labor and agriculture can work together to promote the better living and the greater freedom that we all want.

The Polish Constitution: Symbol of Freedom

EXTENSION OF REMARKS
OF
HON. JOHN MARSHALL BUTLER
OF MARYLAND
IN THE SENATE OF THE UNITED STATES
Thursday, May 17, 1956

Mr. BUTLER. Mr. President, among the many brave and gallant peoples presently enslaved by the Communist conspiracy are the people of Poland. It is altogether fitting that their millions of friends in America and throughout the free world note the 165th anniversary of the adoption of Poland's Constitution, which remains one of the great documents in man's long struggle to be free and independent.

I ask unanimous consent to have printed in the Appendix of the RECORD a statement I have prepared in commemoration of this important anniversary.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

POLISH CONSTITUTION: SYMBOL OF FREEDOM

Today we are commemorating the 165th anniversary of Poland's constitution, and I am grateful for the opportunity to assure the Polish people in our own country as well as the millions of our Polish friends behind the Iron Curtain that we have not forgotten the plight of Poland.

This anniversary is one of the great events in the long history of Poland. For it was by the constitution of May 3, 1791, that it was decreed that Poland would be a nation of freedom, based on laws made by the people. It contains this statement: "All power in civil society is derived from the will of the people."

The road to constitutional reform was not an easy one, although Poland was one of the first of the pioneers of liberalism in Europe. In 1347, Poland established the first complete code of laws existing then in Christian Europe. In 1413, the leaders of Poland and Lithuania executed an agreement, the language of which proclaimed the brotherhood of nations for the first time in history. In 1430, the security of the individual was recognized and safeguarded by law in Poland, and as this same law was constantly broadened, it became the nucleus of Poland's unparalleled political and religious liberties.

For 2 years preceding the Polish constitution of May 3, 1791, the Polish Diet held intense discussions until there was general concurrence in the character of the constitution. The resultant document included many of the political principles and constitutional practices of the countries most advanced in democracy at that time. It contained many of the forms and practices found in our own Constitution as well as in the British. Such things as the separation of powers, bicameral legislation, the elements of cabinet responsibility, the independent judiciary, and majority rule, all these and more are found in the Polish constitution.

It may readily be seen that the fact that Poland succeeded in these early days to achieve such great progress was due almost entirely to the genius of the Polish people themselves. The descendants of these same democratically minded people have now been thrust ruthlessly under a terroristic, totalitarian police state.

For the sake of these Poles under the Soviet oppression let us all now rededicate ourselves to the cause of constitutional democracy. We know with certainty that the day will come when the Polish people and their oppressed neighbors in Eastern Europe will be enabled to throw off the chains that bind them. We are also confident that the free men in our own great Nation will help assure the return of Poland to its traditional position of honor among the free nations of the world.

Statement by Senate Foreign Relations Committee on Obligation of Soviet Union To Remove Troops From Rumania and Hungary

EXTENSION OF REMARKS
OF
HON. WILLIAM E. JENNER
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Thursday, May 17, 1956

Mr. JENNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an excellent statement by the Senate Foreign Relations Committee, pointing out the obligation resting on the Soviet Union to remove its troops from Rumania and Hungary, with the coming into effect of the Austrian State Treaty.

The citation is from pages 8 and 9 of Executive Report No. 8 of the Committee on Foreign Relations. It is dated June 15, 1955, nearly a year ago; but it is even more pertinent today than it was when first made.

There being no objection, the excerpt from the report was ordered to be printed in the RECORD, as follows:

AUSTRIAN STATE TREATY

10. WITHDRAWAL OF SOVIET FORCES FROM SATELLITES

When the State Treaty with Austria comes into effect, there will no longer be a peace-treaty basis for the Soviet Union to maintain its troops in Rumania and Hungary to protect its lines of communication to Austria.

The committee asked the Secretary of State whether steps will be taken to ascertain whether Soviet troops will be withdrawn from these countries in compliance with the terms of the peace treaties. Mr. Dulles recalled that some provisions of the treaties of peace with Rumania and Hungary, as well as Bulgaria, have been flagrantly violated in the past. He stated, however, that the Department is actively studying "to see what basis we have for asking for the withdrawal of troops" since "one consequence of the making of the treaty should be withdrawal of Soviet troops from Hungary and Rumania."

The committee fully supports the Department of State in its efforts to seek full compliance with those provisions of these treaties relating not only to the withdrawal of Soviet troops from Rumania and Hungary, but also to treaty limitations imposed on the size of the armed forces which Rumania, and Hungary, and Bulgaria as well, may maintain.

Nomination of Maj. Gen. Melvin J. Maas as National Commander, Disabled American Veterans

EXTENSION OF REMARKS
OF
HON. EDWARD J. THYE
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Thursday, May 17, 1956

Mr. THYE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the text of a speech by Mr. Stuart A. Lindman, given at the last convention of the Disabled American Veterans, at which time Mr. Lindman placed in nomination for national commander of the Disabled American Veterans the name of a distinguished Minnesotan, Maj. Gen. Melvin J. Maas. General Maas was at one time a Representative from Minnesota.

Mr. JOHNSON of Texas. Mr. President, I recall him vividly. For many years I served with him on the same committee, and I am a great admirer of his.

Mr. THYE. General Maas was a great soldier and a very able Member of Congress. I know he is serving the Disabled Veterans in a most commendable manner.

Mr. JOHNSON of Texas. And he is a citizen of which any State would be proud.

Mr. THYE. Yes; and we are very proud of him.

The PRESIDENT pro tempore. Is there objection to the request of the Senator from Minnesota?

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

NOMINATION OF MAJ. GEN. MELVIN J. MAAS FOR NATIONAL COMMANDER, DISABLED AMERICAN VETERANS

(By Stuart A. Lindman, commander, Minneapolis Chapter No. 1)

Mr. Commander and fellow delegates, it is a distinct honor to address the chosen of America's disabled defenders.

We have deliberated and debated, denounced and discussed, charged and praised, and reveled in good fellowship this past week. Comes now the climax of our convention, that hour when we look through our ranks for the man behind whom, more than any other, we will rally to the call.

We have served, sacrificed, and continue to suffer; we are brothers and sisters all; pain is our common denominator.

Only two symbols are paid for with a higher price than our proud emblem and standard, the Cross, the Star of David. And we shall not break faith with those who have died. To be mindful of our venerable chaplain's words, "He's not heavy, Father, he's my brother." Now is the hour when we name the man who carries the most of our burden; now is the hour when we name our spokesman * * * spokesman not in name only, but with the complete charge of aggressive leadership. We of the DAV count no cost to ourselves too great in the continued service of country and, in particular, our responsibilities to the war's disabled, their dependents, and their survivors. We so charge each leader of our DAV, local, State, district, and national.

In the critical year ahead we must be prepared to divide and roll the enemy's attack; to make ready the guard against any and every, even seemingly passive recommendation, bill, or declaration in or out of the halls of Congress, which might be adverse to war's disabled and their dependents. Our call is articulate.

I bring forth today the name of one who personifies the purposes of the DAV, namely: To uphold and maintain the Constitution and laws of the United States; to fight for the realization of true American ideals; to work for the betterment of the disabled; to cooperate with Government officials; to serve comrades, community, and country.

This man's record parallels our purpose. Here is the man who has distinguished himself in his many fields of endeavor.

He entered the Marine Corps in 1917; served with marine aviation in the Azores, and in 1926 accepted a Marine Reserve commission. In 1941 he served at sea on the staff of Adm. William Halsey. In 1942 he served with Admiral Fletcher in the Solomons campaign. He served as Marine Corps observer with Gen. Douglas MacArthur in Australia and New Guinea. He was awarded the Silver Star for service with the Army Air Force. He won the Legion of Merit in combat. In 1945 he assumed command of the Awase Air Base on Okinawa, where he was wounded by enemy action. On June 1, 1950, he was promoted to brigadier general. Progressive blindness overtook him in 1952, and August 1 of that year he was retired.

Not only has he distinguished himself on the field of battle, but also in the halls of Congress. He was first elected to the Congress in 1926 at the early age of 27. He served from 1927 to 1933, and again from 1935 to 1945. During his career in Congress he specialized in legislation promoting aviation, national defense, and measures to improve the unemployment situation. As a member of the Foreign Affairs Committee of the House he sponsored several international conferences designed to bring about better relations with foreign powers.

As a member of the Secretary of Defense's Reserve Policies Board, he was named chairman in September of 1950 of a special committee to clarify the status of thousands of Army, Navy, Air Force, and Marine Reserves during the limited mobilization. He advises the Secretary of Defense on Reserve legislation; he is chairman of the board of the Marine Corps Reserve Officers' Association; he is legislative chairman of the Reserve Officers' Association; he is a past commander in chief of the Military Order of the World Wars.

He holds a degree of doctor of laws, awarded by the College of St. Thomas, his alma mater.

To borrow some of the words of the Honorable LAURENCE CURTIS, spoken in the House of Representatives a few days ago: The DAV, under the command of this gentleman will "not permit the disabled veterans to become mere forgotten heroes, to be relegated to the economic scrap pile, for the future welfare of our country is inevitably linked with the welfare of the disabled war veterans."

Here is one whose integrity will allow us not to use only his name in our good cause, but whose loyalty to the troops will dictate his going forth to do battle with our every adversary, whose creed of honor will dictate his strengthening the gains and friendships we have won and established through these years on the legislative battlefield. He will hold the ground won. Even as those before us have called him from the ranks, have reached out and virtually plucked him from the battle for service in a higher eschelon only because of his meritorious service, even so, in our beloved DAV, this man is beholden to none, has never become embroiled in the politics of our struggles and growth. He is truly the man whom we can serve unitedly. Promised nothing, nor having been promised, he owes none. He works only for the common good. He is free of mind and of program. His service has in no way been shackled, nor would his strength of purpose allow same. There can be no dissenting voice in the choice of a commander as strong and noble as this leader.

There is no great credit for selection of this man due any one individual or collective group. As you hear, ours will not be the first organization to extend a call for his training, talent, experience, his heart and mind and very being.

Surely, here is one who has Divine guidance.

The 15th Psalm of David answers: "Who shall dwell in God's holy hill?"

He that walketh uprightly.
He that worketh righteousness.
He who speaks the truth in his heart.
He who back-biteth not with his tongue.
He who takes not reproach against his neighbor.
He who condemns the vile.
He who swears to his own hurt and changeth not.
He who takes no reward against the innocent.

I want to be with that man and for that man, and I'm sure you do, too.

In this choice can we proudly manifest the great heart of the Disabled American Veterans. We here will call forth, for the first time in history, the champion of America's nonservice disabled, the chairman of the President's Committee on Employment to the Physically Handicapped, to now also serve those who have sacrificed parts of body and health in the service of country.

I need not review the uncertain year ahead; if we knew not the critical area we enter, we would not be here in convention assembled. It is paramount our leader be of noble stature. To paraphrase the Psalmist, "The good walk on every side, when the morally purest men are exalted."

We, the chosen of, by, and for America's disabled defenders, having aided in maintaining the honor and integrity and supremacy of our country, holding in remembrance the sacrifices in common made, and drawn together by strong bonds of respect and mutual suffering, will solemnly and firmly reassociate ourselves together in exalting to the post of National Commander of the DAV, the man whose name I place in nomination at this time.

Let his sight be our light. We have seen all of the terror and hells of war; now would to God that in this man's sacrifice he can give us the light, the insight to encourage in all people the spirit of understanding which will guard against future wars.

Gentlemen, I give you the name and nomination of Maj. Gen. Melvin J. Maas.

The Cure of Delinquency

EXTENSION OF REMARKS
OF
HON. JOHN MARSHALL BUTLER
OF MARYLAND
IN THE SENATE OF THE UNITED STATES

Thursday, May 17, 1956

Mr. BUTLER. Mr. President, certainly no organization has done more to combat juvenile delinquency than the Boys' Clubs of America, which will mark their 50th anniversary this year. Undoubtedly, one of the contributing factors to the success of the Boys' Clubs of America has been the able leadership of such persons as the Honorable Herbert Hoover, who has served as chairman of this organization for the past 20 years. I ask unanimous consent to have printed in the Appendix of the RECORD a speech he recently made at the dedication of the new Columbia Park Boys' Club building in San Francisco, outlining the worthwhile work being done by Boys' Clubs everywhere.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE CURE OF DELINQUENCY AND THE MAKING OF GOOD CITIZENS

(An address by the Honorable Herbert Hoover at the cornerstone laying of the new building of the Columbia Park Boys Club, San Francisco, Calif.)

It is an honor to participate here in the laying of the cornerstone for a new building of the Columbia Park Boys Club. This was one of the earliest boys clubs established in the United States. It was due to that great San Francisco spirit Maj. Sidney Peixotto, and it has shed blessing on this city now for 61 years.

I have been on this team for only 20 years as chairman of the national board. In my time alone I have witnessed the number of clubs double—from 200 to over 400. I have seen them established in 300 towns and cities. This is no paper organization. To build and equip a club like this cost from $300,000 to $500,000. We have in this 20 years had the satisfaction of the growth of a nationwide investment in these clubs from $20 million to over $120 million.

The clubs have become one of the great character building institutions of our country. They turn out every year thousands of assured loyal and patriotic citizens. And every club is a voluntary institution supported by the generosity of the citizens of their city. There is no governmental hand in them.

Our country is greatly agitated over the growth of teen-age delinquency. There are a multitude of proposed remedies. Most of them gyrate around ideas of how mothers and fathers and teachers can do a better job. Most of these remedies ignore four primary forces insofar as our congested districts are concerned.

First. These boys are endowed with dynamic energy. The world is new and must be fully explored. They have an impelling desire for adventure, discovery, and great undertakings. They have competition and combat in their bones. Their primary instinct is to hunt in a pack in search for adventure and joy.

Second. We have laid pavements and cement over most of their out-of-door space in our congested city districts.

Third. These boys can no longer find outlets for their energies in the woods or on the streams and the animals to be captured.

Fourth. We send these youngsters to school for 6 or 8 hours during the day and we leave them to the paved streets for the evenings, and Saturdays and Sundays.

Do you wonder that with these innate qualities and the surroundings that these boys conspire by gangs to engage in destructive joy and the excitement of battle?

This is where the Boys Clubs come in. Here we provide a place where gang spirit and competition expend themselves in organized games. If the youngsters need to do combat, they are given the gloves and operate under rules of sportsmanship. Here in these clubs they expand their creative spirits through the mysteries of woodworking, machine tools, books, and musical instruments. Here they find their bent for future life. Here they conduct their own government and their own discipline. Here they receive constant sympathetic friendliness and guidance from a trained staff of devoted men and women. When they are in these rooms, mother has no anxieties and father broods over no homecoming chastisement.

These clubs are the greatest cure for delinquency in our country. I could prove it to you by the statistics from 300 cities. In one Chicago district alone, the number of boys in the hands of the police every year decreased from 80 percent to only 12 percent.

There are facts which cannot be ignored. The boy members of these clubs cannot afford streetcar or bus fares. Their walking distance is about 1 mile. Thus the clubs become a bright spot of decency within a 2-mile radius or a little more. And there are 3 million pavement boys in the United States. The Nation needs more of these clubs.

Today is the day of the Columbia Park Boys' Club. Its chairman, Mr. Costello, its board of directors of leading citizens, and its director, Mr. Julian Hargrove, have undertaken to erect this modern building and equipment at a cost of about $500,000. Their support has come from generous citizens of San Francisco, the contribution of materials from many manufacturers and contractors. And especially among these contributions has been the free labor from the labor unions. The club needs more support to complete its new building and its operation. That support costs less than police, the courts, and the reformatories, for here is a white spot in delinquency, a stimulant and a training and creation of good citizens. This will be a better city because of it.

My admiration goes out to all who have a part in it.

Score One for India

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 16, 1956

Mr. FULTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Pittsburgh Press of April 17, 1956:

SCORE ONE FOR INDIA

India has come forward with a suggestion somewhat more fitting to her avowed role of neutralism in the cold war.

India proposes a year's postponement of the nationwide elections in Vietnam, which had been set for July under the 1954 Geneva agreement ending the Indochina war.

This is sensible—if for no other reason than the fact South Vietnam won't agree to holding these elections. She is within her rights on this because she never was a signatory to the pact which turned over half the country to the Communists.

President Diem, of South Vietnam, contends the anti-Communist side couldn't get a fair count in these elections with the Reds controlling the more populous North Vietnam. He is supported in this stand by the United States and Britain. But he risks widespread criticism for blocking democratic processes.

Postponement of the issue for a year would save face all around. India's proposal should find ready acceptance, even from Russia.

Eighty-fifth Birthday Anniversary of Mrs. Elizabeth Lambert Wood

EXTENSION OF REMARKS
OF
HON. PAUL H. DOUGLAS
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Thursday, May 17, 1956

Mr. DOUGLAS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a news story from the Arizona Daily Star of Wednesday, March 28, 1956, concerning the 85th birthday of Mrs. Elizabeth Lambert Wood, who has devoted her life and material means to the benefit of mankind; and I also ask unanimous consent to have printed in the Appendix an article from the Glendale (Calif.) News-Press of Wednesday, March 14, 1956, describing the philosophy which has always actuated Mrs. Wood.

There being no objection, the news stories were ordered to be printed in the RECORD, as follows:

[From the Tucson (Ariz.) Arizona Daily Star of March 28, 1956]

MRS. WOOD WILL BE 85 SATURDAY—PHILANTHROPIST TO BE HONORED BY FRIENDS

Mrs. Elizabeth Lambert Wood—Mother Wood to thousands of southern Arizona youngsters—will be honored for her services to youth this weekend when she reaches her 85th birthday.

The pioneer rancher of the Oracle Mountain area will celebrate her birthday Saturday and on Sunday friends will gather at the Triangle Y ranch camp—the mountain area she donated to the Tucson YMCA—to congratulate her.

Mrs. Wood first gave Peppersauce Canyon, an attractive wooded area, to the city of Tucson and then later to the Salvation Army for a district camp. In 1948 she gave the Tucson Young Men's Christian Association her Crooked G ranch, which has been established as the Triangle Y ranch camp.

The camp has grown from 28 youngsters per period to a year-round program. Future plans call for a building program, including a conservation classroom and the establishment of an early western American museum at Mrs. Wood's Hilltop House. The museum's library will feature books on the early West, and writers, ministers, and others will be able to use it for research and writing.

At the Triangle Y camp this Sunday, from 2 p. m. to 6 p. m., many of Mrs. Wood's friends from southern Arizona will come to pay respects. The camp board of the Tucson YMCA has set aside the day as Mother Wood Day. Camp board president, Abe Chanin, has invited Tucsonans to visit the Triangle Y this Sunday.

Governor McFarland noted the occasion by congratulating Mrs. Wood and saying: "The impact of your life and worthwhile deeds on the community and its citizens is indicated in some degree by the spontaneous outpouring of affection by the people who honor you. I join the host of your friends in wishing you many more years of successful and happy living."

Mrs. Wood, whose grandfather developed the Lambert cherry in Oregon, is a pioneer of the Oracle Mountain area. She has written many children's books and poems.

She gives this as her secret of living: "I would say, have a good time at whatever you are doing, or have to do. As a child I laughed often. Glancing back over years of health and activity, I wonder if my laughing did not contribute to my sound mind and body."

[From the Glendale (Calif.) News-Press of March 14, 1956]

BYPATHS OF HISTORY

(By Guy Allison)

To what habits of living does an 85-year-old woman writer of "Wild West" stories attribute her buoyant outlook on life?

Among the remarkable persons with whom we have claimed warm friendship for years is Mrs. Elizabeth Lambert Wood, now spending the winter at her desert ranch near Oracle, Ariz. Mrs. Wood is a popular western story writer, daughter of the fruit grower who created the Lambert cherry, which is known all over our country. We both have summer homes within 10 miles of each other on the low lying peninsula which extends 27 miles northward from the mouth of the Columbia River. Never ceasing to wonder at the virility of mind and body of Mrs. Wood, this writer recently wrote to her and asked her:

"What have you discovered about the art of living?"

Here is the answer just received from this rootin', tootin', shootin' octogenarian.

"My long time friend, Guy Allison, author of this widely read column, traveler and historian, knowing that I am within a few days of my 85th birthday, asked me the secret of my active life at an age reached by relatively few people. Basically, I would say, have a good time at whatever you are doing, or have to do.

"As a child I laughed often, as the eighth of 10 children. My laughing often irked others, and I was frequently admonished, 'When you grow older life won't seem so funny.'

"Glancing back over years of health and activity, I wonder if my laughing did not contribute to my sound body which has never needed the touch of a knife. My life has been enjoyed in the company of the salt of the earth, beginning with a wonderful grandfather, my own father, my husband, son, daughter, grandson, sister, brothers, aunts and uncles, nieces and nephews. Through them I learned the priceless riches of family and friends.

"The greatest discovery of all? Have faith in God. I try to remember to accept His bounty with humility. Get as much excitement out of finding the first wild strawberry in spring, as in climbing a mountain or setting off for Europe.

"Blot out disappointment in people and events. Early learn to acknowledge that no competition confronts anyone except to outstrip himself. It is necessary in climbing

to see that those beside you are also happy in their work.

"Face danger unafraid, knowing that God is with you, directing you to meet the challenge. Pay bills promptly; keep your credit and conscience clean. Work for hours each day at something that delights you, that quickens your creative ability. Delight also in learning something worthwhile each day—perhaps the memorizing of some beautiful poem or the Sermon on the Mount.

"Get a thrill out of everything—eating, sleeping, working, visiting. This is a world in which each of us is essential. Again I say, above all, let your faith in God grow day by day. Daily whet your taste for beauty. Melt out of heart and mind every uncharitable estimate of your neighbor. First in the morning throw out the window all distaste for a job, your fellow workmen, and the world about us."

So we have from this dear friend a view of life which is most exhilarating. I thought you might enjoy hearing how she has attained such rich living at such an advanced age.

Indian Claims

EXTENSION OF REMARKS
OF
HON. JOSEPH C. O'MAHONEY
OF WYOMING
IN THE SENATE OF THE UNITED STATES
Thursday, May 17, 1956

Mr. O'MAHONEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter written by Oliver LaFarge, president of the Association on American Indian Affairs, Inc. The letter of the distinguished Mr. LaFarge was printed in the New York Times of Sunday, May 13.

I call attention to it particularly with respect to calendar No. 1748, H. R. 5566, to terminate the existence of the Indian Claims Commission, which has been favorably reported by the Committee on Interior and Insular Affairs. Its passage by the Senate, which I hope will come about at an early date, will do much to permit the settlement of Indian claims.

The letter of Mr. LaFarge is a distinct contribution to an understanding of the measure and its purpose.

There being no objection, the letter to the editor was ordered to be printed in the RECORD, as follows:

INDIAN CLAIMS SUPPORTED—JUSTICE DEPARTMENT CRITICIZED FOR SEEKING REVERSAL OF COURTS

(AUTHOR'S NOTES.—The writer of the following letter is president of the Association on American Indian Affairs, Inc. He is the author of Laughing Boy and other books about the Southwest.)

To the EDITOR OF THE NEW YORK TIMES:

Most Americans know that in past years the Federal Government has violated a series of solemn agreements with our Indian fellow citizens. Few realize, however, that the Indians today face a broken promise as outrageous as any in the Nation's history.

Until 1946 every Indian tribe was barred by law from seeking redress in the courts for wrongs done by the United States. As a measure of justice and humanity Congress then established a special commission to hear and finally determine all unsettled Indian claims. Acting in reliance upon that pledge of fair treatment, the tribes have vigorously prosecuted their claims for 10 years, including, in some cases, the expenditure of thousands of dollars of their own funds for research and legal expenses.

In 1955 the Otoe and Missouria tribe won a significant victory when the Court of Claims, affirming a commission holding, ruled that the Indians were entitled to compensation under the law for the taking by the Government of lands which they formerly possessed under so-called "original Indian title"; that is, ownership based upon exclusive use and occupancy, rather than upon "recognition" by the United States. The Supreme Court subsequently refused to review that decision.

DEFEAT WITHOUT TRIAL

The Department of Justice, which lost th Otoe and Missouria case on the merits, now is asking Congress to reverse the courts through legislation. Specifically, the department urges that the Indian Claims Commission Act be changed to eliminate original Indian title claims from its coverage. Any such amendment, if adopted, automatically would defeat more than two-thirds of the claims on file without even the formality of a trial.

The chief arguments of the Department in support of its position are not based upon justice or morality, but rather are based on the contention that Congress in 1946 did not intend to compensate Indians for the loss of lands held by original Indian title, and upon the supposed high cost to the Government of righting past wrongs.

The argument as to congressional intent originally was presented in great detail to the Court of Claims, and was flatly rejected by that court in a unanimous, carefully reasoned opinion. The argument as to the alleged excessive cost—purportedly $5 billion—utilizes not facts but estimates that are demonstrably exaggerated. Actual experience in prior Indian claims litigation indicates that these figures on possible judgments are more than 25 times the amounts which reasonably can be expected.

REPREHENSIBLE ACT

In seeking by false representations to scare Congress into revoking a remedial statute 10 years after it was passed, the actions of the Department of Justice are reprehensible on their face. At least equally disgraceful is the premise that their day in court should be withheld from an impoverished and deserving people because of the supposed high cost of doing justice.

Indians throughout the country took on new hope when the Indian Claims Commission was established. Through recoveries for old injuries, the tribes intended to finance the future social and economic rehabilitation of their members. To destroy these hopes by changing the law at a time when the claims are on the verge of final settlement would be a sorry breach of faith from which the Indians might not recover for generations.

OLIVER LAFARGE.

NEW YORK, *May 9, 1956.*

The Kansas National Guard Prior to World War I

EXTENSION OF REMARKS
OF
HON. ERRETT P. SCRIVNER
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 8, 1956

Mr. SCRIVNER. Mr. Speaker, our memories of national guardsmen in World War I and World War II, are apt to cause us to forget some of their earlier history, of which we are reminded in these stories of early day history which appeared in a special edition of the Kansas City Kansan, May 5, in connection with the dedication of a million dollar armory.

Citizens of Kansas City, Kans., guardsmen served along with units from other States on the Mexican border, as shown by this article:

CITY FURNISHED GUARDSMEN FOR DUTY ON BORDER

Kansas City, Kans., furnished an infantry company when President Woodrow Wilson ordered the National Guard into Federal service to guard the Mexican border following Pancho Villa's raid on Columbus, N. M., in 1916.

This was Company A, 1st Kansas infantry, which later became Company A, 137th Infantry, and was commanded by Capt. Archie Rupert.

The two Kansas infantry regiments mobilized at Fort Riley, Kans., early in June and were moved by train to Eagle Pass, Tex., where for several months they trained and did guard duty along the Rio Grande.

They were then moved to San Antonio, Tex., by truck, the first time in the history of the United States Army that an infantry regiment, with all its equipment, was moved from one station to another by truck.

A provisional division was formed in San Antonio and maneuvered to Austin and back. The soldiers, carrying full pack, covered the 180 miles round trip on foot.

While at Austin the troops were reviewed about September 1 by Maj. Gen. Frederick Funston, department commander, who was to die about 2 months later. The famous Kansas soldier had commanded the 20th Kansas volunteer infantry, an ancestor regiment of the 1st Kansas Infantry and the 137th Infantry, in the Philippines in 1899.

The two Kansas regiments were moved back to Fort Riley in November, and were mustered out of Federal service and back into State service.

And an earlier, less well-remembered conflict, the Spanish-American War, Kansas played a part, which is interwoven into the history of the 137th Infantry:

ONE HUNDRED AND THIRTY-SEVENTH INFANTRY LINEAL DESCENDENT OF OLD 20TH

The present 137th Infantry of the Kansas National Guard is the lineal descendent of the 20th Kansas Volunteer Infantry Regiment which served in the Spanish-American War and the Philippine Islands.

And it has been assigned the battle streamers and other honors of the famous 20th Kansas Regiment.

At the outbreak of the Spanish-American War, Kansas City, Kans., was the home station of an infantry company of National Guard and rather than order out the existing regiments intact, Gov. John W. Leedy, of Kansas, ordered the recruiting of additional volunteer regiments for Federal service.

There was considerable controversy concerning the order and the result was that whole companies of national guardsmen enlisted as groups in the newly formed regiments. The extent of the enlistments was so great that the Department of the Army has officially recognized the present 137th Infantry Division as the lineal descendant of that regiment.

Company B, of the 20th Kansas Regiment, was from Kansas City, Kans., and probably is best remembered through the exploits of one of its late citizens, Sgt. William B. Trembley, who was awarded the Medal of Honor while a member of that unit. Although the regiment did not arrive in the Philippines until after the peace treaty with Spain had been signed, the Philippine In-

surgents had revolted and that regiment participated in the campaign to quell the revolt.

The regiment was commanded by Frederick Funston, who held the rank of colonel at that time, and he, Sergeant Trembley, and Edward White were awarded Congressional Medals of Honor for their activities in the crossing of the Bag Bag River in the Philippines.

Following the Spanish-American War, the regiment was reorganized as the 1st Infantry, Kansas National Guard, which later became the present 137th Infantry, Kansas National Guard.

House Leaders To Be Joint Commencement Speakers at Syracuse University on June 4

EXTENSION OF REMARKS
OF
HON. R. WALTER RIEHLMAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 17, 1956

Mr. RIEHLMAN. Mr. Speaker, yesterday I announced to the House that two of our most distinguished legislators are to receive honorary degrees from the Syracuse University on June 4. Today, I wish to bring to the attention of the Members of the House, through the RECORD, an editorial and an article which appeared in the Syracuse Herald-Journal relating to this forthcoming event:

[From the Syracuse Herald-Journal of May 8, 1956]

CONGRESS LEADERS TO GIVE ADDRESSES AT HILL GRADUATION JUNE 4—RAYBURN, MARTIN HONORED—INVITATIONS ACCEPTED

The Democratic and Republican leaders of the House of Representatives have accepted bids to be joint commencement speakers at Syracuse University on Monday, June 4.

Speaker SAM RAYBURN, Democrat, of Texas, and former Speaker JOSEPH W. MARTIN, of Massachusetts, will share the commencement platform and receive honorary degrees.

This was confirmed today by the Herald-Journal's Washington Bureau. Official announcement by Syracuse University is expected tomorrow. Last year's speaker was Governor Harriman.

RAYBURN and MARTIN, bachelors and personal friends, have been playing musical chairs in Congress for many years. When Democrats control the House, RAYBURN is Speaker. When Republicans take over, MARTIN wields the gavel.

LONG TIME IN OFFICE

The two men presided at their parties' national political conventions in 1952 and are expected to play the same roles at the 1956 conventions in August.

RAYBURN, a lawyer, has the longest consecutive service in Congress, 22 terms or 44 years. Previously, he served in the Texas Legislature.

MARTIN, a newspaper publisher, has served 16 terms or 32 years, and is outranked in service by only 4 Republicans, including Representative JOHN TABER, of Auburn, and Representative DANIEL REED, of Dunkirk. MARTIN served in the Massachusetts Legislature before moving to Washington.

RAYBURN, who was 74 on January 6, is almost 3 years older than MARTIN, who won't reach his 72d birthday until November 3.

PARTY RULERS

MARTIN is an easygoing, pleasant man who can be tough on occasion, but RAYBURN never lets down ruling his party with an iron hand.

He won a victory in the Texas primary this week, teaming up with his protege Senate Majority Leader LYNDON JOHNSON, to take control of the Texas delegation to the national convention away from Governor Allan Shivers.

Representative MARTIN has spoken in Rochester on several occasions, but his visit next month will be his first to Syracuse, at least in recent years. It will also be Speaker RAYBURN's first visit to Syracuse.

[From the Syracuse Herald-Journal of May 9, 1956]

NO ALPHONSE GASTON ACT, BUT AN AMERICAN POLITICAL TRADITION

Syracusans and central New Yorkers, along with the other guests of Syracuse University, are in for a treat at next month's graduation exercises: Two landmarks of American politics in their familiar pose of sharing the same rostrum.

Some of us would hesitate to issue a joint invitation to two Members of the House of Representatives who lead opposing factions. But SAM RAYBURN, of Texas, and JOE MARTIN, of Massachusetts have been sharing the Speakership of the House, at least working in tandem for so long, that what would be more natural, even during a partisan election year?

Speaker RAYBURN doesn't visit the White House these days as often as Minority Leader MARTIN. We read his comments, and after the war, saw him on TV, from 1940 on until MARTIN first succeeded him as Speaker in the 80th Congress. They've exchanged gavels once more since then (in the 83d), and it is Speaker SAM, now, and, JOE MARTIN is the voice of the minority.

Both men are in their early 75's. Both have been so long identified with the House of Representatives that we find it difficult to recall a session when their names didn't appear on the roster.

You have to go back to 1913 when Champ Clark, of Missouri, was ruling the House with an iron hand to find the first RAYBURN entry in the CONGRESSIONAL RECORD. JOE MARTIN went to Congress 16 years later, being first elected to the 69th in 1925 when Nicholas Longworth, of Ohio, was Speaker.

Every 4 years, the Speaker and the minority leader, no matter who bears the title, part company. That's at national convention time. Both blossomed into gavel wielding stars in 1952.

They part company, too, on votes and issues usually on something like tariffs or farm aid. When they give the sign, however, appropriation bills sail through like greased lightning. Or any measure they deem "for the good of the Nation" which has been often in the years of war and of a nervous peace.

It is natural, and appropriate, they should appear on the Syracuse University stage. After all, that has become a habit with SAM RAYBURN and JOE MARTIN. Note, too, we haven't had to employ the identification of Republican or Democrat once. There was no need.

The Small Business Committee

EXTENSION OF REMARKS
OF
HON. WILLIAM S. HILL
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 17, 1956

Mr. HILL. Mr. Speaker, I was flattered that my friend and associate on the Small Business Committee of this House required yesterday nearly 7 pages of the RECORD in response to some suggestions I made on this floor quite recently.

However, in thousands of words of talk for the RECORD, I must insist that the gentleman from Texas [Mr. PATMAN] failed to answer my points satisfactorily.

I said in my suggestions that the full committee has not held a single meeting during the first 5 months of this session of Congress, except for a short assembly in pursuance of the resolution for more money to spend in investigations.

I have not yet heard any answer as to why the committee has no meetings.

Why have a committee that does not meet?

My second point was the subcommittees of small business are wandering far afield from matters pertaining to small enterprise and invading areas of which are properly the concern of standing committees of this House.

Here again there was lament and protest but no explanation or expression of regret.

My third point was that much of the $330,000 granted by this House for use of the committee was wasted in pursuits as useless as a fox-terrier dog chasing the community cats. I said, and I repeat, we have reams of pages covering hearings, but not as many pages of report as might be found in a small-town telephone directory.

I say again to my worthy chairman and friend: When do we meet as a committee; when do we agree on an agenda within our realm, and when do we report on the matters that cost so much of the public money?

Two Vital Hearings on Air Routes

EXTENSION OF REMARKS
OF
HON. WILLIAM S. MAILLIARD
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 17, 1956

Mr. MAILLIARD. Mr. Speaker, under the present air-service pattern, no airline is certificated to furnish direct service from the San Francisco Bay area to Tokyo and points beyond. To allow the natural development of business and social association between our residents and the Orient, it is vitally important that approval of Pan American World Airways, Inc., application be granted by the Civil Aeronautics Board, which is currently conducting hearings on this case. I am submitting the following editorial, from the San Francisco Examiner, substantiating the need we have for this service and that of the great circle route from the west coast to London, Paris, and beyond:

[From the San Francisco Examiner of May 8, 1956]

TWO VITAL HEARINGS ON AIR ROUTES

Two hearings this month will go far toward determining how important a place San Francisco shall hold on the great world air routes of the future. Success in both

hearings is, we believe, essential to the city's role as an international trade center.

The Civil Aeronautics Board will reopen hearings in Washington May 15 on Pan American World Airways' application to fly great circle to Tokyo. The following week hearings will be held here on the applications of Pan American and Trans World Airlines to fly great circle from the west coast to London, Paris, and beyond.

The stake is great because, as jet passenger planes come into service, the shorter great circle lanes will get more and more of the travel now moving along the earth's waist. More and more cities will be overflown because of increasing flight ranges. The cities that nail down places as terminals on these great circle routes will emerge as the international air centers of tomorrow.

Though for a year the city has been pursuing, with great success, a policy of fighting aggressively for new routes and services, the policy came too late to keep San Francisco abreast of its neighboring cities in the great circle competition. Los Angeles has a phenomenally successful great circle service to the Scandinavian countries; Seattle has one to the Orient.

Success in the forthcoming hearings would enable San Francisco to catch up and even develop a lead over its neighbors. For instance, Pan American's proposed schedule on the great circle to Europe would start and finish here 4 of 7 weekly flights, and the other 3 would land here. On the same line's proposed great circle to Asia, San Francisco would remain the major terminal as it is now on the longer waist route.

It should be so. The San Francisco area presently generates the largest single volume of traffic to and from the Orient. And, much to everybody's surprise, the CAB's most recent study showed this area generating more traffic to Europe than the Los Angeles area.

We are glad to report that city and civic officials here (and in surrounding cities too) are alert to the importance of the hearings. They are prepared to push hard. We are also glad to note that the San Francisco Chamber of Commerce is sending an official to New York this week to make personal bids to Sabena Belgian Airlines and KLM, Royal Dutch Airlines, both of which are eyeing the west coast. This is the kind of aggressiveness that wins commercial air battles.

Supplemental Appropriations of the Department of Agriculture for the Mediterranean Fruitfly

SPEECH
OF
HON. PAUL G. ROGERS
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 14, 1956

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 11177) making appropriations for the Department of Agriculture and Farm Credit Administration for the fiscal year ending June 30, 1957, and for other purposes.

Mr. ROGERS of Florida. Mr. Chairman, I want to express gratification for the prompt action which the Congress has taken to meet an emergency situation in Florida which can have dire consequences for the entire Nation and particularly the southern one-third of the United States. I speak of the discovery of the Mediterranean fruitfly in Florida which was located in Miami but has now been found as far north as west Palm Beach, which is in my own congressional district. As soon as the first word of the discovery of the Mediterranean fruitfly in Florida was heard, the State of Florida went into action, as well as the Florida congressional delegation, which called upon the Department of Agriculture to lend all possible aid. I want to commend not only the State of Florida, but the Department of Agriculture as well, for the very fine cooperation that has been extended and is continuing to meet this problem.

Senator HOLLAND, who is a member of the Appropriations and Agriculture Committees of the Senate, joined by Senator SMATHERS, presented the problem to the necessary committees of the Senate and had the experts from Florida and the Department of Agriculture to explain the extent of the problem. Our own House Agriculture Subcommittee of the Appropriations Committee, headed by its very able chairman, Hon. JAMIE L. WHITTEN, when contacted by the Florida House Members, was most sympathetic to our problem. The gentleman from Mississippi [Mr. WHITTEN] took the unusual step of opening up his committee's hearings, which had already been concluded, to allow testimony to be presented to the committee so that the emergency situation could be dealt with effectively. I think this is one of the finest examples of showing how rapidly Congress can and does step forward to meet those situations which are in the national welfare. I want to commend the Appropriations Committee for expressing its concern about the discovery of the Mediterranean fruitfly in south Florida. The committee stated in its report:

> The committee is concerned about the recent discovery of the Mediterranean fruitfly in southern Florida. It feels that every necessary action must be taken immediately to control and eliminate this threat to the citrus industry of the country.

In the appropriation bill reported from the committee, and acted upon by the House, increases are given for $500,000 for the contingency fund for emergency outbreaks of insects; $500,000 to be transferred to the Bureau of Customs for increased baggage checks to prevent importation of dangerous insects; and $110,300 for increased inspection at ports of entry.

As I stated at the beginning, the Mediterranean fruitfly has now been found in West Palm Beach, which is some 70 miles north of the first located infestation in Florida. This means that the problem is larger than first anticipated, and I feel that we will have to call upon the Congress for additional funds when the full extent of the infestation is known. Work is going ahead rapidly now to discover this information. I feel sure that the committee which has acted so promptly in initiating a program to combat the Mediterranean fruitfly, will give the same careful consideration to requests for supplemental appropriations so that this infestation may be completely controlled.

Department of Health, Education, and Welfare—Personal Property Made Available for Distribution to and Real Property Disposed of to Educational and Public Health Institutions, January 1 Through March 31, 1956

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 17, 1956

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD I include a report from the Department of Health, Education, and Welfare showing a State-by-State list of real and personal property distributed during the quarter January 1, 1956, through March 31, 1956. This property was made available to educational and public-health institutions in accordance with Public Law 61 of the 84th Congress:

Department of Health, Education, and Welfare—Personal property made available for distribution to and real property disposed of to educational and public health institutions, Jan. 1 through Mar. 31, 1956 (acquisition cost)

[In accordance with sec. 5, Public Law 61, 84th Cong.]

States	Personal property	Real property	Total
Total	$54,716,724	$3,006,998	$57,723,722
Alabama	1,327,895		1,327,895
Arizona	659,147	53,567	712,714
Arkansas	487,735	3,538	491,273
California	5,016,531	193,715	5,210,246
Colorado	557,238	14,805	572,043

The Dairy Industry

EXTENSION OF REMARKS
OF
HON. FRED MARSHALL
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 8, 1956

Mr. MARSHALL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the May 1956 issue of the Nation's Business, a publication of the Chamber of Commerce of the United States:

AGRICULTURE

Although milk production is expected to exceed last year's record by another 2 percent or 3 percent, the consumption of total fluid milk has increased even more. As a result farmers were receiving slightly higher prices for their dairy products while Government purchases and stocks have declined.

The possible effects on future market prospects of raising of price supports on dairy products may be found by reviewing the past 3 years. For the marketing year beginning April 1, 1953, manufacturing milk was supported at $3.74 per hundredweight, 90 percent of parity; actual average price received was $3.46. CCC bought 11,200 million pounds (milk equivalent) of dairy products at the support price. In 1954 the support price dropped to $3.15, 75 percent of parity; the average price was $3.16. CCC bought only 5,700 million pounds. Last year the support price remained at $3.15 and the average price rose to $3.19. CCC bought 4,600 million pounds.

As of March 28, 1956, excess stocks of cheese and nonfat dried-milk solids were less than one-fifth of the peak inventory built up under 90 percent supports.

Thus it appears that stable and improved dairy farm incomes depend on greater production efficiency, merchandising effort and competitive prices, and a minimum of price-depressing accumulation in Government stocks.

While most of the figures given in the article are true, it would seem that the conclusions reached are misleading. On March 28, 1956, the Commodity Credit Corporation had 225.7 million pounds of uncommitted stocks of cheese and 40.7 million pounds of uncommitted stocks of nonfat dried milk. The peak inventory of cheese was reached on September 29, 1954, when the CCC held a total of 435.7 million pounds. Peak inventory of nonfat dried milk was reached on April 28, 1954, when the CCC held a total of 599.3 million pounds. As of March 28, 1956, excess uncommitted stocks of cheese and nonfat dried milk were, therefore, a little more than one-fourth of the peak inventory.

The article gives the impression that there is no longer a dairy problem. If the following information is considered along with the chamber of commerce article, we get a truer picture of the dairy industry.

For the fiscal year ending June 30, 1954, the CCC loss on dairy price support operations was $130,704,719.

For the fiscal year ending June 30, 1955, the loss was $440,274,495.

For the 1956 fiscal year from July 1, 1955, to January 31, 1956, the loss has been $250,101,280 and 5 months of this fiscal year are not included in this figure. Purchases by CCC during April and May of this year have been considerably larger than a year ago.

E. M. Norton, secretary of the National Milk Producers Federation, has said that dairymen suffered a $600 million a year setback when price supports were dropped to 75 percent of parity in April 1954. Since then they have been battling a serious price-cost squeeze. If the $600 million is added to the loss by the Government on price-support operations since April 1954, the impact on the national economy caused by the drop in price supports is more evident.

It is true that the consumption of both fluid milk and manufactured dairy products has increased among the nonfarm population in the past 2 years, but it is interesting to note how much of this increase has been due to Government donations of dairy products and the special school milk program and not to the reasons given in the last paragraph of the above article. Per capita consumption of all dairy products in 1953 was 682 pounds of which 14 pounds came from CCC donations and other programs.

In 1954, the total per capita consumption of dairy products was 691 pounds of which 21 pounds came from CCC donations and other programs.

In 1955, the per capita consumption of dairy products was 699 pounds of which 29 pounds came from CCC donations and other programs such as the special school milk program.

In other words "merchandising effort and competitive prices" accounted for an increase of 2 pounds per capita in 1954 and 1955, over 1953. There was no increase at all in per capital consumption from commercial sources in 1955 over 1954.

The fact that farmers have shown "greater production efficiency" is borne out by the fact that production increased from 123.5 billion pounds of milk in 1955 to an estimated 127 billion pounds for 1956.

After reviewing the above facts and figures, we are still wondering if it would not have been possible to carry out the same kind of a program under 90 percent price supports.

Concentration of 95 Percent of Federal Research Funds in a Few Big Firms To Be Investigated by Select Committee on Small Business

EXTENSION OF REMARKS
OF
HON. STEWART L. UDALL
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 17, 1956

Mr. UDALL. Mr. Speaker, Harlow H. Curtice, president of General Motors Corp., said yesterday that United States leadership in the free world depends on speeding technological progress. Speaking at the dedication ceremonies for GMC's new $100 million technical center in Detroit, Mr. Curtice warned that our country was engaged in a great competitive struggle for survival and was being challenged particularly in the technological area. "We must put more emphasis on basic research, pure research," he declared.

During the past 5 years, as my friend and colleague FRANK THOMPSON, JR., Democrat, New Jersey, pointed out in a speech on the floor on May 9, the United States has spent $22 billion on such research, nearly half the total amount spent in such pursuits since 1860. One of the things which disturbs me most is the revelation that in the 7 months ending January 31, 1956, the Department of Defense awarded research and development contracts amounting to almost $1 billion, to be more precise, $982 million, and of this huge sum only 5 percent went to firms having 500 employees or less.

At the conclusion of the discussion, in which several Members of the House participated, Chairman WRIGHT PATMAN, of the Select Committee on Small Business said:

I assure the gentleman from New Jersey, however, that our committee will do all it can to gather revealing information on this important subject and report this information to the House.

The response to this discussion has been exceptional and I include here some of the comments that have been made upon it as well as a letter from George J. Burger, Jr., of the National Federation of Independent Business. The text of Congressman THOMPSON's legislative measure, House Resolution 452, to authorize the Select Committee on Small Business to investigate and study the problems of small business with respect to basic and applied scientific research and development work is also included:

[From the Trenton Evening Times of May 16, 1956]

STRANGLING SMALL BUSINESS

Even the most casual study of bankruptcy statistics, a dismal subject at best, inspires genuine anxiety concerning the future of small business. Independent business enterprises with moderate resources are finding the struggle for survival increasingly difficult and it is becoming distressingly apparent that they are not helped by administration policies.

The problem of the weakening position of small business in the Nation's economy inspired forthright and enlightening discussion in Congress a few days ago when Representative THOMPSON, of New Jersey, introduced a resolution calling for an investigation of the amount and proportion of funds distributed by Federal departments and agencies for research and development facilities.

Introduction of the resolution had been preceded by a great deal of revealing inquiry and was followed by a discussion which accented in striking fashion the extent to which Federal research funds are devoted to the interests of big business. In fact, as Representative THOMPSON charged, 95 percent of Government money for this purpose is concentrated on the research activities of a few great enterprises.

"Obviously," as he insisted, "these firms that are able to have a substantial part of their experimental and research and development activities financed by the Federal Government will have a great lead, sometimes an insurmountable lead, in the commercial race."

Research is as essential as it is expensive. Without it an industry cannot keep pace with the march of progress. When great corporations have this vital cost assumed for them by the Federal Government, their advantages in the competitive field are increased immeasurably.

The great disparity in allocations of money for this purpose constitutes an injustice with fatal possibilities with respect to the survival of relatively small-business enterprises. Mr. THOMPSON has accordingly performed an important public service by raising the issue so effectively in Congress.

[From the Newark News of May 14, 1956]

CAPITAL COMMENT

(By Thomas L. Stokes)

HOUSE EXPLORES PRIVATE RESEARCH WITH TAX MONEY

WASHINGTON.—The House of Representatives recently took a look at one aspect of the growth of big-business control of our economy and our Government which, strangely enough, is nurtured by public money provided by all of us as taxpayers.

Soon after the discussion in the House about the outlay of Government money for scientific development and research, and how the bulk of it goes to a few corporations, former President Harry Truman coined a phrase for this spreading control of big business over our Government. He called it "a new feudalism" in a message to the annual convention of Americans for Democratic Action.

Said Truman, "Centers of private power, beyond democratic control are exerting greater and greater influence over our national life, driving small business to the wall and strangling individual enterprise."

DISCERNS DANGER

Two days earlier in the House Representative THOMPSON, Democrat, Fourth District of New Jersey, had precipitated the discussion of Government research money and what happens to it. Recognizing the need of a big-scale research and development program, most of which is for defense, he warned of the danger to the free competitive enterprise system in the way the Defense Department is funneling most research contracts to big companies.

For example, the Department's figures for the 7 months ending January 31, this year, show that only 5 percent of nearly a billion dollars in research contracts during that period went to firms having 500 or fewer employees. It was pointed out during the debate by Representative PATMAN, Democrat, of Texas, chairman of the House Small Business Commitee, that "this 5 percent of the money could be compared with about 45 percent of the manufacturing activities carried on by firms with less than 500 employees."

The increasingly large contribution of our taxpayers to research by private companies was revealed in figures presented by Thompson. They showed that, of the $4.21 billions expended for research and development in 1955—which compares with $1.75 billions in 1946—the Federal Government contributed $2.42 billion or 57 percent. Private industry supplied 41 percent—$1.71 billion. The rest came from nonprofit institutions. While Government, itself, did most such research not many years ago, now 75 percent is done by private industry and a large part of that at public expense.

OTHER ADVANTAGES

Along with the money, the favored corporations get other advantages that help them to expand their control over our economy. As explained by Thompson:

"Obviously these firms that are able to have a substantial part of their experimental and research and development activities financed by the Federal Government will have a great lead, sometimes an insurmountable lead, in the commercial race. The firms that receive the research and development contracts are in a position to hire, preempt and control the available research personnel, the supply of which, as we know, is now critically short. These companies will gain the know-how and have the inside track with new products and new processes.

"Furthermore * * * when the Department of Defense grants a contract for research and development work, it actually allows the private firm receiving the contract to take out the patents on patentable inventions it makes with the use of Government money."

NATIONAL FEDERATION OF INDEPENDENT BUSINESS,
Washington, D. C., April 5, 1956.

Hon. FRANK THOMPSON, Jr.,
House of Representatives,
Washington, D. C.

DEAR MR. THOMPSON: I have talked with our president, Mr. C. Wilson Harder, about your March 30 letter, and he has asked me to tell you that he is personally much in accord with your idea of promoting a study into the problem of federally financed research and development work and all its ramifications into the business world.

Beyond doubt, findings resulting from such a study could have much value in helping the Congress to appraise the role smaller, independent business can play in connection with these contracts and in connection with work resulting from such activity. At the same time it could go far toward helping to remove whatever arbitrary roadblocks have been thrown in small business' path.

It goes without saying that many of the helpful innovations which have strengthened our productive muscle have come right out of the minds and work of smaller businessmen. This segment of our economy continues to have a tremendous potential in this direction, provided its capabilities are fully used.

Mr. Harder has asked me to remind you, however, that since it is our policy to take a stand on legislation only after polling our membership, and that since we have not had a chance to poll our members on your bill, he cannot commit the Federation as an organization. Perhaps if we had had some earlier notice we might have been able to poll, just as we are polling currently your and Senator FULBRIGHT'S tax reduction bills, and possibly, assuming membership favorable vote, secure the widespread expressions you desire.

We know you understand our position, and with very best wishes,

Sincerely,

GEORGE J. BURGER, Jr.,
Assistant to President.

[From Labor]

NEWS OF CONGRESS—SENATE GROUP TRIMS DOWN PENSION BILL AS IKE ASKED—MILITARY FUNDS HELD AMPLE; CHARGE UNCLE SAM HELPS MAKE "BIG BIZ" BIGGER

(By Albert H. Jenkins)

MAKES "BIG BIZ" BIGGER

Some significant facts and figures on how Uncle Sam's huge expenditures for scientific research and developments are distributed were given to the House this week by Congressman FRANK THOMPSON, Jr., Democrat, New Jersey. Among them were these:

1. In the year beginning next July, the Government will provide $2.2 billion for research. Of each dollar, 85 cents will go for developing new weapons, and only 15 cents for studies and improvements in such fields as labor, health, welfare, commerce, and agriculture.

2. Last year, the Federal Government provided 55 percent of the $4.2 billion spent on research, and private corporations put up only 41 percent.

3. Of the Government's research billions, 95 percent is going to a few big corporations, and only 5 percent to smaller firms.

4. The big corporations get the patents on discoveries and developments they make with the Government's money, THOMPSON pointed out.

He said these patents, and the big corporations' almost complete monopoly of Government research money, are helping to make big business still bigger and more powerful.

Resolution

Resolved, That the select committee to conduct a study and investigation of the problems of small business, created by H. R. 114, acting as a whole or by subcommittee is authorized and directed to conduct a full and complete investigation and study of (1) the amount and proportion of funds distributed by Federal departments and agencies for research and development facilities and work to the various segments of industry and the various size and classes of firms, (2) the methods, standards, and criteria being used by the Federal departments and agencies for distributing such Federal funds among various competing firms and size and classes of firms, (3) the methods and procedures adopted by the Federal departments and agencies to safeguard the interest of small business in research and development work and to assure broad participation by such firms in federally sponsored and federally aided research and development programs, and the extent of the success of such methods and procedures, (4) the extent to which the award of Federal research and development contracts determines the distribution of Federal contracts for procurement of supplies and services, (5) the extent to which the granting of Federal funds for research and development work influences or determines the employment by small business of scientific and technically trained research personnel, and (6) the procedures and methods in use by Federal departments and agencies concerning the assignment of patents and the licensing of patented inventions made or developed with the assistance or use of Federal funds.

The committee shall report to the House (or to the Clerk of the House if the House is not in session) as soon as practicable during the present Congress the results of its investigation and study, together with such recommendations as it deems advisable.

For the purpose of carrying out this resolution the committee or subcommittee is authorized to sit and act during the present Congress at such times and places within the United States, whether the House is in session, has recessed, or has adjourned, to hold such hearings, and to require, by subpena or otherwise, the attendance and testimony of such witnesses and the production of such books, records, correspondence, memoranda, papers, and documents, as it deems necessary. Subpenas may be issued under the signature of the chairman of the committee or any member of the committee designated by him, and may be served by any person designated by such chairman or member.

Problems Confronting Union Members in Coming Elections

EXTENSION OF REMARKS
OF
HON. HERBERT H. LEHMAN
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Thursday, May 17, 1956

Mr. LEHMAN. Mr. President, on May 3, W. P. Kennedy, president of the

Brotherhood of Railroad Trainmen, one of the most distinguished labor leaders in America, addressed a meeting of the New York State legislative board of the Trainmen's Union. The meeting was at Albany, N. Y.

In the course of that speech, Mr. Kennedy made a number of political observations on the duties and problems that confront union members in regard to the coming elections. Mr. Kennedy was kind enough to make some remarks about me. I do not know whether I deserve the gracious tribute paid me by him, but I value it coming from a friend and from a man whom I so greatly respect and admire. I have not yet made up my mind whether I am going to be a candidate for reelection to the United States Senate, but whether I run or not, I will always value this expression of confidence by Mr. Kennedy.

Mr. President, I ask unanimous consent that Mr. Kennedy's speech, which includes many important observations quite beyond the passing reference to my possible candidacy, be printed in the Appendix of the RECORD, as it appeared in a recent issue of the Trainman News, the official publication of the Brotherhood of Railroad Trainmen.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

[From the Trainman News of May 7, 1956]

LET'S POOL OUR VOTES, SAYS WPK—BACKS LEHMAN FOR SENATOR IN NEW YORK

ALBANY, N. Y.—Collective efforts have been the salvation of labor in improving working conditions and wages, and the same collective effort must be turned to the needs of politics and government.

That message was given by President W. P. Kennedy at a luncheon during the reorganization meetings of the New York State Legislative Boards of the BRT and LA here May 3, where he also gave a hearty endorsement to Senator HERBERT H. LEHMAN, Democrat, of New York, who is up for reelection.

The business of government is, or should be, the concern of all, he said, and added that the best way to do an efficient job after registering and voting is to pool our political efforts with those of others, in groups and through such groups in political parties.

He called for an expansion of that political unity in supporting Senator HERBERT H. LEHMAN, Democrat, of New York, and other liberal candidates in New York.

"The great Empire State of New York has its important and impressive quota to be nominated and elected this year. Your United States Senator up for election is truly a great man—a big man in the affairs of our Nation. His outstanding services as your governor for several terms has been dwarfed by his aggressive, militant and statesmanlike conduct in the United States Senate," said President Kennedy.

FINEST RECORD

"The record of independence, honesty, integrity, courage and vigor of my good friend and New York's Senator, the Honorable HERBERT H. LEHMAN, is such that he deserves renomination and reelection by an overwhelming approval of the voters of this great State. His election is sorely needed, not only for you in New York, but for all America and for the world at large.

"We need and should have HERBERT LEHMAN in the United States Senate to lend his able assistance in the cause of liberty and justice. He is one of our best friends—not only of labor, but for all of the people. He is rightfully termed 'the Conscience of the United States Senate.'

"The election of liberals as President, Vice President, and in the Senate would be ineffectual without a substantial majority in the House of Representatives.

"The New York delegation in the House consists of 45 Congressmen—the largest delegation. It is very important that the New York liberal Congressmen be renominated and reelected—and the reactionaries, often referred to as the old guard, be defeated, if possible in the primary, and certainly in the general election.

"There is a definite trend toward the nomination and election of candidates who will serve all of the people. New York needs more Congressmen who help in the House like Senator LEHMAN does in the Senate."

The BRT and LA, said President Kennedy, will continue their age-old custom of being nonpartisan in elections. Members of the brotherhood are active in all political parties, he said, except the Communist, and of those "We do not want any. They would find our membership hard and difficult to get along with."

The BRT has developed a good habit of scanning the record of political issues of vital interest to workers, the farmers, and the people in general, he said, and from this search decisions are made on supporting candidates.

Elections this year are of grave importance locally, in the Nation and over the world, said President Kennedy.

"In a world endangered by Communist influence abroad and with economic uncertainty and political confusion at home, the stakes in the primaries and in the general elections this year are enormous. * * * We should insist that the major political parties nominate their most qualified candidates and include planks in their platforms on the important domestic and foreign issues before the American people," he said.

"We in the labor movement, in the farm organizations, and in the civic groups must do our part in presenting the issues clearly and understandingly to the people."

He warned of the dangers of complacency, and pointed to the experience in 1946 when a complacent vote gave us the terribly bad 80th Congress and the Taft-Hartley law and uneven and unfair tax laws.

"In other instances we have watched national administrations almost forget the workers and the farmers in their eagerness to serve their small clique, who appeared to be their heaviest campaign contributors," he said.

"We must overcome the complacencies of the past. We must all qualify and vote. It's the wise thing to do. It's the only way we can assure ourselves of holding our economic and social gains of the past 2 decades. It's our only chance to go forward to the better ways of living—we cannot stand still, we either move forward or backward—and who among us wants to go back to those demoralizing days of the 1930's?

"WORLD IS WATCHING

"People throughout the world, who love liberty and want its freedoms preserved are anxiously watching and waiting the results of our primaries and elections. We must not fail them. We must not fail ourselves. There is so much depending on what we do in America this year.

"The office of the Chief Executive of the United States is a most important one. On the shoulders of our next President will rest the responsibility for the general welfare and the preparedness of our 166 millions of people and there will be millions and millions of people in the critical areas of the world who will look hopefully to America for guidance.

"The next four critical and difficult years will require a lot of hard and vigorous work. As much as we may desire to do so, there just isn't any plausible way of successfully delegating the important and essential duties of our chief executive. We cannot accept the idea that our national administration can be liberal in its foreign policies and at the same time serve the most decadent reactionaries at home.

"We want and we need a President who will serve all of the people, not just a privileged few—one who believes that our great natural resources belong to—and should be used for—all of the people, instead of being given away for exploitation by selected groups or individuals for personal gain. Our next President should be a person who believes that what is good for the workers, the farmers, the housekeepers, and the small business people, is also good for America.

"We regard the office of the Vice President as one of importance—not to be offered as a consolation prize. Events of the past months makes us more than ever conscious of the importance of an office, whose occupant is only a heartbeat away from that of the Chief Executive.

"We deplore a political expediency whereby a liberal is counterbalanced with a conservative as a candidate for Vice President, or vice versa. The succession in office makes both the President and the Vice President equally important. The people should so regard it, even if the politicians have no regard for the desires of the people.

"While we discuss the importance of national officials, we must not overlook the national officials to be elected from the several States. Along with the President and Vice President, there will be 33 United States Senators and the entire House of Representatives—435—a delegation from each State."

The task ahead is big, he said, but it need not be so difficult if each individual does his or her share by voting in all elections, and pool their voting with that of others seeking the same goal.

BACK MAN, NOT PARTY

The most important thing, he said, is voting for the candidates who serve your interests, regardless of their party affiliation.

"Our labor unions were put at an unfair disadvantage by our enemies who controlled the 80th Congress and passed the Taft-Hartley law over the veto of the President. That act, among other antilabor provisions, amended section 313 of the Corrupt Practices Act, by putting labor unions in with national banks and corporations organized under the authority of Congress," said President Kennedy.

"To overcome the restrictions of the Taft-Hartley law we organized the Trainmen's Political Education League. The league provides facility whereby the members, employees, and friends of the brotherhood can legally carry on needed nonpartisan political activities in support of favorable candidates for public office.

"TPEL affords you and your friends the opportunity to effectively take an active part in the selecting of capable public officials who will be friendly to your interests.

"It is the best way you can help keep your Government working for all of the people. We must ever be alert to the fact that a TPEL contribution is needed from each of you and from each member of your lodge. Our friendly candidates need financial support. We can give that needed support through TPEL. A membership card is issued to all making a contribution of $1 or more."

He cited some of the vital issues facing the Nation—will power companies be given franchise to sell publicly created power from the Niagara Falls development?

Or will we follow the fine Canadian example, where the people get full advantage of public power through the Ontario Public Power Authority?

GOP GIVEAWAYS

He hit hard at GOP administration efforts to give away natural resources at the Hells Canyon site, attempts to destroy progress made in public power, flood control, and conservation.

"We must take care," said President Kennedy, "or we will be seeing national scandals that will make the Teapot Dome-Fall-Doheny scandals of the early twenties look like pink tea parties in comparison."

America is full of traditionally liberal, militant people, he said, people who love the good life of freedom and abundance for all.

"We want to conserve, at any cost, our invaluable heritage of time-tested customs and institutions in the forward march to economic, social, and political security."

President Kennedy went on to say:

"Thomas Jefferson recognized the forces of liberalism and reaction when he wrote, 'Men by their very constitutions are naturally divided into two parties, those who fear and distrust the people and wish to draw all powers from them into the hands of the higher classes; and those who identify themselves with the people, have confidence in them, cherish and consider them as the most wise depository of the public interest.'

"Our political party alinements are not so well defined as in the quotation from Jefferson. We have liberals and reactionaries in both the Republican and Democratic Parties. That is why we, as a labor union, must remain nonpartisan—supporting liberals where we find them in both parties. In that way we attempt to meet the challenges of our time by courageously joining with those who believe the people to be the best depository of the public interest.

"If I were a voter in New York, I don't see how I could turn in any direction but to the Democratic Party. In Gov. Averill H. Harriman you have a liberal as described by Jefferson, who serves well the interests of all the people in the State. He is doing a good job and his administration is following the pattern set by his illustrious predecessors—Al Smith, Franklin D. Roosevelt, and Herbert H. Lehman. I hope you good voters will give him a majority in both houses of the legislature.

"The uneasy restlessness of the people since January 1953 seems to show less and less confidence in President Eisenhower and the Republican Party. Despite all of the favorable publicity in the newspapers and magazines, on the television and over the radio, there's a definite trend in the opposite direction.

"PARTIES SHIFT

"The 30 Republican governors in 1953 have dwindled to 21, with the Democrats increasing their number from 18 to 27. Five hundred and five State legislators have been added to the Democratic column in the same period. Hundreds of Republican strongholds in counties and cities in Pennsylvania, Illinois, Indiana, the New England States, and in other sections of the country have turned Democratic—all of this indicates the people's resentment against the administration's failure to provide for the general welfare. It is evident that what is good for General Motors is not good for and is not wanted by the people.

"The New York Legislative Boards of the Brotherhood of Railroad Trainmen and Ladies Auxiliary have the obligations of directing the course our members should take in the primary and general elections. The officers and members of the boards must not fail in pushing forward our collective political efforts to where all will be registered and all will vote in the primary election, June 5, and in the general election, November 6, 1956, is an important political year. You can make it one for the people. May God grant you the wisdom to do so."

The Industrialization of Underdeveloped Countries

EXTENSION OF REMARKS

OF

HON. THOS. E. MARTIN

OF IOWA

IN THE SENATE OF THE UNITED STATES

Thursday, May 17, 1956

Mr. MARTIN of Iowa. Mr. President, the eventual success of our foreign-aid program will be measured by the ability of the countries receiving assistance from us to establish their own economies on a sustaining basis with increased standards of living for their peoples. If this is accomplished it will be more difficult for discontented elements to seek salvation through communism and left-wing socialism.

President Eisenhower and Secretary Dulles realize that our governmental foreign aid must lay the groundwork for increased investment of private capital if real progress is to be made in raising world living standards. Some of the private capital will, of course, consist of foreign investments by our citizens and citizens from other developed countries, but a great deal of the new investment must consist of native funds and savings originating in the underdeveloped area.

The recent session of the Economic and Social Council of the United Nations discussed the problem of the industrialization of underdeveloped countries. This subject has had an important place on the agenda of the Council for many years. Dr. John C. Baker, President Eisenhower's representative to the United Nations Economic and Social Council, reviewed the United States accomplishments in furthering industrialization in these areas. He emphasized the great contribution which has been made by private American firms who have not only invested their capital abroad, but, what is more important, have contributed techniques and know-how. For example, he said the Goodyear Time & Rubber plant in Indonesia employs 1,400 people, of whom only some twenty are Americans and Europeans. The company has carried on an active training program to give Indonesians positions of responsibility as rapidly as possible. They have also sent young Indonesians to Akron, Ohio, to acquire special technical skills here.

The problem of the industrialization of underdeveloped countries is one which must be attacked on many different fronts. The United States contributes technical assistance through bilateral aid. We also support the United Nations technical-assistance program. We will shortly be considering the President's program for an extension of foreign economic aid. These investments will pay dividends to the American taxpayers if they prepare a climate in which private investment, both foreign and indigenous, can thrive.

Mr. President, I ask unanimous consent to have Dr. Baker's statement to the Council printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY DR. JOHN C. BAKER, UNITED STATES REPRESENTATIVE IN THE ECONOMIC AND SOCIAL COUNCIL, ON INDUSTRIALIZATION OF UNDERDEVELOPED COUNTRIES

Mr. President, peace and economic well-being are the twin objectives of our world today. In these last few days, hopes for peace burn more brightly, thanks to the efforts of the United Nations, its Secretary General and its member states. Here, in the Economic and Social Council, interest is focused on the improvement of economic well-being in all nations. We, who are gathered here, bear a heavy responsibility for progress on those pressing problems of economic development, the solution of which is so important to men in so many nations.

There is an old saying that a problem carefully defined is a problem half-solved. This may well prove true for the problem we are considering today—the industrialization of underdeveloped countries.

Real progress toward economic and social improvement is made only when countries produce more goods and services for their peoples. This applies to all nations. Underdeveloped countries, therefore, are—and rightly so—eager to obtain the means by which they themselves can produce sorely needed manufactured goods in local factories, with local labor. To help them along this road is an opportunity that should be welcomed by all members of the United Nations. As far as my own country is concerned, President Eisenhower again recognized the necessity to do so in his speech before the American Society of Newspaper Editors last Saturday.

What direction should the work of the United Nations on problems of industrialization take over the next few years? My own Government has very carefully examined the documentation which the Secretary General has prepared in response to the request of the Council. Since this matter is to be considered in the Economic Committee, we shall be discussing our detailed views on the next steps that might be taken in that body.

At this time, however, I should like to commend the Secretary General for his very informative and comprehensive survey of the work already being done in the United Nations and the specialized agencies on industrialization of underdeveloped areas. It is an impressive picture of widespread activities.

As to the proposals for a future program of work in this field, we feel that the Council should carefully examine the problems involved before taking final decisions. This matter is much too important for the underdeveloped countries to permit hasty action. My delegation for one would want to hear more from these countries as to their own views on the direction in which we ought to go before we decide on further action. Furthermore, before we decide on any action program we shall have to answer the question whether it will be merely designed to fill gaps in existing work programs or to develop a unified overall program in the field of industrialization. It will be necessary to assign priorities in any such work program in the light of resources available to the United Nations. As pointed out by the delegations of Canada and Yugoslavia, we shall also have to face and resolve far-reaching problems of organization and finance, of coordination and integration. The role of the regional economic commissions, the specialized agencies, and the United Nations Technical Assistance Program will have to be determined.

In this connection, we must constantly keep in mind that there are, of course, no

stereotyped patterns of economic development applicable to all countries or even to many countries. Different countries have different needs and different possibilities. Development must take into account available resources, local attitudes, social and legal structures, customs, and practices. In some areas small-scale industry and transportation may be most in need of improvement. In others, the emphasis may have to be on strengthening governmental administration and increasing industrial productivity. In all cases, managerial and technical skills must keep pace with development, if development is to be effective.

Certain preliminary steps must be taken by all underdeveloped countries before they can prepare balanced programs of industrial development. It is in this connection, we feel, that the United Nations can be most immediately helpful. As Ambassador Stikker so rightly argued in his statement to the Council last Friday, "When we try to visualize the sequence of industrial development in any given territory, it would seem logical to fix our attention first of all on the resources available in the way of raw materials, power, transportation, and labor." This is, of course, the first area of work suggested by the Secretary-General in his proposals for a future work program on industrialization. It seems to us that a knowledge of resources available for the production of power is basic to any evaluation of an underdeveloped country's potential for industrialization.

Let there be no misunderstanding, when I emphasize this need for a stock-taking of available resources. Countries cannot be sharply divided into two categories—those which are inherently manufacturing countries and those which are inherently agricultural or raw-material producing countries. If standards of living throughout the world are to be substantially increased; if the peoples of the underdeveloped countries are to enjoy a greatly increased supply of manufactured goods; if their standards of living are to be augmented beyond the bare necessities of life, the world's manufacturing capacity will have to be greatly expanded everywhere.

The industrially advanced countries could not, even with their large industrial potential and under conditions of continuous full employment, supply all the manufactures the whole world needs. Such a growth of manufacturing must inevitably involve greater industrialization in underdeveloped areas.

It has sometimes been suggested that there is a conflict of interest between the more developed countries and the aspirations for greater industrialization of the less developed countries. We do not share such views. On the contrary, greater industrialization of the underdeveloped areas is in the interest of all countries. The best customers of industrialized countries are prosperous, developed countries. A significant portion of the world's exports of manufactured goods moves, not to the less developed, but to other industrialized countries.

We should not assume that the pattern of industrialized and under developed countries which exists today is a permanent pattern. It may be a fairly rational pattern in the light of the present distribution of capital, skills and technological knowledge. It may not be so in the light of future developments. The world is still young in the exploration of the resources with which nature is endowed it, and of the ways in which these resources can be utilized. And many a country which thinks itself poor in resources may find that, by taking careful stock of what it has, it will discover possibilities for economic developments now unknown. Even more, as technology develops, apparently useless resources may become of great value.

As one student of this subject has observed, "A resource at any time and place is a function of the prevailing technology * * * More than one-seventh of the solid content of the earth's crust is aluminum, but this becomes a resource only when a people attains a very high level of scientific and industrial efficiency. Whether waterfalls are sources of heat, light and power, or merely obstacles to navigation, depends upon the people who own the waterfalls. The real fact of the matter is that we never know how rich any country is in resources until it begins to industrialize, to develop real needs and markets for natural resources and to develop a large class of scientifically trained citizens who know how to locate resources and recognize them when they see them."

This is not to imply, of course, that industrialization in the narrow sense of manfacturing is the only road to economic development. Economic development means advancement in many fields—in agriculture, mining, transportation, communications, power, and in the skills and capacities of people. All these are mutually reinforcing elements in the process of development. And they are all competing claimants for the limited resources available, particularly capital. The wise apportionment of scarce resources among these elements must necessarily vary with time and circumstance.

We in the United States appreciate the magnitude of the job that confronts the underdeveloped countries in the field of industrialization. During our own industrial development we have had to deal with many of the same problems which now confront these countries. The American people are the first to recognize the benefits to be obtained from diversification and industrialization. For these reasons, they have welcomed the opportunity to assist the process of industrialization in underdeveloped countries. This assistance has taken various from both through private enterprise and through our foreign aid programs—the extension of industrial know-how, the erection of manufacturing enterprises, the provision of capital resources to facilitate industrial development.

With your permission, Mr. President, I should like to cite a few of the ways in which our business enterprise and our Government have been contributing to the industrial growth and the increasing economic vitality of underdeveloped countries throughout the world.

The key importance of management and other supervisory and labor skills to successful industrialization has long been recognized. One of the important reasons why my Government has urged other countries to encourage direct private foreign investment is that such investment necessarily involves the export of managerial and technical know-how as well as capital. Over the years, American industry has in this way made a real contribution to industrial development in underdeveloped countries. In particular, American industry has been extremely successful in training local citizens to take over key positions in the industrial plants established in other countries.

Some of the most important locally owned business enterprises in underdeveloped countries have been established by nationals who at one time worked for United States companies. For some time, the larger American companies have made a practice of maintaining training courses for their workers and employees, in many cases bringing the employees to the United States for further training. For example, in Brazil during the 4 years, 1946–49, a total of 6,750 employees completed training courses offered by 58 companies controlled by American capital. Also 63 employees of these companies were sent to the United States for training in 1949 alone.

General Electric, one of the largest and oldest American companies operating in Brazil, is an outstanding example of how private foreign investment in Latin America has assisted industrialization in underdeveloped areas. The company has been closely integrated, directly or indirectly, with almost every phase of Brazil's development over the past 40 years. Generators, motors, transformers and heavy electrical equipment produced by the company have played a major part in Brazil's hydroelectric development, in the electrification of her railroads, in the improvement of her urban transport, and in the realization of such projects as the great Volta Redonda steel mill. General Electric's 5,300 employees probably constitute the largest employee group of any foreign-owned manufacturing company in Brazil. Today, only 41 of these employees are American citizens, mostly specialists and technicians; the rest are local personnel. Since 1930, the company has trained 216 Brazilian engineers. The company also offers training courses for students in Brazilian technical schools. In addition, it gives special courses in X-ray technique for doctors in the Brazilian public health service, and other similar courses for specialized groups.

Since the end of the war, Sears Roebuck & Co. in Latin America has been responsible for the establishment of a large number of new local industries which have been given contracts to provide goods for sale in the Sears stores.

Sears no longer uses Latin America as an outlet for goods made in the United States. Today, over 60 percent of its Latin American merchandise is manufactured by Latin Americans in Latin America. In Brazil, 90 percent of the goods sold by Sears is locally manufactured.

Atul Products, Ltd., located in India, is one example of how American private industry stands ready to work with a locally controlled and managed enterprise. The company was established in 1952 to manufacture dyestuffs and pharmaceuticals. Ninety percent of its capital was locally subscribed and 10 percent was provided by the American Cyanamid Co. The American firm has no share in the actual management of the plant, but it has provided much of the necessary technical assistance. The dyes produced by this enterprise now fill a substantial part of the demands of the textile and other industries in India. Its production of sulfa drugs and antibiotics makes possible more effective implementation of the country's health program.

The Goodyear Tire & Rubber Co. plant in Indonesia produces automobiles and truck tires and also bicycle tires for the domestic market. Located in West Java, it employs about 1,400 people, of whom only some 20 are Americans or Europeans. The company carries on an active training program under a policy of giving Indonesians positions of responsibility as soon as they qualify. It has also sent promising Indonesians to its Akron plant to learn special technical skills or to receive training in business operations.

Governmental efforts are increasingly supplementing the achievements of private enterprise. During the first years of its operations, our technical assistance program, now administered by the International Cooperation Administration, was largely confined to fields other than industry. Over the past 2 or 3 years, however, there has been a steady growth in the industrial component of the program. We expect that this growth will continue. We stand ready to consider requests for this kind of assistance to the extent that funds and the necessary technical personnel are available.

Under our bilateral technical assistance program over 14,000 persons from underdeveloped countries have been brought to the United States to observe and learn produc-

tion techniques, engineering and research, applied science in industry, and management, marketing, and distribution practices. We have dispatched 800 American consultants to advise on all aspects of industrial technology and on managerial practices. During 1955 alone we have provided 300,000 items in the form of technical literature, special industrial reports, technical films, and exhibits to assist countries lacking basic modern technical information and training materials. We have cooperated with underdeveloped countries to develop projects in such fields as coal, steel, petroleum, power, and mineral products, and for a variety of manufacturing industries.

A typical example of the results achieved under this program is the improvement in manufacturing processes in India. Recently, over a period of 6 months, American field engineers joined with Indian plant managers in examining production methods in 39 Indian plants manufacturing 27 different products, ranging from a great iron and steel works to a razor plant factory employing 15 workmen.

The shapes and sizes of steel products manufactured at the iron and steel works were simplified, and single production orders were limited to a minimum of 20 tons each in order to assure more efficient operation. As a result, the steel output of the plant will increase by almost 180,000 tons annually. Introduction of mechanically mined ores will permit the plant to raise its pig-iron production by 226,000 tons annually.

The razor-blade factory was idle because its management believed that the quality of their output could not meet competition and that continued production would be unprofitable. After 2 months of assistance by an American technician, the plant is now in full operation turning out razor blades meeting world competitive standards. This was accomplished not by new investment or by displacement of labor, but by rehabilitating existing equipment, retraining workmen in its operation and maintenance, and reorganizing quality control procedures.

Our Export-Import Bank for years has been making credits available, not only to help finance basic development in fields such as transportation, power, communications, and public health, but also for a wide variety of manufacturing projects. During the last 6 months of 1955, the bank financed exports of machinery and equipment for a paper plant in Brazil; rayon-spinning machines for India; thermopower equipment for Iran; equipment for a rolling mill and sulfur plant in Mexico; cement plant machinery for Guatemala; and the components for a tire and tube factory in the Philippines.

One of the great industrial projects financed by the bank has been the Volta Redonda steel plant in Brazil, to which I have already referred. Beginning in 1940, the bank has loaned a total of $105 million to assist the construction and expansion of this steel plant, whose annual ingot capacity is now being increased to 1 million tons.

Two recent loans of the Export-Import Bank illustrate how its resources can be used in association with private enterprise to assist in the establishment of industrial plants in underdeveloped countries. In each case, the bank made a loan to a corporation entirely owned and controlled by local citizens—one in Colombia, the other in Brazil. At the same time, each of these corporations entered into an arrangement with an American company for use of the company's technical processes. Under these arrangements, Colombia will manufacture refrigerator equipment and Brazil will manufacture automobile bearings.

A measure of the response of the American economy to the requirements of the underdeveloped countries arising out of their industrial development is our exports of capital goods to those countries. In 1938, exports of producers' durable equipment to underdeveloped countries were valued at about $300 million; in 1955 they had increased to $1.7 billion. After allowing for price increases since 1938, the United States is currently exporting to underdeveloped countries from 2½ to 3 times the quantity of these producers' goods that it exported in the period just before World War II.

I have been speaking of ways in which the United States has directly assisted countries in the process of development. All of you are, of course, familiar with the support we have also given to similar efforts through such multilateral programs as United Nations Technical Assistance, the International Bank, and other specialized agencies working in the field of economic development.

Mr. President, in some areas the industrialization of underdeveloped countries is only beginning. In others, it has already made great strides. In all underdeveloped countries people are eagerly striving to acquire the means and the skills on which to build a better economic and social life. I have indicated some of the ways in which the people of the United States, in accordance with the American tradition, have contributed to this tremendous world revolution of our times. In this tradition, we shall continue to work with the peoples of the underdeveloped countries to the best of our abilities in the years ahead.

Before concluding, may I revert to a matter brought to our attention with such eloquence and force by the distinguished representative of France. He emphasized that industrialization will have genuine validity and meaning only if it respects the dignity and enhances the welfare of the individual. Truly, industrialization should never become an end in itself. Industrialization must serve the individual—not the individual serve industrialization.

In my own country, as industrialization has spread and become more complex, we have become increasingly concerned with the human element in this equation, with the health, satisfaction, and well-being of the worker. For we have found that in many ways this human element is the most important in the whole process.

To me, one of the most laudable aspects of the attack on the problem of industrialization in many underdeveloped countries is their determination to preserve as much as possible of the fabric of their national characteristics, culture, and traditions—disappearance of which would indeed be a great loss to them and to the whole world. For these countries are truly concerned with the question raised in that well known Biblical saying: "What is a man profited, if he shall gain the whole world and lose his own soul."

Mr. President, in conclusion I want to assure you and the members of this Council that my delegation will do everything possible in committee to assist in working out the foundations of a United Nations program which will effectively contribute to the industrialization of the underdeveloped countries. Such a program will have our firm support.

Department of Agriculture and Farm Credit Administration Bill, 1957

SPEECH

OF

HON. DANTE B. FASCELL

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 14, 1956

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 11177) making appropriations for the Department of Agriculture and Farm Credit Administration for the fiscal year ending June 30, 1957, and for other purposes.

Mr. FASCELL. Mr. Chairman, complete devastation of our Nation's fruit and vegetable crops could become a reality if the Mediterranean fruitfly recently discovered in Florida is not completely eradicated immediately.

The fly is now infesting fruit and vegetable crops at numerous spots in both Dade and Broward Counties, Fla. It was first found April 18, in Miami Shores, Fla., near the Miami International Airport. Pest-control experts of the United States Department of Agriculture and others were immediately rushed to the area after it had been definitely ascertained that adult Mediterranean fruitflies were present.

I have high praise for those in the United States Department of Agriculture who went into action so quickly to identify this menace and to curb it. Check points were set up around the infested area, extensive surveying by trappings is continuing in order to determine the locale of the infestation. Steps for eradication have already begun. Undoubtedly, the Department's recognition of the dangers facing the entire United States and their prompt action will save the Nation's major crops and untold millions of dollars.

The Mediterranean fruitfly has defeated all but one attempt by man to eradicate it. It has won and stopped entirely fruit and vegetable growing in Spain, Italy, Algeria, South Africa, Egypt, Tasmania, France, Greece, Brazil, Madagascar, Hawaiian Islands, and in the Holy Land. Crops can only be grown there if each fruit or host is individually bagged.

Only in Florida has the pest been stopped. That was in 1929. The United States Department of Agriculture knew then as it knows now, that the Mediterranean fly has a capability of spreading and wiping out the entire crop of fruit and vegetables grown in the United States. They know definitely that it could infest all of the west coast area, the entire tier of Southern States, and while there is no definite proof as to how far north the fly could live and exist, nobody wants to find out. This last infestation of 1929 was brought under control and completely eradicated, but it took 5,000 men, 18 months, and $7½ million, as well as the assistance of the National Guard. The pest was found in 20 Florida counties before eradication was completed.

The present infested area is in Dade County in an 18-square-mile area surrounding the Miami International Airport. The infestation has also been found in South Broward County, on Miami Beach, and the most recent at Kendall, Fla., which is 8 miles south of the International Airport and in the heart of the great fruit and vegetable district of Dade County. Indications are that new infestations will continue to be found as trapping activities are extended.

Reaction and response of the local people and governmental units have been prompt and willing. Growers and pro-

ducers have voluntarily offered men and equipment. The county commissioners of Dade County made available immediately $25,000 for State plant officials and for the United States Department of Agriculture to meet immediate payrolls. The State cabinet is making $100,000 available immediately and will supply for the State's participation a million dollars, or whatever sum is necessary.

A State quarantine on Dade County was invoked, and a Federal quarantine followed.

Federal assistance and participation is needed and requested. Any quarantine and inspection, to be effective, must be under Federal control. This will require the assignment of many personnel during the entire emergency. In addition, in the national interest, the Federal Government has a vital part to play in the eradication and control programs.

The United States Department of Agriculture has prepared a budget request for funds to meet this emergency; and that the budget request is now being considered by the Bureau of the Budget.

I am sure that the entire committee appreciates and recognizes the seriousness of this problem. We can't emphasize too strongly that action must be prompt and that whatever money needs to be spent should be spent to completely eradicate this pest. It is very obvious that $1 spent now will save hundreds of dollars later.

In behalf of the entire Florida delegation, I wish to express my appreciation to the chairman, JAMIE WHITTEN, and the members of the Agriculture Subcommittee of the Committee on Appropriations who at my request extended to us the great courtesy of hearing this emergency matter and including it in the record and their report on the Agricultural Appropriation Act, although the regular public hearings of this subcommittee have been concluded for some time.

Our Armed Services: Defense Against the Common Enemy, or Defense Against Each Other

EXTENSION OF REMARKS
OF
HON. A. L. MILLER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 17, 1956

Mr. MILLER of Nebraska. Mr. Speaker, article I, section 8 of the Constitution of the United States declares:

SECTION 8. The Congress shall have power to lay and collect taxes, duties, imposts, and excises * * * to * * * provide for the common defense * * * of the United States;

* * * * * *

To raise and support armies * * *;

To provide and maintain a Navy;

To make rules for the Government and regulation of the land and naval forces.

As a peace-loving, peace-prospering nation, we have nevertheless long recognized that we must maintain our armed services at top military strength in the interest of assuring adequate defense against the common enemy.

The morning press and radio tell us that, as the latest step in our program of defense, it has been suggested that 2 of the 3 Military Departments engaged concurrently in missiles research programs—whether offensive missiles or defensive missiles—should stage a "duel." This proposed duel will pit the Army's "Nike"—developed through research at taxpayers' expense—against the Navy's "Talos," also developed through research at taxpayers' expense. It is interesting that both happen to be ground to air weapons.

It is conceded that missiles will serve both as offensive weapons and as defensive weapons, but it is difficult to understand justification for planning one to finality only to prove that the other—developed to finality—is outmoded, ineffectual, and useless.

As ridiculous as the proposed duel may seem to some, it is good that the proposal has been made; in fact, the proposal is a sound one in light of the status quo of armed services' activities, and the author of the idea is to be commended. Good that it happened, and a sound proposal, because it gives emphasis to the conclusion of many of us that Congress and the President have a clear and present duty to call a halt to Army against Navy, Navy against Air Force, Air Force against Army, and so forth.

It is clear that each of the three military departments is going ahead—independent of each other—in multimillion—or billion—dollar missiles' research programs. Further, that each is prosecuting its individual research program to finality.

To what end?

So that the Congress, the President, and the taxpayers can stand by to witness the spectacle of a gigantic duel between the Army, Air Force, and Navy aimed at proving that two ultimate missiles can and should be discarded in favor of a third ultimate missile.

Missile airframes are missile airframes; launching bases for missiles are launching bases for missiles; propellants are propellants, and warheads are warheads. These are the common denominators in our research programs, and the unknowns are being pursued in at least three different military laboratories.

If these programs were pulled into one military department—or better yet, pulled into one research department directly under the Secretary of Defense—only one program, the best both offensively and defensively, would be pushed to finality. All research talent, know-how, brains, energy, and funds would be commonly pooled toward a common goal for the common defense.

On May 10, 1956, the distinguished chairman of the House Appropriations Committee, during debate on the Armed Services Appropriation Bill, stood in the Well of the House to tell us General Curtis LeMay within the past 2 weeks—in commenting on our supercarrier Navy—has said that his bombers could sink every carrier at sea in 2 hours.

Is the next duel to be between the Navy's carrier *Forrestal* and the B–52 of the Strategic Air Force: Or will we have a warmup by testing the B–47 against the *Nautilus?*

The next duel, Mr. Speaker, should be between the taxpayers and those who have failed, refused, or been unable to unify the armed services.

The burden, under the Federal Constitution, is that of the Congress.

Freedom of the Press: Is There a Paper Curtain?

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, May 14, 1956

Mr. SMITH of Wisconsin. Mr. Speaker, in a physical sense the press of the United States has a capacity that is extraordinary. But in its coverage of vitally important political issues that now face the Nation, only a few papers treat them vigorously and fearlessly. One of these is The Tablet, published by Roman Catholic diocese of Brooklyn, which is always refreshing to read.

The April 28 edition of that paper features two important news stories on its first page: First, an address by Bryton Barron concerning distortion of history in the Department of State and, second, the NKVD seizure of Russian seamen in the United States. It is obvious that such matters should receive fuller treatment in our press.

An informative editorial in the April 28 issue comments on the indicated situation. Under leave to extend, I include the editorial:

IS THERE A PAPER CURTAIN?

As the circulation of the Tablet increases steadily in all parts of the United States, letters from recent subscribers indicate one reason for the increase, namely, the printing of news not available in other papers. Why such news does not appear elsewhere is not easy to understand, since it is common property and available to the daily press and to the news services.

For instance, this week on page one are two articles: one a lengthy summary of an address delivered by retired State Department historian Bryton Barron and an article on recent hearings conducted by the Senate Internal Security subcommittee at which a Soviet NKVD agent testified. Both of these stories were available to the daily press and the news services, but how many Americans had the opportunity of reading them in their local papers? The New York Times, with 96 pages of news on April 22, for example, did not find space for the Senate subcommittee release. Both stories were ignored. Why? We do not know.

Again, there was the case of House Resolution 6376, passed by the House of Representatives professedly to provide for mentally ill Alaskans. In three articles in March The Tablet exposed loopholes in the language of the bill which would permit a political nuisance from the United States to be transported to Alaska on the pretext he was mentally ill. The series elicited a tremendous reaction from all parts of the United States. Senators and Congressmen were urged to insert the articles in the CONGRESSIONAL RECORD, yet it was only on Monday that they were finally inserted by Senator EVERETT M. DIRKSEN, of Illinois. Meanwhile, the daily press has maintained a blank silence on the

subject. Newspapers which sent two or more gossip columnists to Monaco to report on a wedding would not assign one correspondent to expose the menace of H. R. 6376 to the freedom of American citizens for their readers.

Why? We still do not have the answer. Is there a Paper Curtain as well as an Iron Curtain and a Bamboo Curtain? There is a broader question, too: Why the lack of interest shown by the daily press in the infiltration of Communists in the departments of our Government? Has the American press been intimated or subsidized? Again we do not know. But the fact remains that The Tablet should not be virtually the only press medium to be giving its readers such news.

Then there was the recent outrage of five Soviet seamen who had sought refuge in this country being compelled by Soviet secret police to board a Scandinavian Airlines plane at Idlewild Airport to be transported to an uncertain but unenviable fate in Red Russia. It took place on American soil and American Government officials stood by unprotesting. Yet the metropolitan papers, which daily find petty things to become indignant about found nothing significant enough for editorial comment in the disgraceful incident.

We must pose to our readers a question which we have been asked many times and still cannot answer: Is their a Paper Curtain which is brain-washing our people by withholding news unfavorable to the Communist conspiracy?

Proposed Changes in Excise Tax Administrative Structure

EXTENSION OF REMARKS
OF
HON. JERE COOPER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 17, 1956

Mr. COOPER. Mr. Speaker, today the Committee on Ways and Means met further in executive session with respect to recommendations contained in the report of the Subcommittee on Excise Tax Technical and Administrative Problems.

For the information of the Members of Congress and the interested public, I would like to insert at this point in the RECORD a press release I have issued announcing the decisions made today by the committee in regard to the subcommittee recommendations.

The committee is scheduled to meet again at 10 a. m. in executive session on May 21, 1956, to resume consideration of the subcommittee report.

The press release follows:

CHAIRMAN JERE COOPER OF THE COMMITTEE ON WAYS AND MEANS ANNOUNCES TENTATIVE DECISIONS OF THE COMMITTEE ON THE RECOMMENDATIONS OF THE SUBCOMMITTEE ON EXCISE TAX TECHNICAL AND ADMINISTRATIVE PROBLEMS

The Honorable JERE COOPER, Democrat, of Tennessee, chairman of the Committee on Ways and Means, announces the tentative decisions reached today by the committee with respect to the recommendations contained in the report of the Subcommittee on Excise Tax Technical and Administrative Problems. Previous announcements with respect to earlier decisions of the committee were issued on May 10, 14, and 16, 1956. These announcements are printed in the CONGRESSIONAL RECORDS for May 10, 15, and 16, 1956, and appear on pages A3818, A3918, and A3965, respectively.

Chairman COOPER stated that the committee would resume its consideration of the subcommittee's report in executive session at 10 a. m., on Monday, May 21, 1956. A table of revenue estimates relating to the subcommittee's recommendations is printed in the subcommittee report beginning on page 13. A more detailed explanation of the recommendations appears in the subcommittee report beginning on page 16. The decisions reached by the committee today, are as follows:

X. GENERAL

1. Uncertainty with respect to the tax to be paid upon the sale of installment accounts at less than face value should be resolved by statute. The administrative rule now in effect requires payment of tax upon the face value of installment accounts irrespective of the selling price. However, an exception is made in bankruptcy and receivership cases where the taxpayment is based on the selling price. This rule should be codified and extended to similar sales made in other legally distressed situations.

2. It should be made clear that the type of contract recognized under Louisiana law, which is similar to an installment contract, qualifies for the privilege of deferred tax payments as an installment contract.

3. Statutory authority should be given to the Secretary of the Treasury or his delegate to authorize by regulations that a person, who is liable for the filing of returns with respect to the retailers' taxes and the transportation of property tax, may designate his supplier or shipper to perform such acts as are required of him in connection with the filing of the returns relating to these taxes.

4. The subcommittee has agreed to ask the State Department for a report on the question of whether or not the present foreign diplomatic exemptions should be continued and if so the proper extent of such exemptions.

5. Exemptions from manufacturers, retailers, transportation, and communication excise taxes should be provided for elementary and secondary schools and colleges and universities operated by nonprofit organizations.

XI. TOBACCO AND ALCOHOLIC BEVERAGE TAXES

The committee began consideration of the recommendations contained in this section and will resume consideration of section XI when it next meets on Monday, May 21, 1956.

Power for Peace and the Foundation for Religious Action

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 17, 1956

Mr. HOSMER. Mr. Speaker, I would like to take this opportunity to pay tribute to the splendid works of the Foundation for Religious Action in connection with the observance of Armed Forces Day.

To broaden and deepen the meaning of Armed Forces Day, May 19, 1956, and the Armed Forces Day slogan, "Power for peace," the Foundation for Religious Action in the Social and Civil Order and the Department of Defense are jointly emphasizing the spiritual factor in observance of this event.

The suggestion for such a program stemmed from the foundation and has the aim of emphasizing America's need to strengthen her national power for peace in all its phases—spiritual, psychological, and educational, as well as political, economic, and military. Nothing less is demanded if we, as a people, are to meet the prolonged crisis which we face along with free men everywhere.

The foundation is bringing the "power for peace" observance to the attention of church and synagogue authorities of the principal denominations and interdenominational councils, and in the Washington area to a number of individual churches and synagogues.

The foundation has endeavored to focus attention on both the debt of all Americans to those who serve in the Armed Forces and the contribution made by the churches and the chaplains of the services to the Nation and its Armed Forces.

The Foundation for Religious Action in the Social Order was established in 1953 to emphasize in an age of material greatness the importance of the spiritual, to interpret the importance of the religious dimension in practical affairs and to spell out what Americans can do to act in a world crisis. The foundation is an action body and does not sponsor discussions of dogma or church unity, nor does it engage in evangelism with a view to making converts for any church or doctrine.

In observing Armed Forces Day, we should all remember that our national security depends on a deep and abiding religious faith. Religious faith fosters attitudes that contribute to peace among men. With peace as our objective, the cultivation of spiritual factors in our daily living will build and strengthen the fabric of our national security.

H. R. 9836, a Bill To Provide for the Regulation of Interstate Transportation of Migrant Farm Workers

EXTENSION OF REMARKS
OF
HON. JOHN V. BEAMER
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 17, 1956

Mr. BEAMER. Mr. Speaker, under unanimous consent, I wish to insert in the CONGRESSIONAL RECORD the attached letter from the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees, in which they express their support H. R. 9836, a bill to provide for the regulation of interstate transportation of migrant farm workers:

BROTHERHOOD OF RAILWAY AND STEAMSHIP CLERKS, FREIGHT HANDLERS, EXPRESS AND STATION EMPLOYEES,
Washington, D. C., May 18, 1956.

SUBCOMMITTEE ON TRANSPORTATION AND COMMUNICATION OF THE HOUSE COMMITTEE ON INTERSTATE AND FOREIGN COMMERCE.

Gentlemen: This is the statement of the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees, in favor of H. R. 9836, introduced

by Congressman BEAMER to provide for the regulation of interstate transportation of migrant farm workers. Such regulation is long overdue. A companion measure, S. 3391, introduced jointly by Senators MAGNUSON and BRICKER, passed the Senate on a call of the calendar under date of April 30, 1956. Both the Department of Labor and the Interstate Commerce Commission are in favor of the enactment of this legislation.

Repeatedly, official and private studies of the migrant labor problem have pointed out the crowded, uncomfortable and dangerous conditions to which our migrants are subjected in the long hauls from Florida to New York and from Texas to Michigan. Dilapidated trucks filled with human cargo travel our highways day and night to meet the seasonal needs of agriculture. If livestock was being hauled the truck would have to meet certain standards of safety. But for humans, anything goes. The trips to which they are subjected in order to get work are often nightmares. Their feet swell from the long hours of standing. They are exposed to the heat, cold, and rain. In case of accidents, which are all too frequent, no benefits are provided by insurance.

How long are we, as Americans, going to let this disgraceful situation continue? We have a chance to correct it, with benefit to workers, farmers, and the public.

Let us pass the Magnuson-Beamer bill at this session of the Congress and give the Interstate Commerce Commission the authority to regulate the conditions under which migrant workers are transported.

Our organization wishes to be recorded in favor of this humanitarian legislation.

Respectfully submitted.

HARTMAN BARBER,
General Representative.

Uncle Sam, Colonizer

EXTENSION OF REMARKS
OF
HON. WINT SMITH
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 17, 1956

Mr. SMITH of Kansas. Mr. Speaker, the Omaha World-Herald recently published an editorial which seems to me to be most timely. This editorial points out the one aspect of our foreign-aid program which is often missed and lost by many people, namely, the United States is simply following in the footsteps of other colonizing nations. This editorial points out this fact—these old colonizers of past history are now second and third rate nations because they spent their efforts and taxes to remake the world in their own image.

I am sure the World-Herald of Omaha, Nebr., is performing a most valuable service in pointing out this aspect of our foreign aid program.

The editorial follows:

UNCLE SAM, COLONIZER

We stay-at-home Americans get only a keyhole view of our foreign-aid program.

Congress appropriates the money, we pay the taxes—and that's about all we know. We have no sense of how this huge, worldwide spending is affecting the people of other lands. Or how it is causing them to feel toward distant, mysterious Uncle Sam.

Bob Considine talks about that elsewhere on this page.

He's about the travelingest reporter in the business, has visited almost every country to which Americans are admitted. Recently he ha sbeen watching the atomic tests in the Pacific.

Listen:

"What an incredible change has overcome us in 15 fleeting years.

"Now there is hardly a place on the face of the earth that is not marked by an American family, an American structure, an American grave. In a split moment of time, as time is measured historically, we have taken over (from the British) the so-called white man's burden. We have become colonizers without compare. We build airfields, teach school, show people what end of a hoe to use, and jab wonder drugs in arms of assorted colors in places that weren't in our best atlases a few short years ago."

In other words, we Americans have become the latter-day successors to the conquering Spanish and Portuguese and Dutch, the Napoleonic French, and the Victorian British.

All of them, in their day, supreme. All of them swaggeringly confident that they could recreate the world's underprivileged and dispossessed in the image of a Great White Father.

And where are they now, these colonizing nations? Without exception, in the ranks of the second-rate. Despised and reviled and cast out from the lands in which they once tried, according to their lights, to uplift and do good.

Now we Americans have come to our moment of glory. We are rich beyond imagination, surfeited with treasure and surpluses, eager to be a big brother to all.

So what do we do? Using modern techniques, wielding the dollar instead of the sword, we have become, as the knowledgeable Mr. Considine puts it, colonizers without compare. We have set off down the path which has led so many great and powerful nations to destruction.

The Balance of Economy

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 16, 1956

Mr. FULTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Pennsylvania Labor Journal:

THE BALANCE OF ECONOMY

(By John A. Feigel, President, Pittsburgh Central Labor Union)

The American system of free enterprise rests upon a proper balance of agriculture, labor, and business. It is constantly changing and developing to improve our already high living standards. Let us take a quick look at the part played by all three and the balance thus obtained.

THE AMERICAN FARMER

American agriculture differs sharply from the agriculture of countries not yet industrialized. In China or India, for example, the average farmer cultivates his land to provide almost all of the things his family consumes. The American farmer, like most other Americans, tends to specialize. He concentrates on producing those crops or raw materials to which his land is especially suited and which are in demand. He exchanged these products for money to buy the manufactured goods he needs, the food he does not produce himself, and the services he wants. Much of his work is made easier by machinery, and that too is usually specialized. The money a farmer receives for his crop is used in three principal ways: (1) to pay production costs, which usually include seed, labor, maintenance, feed, and sometimes, rent or mortgage payments; (2) to pay others for goods and services; (3) to save and invest. This last he may do either by lending the money to others (by opening a bank account or buying insurance or securities) or by investing it directly in his own farm so that his next crop may bring him a better return.

Notice that all of these expenditures bring the farmer into contact with the economic activities of others. His product supplies consumers or other producers. His payments for seed, feed, labor, goods, and services help to create the demand that keeps industry productive. Thus, people as widely varied and scattered as a barber in Omaha, a worker on an assembly line in Detroit, a college professor in Massachusetts, a chemist in Delaware, and a trucker in Philadelphia, all benefit from the economic activity of a grain farmer in Iowa.

Specialization creates not only opportunity for economic advancement, but also increased dependence on others. Specialization means that the individual becomes an expert at one job, but it also means that he must depend upon other specialists for the products he needs but does not produce himself.

THE AMERICAN WORKER

By far the largest number of Americans make their living in our free enterprise system by working for others. In this group, there is much more specialization than in any other.

Actually, a great many Americans who work for wages or salaries are also capitalists because they have invested savings and, through stock ownership, are part owners of productive property.

The point is simply that they are paid for their labor. In our country, people in a great variety of occupations are working people. We all have the opportunity to change our occupation if we want to and have the ability. And our system of free schools permits us to develop needed abilities.

As American industries have constantly grown and employed more and more people, relations between management and employees have necessarily become more impersonal and complex. Therefore, the individual worker often finds it difficult to obtain the best return for his labor entirely by himself. To represent the employee in his relations with management, trade unions have been formed.

Sometimes, of course, the managers of a company and the representatives of the union fail to agree, and there are strikes. The workers exercise their right to strike if they are not satisfied with the terms offered. This right to strike within the framework of our laws is fundamental in our system.

THE AMERICAN BUSINESSMAN

Many Americans who work for a salary call themselves businessmen because they make their living from business enterprise. However, I should like to use the word in a more restricted sense. A businessman, as I use it, will mean one who owns or largely controls a productive enterprise.

The role of the businessman so defined is similar to that of the farmer and differs somewhat from that of the man who works for wages or salary. Only a part of the businessman's income comes from his labor. This does not mean that he works less than others—often he works longer hours than his employees. What it does mean is that a part of his earnings is a reward for the risk he takes. He makes an investment of money in the hope that he can sell a certain amount of goods or services. He is responsible for the costs of his enterprise—wages and salaries, materials, and rent. He expects to sell enough to meet business, personal, and family expenses and have something left over. But he can never be sure of success. This is the risk he takes. Some-

times his success is very great. The great private fortunes, of which America has had more than any other country, have usually resulted from a substantial risk that paid off. Opportunities for the accumulation of such fortunes, however, have in recent decades been limited by the people through various laws.

The great majority of American businessmen operate small business—that is, stores, garages, real estate, and other service agencies, or small manufacturing or processing plants. The difference between such enterprises and what we call big business is very great. Most large businesses in the United States are owned by a great many people, rather than by individuals. When a farmer or worker invests his savings or profits in stocks, or in banks and insurance companies that own stocks, he becomes a part owner of a business. Our large businesses are owned by many thousands of individuals holding a few shares each. One of the largest, American Telephone & Telegraph Co. is owned by more than a million stockholders.

Every one who works in such a business, no matter what he is paid, is an employee. The president is an employee, and as such he does not take risks in the same sense as the small-business man we have been discussing. As a stockholder—and there may be many others whose holdings are far greater than his. So the risks of big business are taken by the investors, which include millions of "little people." In conclusion, we may fairly ask: What has been the record of our free enterprise economic system? To most of us the answers are obvious enough. But they bear repeating. Because our system emphasizes the freedom, enterprise, courage, and imagination of the individual, it gives the American citizen assurance that he can make of his life what he will, that he is as good as his neighbor, that he counts.

Basic Objectives of the United Steelworkers of America in Their 1956 Contract Negotiations With the Steel Industry

EXTENSION OF REMARKS
OF
HON. ELMER J. HOLLAND
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 17, 1956

Mr. HOLLAND. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following basic objectives of the United Steelworkers of America, AFL–CIO in their 1956 contract negotiations with the steel industry:

The International Wage Policy Committee of the United Steelworkers of America, meeting in Pittsburgh, Pa., in accordance with the constitution and laws of the United Steelworkers of America, adopts the following basic objectives as the wage policy for 1956 negotiations, to the extent contractually appropriate:

HIGHER WAGES

The economic needs of the members of the United Steelworkers of America, their greatly increasing productivity, the record profitability of the industry, and the economic situation of the country as a whole, all require that a substantial wage increase be negotiated with the industry.

WEEKEND PREMIUM DAY

For those companies where it is not already part of the contract, the time is overdue for the institution of premium pay for all work performed on Saturday and Sunday as such.

SUPPLEMENTAL UNEMPLOYMENT BENEFITS

A noncontributory supplemental unemployment benefit plan shall be established along the practical and feasible lines advocated by the union, financed by and limited to fixed employer contributions to a general fund from which, upon sound insurance principles, benefits shall be paid. The plan shall provide eligible employees up to 52 weeks of adequate benefits against the ravages of unemployment and shall encourage stabilization of employment.

INSURANCE AND PENSIONS

For those companies where present insurance plans are on a contributory cents-per-hour basis, these plans shall be revised, enlarged and improved to provide adequate insurance benefits for members of the United Steelworkers of America and their families on a benefit basis at employer expense. For those companies where present insurance plans are on a noncontributory basis, such plans should be revised, enlarged and improved to provide adequate insurance benefits for members of the United Steelworkers of America and their families. Where contractually appropriate, pension plans in the industry shall be improved by liberalizing their provisions and by providing adequate retirement and disability pensions for all retired employees.

UNION SHOP

The time is overdue for the employers in the industry, who have not already done so, to agree with the union on the full union shop.

HOLIDAYS AND VACATIONS

Additional paid holidays, greater vacation benefits and liberalization of eligibility requirements for holiday and vacation pay shall be provided. Premium pay shall be paid to all employees who work on a holiday in addition to the regular holiday pay.

BETTER CONTRACT TERMS

In addition to the foregoing, improved provisions shall be negotiated with respect to shift premiums, hours of work, overtime, severance pay, incentives, reporting allowance, seniority, preferential hiring upon layoff or when plants or departments are discontinued, military-service apprenticeships, local working conditions, grievance and arbitration machinery, contracting out, safety and health, jury pay, and supplemental workmen's compensation. All remaining geographical wage differentials and wage and salary differentials and inequities shall be eliminated, and, where necessary, provision shall be made for review and modernization of job classifications and the job classification manual. Every effort shall be made to negotiate a master agreement for each company and uniform expiration dates.

Each negotiating committee shall conduct a complete review of existing agreements with the objective of obtaining these and additional improvements and in order to remedy deficiencies which have been disclosed by arbitration proceedings or in the operation of the contract. Every effort shall be made to incorporate in the new agreements beneficial provisions previously made part of the basic agreements and those set forth in prior wage policies.

Forced Labor in Mainland China and in Albania

EXTENSION OF REMARKS
OF
HON. B. CARROLL REECE
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 17, 1956

Mr. REECE of Tennessee. Mr. Speaker, we all know that the Communist countries use forced labor. It is used as a means of political coercion and also as the regular and normal means of carrying out state plans and projects for economic development.

On April 27, Dr. John C. Baker, the president of Ohio University and the United States Representative to the United Nations Economic and Social Council, addressed the Council regarding a report prepared by the Secretary General of the United Nations and the Director General of the International Labor Office on forced labor in mainland China and Albania. His statement is of great significance.

Under leave, I am including it as an extension of my remarks:

UNITED STATES MISSION TO THE
UNITED NATIONS,
New York, N. Y., April 27, 1956.

FORCED LABOR (MAINLAND CHINA AND ALBANIA)

(Statement by Dr. John C. Baker, United States Representative in the Economic and Social Council)

One of the most important functions of the United Nations is the preservation and advancement of human dignity and human rights. It is a field in which the United Nations, to be effective, must exercise ceaseless vigilance and untiring activity.

The Charter itself reflects the concern which the founders of the United Nations felt for this important work, since the only Commission it mentions is the Commission on Human Rights.

One of the most discouraging of the various aspects of violations of human rights is the existence of forced labor. So much so, in fact, that many people wish we could close our eyes and ignore its existence. There are other abuses of human rights which we do not discuss. That fact could furnish an excuse for the Council to avoid this subject. But unfortunately, the violations of human freedom and dignity in this area have been so extensive that the conscience of the world will not let us ignore them. In fact it was through the medium of a nongovernmental organization that the problem was first brought to our attention.

New incontrovertible facts on this unhappy subject are set forth in the report before us prepared by the Secretary General of the United Nations and the Director General of the International Labor Office (E/2815). The material in this report has already been investigated by an ILO Forced Labor Committee, composed of three eminent men of unquestioned integrity—Mr. Paul Ruegger of Switzerland, a former President of the International Committee of the Red Cross, Mr. Cesar Charlone, a former Minister of Foreign Affairs of Uruguay and Mr. T. P. Goonetilleke, former district judge in Ceylon.

After thorough examination of the facts the Committee reached the "firm conviction that there exists in the world today definite systems of forced labor (a) as a means of political coercion or education, and (b) as a regular and normal means of carrying out State plans and projects for economic development." These general conclusions confirmed decisions made by the previous UN–ILO Ad Hoc Committee on Forced Labor about the existence of forced labor in the Soviet Union and in the countries under its direct influence. This new report is of special importance because it conclusively establishes that the same system also exists under the Communist regime on Mainland China and in Albania, two areas which were not covered in the previous report.

It is not our function to go into great detail on the information contained in the bulky document before us. The details are there for all to read. It is our responsibility, however, to appraise and evaluate. Much of the information, it should be noted, came directly from official organs of the two areas

concerned. Other information came from victims of the system who have since escaped and have had an opportunity to tell the world about what they experienced.

First a few words about Albania. The Albanian Penal Code makes elaborate provisions for "corrective labor" and banishment of citizens to concentration and labor camps. Over the past 10 years some 40 political prisons and concentration camps have been in operation in Albania, at one time or another, in which approximately 16,000 people have perished. Among these are included distinguished persons whose only crime was that of being born into a social group considered hostile by the Communist government. Innocent Albanian women and children have been forced to labor under conditions already well known to this Council.

After examining the material which reflected these conditions the ILO Forced Labor Committee concluded:

"In view of the declared purpose of the (Albanian) Penal Code and the wide and flexible manner in which the definitions which it contains concerning acts considered contrary to the interests of the state can be interpreted, the legislation in force in Albania could constitute a basis for a system of forced labor for political purposes, aiming at the correction of those who are opposed to the ideology of the government.

"Forced labor for economic purposes appears to have been established in the form of extensive projects based on legislative and administrative provisions which authorize the recruiting, mobilization, and direction of workers for carrying out the economic plans of the state.

"The penalties imposed for failure to fulfill the standards set for individual output and the system of labor discipline permit, among other sanctions, the imposition of forced labor as a corrective measure."

Thus the world has once again been brought face to face with oppression of human beings on a systematic and widespread basis. The fact that Albania has but a small population does not diminish the moral reaction we instinctively feel toward such a situation.

It is even more shocking to know that this form of modern slavery has also been introduced to the mainland of China by the Chinese Communist regime. Although information has long been available that the Chinese Communists were employing forced labor systems and other severe forms of punishment which are contrary to provisions of the United Nations Charter, it was only in 1954 that the Chinese Communists themselves revealed the vast extent and systematic nature of this program by adopting laws and regulations putting forced labor on a permanent basis.

The institution which has been imposed upon the Chinese people is closely patterned after the experience and practice of the U. S. S. R. This is no accident. Lo Jui-Ching, Minister of Public Security and head of the Communist Chinese MVD, himself made this clear when he submitted the new forced-labor law to the Government Administration Council in 1954 by stating: "During the process of preparation, assistance was received from Soviet legal experts, and many discussions were held and revisions made."

The report before us contains laws, regulation and policy statements from Communist China which discuss the administration and purposes of their forced labor system. It includes the full forced labor code of Communist China—the regulations governing reform through labor. It also contains material from eye-witness sources. The information shows that wide segments of the population are considered as class enemies and treated like criminal elements, that a major purpose of the system is to compel allegiance to the political views of the ruling regime, and that the system is used for economic purposes.

The system is directed, first and foremost, to eliminating any shades of opinion and thought which differ from those of the regime. This was made clear as early as 1949 by Mao Tse-tung in his essay "On the Peoples Democratic [sic] Dictatorship": "The reactionaries must be deprived of the right to voice their opinions; only the people" [and Mao explicitly meant that in Communist China only certain types of persons are "people"] "have that right. Those belonging to reactionary classes or groups would be given a chance to reform themselves through labor into new persons, but only on condition that they do not rebel, sabotage, or create disturbances." Mao stated that this could be referred to as a "benevolent policy" but that it would be "compulsorily imposed upon those originally from enemy classes . . . If they do not want to work the people's state will force them to do so."

What this means in forced labor camps was revealed in a broadcast from Peiping on October 18, 1951 concerning the Ching-ho Forced Labor Camp: "When Chairman Mao Tse-tung's treatise on people's democratic dictatorship and the policy of reform through labor were explained to the criminals, they showed signs of violent mental revolt. Some of them burst into tears, some lost their appetite for food, some wrote death notes, and some attempted suicide or escape. To meet the situation, responsible officials of the farm made the criminals fully understand that reform through labor was a liberal measure taken by the people and the state for the sake of giving the counterrevolutionaries a new life and was therefore their only means of having a new future."

Mr. Chairman, this process is praised in the Chinese Communist press as a significant contribution to the national economy and was adopted with that end in view. Production figures have been given by the Chinese Communist press which show that they consider forced labor to be of considerable economic importance. These figures can be found in the documents before us. On September 7, 1954, furthermore, the Peiping Peoples Daily revealed that 83 percent of the persons in confinement in Communist China had been assigned to forced labor and indicated that they were doing such jobs as cutting timber, constructing buildings, and building water conservation installations, railways and highways. Shortly over a month later it stated: "Production from corrective labor . . . has now reached impressive proportions, and is playing a real role in national economic reconstruction," a comment similar to that of Lo Jui Ching that: "Production under the reformatory labor program has contributed significantly to the supply of commodities to meet the requirements of basic national development."

It is thus clear that forced labor is used in Communist China for both political and economic purposes. The vast extent of the system is revealed by the production figures cited by their own sources and by the fact that the regulations make elaborate provisions for various types of forced labor institutions, including provisions for camps of 3000 or more prisoners.

The ILO committee, after examining this extensive material, concluded:

1. "The guiding principle . . . is that persons hostile to the regime (described usually as 'counter-revolutionary elements, feudal landlords and bureaucrat-capitalists') must be deprived of political rights and compelled to reform through labor."

2. "In application of this principle, the legislation has set up a very highly organized system of forced labor, in prisons and labor camps, for the purpose of political coercion and education."

3. "(This) system of forced labor * * * is being used on a vast scale for carrying out state programs of economic development, (and) * * * the government is thus conscripting labor on a large scale to further its economic plans."

4. "(This) legislation * * * does not appear to be of a temporary or emergency character or resulting from the need for reconstruction but is inspired by a definite policy laid down by the legislators of the People's Republic."

5. "The elaborateness of the machinery set up by the legislation and the figures mentioned in * * * newspaper articles * * * convince (the committee) that forced labor exists on a very large scale, and that the number of persons involved represents a considerable proportion of the total population."

6. "(While) * * * the legislation contains certain provisions which should secure reasonably good treatment for prisoners and persons in forced labor camps * * * from the other information before it * * * the Committee must have serious doubts as to the extent to which these legislative provisions are actually applied in practice. The many concordant reports of abuses in the procedure for sentence, in the conditions and treatment of prisoners, and in the 'disciplinary measures' taken cannot be ignored."

It is tragic that such serious revelations should be made at a time when there have been reports of improved conditions in some forced labor camps in the ideological center of the system—the U. S. S. R. Many reported improvements, for example, apparently followed the dramatic strikes at Vorkuta and elsewhere. In addition, many people were apparently released as a result of the 1953 amnesty, although persons sentenced to forced labor for political reasons were not among them. The September 1955 amesty may have released many more although it is impossible to verify this. There have also been reports that the aspects of the penal code which were most strongly criticized by the Ad Hoc Committee on Forced Labor may be under revision, and there have even been objections recently by Soviet officials against the system of labor direction.

The ILO Forced Labor Committee, perhaps with these reports in mind, recognized that there has been some improvement in the situation in certain countries since 1953, but concluded "while this in itself is satisfactory it cannot be considered as a major advance since the Committee is firmly of the opinion that the systems mentioned above should in any case be completely abolished."

There is as yet absolutely no evidence that the U. S. S. R. has taken steps to abolish its forced labor system, or significantly altered its political and economic role in Soviet society, and we cannot even accurately assess the causes for these changes which have taken place. Nevertheless ,it is possible that world opinion, as expressed through this Council, has played its role.

The United Nations can take pride in the fact that our investigations of the forced-labor issue have undoubtedly materially helped to improve the lot of a great number of fellow human beings.

There is no evidence, I repeat, that any steps are being taken to abolish the system itself. And I am sure that this is the result for which the Economic and Social Council has always striven. The purposes and principles of the United Nations demand that United Nations efforts continue until that end is reached.

Mr. Chairman, I now turn to the specific action which we can take at this session. It relates in large measure to the ILO. The International Labor Organization has quietly and without fanfare during the past quarter of a century been working toward elimination of various aspects of forced labor.

Now it is carrying forward work preparatory to consideration by the International Labor Conference of the broad problems of forced labor as set forth in the U. N.-ILO ad hoc committee report of 1953.

The United Nations should be in wholehearted agreement with this work of the ILO. It carries forward on a practical, workaday plane much of the same effort we have made in the Economic and Social Council. The ILO, as the international organization with special competence in labor problems, can confidently be relied upon by us to press forward vigorously to eliminate systems of forced labor wherever they are found.

Together with the delegations of Ecuador, the Netherlands, France, and the United Kingdom, the United States has cosponsored a resolution designed to facilitate this. As in the past, it condemns the existence of forced labor for political and economic purposes. It requests the ILO to continue its work in the field and to report on forced labor to the Council in its annual report. It also includes a request to the Secretary General to transmit any information he may receive to the ILO for its information and use, including information of a nature which ordinarily would be circulated only under the provisions of resolution 75 (V).

The total effect of this resolution would be to place the subject in the hands of a competent group of men in a responsible and experienced organization who will press forward to seek to eliminate forced labor as rapidly as possible. It will be possible for us to review the subject periodically on the basis of the ILO reports, or if the situation warrants to take it up as a special agenda item in the future. It is our hope that the trends in world thinking and relations have come to the place where all delegations can support this resolution.

Pike County Farm Losses

EXTENSION OF REMARKS
OF
HON. SID SIMPSON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 17, 1956

Mr. SIMPSON of Illinois. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following newspaper comment from the Pike County Republican, of Pittsfield, Ill.:

[From the Pike County Republican of May 9, 1956]

SHOCKING LOSS FIGURE

An inkling of the serious financial crisis Pike County farmers endured during 1955 appears in the Farm Management Cooperators survey conducted under the supervision of Farm Adviser Herb Wendler. A summary of this survey appears elsewhere in this issue.

It is important because it is based on accurate cost studies of 22 farming operations in Pike County. It does not mean that all farmers suffered as heavily as the 22 cooperating, but it does indicate serious trouble.

The 22 farmers had an average loss of $7,260 for the year, or a total for the 22 of $159,764.

These conditions developed during a period of rigid high price supports on basic crops, as the flexible program was not effective until late fall.

Everyone in Pike County joins in a fervent prayer that the new farm program, based more closely on the age-old law of supply and demand, will help to correct this shocking farm financial situation.

Heavy loss during years of national prosperity is an anachronism that must be ended. However, it would be futile to try to end it by continuing the same old legislation under which this unfortunate situation developed.

[From the Pike County Republican of May 9, 1956]

SURVEY SHOWS 22 FARMERS HERE HAD BIG LOSS IN 1955—AVERAGE LOSS OF $7,260 PER FARMER DURING YEAR

A survey by Farm Adviser Herb Wendler, based on the management records of the 22 farmers who cooperate in the special annual study, shows 1955 as a year of staggering loss.

Here is Mr. Wendler's summary and comment:

How did our Pike County farmers do in 1955? The only accurate records I have available are those from our 22 farm management cooperators.

Let's start with the startling figure. In 1955 these 22 cooperators had a net loss of $159,764. In round figures that's a loss of $7,260 per farmer. I am wondering how many businesses in Pittsfield would fold up with such a loss.

One operator had a net management return. It was small. Following the principle of not quoting specific farm examples, no individual farm figures are quoted in full. Most farmers on the accrual basis of accounting paid no social-security taxes.

We like to speak in terms of returns per $100 worth of feed fed to the different classes of livestock. In 1954 hogs returned $150; in 1955 the figure was $100 (break-even on feed only). For beef cattle in 1954 the feed return was $123 per $100 worth fed; for 1955 this was $98. The dairy cattle situation dropped from $176 in 1954 to $131 in 1955. Normally we would expect our farmers to receive $138 instead of the $100 they received in 1955 from hogs. From beef cattle they would need $131 instead of $98. And from dairy we would need $206 instead of $131.

Perhaps the net return per tillable acre might give you the picture from a different angle. However, these returns are based on six counties (Schuyler, Brown, Pike, Adams, Hancock, and Fulton). We will quote the farms with a soil productivity rating of 50 to 64, or near average in productivity. For 1955 11 beef farms with an average of 216 tillable acres had a negative return (loss) per tillable acre of $40.48. Twenty-two hog farms with an average of 238 tillable acres had a negative return of $25.56. Five mixed livestock farms with an average of 139 tillable acres had a negative return of $38.05.

In these figures we conclude the beef farmer is hardest hit. Might I add that this group also suffered a loss in 1954 although it wasn't nearly so large (about one-third of 1955's loss).

Since 1954 is mentioned, I'd like to quote the net management return for these cooperators in that year. It was $8,801. By adding the 1954 positive figure of $8,801 to the 1955 negative figure of $159,764 we find this small group of farmers had a drop in net management returns of $168,565.

It is possible for a few farmers to make a profit while the majority are losing money, but no rural community can make progress while this condition exists.

Some farmers can do a little to help themselves, but they cannot do the job by themselves.

The hog farmer can practice some self-help. I have seen the figures quoted that if we could cut 50 pounds off of all 250 to 160 pound hogs going to market at the present time, prices would jump as much as $1.10 per hundredweight. This would be a result in the cut in lard tonnage alone.

Big Business and the H-Bomb

EXTENSION OF REMARKS
OF
HON. B. CARROLL REECE
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 17, 1956

Mr. REECE of Tennessee. Mr. Speaker, the unique feature of our free-enterprise system is that each business unit, regardless of its size, can play a part in furthering the welfare of all of us. Big business plays a particularly important role in furthering research activities which are completely beyond the scope of smaller enterprises. This is true in spite of the statements by Mr. T. K. Quinn, the professional anti-big-business witness whose statements I reviewed in the CONGRESSIONAL RECORD last year.

Mr. Quinn said "original inventions are no more plentiful, proportionately, in big than in small organizations." Mr. Quinn argues that "in the electrical-appliance industry, the better clothes-washingmachines have not been produced by the monster companies but by relatively small, independent companies specializing in one or two products. This is also true of ranges, vacuum cleaners, radios, toasters, mixers, home-freezers, fans, clocks, heaters, air-conditioning units, and so forth." Mr. Quinn may know something about toasters and mixers, but he does not claim to be an atomic scientist.

One accomplishment of big business which means more to the security of all of us than anything else is the production of the hydrogen bomb. Here the role of big business is undisputed. What is more significant, I firmly believe that our scientists, through their efforts in developing the hydrogen bomb, are on the way toward the development of peaceful applications of the fusion process.

Henry J. Taylor recently described the activities of the Du Pont Co. in producing the plant facilities and the bomb itself at the huge Savannah River plant of the Atomic Energy Commission. Mr. Speaker, the fee charged the Government by the Du Pont Co. for assuming this tremendous responsibility was $1.

I wonder where we would be today if we had followed the advice of Mr. Quinn and destroyed the vast organizations which are capable of doing this kind of a job for all of us.

Mr. H. J. Taylor, the noted journalist and radio commentator, recently described the Savannah River project in an article in the Reader's Digest. In accordance with leave previously granted, I am including Mr. Taylor's article as an extension of my remarks:

INSIDE THE H-BOMB PLANT

(By Henry J. Taylor)

The hydrogen-bomb plant is the largest construction achievement in the history of the world. The site, larger than Chicago, covers 315 square miles, stretches through three South Carolina counties. The great secret plant runs for 27 miles along the Savannah River. It cost $1,400 million.

There are 280 permanent buildings. Many are as heavily constructed as the battleship *Missouri*. Nearly all are windowless. Some are enormous gray monsters billowing skyward in tier after tier of concrete and steel, shaped unlike anything previously designed by man—and some are actually not populated by a single man, because the process inside is so deadly.

Some have a definite, sober majesty. Others are low and rambling, with annexes and entrances that you enter as if you were coming into the yawning mouth of a giant snake. Still other tremendous buildings consist of row after row of aluminum-colored tubes, trellises, retorts, and tanks, thrown up bare, without walls, for the fumes from their strange processes would be poisonous if confined by walls and the ventilation problem impossible. In fact, some fumes at this stage are so lethal they are carried to a tower 400 feet tall, and burned high in the sky—an eerie, even frightening sight at night, the wild flames licking upward in a blazing whirlpool.

Pumping stations and power stations are everywhere. An incredible quantity of water is needed to cool the atomic reactors, enough to serve the city of Philadelphia. In its chores, this water is pushed through 85 miles of underground mains. Little is consumed; it is simply circulated and returned to the Savannah River. Overhead powerlines weave among the buildings for some 128 miles. The plant uses as much electricity as the entire State of Delaware.

Every man who enters this place is photographed. Each building is surrounded by its own immense circuit of barbed wire and a secret protection system. There are armed sentries and squads of radio-equipped patrol cars hovering near every series of barriers. Even the plant's general manager and security chiefs, who guided me throughout, must stop for full identification at every alarm post and checkpoint. That they had passed through the barrier a few minutes before, and had been identified, made no difference.

How did this all start, in the first place?

Our A-bomb had been a success. Nuclear fission, or the splitting of the atom, had been achieved. We had learned the secret of the transmutation of the elements, changing one element to another. We had made an A-bomb so powerful that it had, at Bikini, lifted 10 million tons of water to a height of 2 miles—equivalent to the tonnage of the United States wartime fleet. But after the U. S. S. R. exploded their A-bomb in August 1949, it was decided to attempt the creation of the even more powerful H-bomb.

The known fact that our A-bomb generated temperatures up to 50 million degrees Centigrade led to the successful creation of the H-bomb. The sun, which gives off energy in changing hydrogen to helium, burns at some 20 million degrees Centigrade. Scientists reasoned that an A-bomb explosion could produce a fusion reaction like that of the sun if the proper materials were at hand. The atomic bomb could thus be used as a trigger for a fusion bomb. That bomb, in turn, would ignite and fuse or bring together two of the heavier isotopes of hydrogen.

The decision to attempt the H-bomb was made at the White House on January 31, 1950. But the manufacturing challenge was appalling. The hydrogen bomb would have to contain fusionable products similar to those in the stars, and produce incredibly high temperatures. Savanah River scientists told me that first estimates were that such material would cost a million dollars a pound. It would have to be carried to the target under refrigeration of 400 degrees Fahrenheit below zero. The bomb itself would weight at least 130,000 pounds, and so could not be transported by air.

The material now used was conceived later on in the realm of pure science. But it took this 315-square-mile plant to make that product.

In the beginning, technical production difficulties, and the sheer immensity of the factory-construction problem, were so great no assurance could be given that such a nuclear product could be made. However, E. I. du Pont de Nemours & Co.—which had built and operated the Hanford, Wash., plutonium unit—accepted an Atomic Energy Commission letter of contract on August 1, 1950, and took on the project, including responsibility for thousands of subcontractors, at a fixed fee of $1.

When the engineers started looking for sites they started looking for rivers, because so much water would be needed to cool off the atomic furnaces. But the investigation also dealt with many other factors. In all, some 114 sites were examined. In November 1950 a joint review committee chose the area south of Aiken on the quiet Savannah River.

Six villages were made into ghost towns—like Ellenton. The name still appears in the post office guide, but not a soul remains. Dusty houses cluster the short main street. The wind bangs their doors open and shut on creaking hinges. For these houses stand today in the heart of the secret area. In all, 1,500 families had to be moved and resettled.

Meanwhile, Du Pont's engineering work had started. It wound up a series of 2 million blueprints. In a roll of paper 24 inches wide they would stretch from Atlanta to Seattle. The dirt excavated would cover the same distance, in the form of a wall 10 feet high and 6 feet wide.

Construction started in February 1951. The number of workers reached a peak of 38,500 in September 1952. The average age of the engineering and supervisory group was only 40.

Today there is an operating force of around 8,500 people. All personnel live off the secret site.

A world safety record was established during the building of the plant. Men worked for more than 6 million exposure hours without a single lost-time injury—a record unparalleled in the construction industry.

The first output was tested near Eniwetok atoll in the Pacific on November 1, 1952. That bomb was called "Mike." It was too big to be dropped from an airplane. It wiped out the island of Elugelab, on which it was shot, leaving in its place a crater 175 feet deep and a mile wide—big enough to hold 14 Pentagon buildings.

That single bomb had more force than the combined weight of all the bombs dropped on Germany and Japan throughout World War II.

In 1954, another H-bomb, by now so developed that it could be airborne, was exploded in the Pacific. It produced several-fold the force of the first one.

The first step toward making the H-bomb is the arrival at the plant of polished slugs of uranium. One pound of this material (only the size of a golf ball because of its great weight) has the same potential energy as enough TNT to fill the Yankee Stadium. The uranium slugs are assembled inside long tubes called fuel rods. The target material this atomic fuel is to bombard is assembled inside similar rods in such a way as to provide a self-sustaining chain reaction. The methods call for applied nuclear science of the highest level and involve, of course, several of the most basic secrets of production.

Roughly speaking, the materials that are to react on one another in the nuclear furnace, the reactor, are now ready. And here came the next construction challenge. Previous reactors were atomic piles using graphite in the nuclear process. H-bomb materials required designing a tank-like reactor on a completely new theory. The tank could be made of aluminum. It would be surrounded by graphite, and then by a concrete shield. But it would have to be filled with "heavy" water.

This fluid is a phenomenon. It looks like plain water, but weighs more. Of the hydrogen atoms in plain water, one in every 6,250 weighs twice as much as the rest. Every time you use 52 gallons of water in everyday living, you use 1 ounce of "heavy" water. This amounts to 1 pound in every 3 tons of water—if you can get it out. The H-bomb plant miraculously "gets it out" by the thousands of tons, whereas only a small quantity existed previously throughout the world.

In the H-bomb process, neutrons fly out from the uranium at high speeds. They are the "spark" for the powerful nuclear reaction. But they travel 30 million miles per hour; it is necessary to slow them down before they are efficient; otherwise they may bypass the atomic targets in the other rods that they are supposed to convert. The heavy water is used to slow down the neutrons. They are kept submerged in this strange fluid, which is called the "moderator."

Finding a way to produce vast quantities of heavy water made possible the success of the radically new reactors. These are great, tiered, heavily constructed buildings. There are five of them, all alike, the heart and core of the plant: buildings R, L, P, K, and C. The working force call them "Roger," "Lilly," "Polly," "Kitty" and "Charley."

There are 5 reactors instead of 1, not because all are necessary to make 1 H-bomb, but to multiply the output. For it is incorrect to assume that once our country has a suitable "stockpile" of atomic weapons we have a true and standing supply. Atomic bombs deteriorate in storage. They must be freshened, replenished, "recharged." That is why there is continuous atomic-materials production, and why the output is on a permanent basis.

An atomic bomb is an uncontrolled reaction. A reactor operation is a controlled reaction. When loaded rods are put in the reactor, the tremendous potential energy locked up in their atoms must be released gradually. The nuclear operation requires controls so fantastically sensitive that human operation is impossible. The pulse of the reaction must be recorded continuously. Speed in electronic calculators and signal systems is imperative to monitor it and also to set in motion the nuclear corrective measures required to compensate for the slightest changes. The whole operation is controlled by another industrial super-marvel—instrumentation.

The H-plant's instrumentation includes more than 100,000 dials. Some scales weigh invisible specks one billion times smaller than a gram. Other instruments clock speeds of atomic particles to one thousandth of a millionth of a second. Miraculous pumps whirl faster than the speed of sound. You can see immense doors open and close themselves in perfect unison. Some of the machines weigh 250,000 pounds, yet they must operate with micrometer-like precision. They are, in fact, built by watchmakers.

The fission products, or ashes from the atomic fuel, are intensely deadly, radioactive. To handle them, robots take over. To avoid radioactive fatality, the incredibly difficult operations had to be designed to continue indefinitely without ever stopping for maintenance, and completely without human contact.

Here you see robot hands, remotely directed, so delicate in their touch that they could pluck a hair from your head. You see huge robot derricks and electric trolleys inching their way through tunnels and down tracks under electronic control, as if guided by brains from another world.

Equipment maintenance and other intricate changes are made on signal by means of these weird workmen among the forest of machines. They throw switches as a man might do, repair leaking pipes, transfer faulty machinery, install replacements, and even flash a battery of lights, like a pinball machine, if they fumble something.

Technicians scan the operations from outside the vast building through a telescope in the wall. When I asked why the robots needed watching one scientist replied: "Well, it's lonesome in there. We keep our eye on them to see that they don't go over in a corner and sulk."

At intervals, discarded machines or tools, if radioactive, are transported to a burial ground down by the river. There even the trucks that haul them are buried forever.

The atomic end-products emerge separated. The uranium fuel, repurified, is returned for reprocessing into slugs, to be used again. Some plutonium has been created, useful in the A-bomb. Cobalt has been made radioactive; it will be packaged in the form of wafers, each slightly larger than a dime, and shipped for use in the medical profession as a substitute for radium. Isotopes are sent to outside laboratories for experiments toward better agriculture, better forestry, better industry, better health. The poisoned material for which no use is yet known is stored underground in batteries of giant sunken tanks, each the size of a 10-story building, awaiting a day when science will discover some utilization.

And finally comes the material for the H-bomb, now purified and lethal. It is ready to be assembled into the weapons which today guard the peace of the world.

None of Washington's Business

EXTENSION OF REMARKS
OF
HON. JOHN V. BEAMER
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 17, 1956

Mr. BEAMER. Mr. Speaker, under unanimous consent, I wish to insert in the Appendix of the CONGRESSIONAL RECORD the attached editorial from the Indianapolis News of April 25, 1956, entitled "None of Washington's Business":

NONE OF WASHINGTON'S BUSINESS

The question of whether four State conservation department employees are "guilty" or "not guilty" of ridiculous charges that they violated the Hatch Act will be aired at a United States Civil Service Commission hearing next month.

The outcome of the hearing is not important. But the reasoning of Washington bureaucrats that underlies the hearing is of great importance.

It is a disturbing example of the continuing trend on the Potomac to dictate the affairs of sovereign States.

The Hatch Act was passed more than 20 years ago with the basic aim of prohibiting political activity by Federal employees.

Yet, because four Indiana State employees solicited voluntary contributions to the Republican Party, the United States Civil Service Commission held up its hands in horror and cried "coercion."

The Hatch Act was violated, the Commission said, because the conservation department was receiving an allotment of $67,000 in Federal funds and hence the department employees come under the Commission's purview.

Indiana Attorney General Edwin K. Steers says the charges will be refuted.

It makes no difference, actually, whether the men are "guilty" or not. The affair is simply no business of the Federal Government.

The only punishment that can be given is to deprive the conservation department of the small allotment of Federal funds. Since Gov. George N. Craig several months ago rejected the allotment in a spirited defense of States' rights, that punishment would be meaningless.

There never was a valid reason for such a hearing to be called. But it does afford another opportunity for Indiana to make another fighting stand against Washington dictation.

And if it serves to remind an additional number of Hoosiers that the danger of Federal control always accompanies Federal aid, then it will not be a waste of time.

Comments of Menominee Problems

EXTENSION OF REMARKS
OF
HON. MELVIN R. LAIRD
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 17, 1956

Mr. LAIRD. Mr. Speaker, the Shawano Evening Leader in its issue of Friday, May 11, 1956, reprinted 2 editorials, 1 from the Milwaukee Journal, Milwaukee, Wis., and 1 from the Appleton Post Crescent, Appleton, Wis.

I ask unanimous consent to include the reprints of these two editorials as they appeared in the Shawano Evening Leader. The Menomine Indian Reservation is located just a few miles from Shawano, Wis.

COMMENTS ON MENOMINEE PROBLEMS

The problems of the Menominee Indian Tribe as termination nears have drawn widespread comment.

We present here the recent comments of two Wisconsin daily newspapers.

THE MILWAUKEE JOURNAL

It remains to be seeen, in this election year, whether last week's meeting of the State Menominee Indian study committee settled more political controversy than it raised.

Certainly the former is to be hoped for, because the problems involved in termination of Federal trusteeship over the Menomines and their magnificant central Wisconsin forest are complex enough without partisan politics being added as a disruptive ingredient.

The committee, created by the last legislature to help the Menominees prepare for termination by December 31, 1958, is made up of tribal representatives, legislators, supervisors of counties adjoining the reservation and State department officials. Working with the committee are technicians from the University of Wisconsin.

Last Friday the committee sidestepped endorsement of a congressional bill by Representative REUSS, Democrat, of Milwaukee, which would permit the transfer of property to the tribe only when the tribe and the Secretary of the Interior agreed upon a termination plan, but would end Federal supervision and benefits on December 31, 1958.

William Proxmire, Democratic candidate for governor, has predicted a "nightmare of injustice" if the bill is not passed. But at the meeting Attorney General Thomson, study committee chairman and a Republican candidate for governor, said he believed the bill would "create more problems than it solved."

The committee, however, did adopt a policy statement approving preservation of the Menominee forest under sustained yield timber management, one of the objectives of the Reuss bill. It also endorsed a noncontroversial bill by Representative LAIRD (Rep., Marshfield) to appropriate Federal funds for termination studies. It also asked Congress to amend the termination law to avoid possible complications by premature allocation of property rights to individual tribal members. LAIRD has since introduced a bill to accomplish the latter purpose.

Both Democrats and Republicans may choose to make political capital of the committee actions. But if there is disagreement, let it be on a responsible level. The interests will be poorly served by bickering and unfounded charges at a time when not even tentative recommendations have been made by the trained personnel now digging into the difficult problems involved.

THE APPLETON POST-CRESCENT

It has been said that some of the leaders and members of the Menominee Indian tribe are probably wishing that the political campaigns would end quickly. There are signs that the Democrats in their anxiety to defeat the Republicans are willing to use the tribe and its problems as clubs without regard to the unfortunate consequences for the Indians themselves.

Thus some of the Democratic candidates have already issued charges that the Republicans have unworthy motives as the State administration works out the problems of Indian self-government, in consultation with the tribe, under legislation adopted by a Republican-controlled Congress that provides for the release of the Indians from Federal Government wardship at the end of 1958. Not too subtly, some of the Democratic oratory has hinted that the Republicans want to be a party to the despoliation of the Indians' magnificent forest reserves by private interests.

Not only is the suggestion a base one, but it can be refuted so easily by the clearly visible record as to cause some curiosity about why the Democrats dared to make it. Perhaps they don't think that many persons are informed sufficiently about the details and that the political dividend is worth the risk.

The fact is that such a charge impugns not only the elected officials at Madison, but several dozens of nonpartisan technicians of the University of Wisconsin and the State administrative agencies, not to mention the leadership of the tribe and the chairmen of the Shawano and Oconto county boards.

For these are the men who are sitting as members and consultants of the commission set up by the last legislature to work out a civil government and political freedom program for the 3,200 members of the Menominee Reservation. The task is admittedly a challenging one. No one has said the problems will be easily solved. Some thoughtful persons are aware that there are some doubts that a way can be fashioned to permit the cooperative ownership and protection and sustained-yield management of the forest for the Indians' economic benefit, within the taxation requirements of a modern local government operating without exceptional State or Federal subsidies.

But the important fact is that the answers are being sought, that some of the best brains available are dedicated to the task, and that the legislature from now on will get the facts. If it is then shown that the problems cannot be solved within the terms of the "emancipation" act of the Congress effective in 1959, the Congress will have ample opportunity to take new action to suit the facts as they are found to exist. Meanwhile it will be clear to all fair-minded persons with the slightest knowledge of this matter that caterwauling from the sidelines with political intent and purpose can only make the solution more difficult.

Independence for the Handicapped Through Employment

EXTENSION OF REMARKS
OF
HON. OREN HARRIS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 17, 1956

Mr. HARRIS. Mr. Speaker, it is with great pride that I include in my remarks an essay written by Mr. Rodney Nicholson from Parkers Chapel High School, El Dorado, Ark., which placed fifth in the national essay contest conducted by the President's Committee on Employment of the Physically Handicapped. I commend this essay to the attention of every Member of Congress. I am sure all of us join in congratulations to this fine young man for his contribution to this program.

Under leave granted, to extend my remarks, I include the essay:

INDEPENDENCE FOR THE HANDICAPPED THROUGH EMPLOYMENT

Independence is a wind of freedom within the soul of man. Independence is the spirit of a man free from the sustaining support of another man, free from control over his mind, his thoughts, and his works. Independence is the faith of a man in himself, in his ability as an individual to develop and direct his talents and his life.

Employment, whether directly controlled by another, or guided from within the personality is a foundation requirement without which independence could never be attained. This is a decree from God written into the nature of life itself.

The union of these distinct ideas of independence and employment is found in the poetry of Carl Sandburg, woven into a single expression of beauty and truth.

"I know a Jew fish crier down on Maxwell
Street with a voice like
A north wind blowing over corn stubble in
January.

He dangles herring before prospective customers evincing a joy
Identical with that of Pavlowa dancing.

His face is that of a man terribly glad to be
selling fish, terribly glad
That God made fish, and customers to
whom he may call his
Wares from a pushcart."

The need of employment is for every man. It holds no exception, whether the man is strong and able and alooks on his world from clear eyes, or whether his eyes are dim and he is halt and lame.

But for the physically disabled the task of securing employment to build an independent life is beset with difficulty. We must understand these difficulties if we are to help the disabled to help themselves.

The disabled must adjust themselves mentally to their disability.

They must develop their capacities and natural skill to a higher degree than that required of one who is able bodied.

They must overcome the natural resistance and prejudice of employers.

They must prove their worth, competing with sound men in the production of goods and services.

The darkness of misunderstanding that still clouds the truth about disabled people remains a foremost crippling difficulty. If not dispelled, this difficulty can cause society to doom its physically disabled to a living death of uselessness and cruel despair.

Must the crippled and the physically deformed stand on the corner of a street to sell items for scant pennies?

Should people recovered from a disease be thought a hazard to health and never allowed to work?

Are the blind better for nothing than to be idle in their darkness, their very lives dependent on another's charity?

A disabled person needs constructive assistance in solving those difficulties. If this assistance is not available the person will likely become a burden to his society, able to hold scant happiness for himself or for others. This is a tragedy too intense to be ignored or looked lightly upon by anyone.

The entire working force of the country of America nears 63 million. Of these, approximately one-quarter of a million become disabled each year. While millions of these disabled are gainfully employed, there were in 1953 some 200,000 who were not—more people than comprise the entire working force of the country of Norway.

Many of these unemployed are supported at public expense. With proper training and rehabilitation, they could be placed on jobs fitted to their ability and personality. Being thus employed they would make valuable contributions to the working force of America. They would achieve a pride in themselves and respect of others as self-supporting citizens.

It is of evident importance then to the economy of this Nation that our disabled be rehabilitated, trained, and placed in profitable, productive employment.

Our Government has recognized this need and great strides have been made in its direction. But at best Government efforts rehabilitate less than 100,000 disabled persons each year; much remains to be done.

In 1953, while addressing the President's Committee on Employment of the Physically Handicapped, President Truman said in essence:

"The Nation's rehabilitation and placement programs should be expanded until large enough to give proper assistance to all who need it.

"Helping the physically disabled is not a matter of charity, done only for their happiness and comfort. We need them as productive workers, as taxpayers and citizens. Helping the disabled is a matter of economics as well as social justice."

The President closed saying, "We cannot afford to waste our human resources any more than our natural resources. We must husband them both if we are to succeed in building strength and security and peace for ourselves and the free world."

Truly by becoming personally independent, people form the soul of an independent nation. In turn, the free nation rewards them a finer degree of personal independence.

Independence has never been gained for a person solely because of his physical power. Independence is a harvest of the mental and spiritual struggle, the victory and the disappointment of individual effort.

Franklin Delano Roosevelt, stricken in early manhood by paralysis, rendered a cripple for life, became one of the greatest and most beloved leaders the world has ever known.

The Apostle Paul, suffering bodily affliction, learned and followed the trade of a tentmaker. He established churches, writing them epistles which comprise now more than half the books of the New Testament. As the first great missionary of the Christian faith, Paul has had an influence on humanity felt even stronger today than when it began centuries ago. Justifiably he could say, "I have fought the good fight, I have finished my course, I have kept the faith."

The years between the lives of these men are rich with the contributions of disabled people. Science, medicine, literature, music, none of the arts or professions could have attained their present degree of excellence lacking these contributions.

Physically disabled people we meet each day have directed their lives into doing a worthwhile job. They have achieved a greatness no less than those who have won fame and recognition.

These people are the friends who share our joys and our disappointments, sharing in all the ways of friends who enrich life with a finer meaning.

They are the neighbors who have homes along our street.

They are the artists and thinkers, the teachers and the statesmen, the engineers and the builders of America.

Creating, sharing, planning, building, the disabled work with us as people dependent on one another—yet independent with a burning individual freedom lighting the way to work and the way to live.

The equality of job opportunity is the birthright of every American. For one handicapped this birthright must be protected by an understanding of his problems and by the assistance in helping him to secure a job. With employment as a solid foundation he can seek the highest fulfillment of his life, an achievement aided and enriched by a personal independence; the wind of freedom within the soul of a man.

Public Power at Niagara—The First Step Has Been Taken

EXTENSION OF REMARKS
OF
HON. IRWIN D. DAVIDSON
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 17, 1956

Mr. DAVIDSON. Mr. Speaker, I learned with a great deal of gratification and pleasure that last night the Senate passed Senator LEHMAN's bill, S. 1823, to authorize the construction of certain works of improvement in the Niagara River for power and other purposes. By its action, the Senate gave its approval to a principle which I have long advocated, that this great natural resource should be developed by public authority for the benefit of the people.

The first great step toward harnessing the power potential of the Niagara's waters was taken last night. It now remains for this House to approve this redevelopment project.

Because of my deep concern and feeling about the importance of this project and its value not only to the people of New York, but to the Nation as well, I am today introducing a bill identical in every respect with the bill passed last night. I do this to make unequivocal my position in support of the measure and the project which it envisions.

Delay in the passage of this act will be exceedingly costly. Too much water has already flowed, unutilized, over the falls at Niagara. Each second, an additional 23,000 cubic feet of water is lost. With it goes the potential electric energy that might have been produced. What a tremendous loss that is for the consumers of electrical power in the area. What a waste in terms of the benefits that would be derived from this electricity.

I respectfully urge each of my colleagues in the House to give this legislation his earnest support and his vote, so that the harnessing of our share of the Niagara power may begin. The benefits that will be derived therefrom will redound to the ultimate good of all the people of our Nation.

Postmaster General Summerfield Asserts the Post Office Department Has No Intention of Changing Existing Regulations Affecting Rights and Privileges of Postal Employees

EXTENSION OF REMARKS
OF
HON. EDWARD H. REES
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 17, 1956

Mr. REES of Kansas. Mr. Speaker, my attention has been directed to a recently publicized statement concerning certain regulations of the Post Office Department indicating, if enforced, might affect certain rights of employees in the postal service. Of course, I am opposed, as you are, to regulations that would jeopardize the privileges of those employed in the postal service of our country.

I addressed an inquiry to the Postmaster General concerning this matter. It occurred to me Members would be interested in my inquiry and the reply of the Department. Here they are:

MAY 15, 1956.

Hon. ARTHUR E. SUMMERFIELD,
The Postmaster General,
Washington, D. C.

DEAR GENERAL SUMMERFIELD: Postal employee leaders have called my attention to regulations of the Department which they charge might be used to curtail the rights of the Department's 500,000 employees. Postal leaders say that the policy could curtail the rights of employees to take action for the improvement of their working conditions and benefits without prior approval of the Department.

The controversial regulation, they say, appeared in the March 28 edition of the Postal Manual. It reads as follows:

"Information relating to the policies and decisions of the Post Office Department will be released only through official channels. Employees shall not actively engage in campaigns for or against changes in the service, or furnish information to be used in such campaigns unless prior approval has been obtained from higher authority.

"If an employee has justifiable reasons for favoring or opposing changes in the postal service, he shall contact the proper officials and await specific instructions before engaging in local hearings or activities."

Union officials tell me that is a violation of the Lloyd-LaFollette Act of 1912 which, as you know, specifically gives Federal workers the right to petition Congress as to improvement in their benefits and working conditions as well as the airing of their grievances. Federal workers tell us the regulation would prevent employees from having their grievances and personnel matters aired within the Department.

It would seem to me that, if the contention of the postal employees is a correct one, and that the Department has issued regulations as described in their complaint to me, you should have an explanation therefor. I will appreciate if you will let me know when you issued these regulations, also why they were issued. Apparently they must be recent or I would have had complaints prior to this.

Knowing the fairness of your attitude toward the problems of the employees in the postal service, I am sure you must have reason for the issuance of this regulation.

Respectfully submitted,
EDWARD H. REES,
Member of Congress.

MAY 17, 1956.

Hon. EDWARD H. REES,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN REES: Your letter of May 15, 1956, states that postal employee leaders have called your attention to certain regulations of the Department which they charge might be used to curtail the rights of employees. If the facts concerning postal regulations were as represented to you by these employee union leaders, I would be the first to share your deep concern in the matter. The claim that these rules are intended to restrict employee rights of free speech simply is not true. Here are the facts:

In 1949, the previous Post Office Department management issued a restriction on campaigns for changes in the mail service on the part of Postal Transportation Service employees. This regulation was reprinted recently in a revised chapter of the new Postal Manual.

It is this regulation which a few of the employee leaders have chosen to distort and misinterpret in an apparent attempt to influence legislation. The Department had no intention whatever of changing any existing privileges of employees and made this fact clear to anyone who inquired. In fact, the chapter of the Postal Manual which reprinted this old regulation made specific reference to part 741 of the same chapter which clearly stated the Department's intent and policy to protect fully the rights of employees.

Part 741 specifically provides for "the presenting by any person or groups of persons of any grievance or grievances to the Congress or any Member thereof" and that "the right of persons employed in the civil service of the United States, either individually or collectively, to petition Congress, or any Member thereof, or to furnish information to either House of Congress or any Member thereof, shall not be denied or interfered with."

Thus, these rights to present any grievance to Congress or any Member thereof, to petition Congress, or any Member thereof, or to furnish information to either House of Congress, or any committee or member thereof, are specifically set forth. Further, in a sincere effort to provide proper recognition for employee organizations, this same chapter of the Postal Manual recognizes the right to organize and contains the following instruction to all postal field management: "Consultation with employee organizations concerning mutual problems is not only the sensible course, but also the policy of the Department."

Sincerely yours,
ARTHUR E. SUMMERFIELD,
Postmaster General.

Mother

EXTENSION OF REMARKS
OF
HON. KENNETH J. GRAY
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 18, 1956

Mr. GRAY. Mr. Speaker, on last Sunday, May 13, we honored the mothers throughout the Nation on their special day that has been set aside and known as Mother's Day. Whether young or old, we all rejoice in the love, affection, and tender care we have received from Mother.

I was so inspired by a Mother's Day poem composed by one of my constituents, Mr. Ike Williford, of Eldorado, Ill., that I wanted to have it included in the RECORD for the benefit of my colleagues and friends:

MOTHER

I see her feeble hands now etched,
With marks of toil and care.
The ones that took me in her arms,
And held me closely there.

When childhood steps were hard to take,
She seemed to understand.
And shielded me from lots of falls,
With those old wrinkled hands.

I wonder now what are her thoughts,
As she sits there alone.
When time hangs heavy on her hands,
And all the children gone.

Perhaps she thinks of days gone by,
When times were not so good.
And those old hands worked late at night,
To earn our livelihood.

If Mother could recall her years,
Her past life to amend.
I'm sure that she would quickly choose,
Those same steps o'er again.

This world is filled with noble works,
Whose fame shall ever grow.
Yet Mother's hands have done far more,
Than anything I know.

—*Ike Williford.*

A Court of Professors and Politicians

EXTENSION OF REMARKS
OF
HON. W. J. BRYAN DORN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 17, 1956

Mr. DORN of South Carolina. Mr. Speaker, the question of qualifications for Justices of the Supreme Court was raised at the time of the formation of our Government. Alexander Hamilton is reported to have said that we need not ever worry about that as any President would always appoint the very best legal minds and those with the most judicial experience to the Supreme Court. Mr. Hamilton was a great and patriotic man. He simply could not foresee a time in America when any President would appoint other than our very best lawyers and judges to the high bench. Unfortunately, Hamilton was wrong. We have indeed fallen upon such evil days. The Supreme Court today is destroying the individual liberties of our people, our local communities and our States.

Mr. Speaker, I commend to this House an editorial which appeared in the Easley (S. C.) Progress. Our grassroots local newspapers such as the Easley Progress are ably pointing out to our people the dangers of the day.

A COURT OF PROFESSORS AND POLITICIANS

One would ordinarily think that the Supreme Court of the United States would be composed of lawyers or judges with long experience. An act is now before Congress to require that any judge on the Supreme Court

of the United States should have had at least 5 years' experience as a judge of a lower Federal court or the supreme court of a State. Yet only 1 of the 9 present judges would pass this simple test. Only 2 more had any prior judicial experience, 1 of them 1 year on the Federal bench, the other (Hugo Black) 18 months as a police court judge. The proposed law means that the people are gradually waking up to an alarming situation—that these men of great power do not understand the power they have because of lack of experience, and are grasping so much additional power as to threaten dictatorship.

Senator Kuchel's Character and Accomplishments Endorsed Editorially

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 17, 1956

Mr. HOSMER. Mr. Speaker, those who know and work with Senator THOMAS H. KUCHEL, California's outstanding junior Senator, are personally aware of his outstanding personal character and ability. These were the subject of a recent editorial in the Long Beach Press Telegram, which sums up his record and concludes that it calls for his retention as a Member of the other body. The editorial is as follows:

CHARACTER, ACCOMPLISHMENT CALL FOR RETENTION OF KUCHEL

When THOMAS H. KUCHEL, of nearby Anaheim, was appointed to the United States Senate by Gov. Earl Warren in December of 1952, this newspaper remarked that there was every good reason to anticipate that Mr. KUCHEL would do credit to Warren's record for picking good men for important appointments.

We have never had reason to regret that prediction. Senator KUCHEL has proved competent, conscientious, and effective in the high post to which he was named. He served so well in the early stages of his tenure in the Senate that the voters of California, in 1954, elected him in his own right to serve out the term of former Senator, and now Vice President RICHARD NIXON.

That term expires at the close of this year, and Senator KUCHEL is again before the voters for reelection. His continued effective service since the 1954 balloting calls for another resounding vote of approval at the polls June 5 for this man of demonstrated integrity.

Senator KUCHEL has supported President Eisenhower in the field of international affairs and national defense—not as a blind follower but because he regarded Eisenhower's policies as the soundest approach to desired objectives. On issues of domestic interest, he has exercised notable independent judgment.

On many questions of direct interest to our own region, Senator KUCHEL has acted with dispatch and effectiveness. He had a key part in bringing about favorable action on the replacement of finger wings at the Long Beach Veterans' Hospital. His bill providing a research program on smog is now the law. The plight of the fishing industry in this area, the problem of sea erosion at the nearby Orange County beaches, and any number of such matters have received his prompt attention.

Senator KUCHEL's friendship for Long Beach has been emphatically demonstrated on many occasions, outstanding among these being his action on tideland matters. Shortly after taking office, he gave able aid in the restoration of the tidelands to the control of the States.

Then, when a bill was introduced in the State legislature which would have seized all of Long Beach's tidelands oil income, Senator KUCHEL joined Senator KNOWLAND in publicly voicing opposition to this extreme proposal. His statement was one of the significant factors in swinging the tide against the seizure bill in the 1955 legislature and bringing about instead an interim investigation of the problem.

We in Long Beach must not forget this notable contribution to our cause, made in the name of fairness and justice to a member of the State's family of communities.

Clearly, Senator KUCHEL has earned the support of the voters of this area in his bid for reelection. He is a Republican, but Democrats as well as Republicans have shown, at a number of statewide elections, that they recognize TOM KUCHEL as a public servant deserving of support, regardless of partisan considerations. He should be retained in the United States Senate.

Precinct Vote Clears Air for All of Texas Politics

EXTENSION OF REMARKS
OF
HON. PAUL J. KILDAY
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 17, 1956

Mr. KILDAY. Mr. Speaker, under leave to extend my remarks, I include the following editorial from the San Antonio Express of May 7, 1956, having to do with the effect of the recent Democratic precinct conventions, carried overwhelmingly by Senator LYNDON B. JOHNSON:

PRECINCT VOTE CLEARS AIR FOR ALL OF TEXAS POLITICS

Texas Democrats spoke up Saturday for party responsibility, moderation, and for orderly processes under the law.

At their precinct conventions, Democrats voted 4 to 1 in the State and 3 to 1 in Bexar County for the Democratic leadership of Senator LYNDON JOHNSON. The issues were drawn clearly. Convention delegates said they want Democrats to run their party affairs; that they prefer moderate, middle-ground leadership; and that they do not recognize the discredited doctrine of interposition.

We think the precinct convention results clear the political air for all of Texas. There is a large segment of Texas citizens who have forgotten the bitter days of the Civil War era and no longer think Republicanism is a foreign political philosophy. Many of those in the ranks of Gov. Allan Shivers will find political ideals of their liking in the Republican Party.

If this overwhelming vote for Democratic Party regularity results in a strong two-party system in Texas, it will be for the State's best political interest. The trend has been for a stronger Republican Party. Saturday's convention voting should serve to strengthen that trend.

But all Texans—Democrats and Republicans alike—can find cause for celebration in the manner in which Democrats ignored interposition and all the evils such a doctrine might bring into being if it were taken seriously by any considerable number of citizens. That fantastic doctrine, rattled about Texas in the heat of preconvention campaigns, found no support in the showdown test Saturday night, we are happy to learn.

Shall We Finance Nehru's Socialism?

EXTENSION OF REMARKS
OF
HON. DONALD L. JACKSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 17, 1956

Mr. JACKSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Santa Monica (Calif.) Evening Outlook of May 8, 1956:

SHALL WE FINANCE NEHRU'S SOCIALISM?

India's Prime Minister Nehru soon will be coming to this country on what he calls a "goodwill" visit. As Will Rogers would have said, this means he's going to be a little slow in telling us how much money he wants.

Certainly Nehru isn't coming to the United States because of any love for us or our institutions. According to him, we were to blame for the Korean War. His anti-American utterances in recent years would fill a book, and he has been especially critical of our free-enterprise system—but never unwilling to accept our aid.

He is coming to the United States, let us remember, after being assured by Khrushchev and Bulganin that India can get everything she desires, in the way of technical aid, financing, materials, etc., from Soviet Russia. Apparently Mr. Nehru doesn't quite trust these Soviet offers, although he feels much closer to Russian and Chinese Communists than to Americans. At least he wants to find out what Washington will offer. So it behooves us to examine Mr. Nehru's program for India, as recently revealed.

India's governing Congress Party is on record as favoring a "socialistic pattern of society." And Prime Minister Nehru implemented this with the statement that "I certainly do not consider that free enterprise has anything to do with the concept of democracy. I do not want to give private enterprise a place which it has in some countries where it is virtually a demigod. If private enterprise clashes with the interests of the country as a whole, it will have to be put down or perhaps have to go, root, trunk and branch."

The socialist aims of the Nehru government are clear in its so-called Company Law of 1955. Its 649 clauses and 12 schedules cover all aspects of company management, limiting salaries of managers and empowering the government to change systems of management if it deems this necessary. The government will be able by August 15, 1960, to determine whether managers could continue to hold their jobs. The Nehru regime makes itself the final authority on the way a company should be run. This is nationalization by the back door.

New Delhi's Minister for Planning, Gulzarilal Nanda, believes his country will need around $2,300,000,000 of foreign capital to reach the goals of its second "Five-Year Plan" starting next year. This huge amount of foreign capital can come only from the United States, since the Russians are not in the lending or giveaway business. It can

come only from the American Government, because American investors and private corporations already have learned about India, to their heavy cost.

There are Americans like Chester Bowles and Harold Stassen who think we should give Nehru everything he asks for, and put up with his anti-Americanism, in order to keep India more or less on the side of the free world. We think Mr. Nehru should be told very bluntly, when he reaches Washington, that we are tired of his backbiting and will not underwrite his socialism and "neutralism." Let him take India in any direction he pleases, but not on our backs. That messy and backward subcontinent never will be on our side so long as Nehru and his kind govern it. Yet Mr. Nehru dares not get in bed with Communist Russia. Mr. President, give him to Chester Bowles and Eleanor Roosevelt.

Vursell and Nelsen Against Hoover REA Report

EXTENSION OF REMARKS
OF
HON. JOSEPH W. MARTIN, JR.
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 17, 1956

Mr. MARTIN. Mr. Speaker, with leave to extend my remarks in the RECORD, I am inserting a radio-broadcast discussion participated in between Mr. Ancher Nelsen, Administrator of REA, and my colleague, the Honorable CHARLES W. VURSELL, on May 10, 1956.

This is one in a weekly series of interesting and informative broadcasts on farm problems by Mr. VURSELL, carried by several radio stations in the 23d Congressional District of southern Illinois.

The matter follows:

VURSELL AND NELSEN AGAINST HOOVER REA REPORT

My friends, this is your Congressman, CHARLES W. VURSELL. In this broadcast today I have a pleasant surprise for you. I am honored to have with me on this program the top Administrator of REA, Mr. Ancher Nelsen.

Mr. Nelsen has directed this organization, nationwide, from his office in Washington for the past 2 years, and I am safe in saying that no administrator is more highly respected or has done a finer job in helping to bring light and power, and REA telephone service, to the farmers since this organization started than has Mr. Nelsen, who will participate in a brief discussion with me today.

However, before calling upon Mr. Nelsen, as your Congressman, I want to make a short statement. It has been my pleasure to serve in the Congress for 14 years, where I have had an opportunity to see REA grow, and an opportunity to help it to expand its growth—through always seeing to it that we in the Congress constantly provided adequate funds for its operation and development.

When I came to Congress, the REA organization was about 6 years old, and about 47 percent of the farmers had been reached with its service. Today, about 95 percent of the farmers of the Nation receive light and power. Of all of the billions of dollars I have helped to appropriate over the past 14 years, none of it, in my judgment, has done as much to aid the farmers, to lift the drudgery from farm work and farm women, and build up the economic welfare of our Nation as has the money we have loaned to REA cooperatives.

This organization has turned on the light and power in the farm homes of America. It has helped to modernize and make farm life more enjoyable. It has brought about a condition that helps to keep more of our fine young men and women on the farms of our country.

By making electricity available to the farmers, they have spent billions of dollars for electrical appliances, which has helped to employ labor, increase business, and build up the economy of the Nation.

Let me tell you what REA has done for Illinois: The 27 cooperatives in Illinois have extended REA service to over 95 percent of the farms in our State. Up to January 1, 1956, these cooperatives have borrowed from the Government $84,510,000, and paid back to the Government in interest $8,950,838, and repaid on principal $18,167,359. This includes a current balance of $5,147,854 of payments made ahead of schedule. In other words, they have paid interest and payments due, and have a prepayment for the future to their credit of $5,147,854.

The fine thing about it is that the record throughout the 48 States is almost as good as the record in Illinois.

In my congressional district, the 5 REA cooperatives have borrowed a total to date of $17 million from REA, and have invested $15,600,000 of that amount, with which they have built and now operate 8,400 miles of line, and serve 28,600 rural customers, who are my constituents. These REA cooperatives are also paying their loans ahead of schedule.

At the close of 1955, they had paid $6,600,000 on principal and interest due on their loans, of which $2,400,000 was paid in advance on principal.

Now, my friends, you have heard quite a bit of talk about the Hoover Report, which sought to change the loan and financing status of REA. As a Member of Congress, I would like to say to you: first, I am opposed to making any change in the present set up of REA, and second, in my judgment, the Congress that brought into being the REA, and has helped to nurture its growth for 20 years, is so proud of its accomplishments that you need not have any fear that we will permit its present organization to be handicapped, or changed, in any way, that would mar the fine record it has been making.

Mr. Nelsen, I am going to ask you to comment on any of the phases of REA that come to your attention at the present time. I know my people will be glad to hear this information from the very top of this great organization.

Mr. NELSEN. Well, Congressman, first may I say that I appreciate the opportunity of appearing on this program with you. I think it is a compliment to me and a compliment to the program.

The rural electrification program has been one of the outstanding contributions to rural America. I say that to you as a farmer. I happen to own and operate a farm in Minnesota. I helped organize the system that serves my farm, and I know farming with kerosene lamps, and it isn't easy. When electric power came out there it was a great contribution.

One of the things we have tried to do in the years I have been acting as Administrator is to try to apply some of the commonsense business administration that we learned on the farm—we have tried to apply that to Government. We have tried to make loans where they are necessary—where they are needed. We have not tried to outbid anyone else, but we are trying to do what is necesary.

We have encouraged that the farmers, directors and managers assume more responsibility and learn more about the business of runing their cooperatives. Therefore, they become stronger; because it is necessary to understand your responsibilities to do a good job.

We have encouraged greater financial strength. We encourage the cooperatives to have their rate structure such that will permit them to acquire greater ownership and less Government equity, and more farmer equity—and, therefore, owning it. So right across the board, our objective has been to do what any good farmer wants to do; that is, to own and operate and understand the business. And we have been very successful in that respect, because today we find the financial picture with REA cooperatives nationwide to be the best in its history. We find at the present time over $80 million of advance payments to the Government of the United States. We find that only about 13 of the cooperatives are behind in their payments. We find also that about 700 to 900 have paid advance payments to the Government. So, I think, when you add the total score we find ourselves in a very strong position.

And I want to say regarding the Hoover Committee report, we hear so much talk about it—I think mostly politically inspired, because we had Hoover Committee reports under previous administrations—and they are recommendations to the Congress for consideration. But our position on the present report is this: that we felt the recommendations in that report went far beyond where they should go, and had not had adequate study, and, therefore, we in REA recommended against it. The Secretary of Agriculture supported our position, and the President of the United States supported our position, and, on top of that, the Congress has supported our position, so, I think, we are in fine shape. We are financially strong. The farmers are getting electricity. We are paying back our loans. And, as a farmer, I feel very proud of what the rest of the farmers nationwide have done.

Mr. VURSELL. Now, that is fine, Mr. Nelsen. If there is anything further you would like to say I note we have almost 2 minutes of time.

Mr. NELSEN. Well, you may be interested also in the telephone program. That is part of our responsibility. We started out, I think the first year with about a $4 million loan program. Gradually that has gone up. Today it runs around $80 million per year.

A part of the contribution that the telephone program makes to rural telephone is the competition. The Bell companies and the independent companies are all doing a little more just because we are in it to push them a little bit. Incidentally, a big percentage of our loans are made to the small independent companies who have difficulty in getting finances. So we are trying to improve rural telephones. In this past year we had the most successful year in the history of rural telephony in the extension of telephone service to farm people.

Mr. VURSELL. That is fine, Mr. Nelsen. I see our time is almost up, but I want to compliment you for the very fine job you have done. I am delighted to have you here with me on this program today. I know our listeners are as well.

This is your Congressman, CHARLES W. VURSELL, signing off until this same time over this same station next week.

Texas' Man Johnson

EXTENSION OF REMARKS
OF
HON. ALBERT THOMAS
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 17, 1956

Mr. THOMAS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial

from the El Paso Herald Post of May 7, 1956, and Houston Press of May 7, 1956:

TEXAS' MAN JOHNSON

Now, more than ever, Senator LYNDON JOHNSON stacks up as a major factor in the Democratic presidential convention to be held in Chicago in August.

Senator JOHNSON'S decisive victory over Governor Allan Shivers—hitherto undefeated—in Saturday's precinct conventions gives him control of the big Texas delegation at the National Convention.

He is almost certain to be a favorite-son candidate, and whether or not he becomes a serious contender for the presidential nomination, he will be in a position of strong influence on the convention's decisions—both as to the choice of a candidate and the writing of the platform.

LYNDON JOHNSON, as majority leader in the Senate and as a force in the Democratic Party, not only is a skilled politician but has constantly been an exponent of moderation—in contrast to some of the extremists who have sought to dominate the party.

The Senator's victory greatly improves the outlook for the moderate policies he stands for.

Perhaps even those conservatives whose peculiar campaign for Shivers stultified them and him will see at least a ray of light.

Food and Drug Law Golden Anniversary Week, May 6-13, 1956

EXTENSION OF REMARKS
OF
HON. THOMAS J. DODD
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 3, 1956

Mr. DODD. Mr. Speaker, this June will mark the 50th anniversary of the Federal food and drug laws and the Meat Inspection Act.

The distinguished Governor of Connecticut, Abraham A. Ribicoff, has issued an official statement declaring the week of May 6–13 as Food and Drug Law Golden Anniversary Week.

The Governor's statement is as follows:

The 50th anniversary of the signing by President Theodore Roosevelt of the first Federal Food and Drug Act will be celebrated during June 1956.

We in Connecticut are particularly honored to observe this occasion because our State has always pioneered in insuring the purity, integrity, and abundance of our food, drug, and cosmetic supplies. Connecticut's first State law in this field was enacted some 20 years before the first Federal act.

Furthermore, our agricultural experimental station was the first in the country, established 82 years ago, and devoting part of its efforts ever since to specific problems of protecting the health of our citizens.

As Governor of Connecticut, I am happy to declare the week of May 6–13, 1956 as Food and Drug Law Golden Anniversary Week.

Interested citizens, in cooperation with members of the Association of Food and Drug Officials of the United States, are urged to mark this occasion with appropriate commemorative activities to foster public recognition of the many benefits derived from Federal, State, and local food, drug, and cosmetic laws.

When Will Our Allies Support Themselves?

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 17, 1956

Mr. BENTLEY. Mr. Speaker, under leave to revise and extend my remarks in the Appendix of the RECORD, I wish to insert an editorial from the May 12 edition of the Saginaw News entitled "When Will Our Allies Support Themselves?":

WHEN WILL OUR ALLIES SUPPORT THEMSELVES?

The American people have been invited to continue pouring out their billions of earnings in foreign aid for another 10 years, or even a generation. The goal: "To accelerate the day when the Soviet Union will be a decent state to do business with."

This is the premise on which Secretary of State Dulles presses his case against cutting the $4.9 billion foreign aid bill. It is a premise which alters radically the people's understanding of a foreign aid policy which they have, until now, been willing to support in the belief that an end could be seen.

There may be no end to this policy of United States aid as a substitute for the NATO countries' assumption of their own economic support. And the NATO member nations are but part of this program of international subsidy. It spreads also to the so-called underdeveloped peoples to discourage their courtship with communism.

Ten years or a generation more of American billions shared in this endless pursuit of friends and support of old allies who, after 10 years of our assistance still can't stand alone, seems utterly futile.

Ten years ago the United States launched on a program of foreign aid whose purpose was understandable and, if the American people have to say so themselves, generous beyond all precedent. It was to restore war-devastated countries, allies and former enemies alike. It was to help them rebuild their economies. Then later the aim was to help allies develop military defenses against the unveiled imperialistic intentions of the Soviet Government.

The American people were given to understand that, once the economies of free nations had grown sound again, those governments would be able to stand up to the Communists.

The American people have given $55 billion of their earnings to this foreign-aid program. It has gone far beyond the bounds of disaster relief and the basic outfitting of military units.

Now we are being asked to continue this aid indefinitely, because our friends aren't able to afford their military establishments. It is a question whether they ever will. This raises serious doubt as to whether, in the long run, it is feasible, let alone sensible, to base the West's anti-Communist defense on so shaky an economic foundation.

Mr. Dulles deserves high praise for the imaginative construction he has given to NATO as an articulate alliance of friendly nations inside the United Nations. As an independent council, it also can bring unity of action, or at least formidable pressure, on the bigger, ideologically divided U. N.

If we fail to see the connection between this unfolding new approach and the endless subsidization of our friends, however, it is because nothing has been shown on the dollar side other than to suggest more of the same.

Rather than assisting Western Europe and some of these underdeveloped nations toward independent economic strength, is there not also concern that by our perpetual supplying of aid we have slackened their own will to recover and advance?

Congress is showing reluctance to accept the continuing heavy foreign-aid commitment. The greatness of America was built not on dollars but on ideals. America is distinctive in the world today only because it has defended at every turn the blessed heritage bestowed upon it by the Founding Fathers. Americans cannot build other nations in America's image through dollars. In bypassing the foundations of our strength and wealth simply to share the fruits, we may be perpetuating a disservice, which is the last thing Mr. Dulles or any of us could want.

Address by Hon. James A. Farley at Dinner Honoring the Ambassador of Japan

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW MEXICO
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 17, 1956

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Hon. James A. Farley at a dinner tendered His Excellency Masayuki Tani, Ambassador of Japan, by the Japanese Chamber of Commerce of New York at the Waldorf-Astoria, New York City, on May 15, 1956:

ADDRESS BY HON. JAMES A. FARLEY, CHAIRMAN OF THE BOARD, THE COCA-COLA EXPORT CORP., AT DINNER TENDERED HIS EXCELLENCY MASAYUKI TANI, AMBASSADOR OF JAPAN, BY THE JAPANESE CHAMBER OF COMMERCE OF NEW YORK, NEW YORK CITY, MAY 15, 1956

I am most pleased to be included amongst the distinguished friends and members of the Japanese Chamber of Commerce of New York at the chamber's annual dinner. Happy birthday and banzi.

I also deeply appreciate being given the opportunity to share the speaking honors with your president and with the Ambassador of Japan to the United States.

You can well imagine that it is difficult for me to select an appropriate subject on which to address you as your chamber has so many times been addressed by experts on every phase of Japanese-American relations and, obviously, I can lay no claim to being an expert on that subject.

I have, however, had instructive experience with the formulation of national and international policies of trade and commerce as a Cabinet member. I have also traveled the world over as an "observing salesman." I have been in Japan several times.

Consequently, I have been able to observe, firsthand, the working of different trade policies on the domestic and international economy of many nations in their efforts to rehabilitate themselves economically from the devastations of war. I have seen the struggle of nations to recapture their lost foreign markets to provide an outlet for their restored domestic production. I have had the opportunity of talking with government officials, businessmen, manufacturers, bank-

ers—with all classes of people in all walks of life. Naturally, I have formed certain opinions from these experiences. Although each country has its own special and peculiar problems there are, nevertheless, certain universal economic truths applicable to all.

Your chamber is dedicated to the improvement of relations between Japan and the United States, particularly in the fields of commerce and trade. This recommends that I should devote my remarks to certain basic general observations which are within the framework of your chamber's objectives and purposes.

It has been repeatedly said, from the highest official sources, that Japan is the eastern bulwark against communism. To be a strong and effective bulwark against communism, Japan must have a strong and viable economy, with political stability. To be in that position Japan must, first, be economically and industrially rehabilitated from the ravages of war; second, she must have access to required raw materials at costs making her manufactured products competitive in world markets; and, third, Japan must have world markets available in which she can competitively sell her manufactured products.

Let me express it another way, as this is the very heart of the Japanese problem. The viability of Japan's economy is inextricably bound to a foreign trade cycle whereby food and raw materials are imported into Japan, the same materials being processed there into finished goods and the finished goods then exported for foreign exchange to finance the import of more goods and raw materials.

Japan is at present dependent on friendly countries for an assured supply of the foods and materials vital to her existence. Up to the recent past, Japan has been able to pay for her requirements with United States dollars, and while this may continue for some while the more likely prospect should be that Japan will turn to the countries of Asia and Africa, as well as this hemisphere, for her food and raw material supply. She should be able to sell to those countries, from which she buys, and all nations of the free world should unite to assist her in placing her manufactured produce in these areas where they can so easily and successfully be absorbed in exchange.

No one can deny that the United States has a clear understanding of this problem and has been doing and is doing everything posible to solve it.

President Eisenhower has repeatedly shown his clear understanding of it and has reaffirmed his understanding by enunciating it as the American policy toward Japan.

Let us select a few quotations from the President. A year ago he said: "Japan cannot live, and Japan cannot remain in the free world unless something is done to allow her to make a living.

"Now, if we will not give her money, if we will not trade with here, if we will not allow her to trade with the Reds, if we will not try to defend in any way the Southeast Asian area where she has a partial trade opportunity, what is to happen to Japan? It is going to the Communists."

As early as December 23, 1954, in letters to the chairman of the Senate Finance Committee and the chairman of the House Ways and Means Committee, he wrote:

"A stronger and more stable Japanese economy is of major importance to Japan and to the free world. Our current efforts to expand Japan's trading opportunities by inducing other countries to join us in lowering trade barriers against Japanese goods is an important link in our overall security effort."

As recently as April 21 of this year, President Eisenhower added to his prepared address to the American Society of Newspaper Editors, the following most striking observations. I quote:

"Let me take one example, just to show you how these things work out. Let us take Japan. There is no one in this room who needs a blueprint of how important it is to us that Japan stay outside the Iron Curtain. A nation of 90 million industrious and inventive people, tied in with Communist China and with the Soviets, would indeed pose a threat to us that would be very grave indeed.

"Japan is 90 million people living on fewer ariable acres than there are in the State of California. How are they going to live? Well, they have got to trade. They have got to deal with other people outside. We won't trade with them. Every day—well, if not every day, every week, there comes to Government, including to my desk, pleas for greater protection against Japanese goods.

"Now this is not wholly one-sided, because some of our citizens have found out that last year—I think my figures are correct—while we were buying $60 million worth of cotton textile goods from Japan they bought $120 million worth of our cotton. So even that problem is not clear in exactly what you should do.

"But anyway, we won't trade with them, so they can't make a living with us except on a minor scale. But we get tired, properly—we can't be trying to sustain any other nation just with our money. So we don't just give them the millions by which they can go and buy all the things they need abroad.

"But the next thing we come up against: we are very certain in our own minds that some of these nations—not all the United States people, but some of them, are very loud in their denunciation of any country that trades with the Communist countries. So the Japanese can't trade with their natural markets, with Manchuria and China. So finally all of those southeastern markets—all the southeastern Asian markets have largely destroyed—they are so poor they can't support Japan.

"So what does Japan do? Where are we chasing her? Chasing her to one place. She has to look less to us and more to her mainland next to her. She has to, now, begin to look rather longingly, unless something is done. Now that is the kind of cross-purpose that comes up, and this goes on around the world. Britain and France and Germany, indeed every country with which we deal, has some problem different economically from our own."

It is most significant that the President should have taken this important audience to make his position so positive.

Now the significant fact is that this policy to assist Japan in every way to rehabilitate herself and become self-supporting is not a partisan policy. It is free from even the suspicion of partisan political motives. It is not a Republican or a Democratic policy. It is an American policy. It has been carried on by the past three administrations.

Also, reciprocal tariff treaties to facilitate the freer exchange of goods between nations were initiated and authorized by law under a Democratic administration, principally under the advocacy of my dear friend, the late Secretary of State, Cordell Hull. I was in the Cabinet at that time. This policy of the reciprocal tariff treaties has been supported by the Roosevelt, Truman and now by the Eisenhower administrations.

Thirty-nine nations have entered into an agreement known as the General Agreement on Tariffs and Trade—commonly called GATT. This multi-nation agreement has liberalized tariffs amongst the participating nations on a reciprocity basis.

There is now before the Congress of the United States a bill to approve OTC, the international organization set up by 31 nations last year in Geneva to implement and to provide the organizational machinery to carry out the General Agreements on Tariffs and Trade. If this bill now before the Congress is not enacted into law some other similar legislation will have to be enacted to redeem our agreement under GATT or else the whole structure of reciprocal tariffs will fall.

President Eisenhower's special commission, headed by Clarence Randall, supported the underlying objectives of reciprocal tariff making.

From this record of legislative history and the declarations of the executive branch of our Government made over the past 25 years, we can safely say that these reciprocal tariff treaties are now an established part of America's national as well as international trade policy. It is a policy to which over 39 nations have subscribed and on which they are now predicating their trade policies and programs.

I have labored these points to emphasize that a freer exchange of goods amongst nations—helping nations to help themselves to earn a living—and the whole policy of reciprocal tariffs—is a two-way street. Furthermore, I repeat, reciprocal tariff treaty making is not only our national domestic policy but also a matter of our international commitment.

To depart from this policy at this time would be a breach of agreed policy. A policy on which all GATT participating nations in the free world have relied. Such a change would cause a serious economic rupture in many "tender" places and in some might lead to a loss of friends behind the Iron Curtain.

From the record to date, however, there should be every assurance to Japan that the United States will do its part to contribute to the success of her effort to become self-sustaining. The present liberal trade and tariff policy toward Japan must be pursued if Japan is to be able to play the part in the Western World which is expected of her.

Last June in Geneva, the United States concluded an agreement under which Japan was granted substantial tariff concessions upon many products exported to the United States and in return the United States received reciprocal concessions upon some American commodities, but it is certain that substantially more tariff concessions must be granted if Japan is to even approximate a balance of trade. However, considerable progress is noted.

Of course, our domestic economy must be adequately protected against illegitimate international competition and dumping, but for the prosperity of our domestic economy it is now pretty well recognized that we must promote our foreign markets for our exportable surpluses, and to do this we must make it possible for our foreign customers to buy from us by our purchasing from them.

But let us pause here a moment.

The damaging effects of Japan's increasing exports to the United States on our domestic production, as claimed by some American industries, are grossly misrepresented. For instance, one would get the impression from the present flareup that Japan's textiles were being imported into the United States at a rate destructive of the American textile industry. The fact of the matter is that the total textiles exported by Japan to the United States are about 1.5 percent of the United States textile production. This 1.5 percent is negligible to the United States, and in the light of the magnitude of her textile production, but vital for Japan.

Furthermore, Japan has always been, and is, one of the largest purchasers of American goods. She buys very much more from the United States than she sells to the United States. Let me cite one example of this, the one which is so controversial at the moment. In 1955 Japan purchased $120 million of raw cotton from the United States—the largest purchase of cotton made of United States raw cotton by any nation in the world—and only sold cotton fabrics of all kinds to the United States of $50 million. The balance of trade is heavily against Japan.

I believe that our trade and tariff policies have proved to be most constructive to Japan and are long steps forward to better relationship and understanding between all nations and peoples. We have a long way to go, but I for one do not despair of the future if we cleave to our course with determination and good will.

Mr. Araki, former ambassador to the United States, and now governor of the Bank of Japan, last June said:

"I feel gratified at the unmistakable evidences of a notable economic recovery of our country after the war, and I believe it is the desire of our entire nation to see this trend well kept up and advanced on a really sound basis for the future."

I have witnessed the great achievement of Japan. She has gone a long way toward economic rehabilitation but she still has a much longer road to go to permanent economic stability. Any instability in Japan at the present moment could readily cause serious political repercussions and undo the progress thus far made. The whole free world has a stake in Japan's emerging as a political and economic stable and strong nation with a people dedicated to freedom and peace.

I will close with one other observation.

All human relationships—yes, even international relations—are based upon mutual confidence. Confidence flows from mutual understanding of dissimilarities as well as similarities. Nothing promotes understanding between peoples as much as doing business together. We get to know the ideology, the thinking and peculiarities of each other in doing business together. Principally, we learn how to agree with each other—how to get along together. Trade and commerce are basic points of contact.

In this sense, the American businessman, doing business in another country, can be considered an ambassador of good will of the American people—a missionary of the American way of life. He has opportunities and responsibilities to promote good will amongst men.

And, above all, peace, and enduring peace, must be founded on reciprocal confidence and mutual understanding, and peace is the universal aspiration of all peoples.

International trade agreements are usually and properly called treaties of commerce and friendship. Every American businessman abroad is a salesman for America and is thus a part of a great mission—the mission of restoring confidence to mankind by making friends with the peoples of the world.

Having a great admiration for and confidence in the industry and determination of the Japanese people to pull themselves up by their own bootstraps, I am certain of their ultimately achieving a sound and prosperous well-being in the family of free nations.

A wise and practical course has been set by the policies I have outlined.

Your chamber has done and can do much to achieve its objective of ever-improving commercial and friendly relations between Japan and the United States.

Independence for the Handicapped Through Employment

EXTENSION OF REMARKS
OF
HON. JOHN P. SAYLOR
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 7, 1956

Mr. SAYLOR. Mr. Speaker, the rehabilitation of the handicapped is a sound concept; both humanitarian and economic values are easily understood and generally accepted. Tremendous progress has been made in rehabilitation in recent years, and I am confident that more will be done in the future. Particularly, it is hoped that the 84th Congress will adopt H. R. 5859 into law—this is the bill providing for a Federal Agency for Handicapped which I introduced during the first session.

Efforts of the Federal Government to rehabilitate handicapped civilians began with the passage of the Vocational Rehabilitation Act in 1920. Under this early law, services were confined principally to vocational training, counseling, and job placement. Before that time, a few States had demonstrated the possibilities of vocational rehabilitation. The scope of the services furnished in the rehabilitation process was broadened by extensive amendments in 1943.

Although tremendous progress had been made, there was a lag between the practical application of rehabilitation techniques and the rapidly advancing technical knowledge and research. President Eisenhower, in his first message on the state of the Union, recommended to the Congress that it enact legislation to strengthen and substantially expand the Nation's resources for the rehabilitation of handicaped persons. In line with these recommendations, the 83d Congress enacted into law improvements in services, administrative practices, and methods of financing which are required to take full advantage of new scientific knowledge and of administrative experience gained in recent years.

While retaining the basic features of the Vocational Rehabilitation Act, the law was strengthened materially. More money has been made available to hire and train additional staff to assist the States in creating additional rehabilitation facilities, particularly rehabilitation centers and sheltered workshops for the severely disabled.

The Bureau of Labor Statistics reveals that approximately 100,000 people per year have some sort of physical handicap imposed upon them as a result of an accident, either as a total or permanent disability. Add to these the number who are handicapped as a result of illness or congenital defects and you arrive at the staggering estimate by the American Medical Association that there are some 55 million in our population in some degree disabled. Certainly aiding the handicapped is a duty we all owe our country. Not only can these people be helped to regain their former place in society, but can also become breadwinners for their families and pay their fair share of the cost of government.

This morning, Mr. Speaker, I had the privilege of greeting Miss Theresa Maria Drzal, 512 Bradley Place, Johnstown, who arrived in Washington to receive an award from Vice President RICHARD NIXON. This young lady from my district won third place in the 1956 national essay contest sponsored by the President's Committee on Employment of the Physically Handicapped, and has the unique ability of winning prizes. In addition to receiving this magnificent award, Miss Drzal placed: First in the Cambria County medical contest; first in the Cambria County handicapped essay contest, and first in the Pennsylvania State handicapped essay contest. Theresa will graduate from Johnstown Central Catholic High School on May 22 and will enroll in the Johnstown Mercy Hospital School of Nursing in August. So eloquent is the essay which merited her third place in the 1956 national essay contest, that I believe it is truly worthy of reproducing in the RECORD. I trust that my colleagues will take time to read it and understand more fully the feelings, perseverance, and initiative of our handicapped.

INDEPENDENCE FOR THE HANDICAPPED THROUGH EMPLOYMENT

(By Miss Theresa Marie Drzal)

The ultimate and innate desire of every handicapped person is to attain as great a degree of independence as possible—to achieve as much as possible for himself and his family. The question is: How can a handicapped person develop at least a certain degree of independence?

The surest means of independence is through employment. When a handicapped person gains employment, the door to society is opened to him. His life is no longer a day to day existence, for each day is a new adventure filled with hope and promise. He has been given something to work for, someone to work for, and a responsibility to shoulder. He is no longer like an old shoe which is tossed into the corner because it is worn. He is no longer a person shunned by society and even by his own family. He is again an individual with likes and dislikes, whims and fancies. By achieving independence through employment, a handicapped person gains or regains economic, spiritual, and social stability. He becomes self-supporting. He no longer has to rely on any one person. Thus, he attains the independence he so desires.

Strictly speaking, the handicapped are friends, relatives, or neighbors with physical impairments. Some of these impairments can be seen; others, not seen. Some people were born with them—others received them through illness or injuries. A great majority of these people can be helped through the public service of rehabilitation which is actually the process of assisting the disabled to select suitable jobs and to prepare them for a designated vocation through counseling, training physical restoration, and placement in employment.

Rehabilitation is the best means of preparing a handicapped person for employment and independence. In 1947, the American Mercury reported much progress in the rehabilitation of handicapped persons by industry and of Government agencies setting

up rehabilitation centers. Even now this progress is continuing. Occupational therapy schools, vocational training schools, and other such organizations have done much to prepare a handicapped person for employment. Industry, business, Government, agriculture—all are explorable fields for the rehabilitated physically handicapped.

After the rehabilitation or "adaptation period" is over, the handicapped person is as good a worker if not better than the nonhandicapped person, as proven by the following facts:

1. The handicapped person avoids accidents.

2. The handicapped person is rarely absent from his job.

3. The handicapped person quits less often.

4. The handicapped person is quick to recognize opportunity and seize it with a will and vigor.

Federal, State, and local governments advocate employment of the physically handicapped. This is not all "speechmaking" on their part for many handicapped people are employed in Government jobs. Many, too, are presently employed successfully in industry, business, and on administrative, teaching, maintenance, service, and other school staffs. All told, approximately 7 million men and women with physical impairments are now employed—evidence that the handicapped are competent, dependable, loyal, and capable workers.

Since the handicapped person is a part of the democracy in which we live, it is only fair and just that he be accorded the rights and privileges belonging to him under this democracy. In our democracy everyone has a fair opportunity to employ himself in the work for which he is adapted—no matter what his race, creed, color—or physical condition. Everyone has a fair opportunity to attain independence through employment.

The physically handicapped should be employed because as a group they produce. They are a part of our manpower resources and serve as a reservoir of manpower to contradict manpower shortages.

It is clear that if the handicapped are refused jobs they are refused independence, and many would be forced to go on public assistance for their support and that of their families. This, too, would impose an unnecessary tax burden on the general public. However, by granting employment to the handicapped, this tax burden is lifted, and the handicapped person becomes a taxpayer instead of a tax consumer. Dividends are many as proven by the following statistics. Most of the 56,000 men and women rehabilitated in 1954 had no earnings whatever. A few earned at the rate of $15 million a year. After rehabilitation and employment they are earning at the rate of $102 million a year. At this rate within 3 years they will return in income taxes to the Government the money spent for their rehabilitation. In the following years they will contribute in taxes about $10 for every dollar spent on their rehabilitation. Above all, they achieve independence and have the satisfaction of contributing their share toward the support of the Government.

Many employers bring up the argument that hiring a handicapped person influences their insurance rates. They are in error by this statement, for there is no provision in workmen's compensation insurance policies or rates that penalizes an employer for hiring handicapped workers. Very few jobs require physical perfection. Therefore there is no need for prejudice. Instead, an employer should give a handicapped person the means of attaining independence.

There are many living proofs of the fact that the best means of independence for the handicapped is through employment. Perhaps foremost in the minds of all is Helen Keller, blind and deaf as a result of a childhood illness. She is now an excellent author, tourist, and lecturer. Bob Smith, celebrated quadruple amputee of the Korean war, is another example. He now works for the Veterans' Administration in Washington, D. C. and supports a family with his earnings. The following are some examples not so widely known. Grace Layton, Valley City, N. Dak., is a charming girl of 19 who had a brilliant future in art and design. Then polio struck and left her paralyzed, unable to move her arms or the lower part of her body. She now does charcoal cketches with the brush held in her mouth and realizes a fine profit from their sale for use on Christmas and Easter cards. Another example is Charley Boswell, of Birmingham, Ala., sole supporter and father of his family. Charley lost his sight in World War II, but thanks to rehabilitation regained independence through employment. A younger example is that of Johnny Krise, of Johnstown, Pa., who has deformed hands and lower arms. At the age of 15, he is a sophomore in high school and is a newsboy on Saturdays and after school hours. This is an accomplishment equaled by few normal boys.

These words of President Eisenhower show the need and desirability of using the handicapped to fill vacancies and other openings in employment.

"I share with thousands of other Americans a deep interest in the future of the handicapped people in this country. Our Nation can ill afford to lose the productive power and the talents of those who are idle today because they are disabled. We need them as active, productive citizens."

It is in conclusion, therefore, a proven fact that there is no surer way to economic, spiritual, and social independence for the handicapped than through employment.

Petition To Secure Discharge of H. R. 11 From Committee

EXTENSION OF REMARKS
OF
HON. THOMAS J. DODD
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 16, 1956

Mr. DODD. Mr. Speaker, on the Speaker's desk is a petition to secure the discharge of H. R. 11 from committee. This petition should receive the support of many Members of Congress.

I wish to call to the attention of my colleagues a decision of the circuit court of appeals for the seventh circuit holding that the company involved in that case had established a good-faith defense, and thus its price discriminations were not illegal as the Federal Trade Commission had charged.

This latest court decision highlights the weakness of the recent statement issued by members of the Federal Trade Commission to the effect that H. R. 11 is not necessary and that it is premature.

The members of the Federal Trade Commission have said that the Commission could issue complaints under the first court decision with respect to a good-faith defense.

Now this decision by the seventh circuit court of appeals would appear to have eliminated any grounds for action where good faith is a defense. Thus, it seems crystal clear that the members of the Federal Trade Commission have been mistaken and they should, therefore, support H. R. 11.

Small business is in serious trouble. The passage of H. R. 11 will help small-business men throughout the United States.

Johnson Victory Gives Texas Harmonious Delegation to Chicago

EXTENSION OF REMARKS
OF
HON. ALBERT THOMAS
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 17, 1956

Mr. THOMAS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Houston Chronicle of May 7, 1956:

JOHNSON VICTORY GIVES TEXAS HARMONIOUS DELEGATION TO CHICAGO

Senator LYNDON B. JOHNSON'S sweeping victory in the precinct conventions in Texas Saturday had ramified significance. As a result of it, Texas will send to the Democratic National Convention in Chicago in August a delegation expected to be the most harmonious since 1936. In that year President Roosevelt was seeking nomination for a second term and the Texas delegation supported him. Four years later, however, President Roosevelt sought a third term and Texas Democrats split, starting the acrimonious differences which have characterized the Texas delegations since that time.

With Senator JOHNSON heading the Texas delegation and Speaker SAM RAYBURN lending support, the delegation will have no difficulty in being seated at the national convention and the delegates probably will be harmonious under the Johnson, Rayburn leadership.

The victory adds stature to Senator JOHNSON'S position as the favorite son of the Texas delegation for the presidential nomination. He already has been endorsed for the nomination by such party stalwarts as Senators HARRY BYRD, of Virginia, RICHARD RUSSELL, of Georgia, and Gov. Edwin Johnson of Colorado. This support, plus the big 56 votes which the Texas delegation has in the Democratic National Convention, will place Senator JOHNSON in a strong bargaining position. This will give Texas more influence in the actual naming of the presidential nominee than it has had in many years.

The widespread and overwhelming nature of Senator JOHNSON'S Texas victory enhances his stature in the Senate, where he is the majority leader.

In Harris County, the margin of victory was close between the forces of Senator JOHNSON and those of Gov. Allan Shivers, as far as county-convention control is concerned. The JOHNSON forces, which backed Attorney J. Edwin Smith for temporary chairman of Tuesday's county convention, had a 3-to-2 edge in the number of boxes won, however. The Shivers forces, which campaigned as State-righters, carried the big-voting south, southwest, and west precincts in and around Houston to narrow the margin on county-convention votes.

Due to the fair-play rules proposed by County Democratic Chairman Presley E. Werlein, Jr., and adopted by a liberal-controlled Democratic executive committee, the precinct conventions in Harris County were more clear-cut and free of tumult than they have been for many years. Liberals and conservatives alike are to be commended for

the adoption of the fair-play rules, which seek to assure that majority rule will prevail. That is the democratic way, the American way, to hold elections.

What Price Forgiveness?

EXTENSION OF REMARKS
OF
HON. DONALD L. JACKSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 17, 1956

Mr. JACKSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter published in the Washington Post and Times Herald of May 17, 1956:

WHAT PRICE FORGIVENESS?

On Saturday, April 22, the board of trustees of the American University of Washington declined to consider a request from this committee that it reinstate Prof. Herbert Fuchs. Mr. Fuchs, as you may recall, is a professor of law whom the university barred from the classroom after he testified before a congressional investigating committee on his Communist past and gave the names of former Communist associates.

According to press reports in the Washington papers, the board was asked if it wanted to consider reopening the Fuchs case. "No one said anything and the matter was not taken under consideration," President Anderson of the university is quoted as saying.

Thus, at least so far as the university is concerned, the Fuchs case is closed. Professor Fuchs, whose contract expires this June, is out of a job, and his chances of continuing his academic career as a teacher are dim.

For Professor Fuchs and his family, this is a personal tragedy. But serious as his personal situation is, the action taken against him raises grave issues of public policy and morality.

President Anderson of the American University expressed himself on these issues when he said shortly after Prof. Fuchs first told the House Un-American Activities Committee of his Communist past: "He made a serious mistake in the past, which he recognized and declared. The American University therefore would support his right as a citizen to pursue his chosen professional activities. To take any other position at this time would be beneath the dignity of the institution with a Christian relationship and commitments."

A few days later Prof. Fuchs appeared for a second time before the House Un-American Activities Committee and named associates in Government service who had been fellow members of the Communist Party. Twenty-four hours later the university barred him from the classroom. Now it has permanently barred him from the university.

The American Committee for Cultural Freedom, Inc., has made an intensive study of this case; and on the basis of the material which resulted from this study, it appears that Prof. Fuchs, who was praised when he first testified before the committee, was subsequently dismissed because he had cooperated fully with the congressional committee and had named former associates.

The university's action is thus unusually significant. Politically, it establishes a precedent calculated to discourage others from breaking with the Communist Party for fear of similar reprisals. It hampers the work of future investigations and plays into the hands of the Communist Party itself.

We know of a number of cases in which universities have continued to employ teachers who have pleaded the fifth amendment and have refused to cooperate with congressional committees. In this case, we have the situation of a teacher who after cooperating fully with a congressional committee has been made the victim of economic and professional reprisals.

As for the moral issue, the action taken against Fuchs raises one of the urgent questions of our day: What price forgiveness? In pledging his support to Fuchs after he first testified before the House committee, President Anderson himself underscored the moral problem when he said that to punish Fuchs for his past would be "beneath the dignity of the institution with a Christian relationship * * *" Despite this, the university has inflicted a life sentence of condemnation on Mr. Fuchs.

Now that the American University has closed its books on Mr. Fuchs, the problem remains: What can still be done? For our part, the committee is pledged to help Mr. Fuchs continue his professional career, and we shall do our best both as individuals and in our collective capacity as a committee to make this possible.

PAUL HAYS,
American Committee for Cultural Freedom, Inc.
NEW YORK.

The Voice of Texas

EXTENSION OF REMARKS
OF
HON. OMAR BURLESON
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 17, 1956

Mr. BURLESON. Mr. Speaker, the sentiment expressed in the editorial in the Abilene Reporter News of May 9, 1956, reflects the attitude of many people in Texas and in the Nation. It is hoped that for the sake of harmony and the welfare of all, the results of the recent elections in Texas may ameliorate unkind feelings and bring about cooperations greatly needed in party and governmental affairs.

The editorial follows:

THE VOICE OF TEXAS

This was an important week for various aspirants for the Democratic presidential nomination, with preference primaries in half a dozen States at stake.

But these contest were all but smothered by what happend in Texas last Saturday when as never before Democrats of all shades of opinion went to their precinct conventions to register a choice between unity and an end to bickering on the one hand and continued intraparty strife and turmoil on the other.

The answer was an overwhelming approval of unity and moderation under its principal exponent in State and Nation—LYNDON B. JOHNSON, of Texas, Senate majority leader. The smashing nature of this victory was the biggest single piece of political news since Ike Eisenhower said "Yes." The scheduled primaries in various States this week will constitute a sort of anticlimax.

You may be sure that the national campaign headquarters of both major parties will study the results in Texas with avid interest, and from now on as never before the several vocal and receptive Democratic aspirants for the presidential nomination will be conscious of the power and influence of LYNDON JOHNSON in formulating a platform and choice of a standard bearer.

JOHNSON'S plea for an end to factionalism in Texas and his postprecinct convention statement welcoming to "this great big tent" everyone "who wants to be a Democrat and who believes in democracy" should go a long way toward healing the wounds occasioned by the contest between himself and Governor Shivers for State leadership in the national convention. He gave credit for the "big tent" where it was due: to the people.

Export Control Act of 1949

EXTENSION OF REMARKS
OF
HON. CHARLES A. VANIK
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 17, 1956

Mr. VANIK. Mr. Speaker, in the next several days this Congress will be considering the extension of the Export Control Act of 1949, H. R. 9052. This legislation will extend the act for a period of 2 years from its present termination date of June 30, 1956.

Under the provisions of this legislation, tremendous quantities of steel scrap have been shipped to foreign nations at an alarming rate. In 1954 some 1,260,000 tons of iron and steel scrap were shipped to foreign nations, while in 1955 almost 5 million tons have been shipped abroad. The inventory of supplies of scrap on hand has been shrinking and the most liberal estimates of scrap on hand would indicate only a 90-day supply.

The prices of scrap have risen very rapidly in recent months. Many domestic users of scrap have been compelled to substitute with higher priced purchases of pig iron.

Since the shipping cost of high-quality scrap is no greater than the shipping cost of low-quality scrap, it is understandable why the best grades of scrap should be destined to foreign markets to the dertiment of American scrap needs and with the resulting raising of prices of scrap iron and steel, pig iron and the resulting steel products.

Submitted herewtih is a joint letter from Mr. Ben Moreell, chairman of the Jones & Laughlin Steel Corp., and E. T. Weir, chairman of the National Steel Corp., pointing out the absurdity and the danger in the continued export of large quantities of scrap. It is my considered judgment that the export quotas must be limited in the enactment of this legislation so that the tremendous scrap exports of 1955 should not be duplicated to the detriment of our defense efforts.

MAY 15, 1956.

Representative CHARLES A. VANIK,
House of Representatives,
Washington, D. C.

DEAR REPRESENTATIVE VANIK: The undersigned are deeply concerned about the grave situation now confronting our country as a result of the uncontrolled exportation of iron and steel scrap. This matter was discussed in considerable detail at recent hearings on the proposed extension of the Export Control Act which were conducted by the House and Senate Committees on Banking and Currency. The House committee issued a report

on April 12, 1956, in which the committee calls attention to the serious situation arising from the large-scale exports of iron and steel scrap during 1955, which are continuing in 1956. At this writing the Senate committee has not yet reported on its meeting of April 30, 1956.

The House commitee in its report shares our grave concern. It specifically says:

"The testimony before the committee indicates that we cannot permit scrap exports to continue at the present rate of 5 million tons a year. The committee realizes that the needs of our allies abroad must be considered. It would be too disruptive of our international relations to cut off scrap exports completely at this time. But some means must be found, either through agreements with the foreign producers to whom we are now exporting scrap, or through imposition of stricter controls under the Export Control Act, to reduce exports of scrap to a level where we can be reasonably sure of an adequate supply of scrap for domestic needs."

We believe that this situation merits the serious consideration of every Member of Congress because of its current and prospective adverse effects on our domestic economy and on our national defense potential.

Iron and steel scrap is unfortunately named. Undoubtedly the layman thinks of it as waste material or "junk." Nothing could be farther from the truth. In reality, iron and steel scrap is a vital, limited, and, in fact, irreplaceable raw material of the steel mills and foundries of our country.

As a raw material, iron and steel scrap is even more valuable than iron ore because it is already refined and for that reason can be more quickly and economically converted into new steel. Furthermore, certain of the finer qualities of steel, which are essential for national defense purposes, can be made only by using steel scrap.

Against these facts and against the serious, long-range raw materials problem of the iron and steel industry, it is not only absurd but dangerous to permit the current large-scale exportation of scrap from the United States.

The reserves of iron ore within the United States are known, they are limited, and they are being depleted. They cannot support the future needs of our country for either peacetime or defense purposes. For that reason, the iron and steel industry has worked strenuously to develop dependable reserves abroad—chiefly in Canada, South America, and Africa. Even so, the present combined domestic and foreign iron ore reserves are not sufficient for the future steel production that a rapidly growing population and an increasing consumption will require. Continuing discovery and development of additional foreign sources is a plainly indicated need.

Substantial quantities of iron ore are now being brought in from these foreign sources, even though the cost is higher than would apply to the same amount of ore available from domestic sources. Steel companies are doing this to extend the limited domestic reserves as much as possible and thereby protect our country's position.

Under this circumstance, we repeat, the continued export of large quantities of scrap is both absurd and dangerous. This statement can be demonstrated by simple arithmetic. In 1956 it will be necessary to import about 25 million tons of iron ore. In 1955 approximately 5 million tons of scrap—equivalent to 9 million tons of iron ore—were exported. The effect was to cancel out more than one-third of the protection which the steel companies are seeking to give to the deficient raw materials position of the United States.

It has been contended that the exportation of scrap is not serious because consumers' stocks of scrap are at a record high level. Apparently our Departments of Commerce and State subscribe to this view.

Actually, all that this means from a practical standpoint is that there is a 3 months supply of scrap on hand. Against the long-range situation which is now serious, and will become more so as time goes on, this supply affords no protection. The all-important fact is that the United States simply cannot afford to diminish further its reserves of the raw materials for the production of iron and steel. Iron and steel scrap is a vital raw material and whatever amount of it leaves this country is a permanent loss which cannot be made up in any way.

It certainly seems pointless for steel companies to bring iron ore from foreign sources that have explored, acquired and developed at enormous expense when incoming ore boats are being passed by shiploads of scrap on the way out—and with each ton of outgoing scrap neutralizing about two tons of incoming iron ore.

This is not a mere economic problem of the iron and steel industry. It is a matter that bears directly on the present and future safety and wellbeing of our country. The Commerce and State Departments, in our opinion, are dangerously shortsighted in the view they take of it. The export of scrap must be controlled. The only apparent remedy is Congressional action.

The control of excessive exports of any strategic material is provided for by the Export Control Act, now in force. Where stockpiles of such materials, sufficient to protect the defense needs of the United States are available, an argument could be made for removing control from exports. In the case of iron and steel scrap, there is no such stockpile. In fact, no one knows at present how much scrap can be obtained from our so-called hidden reserves. But there is every indication that those reserves are being rapidly depleted and, should an emergency arise, the steel industry could discharge its obligations to the country only with great difficulty, if at all.

We trust that this serious and important matter will have the prompt consideration of the Congress and that you will give your support to the proper limitation of iron and steel scrap exports.

Sincerely,

BEN MOREELL,
Chairman, J. & L. Steel Corp.
E. T. WEIR,
Chairman, National Steel Corp.

Power and Plenty

EXTENSION OF REMARKS
OF
HON. EUGENE J. McCARTHY
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 17, 1956

Mr. McCARTHY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from Rural Electrification of May 18, 1956:

RURAL ELECTRIFICATION: POWER AND PLENTY

(By Clyde T. Ellis)

Exactly 20 years ago this month, President Frankin D. Roosevelt signed into law the Norris-Rayburn Act establishing the Rural Electrification Administration. That action began the creation of the largest new commercial industry and new consumer market for the products of industry in a generation.

In 1936, only one-tenth of America's farms were electrified, and this for a simple reason. Rural electrification was not an economical business because prohibitive prices were being charged to install rural electric lines and prohibitive rates were being required by the only existing power suppliers. In this situation Government intervened from two directions.

The Rural Electrification Act made it possible to create nearly 1,000 electric cooperatives. These now serve 4 million farms, homes, and rural establishments that could not afford the prohibitive rates of the pre-1936 era. The law helped rural people help themselves. It allowed them to obtain all of the conveniences and laborsaving benefits of electricity by extending to them the credit facilities of the Federal Government in the form of loans which they are repaying with interest.

This was also the time when the great TVA and Bonneville hydroelectric resource projects were coming into existence. They provided electricity at wholesale costs which were less than half the rate which power companies demanded, and they also served as a powerful competitive influence. For the first time the American people had a yardstick with which to measure the fair and possibl costs of electricity, and one which is very useful even outside the areas of public-power development.

The rural electrification program helps the Nation as a whole, not just farmers. It provides a good example of the benefits that more electricity at lower cost spreads among all of our people.

In the next 20 years, farmers in the United States are going to spend $24 billion on electric appliances and equipment. That is an average of $5,300 per farm. In the next 5 years the purchases will amount to $5.3 billion, or $1,100 per farm. To date, about $3 billion has been spent in building REA-financed rural electric lines. That has meant work for thousands of people in the construction industry and a significant demand for products supplied by industry such as poles, transformers, and wire.

In 1953, REA reappraised the relationship between the cost of supplying electricity to rural consumers and the use of electricity by those consumers, and they found that for every $1 spent in construction of facilities, about $4 was spent by the consumers for apparatus that utilized electric energy. That means a tremendous market for consumer goods was created by this program; already it has brought about sales in excess of $12 billion for appliances and electric farm equipment. Over the next 20 years the consumption of electricity by these consumers is expected to rise 4 to 5 times above the present level, and this fact also means that a great many more appliances and items of farm machinery will be purchased to account for this increased consumption.

During the next 2 decades, for instance, farmers will spend $81 million on air conditioners, $144 million on freezers, and $156 million on television receivers. They will buy more than $400 million worth of lights and wiring for their homes, and over $50 million worth of electric clothes dryers.

It should be noted, too, that these are just initial purchases. At the same time farmers will be replacing old and wornout appliances, in some cases at a greater rate. In this period they will replace almost $25 million worth of dryers, more than $200 million worth of freezers, over $500 million worth of wiring and lighting, another $500 million worth of refrigerators, and over $300 million worth of television receivers. In maintaining the rural electric systems, almost a million and a half power poles are purchased annually. About the same number of miles of wire have been strung to serve the more than 14 million people who are receiving electricity as a result of this program.

Over the years, the Federal rural electrification and public power programs have demonstrated that electric rates, like anything else, can no more be divorced from consumer

use of electricity than an automobile can from gasoline. The evidence that in any given community there is a consistent correlation between the prices and the use of various products is strong. As prices go down, the use of the product goes up—anywhere—and vice versa. It is one of the fundamental laws of economics.

The Tennessee Valley Authority provides a good example. Consumption of electricity in the Tennessee Valley area increased by leaps and bounds when TVA's lower wholesale rates, and consequently the distributor's resale rates, became effective. In 1934, the first year of these new wholesale rates, the Tennessee Electric Power Co. increased its sale of ranges and refrigerators more than 300 percent over the average preceding years; sales of water heaters increased better than 700 hundred percent. The power company's total sales of electric appliances was three times as great as the previous year. For the years 1935 and 1936, the volume of appliance sales was about four times that of 1933.

All in all, the rural electrification program has provided the industries involved in making electrical equipment a significant boost, increasing the total market for their products by over 10 percent. This affects everyone. Obviously, all industries and workers in all occupations benefit by this substantial contribution to our economy. And in addition to these very substantial considerations, studios also show that wherever Federal hydroelectric projects have been developed a competitive influence is created that spreads like ripples from a stone dropped in a pond. The farther away this influence of Federal power development, of course, the less the competitive influence, and therefore the higher the power rates.

As a result of his own experience, the American farmer, through his rural electric systems, has been a strong advocate of developing all of the feasible hydroelectric power possible. He learned the hard way that the key to obtaining the greatest benefit from electrictly is keeping the supply plentiful and the the costs down, and he is convinced that the lessons he has learned over the past 20 years can be applied in cities and suburbs everywhere.

Unfortunately, however, in the last few years there has been a regrettable deterioration in the maintenance of progressive resource-development programs—a trend that has already gone far enough to be a threat to the entire economic health of our Nation. It began when the Eisenhower administration canceled the Interior Department's support for a Federal high Hells Canyon Dam on the Snake River. That was followed by administrative moves to weaken the so-called preference rights which rural electric and other non-profit power distributors have as customers for Federal power, under laws dating back to 1902.

Along the way, Federal power agencies such as the Tenneessee Valley Authority, Bonneville, and the Southwestern Power Administration have been weakened, and there have been constant compromises with the commercial utility monopolists, compromises which appease them but really never satisfy them because their appetite is apparently insatiable. They want all or nothing—extension of their monopoly to include Federal hydro projects or no Federal hydro developments at all.

The Eisenhower administration has advocated a "partnership with local interests" for hydro development. One would think that such a plan would benefit municipal and rural electric systems, for they are truly the Nation's locally owned and locally controlled electric utility enterprises. But instead, "partnership" has been a sugary phrase used to excuse the surrender of Federal responsibility to the great utility companies. A great and successful American experiment that was begun 20 years ago has fallen upon evil days.

What's Behind NAACP?

EXTENSION OF REMARKS
OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 15, 1956

Mr. MULTER. Mr. Speaker, the following article by Frederick Woltman, as it appeared in the New York World Telegram of May 12, 1956, should be of interest to our colleagues:

WHAT'S BEHIND THE NAACP?

(By Frederick Woltman)

One year short of a century after the birth of Abraham Lincoln, a race riot erupted in the city made famous by the Great Emancipator. The year was 1908 and the city was Springfield, Ill. Dozens of Negroes were killed or wounded; thousands driven from town.

Out of this bloody event was born the National Association for the Advancement of Colored People.

The year before, William English Walling, a millionaire southern social reformer, and his wife were arrested while traveling in Russia and were quickly released. Comparing notes late, he concluded that the Negro in the United States was treated less humanly than the Jew in Czarist Russia. He wrote a magazine article, Race War in the North.

Mary White Ovington, a Brooklyn settlement worker, read it. She phoned Dr. Henry Moskowitz, a prominent New Yorker and an intimate friend of Alfred E. Smith. (His wife, Belle Moskowitz, became the governor's chief adviser and political strategist.)

The Walling-Ovington-Moskowitz trio got together in a tiny Manhattan apartment. They talked over the Springfield affair and decided to try to rally together a large and powerful body of citizens to fight for political and civil rights for the Negro.

Oswald Garrison Villard, the noted editor, drafted a call timed to coincide with Lincoln's birthday centennary. It said, among other things, "If Mr. Lincoln could revisit this country in the flesh, he would be disheartened and discouraged.

The call went out February 12, 1909. It was signed by 53 educators, writers, social workers, clergymen, and publicists. Among them, Jane Addams, Prof. John Dewey, William Lloyd Garrison, Rev. John Haynes Holmes, Lincoln Steffens, Rabbi Stephen S. Wise, and William Dean Howells. With a few exceptions, all were white.

There followed a conference at Cooper Union and the NAACP was in business. Its basic philosophy was that a racial injustice to one Negro affected all Negroes and blighted the health of American civilization. Its objective from the start was to secure for the Negro the rights and privileges accorded other citizens. And do it within the framework of the American constitutional system.

For the next couple of decades, the NAACP was struggling, ill-financed, but persistent. It was uphill going.

Today, after 47 years, it has become the largest—and oldest—civil rights organization in the country. Its national office, two floors of Freedom House, 20 West 40th Street, serves as a watchdog over Negro rights throughout the Nation.

It has 310,000 members, who pay dues from $2 for straight membership to $500 for life membership. There are 1,300 branches—at least one in every State but New Hampshire, Vermont, North Dakota, Wyoming, and Maine.

Although no color records are kept, 10 to 15 percent of the 310,000 are white. Sixty percent of the total live in the South.

Since 1909, there have been three presidents, all whites. The first, Moorfield Storey, had been secretary to Massachusetts' abolitionist Senator, Charles Sumner. Later he became president of the American Bar Association. A Columbia University literature professor, Joel E. Spingarn, was second. The third is his brother, Arthur B. Spingarn, a New York lawyer.

NAACP's operating heads, on the other hand, have mostly been Negroes. Such as James Weldon Johnson; Walter White, who until his death on March 21, 1955 had for years been its moving spirit; and Roy Wilkins, its present executive secretary.

Its top executive board is strictly interracial, with the 48 directors divided about 50–50 between Negroes and Whites.

The directors today include Eric Johnston, Oscar Hammerstein II, Senators Herbert H. Lehman and Wayne Morse, Walter Reuther, Dr. Ralph C. Bunche, Judge William H. Hastie, Rabbi Judah Cahn, and George K. Hunton, secretary of the Catholic Interracial Council.

Recently, Alabama's legislature ordered an investigation into whether the NAACP is Communist-dominated. And Georgia's attorney general charged it with "subversion" in the NAACP's antisegregation crusade.

But J. Edgar Hoover, FBI Director, had this to say about it:

"Equality, freedom, and tolerance are essential in a democratic government. The NAACP has done much to preserve these principles and to perpetuate the desires of our Founding Fathers."

And Francis Cardinal Spellman declared: "Despite many misunderstandings and difficulties and much opposition, the NAACP has made tremendous progress in the struggle to secure for the colored citizens of the United States that place in our civil life to which they are entitled in accordance with the rights that proceed from our common Creator, and are proclaimed in the American Constitution."

Militant and highly articulate, the NAACP registers as a lobby, hence is nontax exempt. It frankly tries to influence civil rights legislation in Washington as well as the State capitals. It works hard at it.

Indeed, it doesn't even stop to keep a scrapbook of newspaper or magazine clippings. "We'd be swamped if we did," says Henry Lee Moon, NAACP's public relations director. "We're too busy. We're not a research outfit."

Publicity and education are its principal tools. Besides a monthly magazine, the Crisis (50,000 circulation), and the NAACP Bulletin, its national office got out 14 pamphlets and brochures last year—altogether about a million and a half pieces of literature.

One pamphlet by Roy Wilkins takes up the Southern States which are defying the Supreme Court order to integrate white and Negro pupils in the public schools. Its title: "The War Against the United States." While challenging and provocative in tone, NAACP's printed output is generally held to be scrupulously accruate as to facts.

Headquarters also supplies posters, factual ammunition, advice and speakers to its local branches. Holding Mississippi to be the worst offender of all the Southern States, it recently sent out a poster headed: "Stamp out Mississippiism.

Inscribed on a tombstone beneath was this: "George W. Lee, killed May 7, 1955; Lamar Smith, killed August 13, 1955; Emmett Till, killed August 28, 1955; Clinton Melton, killed December 3, 1955."

All told, the NAACP has poured millions into its educational program over the years. Last year's national budget came to over $600,000, with but a handful of the gifts falling into the $1,000 category. The total income, including branches and other activities, reached $1.2 million.

Included was $311,000 for NAACP's Legal Defense and Educational Fund, Inc., a sepa-

rate unit, which is tax exempt. These contributions ranged from $1 to $50,000.

Headed by Thurgood Marshall, NAACP's chief counsel, the Fund has a staff of six full-time paid attorneys; and a reservoir of at least 40 volunteer lawyers around the country, many of them eminent members of the bar.

About 500 requests for legal support passed through the Fund's office for screening in 1955. A large percentage originated locally, either from branches or from individuals and Negro groups with no NAACP affiliation. One such was the Montgomery, Ala., bus boycott.

Often, in the South, the NAACP is accused of moving into an otherwise contented Negro community and stirring up trouble. Often, according to Mr. Moon, the discontent is indigenous as in Montgomery where the NAACP was unaware of the brewing resentment—and it had no hand whatsoever in the boycott which was as peaceful as it was successful.

Only after the city indicted 100 of the Negro leaders on a conspiracy charge, did the Fund step in with legal defense.

"Great progress" has been made in breaking down racial barriers since NAACP was founded in 1909, its leaders say. That year, for instance, 75 Negroes were lynched. The public almost overwhelmingly took lynchings as a matter of course; as punishment for the rape of white women. The NAACP made a survey and found that less than one-sixth of 5,000 lynchings over a 30-year period involved sex crime accusations even by the lynch mobs themselves. It hammered away at the national conscience. Gradually opinion turned.

In 1955 the Nation had three lynchings, all in Mississippi, according to the NAACP's own count. (NAACP excludes "race-hate" killings unless three or more persons act in concert.) Progress came in other directions, too.

"Segregation in public places and recreation has been banned," the NAACP says. "Negroes are voting freely in most States except Mississippi. The Jim Crow car in interstate travel has been derailed."

Over 2,000 Negro students now attend a score or more of southern colleges which excluded them as recently as 1950. A quarter of a million colored boys and girls attended public schools with white boys and girls in States that separated them less than 2 years ago. Fifteen States have job equality laws. Segregation in the Armed Services has been eliminated.

For all of this, the NAACP takes a large share of the credit. The fact is that since 1909 it has pressed literally hundreds of cases in the courts as well as the law-making bodies to help establish equal treatment under the law.

Its greatest victory came on May 17, 1954, when the Supreme Court unanimously declared public school segregation to be a violation of the Constitution. No court since the famous Dred Scott decision of 1857 had ruled on so vital an issue in the field of racial relations.

More than any other person, Thurgood Marshall was responsible for pushing the historic school-segregation case through to a final triumph for the NAACP. Now 47, Mr. Marshall joined its legal staff in 1938 as a special counsel. His salary was $2,400.

Since then, he has spent much of his time pleading civil rights cases before the higher courts and is now regarded in his profession as one of the finest constitutional lawyers in the country. Out of 16 cases he has argued before the United States Supreme Court, Mr. Marshall has won 14.

This is a remarkable score in itself. It becomes considerably more so in light of the fact that all 16 were appeals from lower court decisions, the toughest of all to win. In private practice, he could easily quadruple his present salary of $14,000.

So formidable an opponent had he become, in fact, that when the segregation case landed finally before the highest court of the land, North Carolina brought in as its chief counsel the dean of constitutional law of our time, the late John W. Davis, former Democratic candidate for President. Mr. Davis presented the State's case and lost.

Before May 17, 1954, the law of the land with respect to minority rights was based on the separate-but-equal doctrine, laid down by the Supreme Court in 1896. In other words, in the use of public facilities, including the schools, Negroes could be segregated provided their facilities were equal to those of the whites.

The hitch here was that it didn't work. There was no way to enforce the equal proviso.

In many southern communities, colored children attended school in shacks; white children in modern structures.

In 1940, 44 years after the separate-but-equal doctrine became law, Mississippi's per capita school expenditures were $7.24 per year for colored pupils and $41.71 for whites. Even by 1952, the ratio was still $35.27 to $117.43. And in 1952, Mississippi paid its Negro teachers $776 a year; its white teachers $1,191.

In no small measure due to NAACP agitation, many segregated States made a great deal of progress equalizing school facilities. But, on a voluntary basis, it seemed impossible. For the Federal Office of Education estimated it would cost $1.5 billion to bring Negro school plants up to the level of the whites.

The holdouts, says the NAACP, were those States which are now attempting to circumvent the desegregation order. The NAACP lists them as Alabama, Florida, Georgia, Louisiana, Mississippi, North Carolina, South Carolina, and Virginia.

Communist propaganda abroad, of course, has always harped on a favorite theme—that Negroes are universally abused as inferiors in America.

Within an hour after Chief Justice Earl Warren handed down the integration opinion, the Voice of America was broadcasting it all over Eastern Europe in the languages of Albania, Yugoslavia, Austria, Czechoslovakia, Hungary, Bulgaria, Latvia, the Ukraine, and the Georgian Republic; later to Red China in Mandarin, Cantonese and the Amoy dialect.

It was the Autherine Lucy case—of the Negro coed who unsuccessfully sought to force the issue at the University of Alabama—that further projected the NAACP into the forefront. Mr. Marshall was her counsel.

Its southern critics' attacks are running the gamut. One of the mildest is that NAACP is pushing too fast. Another, that it's trying to ram equality down the throats of the southerners. And that it is masterminding all Negro unrest.

Louisiana, reviving a 1924 statute directed against the Ku Klux Klan, has moved to oust the NAACP from the State.

Meanwhile, the NAACP is standing pat on the Supreme Court's decision. And determined to do everything in its power to implement it.

We Dissent

EXTENSION OF REMARKS

OF

HON. DONALD L. JACKSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 17, 1956

Mr. JACKSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Los Angeles Examiner of April 12, 1956:

WE DISSENT

Twice in a week the United States Supreme Court has handed down decisions that invade States rights.

In both cases, the Court cited the Federal Constitution to nullify a basic principle of the Union—the principle that "powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively, or to the people."

On April 2, the Court ruled that State penal laws against subversive activities are unenforcible because Congress has preempted the field with Federal legislation. This decision adversely affects the police powers of the States, which under the Constitution are definitely reserved to them.

On April 9, the Court overturned a decision of New York State's distinguished court of appeals and virtually repealed a section of New York City's charter relating to municipal officials and employees. This decision, involving a dismissed college professor, diminishes the right of States and local governments to hire and fire within the terms of State or local law. The decision not only does violence to the constitutional doctrine of States rights—it also invaded the domain of education, which has always been deemed a State and local function.

Both decisions unquestionably give aid and comfort to Communists and their fellow travelers. But that is perhaps not the main point at issue. The main point is that the Supreme Court, as now composed, has labored to set up, by tortuous reasoning, new doctrines which 4 of its 9 members dispute.

In the school case, a Brooklyn college professor refused to answer questions about communism before a committee of the United States Senate, pleading the fifth amendment. The New York charter requires the dismissal of any employee of the city who "utilizes the privilege against self-incrimination to avoid answering a question relating to his official conduct." On advice of the city's corporation counsel, the professor was summarily dismissed and went to court.

The New York Court of Appeals held that the educator had a right to invoke the fifth amendment to avoid self-incrimination—and for no other reason—but that the city was thereby bound to discharge him under its charter, which was really a condition of employment.

The United States Supreme Court has reversed that ruling. The Court, however, actually rested its majority decision not on the 5th amendment, but on the "due process of law" clause, which is a very different thing, appearing in the 14th amendment, and which, the New York court had found, did not apply.

Better law, in our lay belief, is expressed in the two dissents.

Justices Reed, Minton, and Burton said: "In reliance upon the due process clause of our Constitution the Court strikes deep into the authority of New York to protect its local governmental institutions."

Justice Harlan sustained the New York Court of Appeals in holding that "the assertion of the privilege against self-incrimination" by a New York City employee "is equivalent to resignation."

Justice Harlan likewise implied that the Supreme Court, to reach its majority opinion, went beyond its jurisdiction. Respecting the fifth amendment, he said:

"On the record, I would affirm the decision of the court of appeals.

"A different question would be presented under the privileges and immunities clause of the 14th amendment. But that question was not raised below and is therefore not open here."

Army Engineers Fight Upstream Watershed Projects

EXTENSION OF REMARKS
OF
HON. CLIFFORD R. HOPE
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 17, 1956

Mr. HOPE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a letter from Matt Triggs, assistant legislative director of the American Farm Bureau Federation, addressed to Hon. ALLEN J. ELLENDER, chairman of the Senate Agriculture and Forestry Committee, with reference to the position and attitude of the Army engineers on watershed projects which have been submitted to the Agriculture Committees of the House and Senate under the provisions of Public Law 566.

The attitude taken by the Army engineers in this matter is beyond my comprehension. I agree thoroughly with everything which Mr. Triggs so well says in his letter:

AMERICAN FARM BUREAU FEDERATION,
Washington, D. C., May 14, 1956.

Hon. ALLEN J. ELLENDER,
Chairman, Senate Agriculture and Forestry Committee,
Senate Office Building,
Washington, D. C.

DEAR SENATOR ELLENDER: During the congressional hearings that preceded the enactment of the Watershed Act, Public Law 566, the only real objection to the proposal came from the Department of the Army. We cannot help but believe that their position was dictated by bureaucratic ambition rather than a real desire to accomplish the objectives of the legislation. Their opposition to 11 of the 13 watershed projects submitted by the Department of Agriculture under Public Law 566, which was made known at the May 7 hearings before the Senate Committee on Agriculture and Forestry, appears to be a continuation of this same type of bureaucratic approach which has characterized the Army's attitude toward upstream watershed protection and flood-prevention projects for many years.

The official voting delegates representing the member State Farm Bureaus approved at our last annual meeting the following resolution:

"Both downstream dams and upstream watershed-protection measures are needed to minimize flood damages and provide water for beneficial use. * * * The Watershed Protection and Flood Prevention Act recognizes the concept that the watershed, as well as the river, must be considered in any plan to combat erosion and floods and minimize the effects of drought. We recommend an equitable distribution of appropriated funds between upstream and downstream protection and control measures."

It is our feeling that land and water conservation on the small watersheds of America are one and the same thing and that they must be dealt with as one problem. Appropriate consideration of the development of wise and conservative use of both soil and water in a small watershed area necessitates analysis of such use on a unified, integrated basis, as provided in Public Law 566. At some point a line must be drawn between the responsibilities for this type of work which is assigned to local organizations with the help of the Department of Agriculture and the flood-control responsibilities of the Department of the Army. We believe that the approach to this division of responsibilities as spelled out in Public Law 566 is as practical a solution to this problem as has been suggested to date.

We are extremely pleased with the way local organizations and States have reacted to the possibilities of watershed protection programs under provisions of Public Law 566. No program of this general nature has been more popular in recent years than that authorized under this act. In the past 18 months about 800 watershed protection and flood-prevention programs have been initiated and are now in some stage of planning. Of this number approximately 480 local organizations have applied for assistance from the Department of Agriculture. Over 300 more applications are presently pending before State agencies. Numerous other project proposals will soon be submitted to State agencies for initial approval. The governor of each State has appointed State agencies to review and approve project applications. The legislatures of 21 States have enacted 40 pieces of legislation in less than 18 months to implement this program. Twenty-five national organizations have become interested in this program and have formed the National Watershed Congress to actively promote local action in upstream watershed protection programs. Despite this interest no projects have as yet been approved for construction.

At the hearings before your committee on May 7 the Department of the Army objected to 11 of 13 watershed plans. The major reasons for their opposition to these projects are reviewed below:

1. They professed great concern about the alleged differences in cost-sharing by local organizations on different projects. Apparently they considered only the cash contribution to the construction of structures and failed to take into account the cost of land, easements, and rights-of-way to the local organizations, the cost of contracting for the improvements, cost of operation and maintenance, and the cost to local people for the installation of soil and water conservation measures on the land. On the 13 watershed projects in question local contributions to structures amounted to 29 percent and the average local contribution amounted to 55 percent of the total cost. The contribution of local groups on these 13 projects appears to us to be completely within the intent of Public Law 566. In fact, we wonder why the Army should bring this point into the discussion when one of their recent reports indicated that out of more than $3 billion of flood-control works built by their organization, the non-Federal contribution was less than 6 percent.

2. The Army claims that the cost-sharing policy under Public Law 566 is preventing them from requiring the same local contribution on Army projects. It appears that they tried to make the point that they are attempting to bring their cost-sharing policy on flood-control projects in line with the policies of the Secretary of Agriculture. We understand that they have issued a directive to require cost sharing on small projects to be comparable with those planned under Public Law 566. This apparently applies only to reservoirs of less than 5,000 acre-feet capacity. In the past, the Army has built less than a dozen reservoirs of this size and now that Public Law 566 is operative and the authority is given to the Department of Agriculture for such small structures, we question why the Army should be considering projects of this small size. Their new so-called cost-sharing policy has no relationship to their large multimillion dollar dams where no local or State contributions are required.

3. They express concern relative to adequate provision for operation and maintenance of the dams built by local organizations under this legislation. Public Law 566 provides that the operation and maintenance of these projects are the responsibility of the local organization. Apparently the Army is of the opinion that local organizations cannot be entrusted either to build or operate and maintain small dams. Local organizations throughout the country have built and maintained thousands of small dams during the past. These dams have been built and maintained at far less cost than if the same structures had been built by the Federal Government.

4. The Army suggests that there is need for further checks on the economic justification on the proposed watershed projects. This proposal appears to be designed to cast a cloud of suspicion on the combined judgment of the local organizations and Department of Agriculture as to whether the proposed improvements for the watershed would pay off. We feel that this is just another way of saying that only the Army is qualified to do watershed protection and flood-prevention work in the upper reaches of the Nation's watershed.

5. They claim that assistance was given on drainage without authority under Public Law 566. The conference committee report on this legislation states:

"The conference agreed to the change made by the Senate in the form and punctuation of the definition of 'works of improvement' to make it clear that the definition includes drainage projects and that it may be an undertaking either for flood prevention or the agricultural phases of the conservation, development, utilization, and the disposal of water."

It appears to us that this language is exceptionally clear and that Public Law 566 contains adequate authority for drainage. It is difficult to visualize why the Army would support such an argument unless it was to confuse the issue.

6. The Army claims that the design of the dams in some of the proposed projects involves risks of failure. Again this argument appears to be designed to cast a reflection on the qualifications of the Department of Agriculture engineers to design and build small structures. The record to December 31, 1955, shows that the Soil Conservation Service has built 338 floodwater-retarding structures. These are the same general type of structures contained in the 13 watershed plans being considered by the committee. In addition, Soil Conservation Service technicians have designed and supervised the construction of more than 13,000 small irrigation reservoirs and more than 700,000 farm ponds. We know for a fact that their structures have withstood terrific abuse in many intensive storms without failure. Engineers employed by both the Army and Department of Agriculture are trained in the same colleges and universities. We see no reason why there should be any differences in engineers of the two organizations as to their ability to design and construct small dams.

Many other objections to the proposed watershed projects were raised by the Army at this hearing. It is our opinion that their bureaucratic ambitions were again employed to frustrate and dim the hopes and desires of thousands of local organizations who have seen for the first time an opportunity to conduct their own watershed programs with technical assistance from the Department of Agriculture without being subjected to Federal domination and control of local resources.

As an organization we do not endorse individual projects. However, it is our feeling that the 13 projects in question are well within the authority prescribed under Public Law 566, and we trust that your committee will consider these 13 watershed-improvement-project proposals on this basis.

Sincerely yours,

MATT TRIGGS,
Assistant Legislative Director.

Golden Anniversary of a Golden Investment in Our Youth

EXTENSION OF REMARKS
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 19, 1956

Mr. DONOHUE. Mr. Speaker, I should like to include a most timely editorial entitled "Golden Anniversary," appearing in the April 3 issue of the Waltham (Mass.) News-Tribune, explaining the true and wholesome nature of the wonderful work being done by our boys clubs throughout the country.

The editorial follows:

GOLDEN ANNIVERSARY

What we believe to be an unfortunate impression could have been gained from an article carried recently in a national publication, Reader's Digest, which had to do with the boys' club movement.

From it one would gather that boys' clubs are the refuges of hoodlums, slum area conversion centers, and recreation bivouacs only for the underprivileged child. It tossed some brickbats in the direction of South Boston and Charlestown, unwittingly perhaps, as it intended to show the effectiveness of the boys' club movement in areas of particular need.

True, the boys' club did originate in areas of heavily concentrated population. Clubs did and still do take kids in the "tough sections" off the street corners and pavements, drawing them to supervised programs in good environment.

This sort of endeavor is basic. No doubt it has an effect upon the good juvenile records in South Boston and Charlestown, although residents of those communities point to the fact that decency and happy family living abound there in far greater quantity than indicated in the article's allusion to squalor and broken homes.

While the boys' club objective remains the same, to provide something wholesome for youngsters to do in leisure time, its philosophy has broadened. It would be most fallacious to believe that boys' clubs intend to serve only those lads from families in the lowest income level, or to feel that it is limited to problem boys.

Indeed, the movement has matured, as we see it, so that youngsters from all the economic levels are brought together. Communities which never before recognized their obligations to the future in providing an outlet for youthful energies are taking great satisfaction in the establishment of boys' clubs.

The street corner problem is pretty much the same in every city or town. If the boy has no place to spend nonschool hours except the soft drink parlor, pool room, or sidewalk he's apt to think up mischief. His association can be with bad companions. The combination, in this era of high speed automobiles and free spending, can be damaging indeed.

Even though he may not be poor, in the sense of family income, a lad can be underprivileged in other ways if he is denied the care and understanding of parents, or the opportunity to express himself as an individual.

This the modern boys' club does, and it does it well through good leadership for youngsters from all strata of society. This mixing process has a beneficial effect. Boys from modest environment learn they can place themselves on equal footing with youths more favorably endowed. The latter learn to absorb the knocks which go with competitive sports, group games, and learning the arts and crafts.

It is a misconception to consider the boys' club an after-the-fact rehabilitation center. Its function, primarily, it to prevent delinquency before it can happen by doing something for the vulnerable boy. This is the investment a community makes when it builds and supports a boys' club.

Awareness of the philosophy underlying the movement is timely in view of the Golden Anniversary of Boys' Club in America being observed this week. Massachusetts, which has pioneered in so many avenues of education, can point to Fall River as the site of the first club. Now, there are 400,000 boy members in 435 boys' clubs throughout the Nation.

Waltham is very much in the forefront by virtue of its million-dollar youth center, constructed at much lower figure as two dollars were made to do the work of three on a self-help plan. This week you can see those contributed dollars translated into character development dividends by visiting the boys' club.

Lay That Proxy Down

EXTENSION OF REMARKS
OF
HON. DONALD L. JACKSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 17, 1956

Mr. JACKSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from Faith and Freedom of May 1956:

LAY THAT PROXY DOWN
(By Morrie Ryskind)

Slowly but surely, the American egghead—that curious creature who cries "Onward" as he retreats backward—is leading us to his utopia: the dark ages. He asks but one thing of any proposal: that it shall have been tried again and again and again—and have failed utterly each time. That sanctifies it for him and he adopts it as part of his creed. Like the mystics, he believes because it is impossible.

Further, he will claim for his quack remedy that it has never been tried before and is a dynamic—he used to say revolutionary, but that word isn't as popular as it was, and he knows his semantics.

And it is no use to point out to him that his notions have been tried all the way from Neanderthal man to Joseph Stalin. Your true egghead is not one to be earthbound by facts: indeed, it is his lofty contempt for facts that makes him an egghead.

Thus, when the egghead demands a cheapening of the currency and the fixing of prices of everything from agricultural products to wages, you waste your breath when your refer to the edict of Diocletian. He will remind you that the edict was issued in the fourth century and that, since the rule of the well-intentioned Roman Emperor, the human race has come a long way.

We now have as part of our heritage the wisdom of Keynes, F. D. R., Truman, Hubert Humphrey, and Wayne Morse, to say nothing of the atomic bomb, television, and the AFL–CIO merger. This time, the egghead is certain, he will succeed.

PRAYING IN THE FRONT PEW

Until recent years, the egghead avoided, if he did not eschew, the church. But there has been of late, if not a genuine religious revival, at least a back-to-the-church movement. And the egghead is there, too—whether he has been genuinely converted or is merely looking for fresh fields in which to establish his doctrine of uniformity.

You will find him occupying the front pews of the kirk and the synagogue, praying loudly that the rest of mankind be recast in his image. For he is certain that the eggheads are the chosen people and that the covenant Yahweh made was with the Americans for Democratic Action.

THE ADA DESCENDS

True enough, he has revised the covenant and incorporated into it some sheerly political additions thoughtfully provided by Bishop Oxnam, Edward Murrow, and Joseph Rauh. This is known as progress, and any thought of adhering to the truths of Moses and Jesus and omitting the newer revelations is known as going back to the religion of the horse-and-buggy era.

The Almighty, it appears, progresses with the rest of us: He used Moses to give us His laws; he sent His Son to redeem a world that had forgotten the sacred commandments; and today, with the universe again in chaos and confusion, He sends us the ADA. Will you not believe? Then, alas, you will not be saved. And the least you can do, since you are an unbeliever, is to get out of the church or the synagogue whose Holy Word you deny.

WHAT ARE YOUR POLITICS?

The egghead, in short, has not only taken to going to church, but he has taken the church over. You and I, reserving for God the things that are His, go to the temple for a quiet communion with the Lord, for a little soul searching, perhaps for the confessional; we think of the man in the next pew not as a Republican or a Democrat, but as a fellow communicant.

Not so the egghead: he wants to commit you politically. He demands part of the reverence we reserved for the Lord, and he has taken over Caesar's function, too, and made it part of the services. We must give the egghead our votes and our tithes. According to the Gospel as interpreted by Walter Reuther and George Meany, every carpenter and automobile worker must think and vote alike; why not every Protestant, every Catholic, every Jew?

Thus, it is we see the liberal Catholic weekly, America, refusing to run an article it had accepted from Russell Kirk because he is a contributor to National Review, whose conservative point of view America rejects. Mind you, they don't object to his article, but he has appeared in the forbidden pages of their own carefully made-up index.

Thus we see the lay committee of the National Council of Churches of Christ forced to dissolve when it protested against the stand of the liberal clergy who began issuing political statements in the name of 34 million Protestants. Thus we see a score of representatives of Jewish organizations—some of them religious, some fraternal—meeting in Washington and pretending to speak for all Jewry on political matters.

TESTING FOR HERESY

The egghead demands not only, obviously, the right to speak, but the right to silence the rest of us. If you don't go along with America you are presumably not a good Catholic. If you don't go along with the general board of the National Council of Churches of Christ, you are not a good Protestant. If the views of the Jews who met in Washington are not yours, you are not a good Jew.

Hasn't the word been uttered?

So something new has been added to religion. And, of course, it isn't news; it's nothing but the old test for heresy. And, if the egghead has his way, the inquisition will follow. Not, to be sure, torture on the rack, but excommunication from the church and exile from the society of decent folk. Unable to present our ADA cards, you and I will have to do our worshipping at home.

I have before me a pamphlet, for example, that attacks the McCarran-Walter immigration law Now, I happen to think the law is a good one. Maybe you don't and cer-

tainly any group of citizens has a right to attack it.

WHO'S ON THE FENCE?

But notice the names of the organizations sponsoring the pamphlet, which is called The Fense: the American Jewish Committee, Board of Christian Education of the Presbyterian Church, Board on Peace and Social Concern of the Friends, Church Peace Union, Commission of the Evangelical and Reformed Church, Council for Social Action of the Congregational Christian Churches, Council of the American Baptist Convention, United Church Women of the National Council of the Churches of Christ, National Council of Jewish Women, Board of Missions of the Methodist Church. Oh, yes; and the National Farmers Union—religion not stated.

ACTING IN WHOSE NAME?

Now, everyone of the individuals in these organizations has, as I said, a perfect right to assail the act—as an individual. Or even as a group united in something called, say, the Committee To Repeal the McCarran-Walter Act. But the bland use of the names of the churches, with the patently intended inference that every Jew, Presbyterian, Quaker, Congregationalist, Methodist, Baptist, et al., backs repeal is a palpable untruth, and people who pretend to revere the Ten Commandments ought not to break one of them by bringing false testimony.

There is another commandment, too, that they may have forgotten: against taking the name of the Lord in vain. If ever a commandment was broken, it is by the people who put out the pamphlet.

The McCarran Act may be good or it may be bad, but it is not a religious issue with God on the side of the pamphleteers, and Satan on the other side. I submit that the Congress that passed the act was not made up of infidels: the Jews, Catholics, and Protestants who voted for the bill were as God-fearing as any of the pamphleteers.

Of one thing, I am sure: the Congress was composed of better Americans than the self-anointed pamphleteers: they voted not as Catholics, Protestants, Jews, but as Americans, thinking not only of what was good for the immigrant, but what was good for America—which they had sworn to preserve. Or is that, too, heretical?

TORQUEMADA TIPTOES IN

Perhaps it is. And if this pamphlet succeeds, we may look forward to other pronouncements from the pulpit: it will turn out that the Bricker amendment is, by implication at least, anti-Semitic, and that Jesus warned us to beware of balancing the budget.

Against the day when the new Torquemada comes, I have already made my preparations. I may confess and be converted outwardly, but secretly I shall go down to the cellar, where I can read the Old Testament as my ancestors did. And—if the secrecy of the ballot still remains—I may even, on election day, vote for a conservative. If I can find one, that is.

Helicopters Rise to Maturity

EXTENSION OF REMARKS

OF

HON. EUGENE J. KEOGH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 17, 1956

Mr. KEOGH. Mr. Speaker, the progress of this age is due, in large part, to the inventive genius and courage of industrial pioneers of the free world. Typical of this, is the use of helicopters as a means of swift, safe, and speedy travel in many congested parts of the world and in many places where terrain and topography uniquely require such mode of travel. The future of "vertical whirlybirds" will not be dependent upon governmental subsidies, military coddling, or other artificial aids if the bold, courageous, and attainable plans of forward looking helicopter operators come to fruition, as set forth in the following report of the meeting of the International Air Transport Association held at San Remo, Italy, and which report appeared in the Wall Street Journal of May 11, 1956, under the byline of Richard P. Cooks, staff reporter. The article is as follows:

SAN REMO, ITALY.—A perilous corkscrew road winds between cliff and chasm from Nice, France, to this picturesque seaport resort town looking out on the Ligurian Sea.

Helicopter builders and flyers from a dozen nations traveled by bus over this precipitous route a few days ago to meet here and map the whirlybird's commercial future. For many, the road seemed symbolic of the twists and turns ahead before pay-and-fly 'copter travel really gets off the ground.

Interestingly enough, and possibly portentous of things to come, helicopters soon will be flying over this craggy Riveria route, cutting the 2½-hour bus trip to just 20 minutes. The ubiquitous Aristotle Onassis, shipping fleet magnate and a dweller in the nearby principality of Monaco, let it be quietly known that he is arranging to buy up to four 12-passenger Sikorsky-built 'copters for regular Riviera runs. Cost of the S–58's: About $280,000 apiece.

SKY HIGHWAYS

At the San Remo conclave, called by the International Air Transport Association, manufacturers unveiled plans for bigger, swifter and safer helicopters. Traffic specialists talked of complex travel patterns, a sort of invisible highway system in the sky to take care of 'copters flying metropolitan routes. And conferees agreed that noise was one of the whirlybird's big handicaps for regular city operating.

The conference also spotlighted important differences between the civilian buyers of helicopters and the people who make them. On one hand, the operators of helicopter lines urged manufacturers to start building roomier, long-range commercial craft and held out the prospect of a multi-million-dollar market for them. Manufacturers, on the other hand, adopted a go-slow attitude, hesitant about zooming ahead on commercial output while helicopter travel still is in the infancy stage.

Until now, commercial helicopters have been single-engine craft and have been adaptations of military machines. Whirlybird enthusiasts say two or more engines are needed for safety in commercial use. They're urging plane manufacturers to bring out a multiengine 'copter that can be operated more cheaply than present types.

BUS-LIKE SERVICE

Robert L. Cummings, Jr., president of New York Airways, told the conferees here there's a market in the United States today for two hundred 25-passenger 'copters for short-haul service. He said his line, which last year toted nearly 25,000 passengers by helicopter in the New York metropolitan area, would operate planes on a bus-like schedule and do away with present reservation procedures.

Mr. Cummings urged manufacturers to rely less on Government orders for helicopters and develop the potentially greater commercial market. He figured the 25-passenger planes he called for would cost about $500,000 apiece and thus would represent something over $100 million in initial new plane orders. On top of that, he noted, there would be another $30 million for manufacturers in making needed spare parts.

Helicopter travel, though hampered by high seat-mile costs and limited schedules, has been on the upswing. New York Airways, for one, hauled only 8,758 fare-paying passengers in 1954, its first full year of operation. Last year, the pay load nearly tripled to 24,569. Within 10 years, predicted T. M. Sullivian, chief of aviation planning for the Port of New York Authority, a million riders a year will be whirlybirding to and from Manhattan.

LONDON TO PARIS

United States lines are not the only ones growing and planning to branch out. British European Airways, which sent eight men to the San Remo session, is casting about for a huge helicopter able to carry 40 or 50 passengers. It wants to use the plane for direct hops from the heart of London to the foot of Paris' Eiffel Tower. It's about to start testing a medium-sized, twin-engine whirlybird but doesn't expect to get the giant-size craft for 3 or 4 years.

New craft designs accented the shift from piston power plants for helicopters to turbine engines. The lighter turbines would make planes more economical to operate and would permit the use of more engines on each plane, thus giving it added safety features.

Igor I. Sikorsky, pioneer plane designer and engineering manager of Sikorsky Aircraft Division of United Aircraft Corp., disclosed plans to use turbines in a twin-motored S–56, a 30-passenger whirlybird expected to be ready for commercial use in 3 to 4 years.

G. S. Hislop, chief helicopter designer for Fairey Aviation Co. of Middlesex, England, reported that a huge 50-passenger Rotodyne is expected to fly early next year and be ready for the market by 1960. Compressed gases will whirl its rotor tips for vertical ascent, then conventional propellers will take over for forward speed.

High costs of travel by helicopter dominated discussions at closed-door meetings. New York Airways' Mr. Cummings estimates a modern 25-passenger craft should be able to operate at a cost of 15 cents to 20 cents per seat mile for hauls of 50 miles or less in metropolitan areas. That would put helicopters in a competitive range with taxis, which now charge 25 cents a mile in New York.

But that cost figure for helicopters is far less than is now prevalent. Mr. Onassis' new S–58's, for example, are expected to have a direct cost of between 20 cents and 30 cents a seat mile. This means the operator's breakeven point, with overhead included, would be at least 50 cents, quite costly when compared to conventional airplane fare which averages about 5.25 cents a passenger mile.

"Convenience and service, not seat mile cost, will make the helicopter successful," argued Wing Commander R. Brie of British European Airways. Says another 'copter backer "A tired executive doesn't mind an extra $10 at the end of a $175 plane trip if he can get to his hotel an hour sooner."

With larger, longer-range helicopters, the seat mile cost (which declines with distance) is expected to run between 5 cents and 7 cents a mile. This, of course, would allow fares in line with rates charged on fixed wing planes. Sabena officials figure, for example, that an intercity helicopter fare for trips up to 250 miles would be approximately the regular plane fare, plus the cost of a bus or taxi to and from the outlying airport.

Report to Provost Thomas V. Garvey, of Queens College, Flushing, Long Island, N. Y., on Visit to Air University by Irving P. Schwartz

EXTENSION OF REMARKS
OF

HON. LESTER HOLTZMAN

OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 17, 1956

Mr. HOLTZMAN. Mr. Speaker, under leave to extend my remarks, I would like to insert in the CONGRESSIONAL RECORD a report made by Irving P. Schwartz, the assistant public relations counselor of Queens College in Flushing, Long Island, N. Y., to Provost Thomas V. Garvey, of Queens College, on his recent visit to Headquarters, Air Force ROTC, and the Air University at Maxwell Air Force Base in Alabama.

Mr. Schwartz is keenly interested in increasing the cadet enrollment in the Queens College detachment of the Air Force Reserve Officers Training Corps, and I believe that his account of the visit, and his conclusions and recommendations will be of interest to all those concerned about our Air Force ROTC program.

The report follows:

Since September of 1955 the department of air science and the department of public relations of Queens College have been formally engaged in a public relations project with the goal of increasing cadet enrollment in the Queens College detachment of the Air Force Reserve Officers Training Corps. As part of the project, an invitation was extended by the Air Force ROTC officials of Queens College and Headquarters Air Force ROTC officials at Maxwell Air Force Base, Alabama, to the Public Relations Counselor of Queens, Dr. Henry S. Miller and the Assistant Public Relations Counselor, Irving P. Schwartz, for a visit to Headquarters Air Force ROTC and Air University at Maxwell Air Force Base. I made the visit to Maxwell together with Maj. Walter G. Lang, USAF, commandants of cadets, 1st Lt. Robert D. Hartwig, USAF, information services officer, both of the Queens Air Force ROTC detachment, and Prof. Charles Haywood of the department of music, from April 26 through April 29, 1956, for the following reasons:

1. To discuss ways and means, with Air Force ROTC officials, of increasing cadet enrollment not only at Queens College but at other colleges which have Air Force ROTC detachments. The enrollment has declined at many liberal arts institutions.

2. To acquire additional knowledge of the Air Force ROTC and Air University programs in order to help us to better understand the excellent work of the United States Air Force educational program.

MEETING WITH GENERAL DEICHELMANN

The group from Queens College had the pleasure of meeting with Maj. Gen. Matthew K. Deichelmann, USAF, Commandant of Headquarters Air Force ROTC. General Deichelmann gave us a complete background and briefing as regards the reasons for the reduced enrollment in Air Force ROTC at many colleges. He made the following points:

1. There is a flying requirement for cadets who enter the advanced corps. There are students who are physically and mentally unable to meet that requirement, and therefore cannot be commissioned as officers in the Air Force.

2. There has been a reduction in the draft quota for college students, and as a result, students are not entering the Air Force ROTC program.

3. There just seems to be a general lack of interest in flying.

4. There seems to be a lack of prestige as regards the military field. The civilian population does not seem to have a high regard for the military. This is one of the main reasons that even the Air Force ROTC graduates do not make a career of the Air Force—that is to say, they seem to fear the lack of prestige which the military has in the opinion of many civilians.

5. There is the need for the civilians to be correctly educated about the military. This, of course, calls for increased public relations. However, there is also a need for the civilians and officers to be further orientated about the excellent educational opportunities in the Air Force such as the various colleges located at Air University.

MEETING WITH COLONEL WHEELER

The Queens College delegation met with Col. Ansel J. Wheeler, United States Air Force, liaison group chief for this area. Colonel Wheeler stated that enrollment was increasing in science and engineering colleges, although there was somewhat of a decline in liberal arts colleges. He commended us for our public relations-Air Force ROTC project at Queens College. I suggested to Colonel Wheeler that other colleges establish public relations-Air Force ROTC projects similar to the project at Queens College. As a move in that direction, I suggested to Colonel Wheeler that local, regional and national college public relations organizations be orientated about the Air Force ROTC program. To my knowledge, this has never been done in a formal manner. Certainly, in my opinion, cadet enrollment can be increased if the public relations programs of the colleges as regards Air Force ROTC are geared toward doing everything possible to help the Air Force ROTC detachments in the colleges.

I told Colonel Wheeler that I would approach some of the public relations officials in the college field with the idea of an Air Force ROTC orientation session, and that I would report to Colonel Wheeler about my findings.

MEETING WITH CAPTAIN JOHNSON

Captain Lewis T. Johnson, United States Air Force, information services officer of Headquarters Air Force ROTC, actually made most of the arrangements for our trip to Maxwell. He was kind enough to tour the base with us, introduce us to all of the officials, and generally to see that we were made comfortable during our stay at Maxwell. However, Lieutenant Hartwig and I had a most enlightening conference with Captain Johnson about public relations and its relationship to the Air Force ROTC program. He made some excellent suggestions about improving our public relations program, thereby possibly leading to an increase in cadet enrollment. Some of the suggestions were:

1. The principals of the various high schools should be invited to the college for an orientation session on Air Force ROTC. Inviting the principals to the college for dinner, and then briefing them about the Air Force ROTC, should do a good deal toward helping to acquire more students for the Air Force ROTC. At the present time, there is somewhat of a lack of cooperation on the part of high-school principals in this area as regards Air Force ROTC. Perhaps, a better term would be that they are indifferent. An orientation program, according to Captain Johnson, would go a long way toward changing the attitudes of many principals.

2. The efforts in the New York area on the part of colleges in visiting the high schools should be coordinated. Captain Johnson said that it is useless to have each college send its cadets to the various high schools when one college can send representatives to speak for the Air Force ROTC at all colleges. In that way, each college would have an equal share of high schools to visit, and there would be no duplication of efforts.

3. The high-school principals should be invited to attend the formal reviews of the Air Force ROTC detachment.

4. Cadets should visit the high schools from which they graduated so that they can speak to students about the Air Force ROTC.

5. The crack Pershing rifle team of the Air Force ROTC should perform for some of the high schools.

VISIT TO COMMAND AND STAFF COLLEGE

The Air Force has an excellent educational program for its officers. Unfortunately, many civilians do not realize the importance of this program nor are many aware that this program exists. The Queens College delegation was very fortunate in being able to visit the Air Command and Staff College, one of the aspects of the educational establishment and an integral part of Air University.

The Air Command and Staff College is the largest resident school for the advanced education of Air Force officers. Its two principal schools are the Command and Staff School and the Squadron Officer School. The Command and Staff School is the intermediate course in the progressive system of officer education provided by Air University and the Squadron Officer School is the first. The college provides an academic instructor course and two weapons courses. There is also a language laboratory for allied officers and a reading laboratory for all of its students. We were given a demonstration of the methods used in the language laboratory.

As the Air Force center for education and development of doctrine in command and staff subjects, the mission of the Air Command and Staff College is to conduct courses to prepare officers for command and staff duties, to prepare staff studies as required by the United States Air Force Headquarters, with the assistance of field agencies to write doctrinal manuals on air command and staff organization, procedures and techniques, to prepare correspondence courses paralleling the two general duty courses and to give instruction in special subjects as part of the general courses.

The mission of the command and staff school is to improve the professional qualifications and abilities of selected Air Force majors and lieutenant colonels to execute the command and staff tasks required in implementing air strategy and missions of the Air Force and to contribute to the development of air doctrine, strategy and tactics.

Major Lang, of Queens College, was selected for command and staff school and will start the nine-month course at Maxwell in September.

The Squadron Officer School is the first step in an officer's advanced military education. It prepares selected officers for the command of squadrons and for the performance of staff duties usually assigned squadron-grade officers.

Other aspects of the Air Command and Staff College include the academic instructor course for teachers in the Military Establishment, weapons courses and the language and reading laboratories. Lt. Col. Howard A. Mitchell, USAF, professor of air science at Queens College and Lieutenant Hartwig will attend the academic instructor course in the summer of 1956.

The entire establishment at Air University and the educational opportunities offered to officers in the United States Air Force cer-

tainly left a deep and lasting impression on us all.

CONCLUSIONS AND RECOMMENDATIONS

1. I must begin by stating that I have received no indication, as a result of my trip to Maxwell, that the Air Force ROTC detachment at Queens College will close in the near future. To the contrary, with all of the efforts being made at Headquarters Air Force ROTC and at Queens College, I am very optimistic about the detachment's future on our campus. I can only see an increase in enrollment as a result of our efforts.

2. The present public relations-Air Force ROTC project at Queens College should by all means be continued. The project has been highly successful. We have received a good deal of newspaper coverage and have also been successful with television coverage. The community is now becoming cognizant of the Air Force ROTC and its importance in our entire Defense Establishment. I cannot give enough praise to the Air Force ROTC officers at Queens College who have worked very closely with the public-relations office of the college in our project. The Information Services officer, Lieutenant Hartwig, has spent many hours, much of them during evenings and weekends, working with me in planning our public-relations program. With this type of cooperation, we cannot help but be successful.

3. By all means, the high-school principals should be invited to the Queens College campus for an orientation session on Air Force ROTC. I believe that a joint invitation should be extended by the provost and the Department of Air Science. I suggest that the provost sanction such a meeting.

4. If there is an opportunity to do so, I suggest that the provost and other members of the faculty visit Air University at Maxwell Air Force Base. In my opinion, there is no better way of learning about the Air Force ROTC and the other educational aspects of the Air Force than from such a visit.

Respectfully submitted.

IRVING P. SCHWARTZ.

MAY 1, 1956.

Appointment of a New Secretary of the Interior

EXTENSION OF REMARKS

OF

HON. THOMAS B. CURTIS

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 17, 1956

Mr. CURTIS of Missouri. Mr. Speaker, one of the major differences between the Eisenhower administration and the preceding administrations of Presidents Roosevelt and Truman lies in the philosophy of the relationship between Federal and local government and between Government and private enterprise in the field of developing our power and other natural resources.

In each of the annual Economic Reports of the Eisenhower administration much effort has been devoted to spelling out the belief of the Eisenhower administration that a balanced partnership between Federal Government, local governments, and private enterprise in the development of our power and other natural resources is the best way to get the greatest and cheapest abundance of these necessities for our society. There is plenty of room for honest argument as to just where the balance should be struck, but there is no room for argument which refuses to recognize that the issue is one of balance and not one of one side being for cheap abundant power and the other being against cheap abundant power. As a matter of fact, there is not just two sides to the question. There are many sides. Some believe that the balance proposed by the Eisenhower administration still unduly weighs the responsibility of the Federal Government at the expense of private enterprise. My own personal view is that the Eisenhower administration is still weighing too heavily the Federal Government at the expense of both local government and private enterprise.

Mr. Leland Olds, testifying before the Joint Committee on the Economic Report on the President's 1955 Economic Report, complained that there was no attention paid to the problem of getting cheap adequate power for our people in the report. In questioning Mr. Olds on his views, I made the following suggestions for his comment: That he, Mr. Olds, was what is known as a public-power advocate. Mr. Olds admitted that he was. I suggested then that his complaint with the President's report was not that no attention was devoted to the problem of getting more cheap power for our people, but rather that the President had not suggested the Federal Government develop plans for moving further into the field directly. The President's report gave emphasis to plans which required more private initiative and which had a better balance between Federal Government, local government, and private participation. The objectives of Mr. Olds, the Eisenhower administration, and people holding views similar to mine, is to get as much cheap power for our people as we can. The issue is not centered on differences in motives, but rather in differences as to how we best attain these desired objectives.

However, the public-power advocates and others who are advocating the philosophy of greater Federal governmental participation in the areas of the development of our natural resources will not accept this statement of the question. I think it is fair to say, generally speaking, these people advocate greater Federal governmental participation in almost all areas of economic and social development in our society. They are opposed not only to a greater participation of State and local governments in all areas of social and economic development, but also a greater participation of private enterprise in these areas. Theirs is not just a holding action; they want the Federal Government to assume more responsibility.

The Americans for Democratic Action have been the public spokesmen of this philosophy and are directing the strategy of public debate on it. Although this is a relatively small group of citizens, in its ranks are individuals influential in the thought-molding professions of our society. They consist of traditional politicians, teachers, professors, authors, newspaper reporters, columnists, book reviewers, book publishers, and other persons in the administrative work of these professions. Accordingly, the strategy they develop on the public discussion of a political issue becomes important.

As I have stated, this group refused to accept the issue for discussion as being one of how we attain the fine objectives we all agree upon. Instead, this group decided to pose the issue as one of motives and opposite objectives. They are for cheap adequate power; the other side is for the opposite. They are for good; their opponents are for bad.

So the issue has been presented to the people by them under the huckster slogan "giveaway." The term "giveaway" implies insidious, improper motives. It has been applied by this group to every step taken by the Eisenhower administration where it has tried to effect a different balance, a balance away from the amount of present Federal governmental participation in economic developments in our society.

These spokesmen of ADA have not been content with merely implying improper motives; in many instances they have made frontal attacks on the motives of all persons connected with a particular issue where the importance of the Federal Government in a matter was being diminished. The Dixon-Yates controversy affecting the TVA as it did is a classic example of the methods employed. The strategy was a series of hit and run attacks. The public today has forgotten many of the charges made as detailed charges. They only remember, as those knowing public psychology planned they remember, there was something unsavory alleged. One of the first charges was that Bobby Jones, a personal friend of President Eisenhower, was financially interested in the Dixon-Yates proposals and therefore * * *. This charge was disproved almost immediately, but those who know public relations media and public psychology knew the refutation would never attain the prominence of the original charge. In the Dixon-Yates matter, one attack after another on the motives of the persons involved was made, refuted, and dropped, only to be picked up after a reasonable period of time and referred to vaguely and collectively to persuade the public that something unsavory was connected with the matter.

The basic issues involved in the Dixon-Yates matter were never honestly posed to the public or discussed by the ADA group although there was much area for honest public discussion.

So it has been with one giveaway after another, including the tideland oil question. Not once has this crowd of intellectuals honestly posed the questions so the American public could give consideration to the real and sometimes difficult issues involved. Furthermore through the power they possess in their thought-molding professions they have been rather successful in poisoning the air throughout the country on matters that can and should be the subject of honest and searching debate.

Now we come to one of the purposes behind such campaigns. The Secretary of the Interior has resigned. This governmental department makes a great deal of policy in regard to issues of

power and natural resource development. This department, under Secretary McKay, has been conscientiously following the philosophy of President Eisenhower in this area in spite of all attacks. It is most important to the ADA to have a Secretary of the Interior in this administration who is not a person of courage and strong convictions. The smear campaign can hurt a strong and able man, but it cannot make him change his course. The smear campaign can make a weak man—a man who doesn't study or know his subject—temporize and modify his views. Particularly, as men have learned, if he does modify his views he receives, through the same power these people exercise in the thought molding fields, great praise as a humanitarian. He is no longer an anti-intellectual, an ante-diluvian.

So the campaign has been on for some time to keep the Under Secretary of the Interior Clarence Davis, an honest, hard-working, and knowledgeable man, from being appointed by the President to the Secretaryship. The campaign against Davis I feel is pointed toward a few people in the administration who have been known in the past to have been influenced by these campaigns, either because they have been taken in by the cleverness of them, or because they feel that the public in general have been taken in by them.

An article entitled "Republican 'Give-aways': the Charges and the Facts" appearing in Harper's magazine, May 1956, illustrates the techniques employed.

This article cloaks itself—not too cleverly either—in the guise of being an objective and intellectual examination of the issues involved in the approach our society should adopt in the development of our natural resources. An alert, thoughtful person can see the dishonesty without even having to refer to outside materials. The fact that it was printed and headlined in Harper's magazine assist in taking the unalert intellectual unawares. I am curious as to why the editors of Harper's participated in this attempt at public deception on this important public issue.

I am setting forth a résumé of the background of Clarence Davis, the person the ADA is seeking to keep out of the Secretaryship of the Interior. I want to point out an interesting fact. Nebraska has long had a system of State ownership of power. Clarence Davis has had a great deal to do with the development of this system. So it can be seen his record is not really that of leaning primarily toward private enterprise in the balance of Federal Government, local government, and private enterprise. If anything it is one leaning toward State and local government. But either private enterprise or local government is anathema to those who want to enlarge the Federal Government. Much as I believe the emphasis should be more on private enterprise, I have no great fear of State or local operation except for the inherent inefficiency of the personnel system it brings, because our local and State governments are still close enough to the people to be watched. I do fear the concentration of economic power in Washington, D. C., or in Wall Street; it makes no difference. I greatly fear the concentration of both economic and political power wherever it be. A totalitarian state is nothing more than a state where economic and political power rests in the same hands. This result can be achieved by the economic groups taking over the political groups as in fascism or nazism or it can be achieved by the political groups taking over the economic groups as in communism. Or it can be a catalysis where the Military Establishment takes over both and coordinates and controls them.

One thing alone will keep a republic a republic and a people of a society free and that is honest public debate which means respect for the wisdom and motives of one's opponents and of the people of the society who listen. Clarence Davis is a public servant whose entire career bespeaks honesty, integrity coupled with great ability and great courage. He would make a splendid Secretary of the Interior.

CLARENCE A. DAVIS

Mr. Davis was born at Beaver City, Nebr., November 21, 1892, the son of Thomas M. and Nannie Galvin Davis. In 1916 he married Florence Wells, of Schuyler, Nebr. They have 1 son, Thomas M. Davis II, and 3 grandsons.

Education: Attended public schools of Beaver City, Nebr. (population 1,200), graduating in 1910. He attended Nebraska Wesleyan University, 1910–13 (A. B., 1913), taking the 4 years' work in 3, and had many college activities; baseball team, track team, tennis team, debating team, class orator, etc., and graduated from Harvard Law School (LL. B., 1916).

Legal biography: He practiced in Omaha, Nebr., from 1916 to 1917, with the firm of Baldrige and De Bord. He removed to Holdrege, Nebr., in 1917 and was elected attorney general in 1918.

Attorney General of Nebraska, 1910–23; counsel to Nebraska in interstate water litigation and in preparation of Nebraska-Colorado Interstate Compact regarding the South Platte River, 1923; member of commission compiling Nebraska statutes, 1922; member Uniform Laws Commission, 1922–25; general practice in Holdrege, Nebr., 1923–36; general practice in Lincoln, Nebr., 1936–53; member of law firm of Davis, Healey, Davies & Wilson; general counsel to Western Public Service Co., 1925–41; general counsel to Consumers Public Power District, 1941–53; counsel to Missouri Valley Development Association; lecturer on administrative law, University of Nebraska, 1943; trustee, Nebraska Wesleyan University, 1923–27.

Member of the Lincoln, Nebr., the Nebraska State, and the American Bar Associations, and a member and vice president of the Federal Bar Association; member of advisory board of editors, American Bar Association Journal, 1948–52; president, Nebraska State Bar Association, 1951; member of house of delegates, American Bar Association; member of the General Resolutions Committee of the American Bar Association, 1950, 1951, 1952, and 1953; has been on the council of the sections of municipal law, public utilities, and an adviser-member of the committee sponsoring the Administrative Procedure Act; member, committee on Lawyers' Reference Service of American Bar Association, 1951–52; chairman of the Missouri Valley regional meeting of the American Bar Association in Omaha, 1953; member of National Conference of Bar Association Presidents, and a member of its council, 1951–53; and presently a member of the committee of the American Bar Association on Civil Service and a member of the Federal Bar Association Committee on the same subject.

He has been a director of the American Judicature Society since 1951; is a member of the Institute of Judicial Administration and a member of the American Law Institute.

He is a member of the Nebraska Reclamation Association, the National Reclamation Association, the American Public Power Association, and a member of its legislative committee in 1952.

Other affiliations and activities: He is a member of the Episcopal Church, Scottish Rite (K. C. C. H.), Masons, Shrine, Pi Kappa Delta, Order of Coif, Lawyers Club (New York), University and Country Clubs (Lincoln, Nebr.).

The AAUP and Academic Integrity

EXTENSION OF REMARKS
OF
HON. DONALD L. JACKSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 17, 1956

Mr. JACKSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the New Leader of May 21, 1956:

THE AAUP AND ACADEMIC INTEGRITY—SPECIAL COMMITTEE REPORT ON ACADEMIC FREEDOM FAILS TO GRIP BASIC ISSUES

(By Sidney Hook, former council member, AAUP)

The long-awaited report by a special committee of the American Association of University Professors on academic freedom and national security has now been released. It was accepted by the council of the AAUP and adopted at its annual meeting in St. Louis. (Whether it represents the point of view of the membership is another question.) I refer to this report as "long-awaited" because it is the first that has been made on the subject of Communist Party teachers in colleges and universities since the issue was raised 7 years ago at the University of Washington. Cases have been piling up with no action taken by the AAUP. Not even investigations were launched. Finally, in the fall of 1955, a special committee was appointed to bring in a comprehensive report on all the cases to date in which the issue of communism was directly or indirectly involved and to formulate general principles to guide action with respect to them.

Of the 18 institutions reported on, only 2 were visited by a committee. This would normally be extraordinary, because hitherto in the investigation of run-of-the-mill academic-freedom cases the reports of the investigating committee of the AAUP have been exemplary in every respect. They commanded great moral authority, and university administrations were very sensitive to their findings. The report of the special committee, on the other hand, has been severely criticized because the committee did not visit all the institutions it censured, conducted itself like a kangaroo court, and based its findings on "facts of public knowledge" even though these admittedly did not represent all the facts.

However, there are two reasons why these criticisms are not very significant. First, the principles enunciated by the special committee made visits or detailed investigations in most cases unnecessary. Secondly, the censures were based primarily on the failure of administrations to follow certain procedural principles. Even if different and more sensible principles had been expressed in the report, it is clear that some of the

censured institutions deserved condemnation for violating canons of proper procedure.

My concern in this article is with the principles of the report, the grounds given for the AAUP's attitude toward employment of Communist Party teachers, the knowledgeability of the committee, and the pertinence and validity of its observations and recommendations on the issue before it. I approached this report with no hostility and, indeed, with some sympathetic interest. Dr. Ralph F. Fuchs, AAUP general secretary, had written me a few days before the report was printed: "Although the committee's approach probably differs from yours in some respects, I believe its conclusions do not differ substantially in practical effect from yours regarding the matters covered."

It may well be that the recommendations in particular cases may not be very different from what my own would have been, but I am convinced that the practical effect of the enunciation of the special committee's principles will be gravely damaging to the AAUP and, more important, to the cause of academic freedom.

The basic weakness—it would not be too strong to say the basic evasion—of the report is apparent in its very title: "Academic Freedom and Tenure in the Quest for National Security." The problem of communism and Communist teachers in colleges and universities has little or nothing to do with national security. It has everything to do with the question of professional ethics and professional integrity. At no time was the number of Communists in colleges sufficiently high to warrant the slightest concern that they would undermine our national security. Today, there are no, or hardly any, Communist Party teachers active on American campuses. In none of the cases considered by the special committee were individuals charged with weakening or even working against the security of the country. On the contrary, they were usually charged with lack of professional integrity, with undermining not our national security but the principles of academic freedom.

These charges, first formulated at the University of Washington, set the pattern elsewhere. They were the charges which the special committee should have considered. After all, John Dewey, first president of the AAUP, and Arthur Lovejoy, its first secretary, made it very clear that the group was founded not merely to defend the narrow professional interests of college teachers, important as they were, but to develop and uphold the highest standards of academic integrity. And it was fundamentally on this ground that both of them were opposed to tenure for members of the Communist Party or any other group organized under similar disciplines for unprofessional purposes.

It was the business of the special committee to assess these charges against members of the Communist Party thoroughly and honestly in the light of the ideals of professional ethics which the AAUP always stressed. They did nothing of the sort. They made no study of Communist Party activities in the colleges. They made no study of Communist Party directives to its members to abuse their professional trust. They cited no literature on the question. They met none of the arguments showing why supervision and observation of the behavior of Communist Party teachers in the classroom was morally undesirable and pedagogically impractical. They contented themselves with the pious statement that the academic community has a duty to defend itself from subversion of the educational process. But they did not even ask whether, as a first commonsensical measure of defense, those who were under explicit instructions to subvert the educational process should not be regarded as prima facie (not automatically) unfit for their posts. After all, academic freedom and commonsense are not irreconcilable. When physicians, lawyers, or any other professional group set up standards to defend the integrity of their profession against those who would undermine it, membership in any organization which gives instructions to proceed dishonorably or to subvert standards of decent practice is of immediate concern to the character committee or committee on professional ethics. Are teachers to be less concerned with the honor and integrity of their profession? Why, then, the red herring about national security?

Even as concerns national security, the special committee evinces an extraordinary naiveté which reflects its ignorance of the Communist Party and its ways. It has one paragraph on military security which states bravely with the admission that the committee accepts unhesitatingly the application of safeguards, where secret research is going on, against misuse of classified information important for military security. It makes the reasonable request that these safeguards should extend only to individuals who have access to such information. It then adds: "In no degree do they (the safeguards) justify the proscription of individuals because of their beliefs and associations, unless these persons were knowingly participants in criminal acts or conspiracies, in either the past or present." If this means what it implies—the report is not a model of clarity or precision—then members of the Communist Party as such cannot be proscribed or barred even from work on restricted projects no matter how important to the security of the Nation. They must first be caught acting as good Communists do in such situations. No one who has the slightest acquaintance with the enormous documentary evidence of the role of Communist parties as fifth columnists and agents of Soviet subversion could hold such an absurd position.

This is not the first time that a committee of the AAUP has betrayed either ignorance of, or indifference to, the nature of communism and the Communist Party. As late as 1948, Prof. George Shannon, reporting for the Commitee on Academic Freedom, wrote that "the evidence that the Communist Party in the United States is subservient to the dictates of international communism, which means the Communist Party of the Soviet Union, is not conclusive (Bulletin, spring 1948, p. 123). One wonders what Mr. Shannon, who is at present editor of the Bulletin, would regard as conclusive.

Ignorance about communism, however, is not the decisive feature of the report, but rather a disregard of the standards of professional integrity. So that there may be no doubt that the instructions given to Communist Party teachers do violate the rudiments of professional ethics, I cite several lines from the official instructions:

"Party and YCL (Young Communist League) fractions set up within classes and departments must supplement and combat by means of discussions, brochures, etc. bourgeois omissions and distortions in the regular curriculum. * * * Marxist-Leninist analysis must be injected into every class.

"Communist teachers must take advantage of their positions, without exposing themselves, to give their students to the best of their ability working-class (i. e., Communist) education. * * *

"Only when teachers have really mastered Marxism-Leninism will they be able skillfully to inject it into their teaching at the least risk of exposure and at the same time conduct struggles around the school in a truly Bolshevik manner." (The Communist, May 1937.)

Although often criticized for giving these instructions to its teachers, to this day the Communist Party has not withdrawn them or qualified them in any way.

The retort usually made—that accepting these instructions is one thing, while carrying them out is another—is quite specious. One might as well say that a boxer who has indicated his willingness to throw his fight, or a basketball player who has promised not to score, is not morally culpable until it can be established that he has actually carried out his instructions. The rules governing examination procedures in most colleges indicate clearly that evidence of intent to commit dishonest acts is a ground for disciplinary action. Membership in the Communist Party, which issues specific instructions to act dishonestly, is certainly prima facie evidence of intent warranting at the very least close inquiry and professional indictment. But not according to the AAUP. The very ethical principles which teachers expect their students to follow, they cast aside in assaying the professional misconduct of their colleagues.

The notion that members of the Communist Party can be detected by their classroom practices is mistaken, and I have detailed the reasons at length elsewhere. Some professors say that, if members of the Communist Party carry out their instructions, they are thereby establishing their incompetence and can be dismissed on grounds of incompetence rather than betrayal of professional trust. But has anyone ever heard of a professor losing his job on grounds of incompetence? Harold Taylor, president of Sarah Lawrence, who believes that members of the Communist Party have a right to teach on the same terms as any other teachers, has frankly admitted that "once a man has received tenure, the tenure rules and the academic policies of the university community are usually strong enough to sustain him in his post indefinitely, no matter what level of achievement he may subsequently reach as a teacher or thinker." (Annals of the American Academy of Political and Social Science, July 1955, p. 79.)

The nonprofessional reader may be startled by this, since it seems to put the college teacher in a highly privileged position. Nonetheless, there are good and sufficient professional reasons for this state of affairs, the chief of which is the difficulty of formulating objective criteria of performance. Academic freedom would be imperiled were teachers to be dismissed on vague grounds of incompetence. This further reinforces the conclusion that the nub of the whole matter is one of professional honor and integrity. Once a teacher has won his spurs, neither supervision nor snooping can detect whether or not, if he is a member of the Communist Party, he is carrying out its instructions. His primary offense lies in his voluntary act of membership in an organization which gives him such instructions, and, although this should not be an automatic ground for dismissal, it should constitute a presumption of unfitness. Mutatis mutandis, the same principle should be applied to members of any group bound by a similar discipline and under similar instructions.

As if the failure of the AAUP special committee to come to grips with the basic issues were not bad enough, it goes on to advocate a policy which seemingly suggests that a college is actually failing in its educational duty unless members of the Communist Party are teaching on the campus:

"To maintain a healthy state of thought and opinion in this country, it is desirable for adherents of communism, like those of other forms of revolutionary thought, to present their views, especially in colleges and universities, so that they may be checked by open discussion. How else are Americans to know the nature of the ideological currents in their world? If representatives of com-

munism from abroad were to be employed under an exchange program in American institutions of higher learning, as has been proposed, the unwisdom of the present academic policy would quickly become evident." (Bulletin of the AAUP, spring 1956, p. 199.)

Now the above reference to the unwisdom of the present academic policy, in the light of the context, can only be to the policy of barring Communist teachers. The committee cannot mean that there is a policy of barring people who hold Communist views from speaking on the campus, for there is no such policy. Dr. Herbert Phillips, dismissed from the University of Washington as a member of the Communist Party, presented his case on almost every major campus of the country and admitted that he could not accept all the invitations he received. Not only are Communists permitted to speak before student groups on campuses; they are often invited to speak before classes as open representatives of their views. Although some adverse publicity sometimes results, this does not occur much more often today than in the years before the quest for national security began. The special committee is certainly aware of all this—or should be. (Objections are usually raised to convicted Communists appearing as speakers, but that is another question.)

What shall we say, then, of the implied proposal of the special committee? Simply this: The notion that, in order to learn objectively about communism, it is necessary to hire members of the Communist Party to teach it is just as absurd as the notion that, to give an objective report about Communist activities in the press, it is necessary to hire members of the Communist Party as reporters. If we do not need to employ racists in order to study objectively the claims of racism, Fascists to study fascism, or bankrupts to study the laws of bankruptcy, then surely it is not necessary to employ Communists to study the doctrines and conspiratorial practices of communism.

The odd thing about the position of the AAUP on this question is that it has never permitted its membership to discuss the issue fairly in the pages of its Bulletin or to hear it debated by competent representatives of both sides before a national meeting. It has loaded the pages of the Bulletin with only one position. It has refused point-blank to invite any speaker known to differ with the official position. It is not too late to conduct a fair debate around the question of professional responsibility and ethics. Is there any reason why the American Association of University Professors should not adopt as its own the statement of the New School for Social Research:
